## SUMMARY JURISDICTION (MARRIED WOMEN) BILL.

Clauses 1—3, *agreed to.*

Clause 4.

Amendment proposed, in page 1, lines 13, 14, to leave out the words "by a court of competent jurisdiction," and insert the words "upon indictment"—(Mr. *Byrne*).—Question, That the words proposed to be left out stand part of the Clause,—put, and *negatived.*

Question, That the words "upon indictment" be there inserted,—put, and *agreed to.*

Another Amendment proposed, in page 1, line 17, after the word "cruelty," to insert the words "to her"—(Mr. *Byrne*).—Question, That those words be there inserted,—put, and *agreed to.*

Another Amendment proposed, in page 1, line 18, after the word "children," to insert the words "whom he is legally liable to maintain"—(Mr. *Byrne*).—Question, That those words be there inserted,—put, and *agreed to.*

Another Amendment proposed, in page 1, line 19, to leave out the word "thereby," and insert the words "by such cruelty or neglect"—(Mr. *Byrne*).—Question, That the word "thereby" stand part of the Clause,—put, and *negatived.*

Question, That the words "by such cruelty or neglect" be there inserted,—put, and *agreed to.*

Another Amendment made.

Another Amendment proposed, in page 1, line 24, at the end of the Clause, to add the words: "Provided that where a married woman is entitled to apply for an order or orders under this section on the ground of the conviction of her husband upon indictment she may apply to the court before whom her husband has been convicted, and that court shall, for the purposes of this section, become a court of summary jurisdiction, and shall have the power without a jury to hear an application and make the order or orders applied for"—(Mr. *Byrne*).—Question, That those words be there added,—put, and *agreed to.*

Clause, as amended, *agreed to.*

Clause 5, *agreed to.*

Clause 6,

Clause 6.

Amendment proposed, in page 2, line 16, to leave out the words "which has not been condoned" and add the words "provided that the husband has not condoned or connived at, or by his wilful neglect or misconduct conduced to such act of adultery"—(Mr. *Byrne*).—Question, That the words proposed to be left out stand part of the Clause,—put, and *negatived*.

Question, That those words be there added,—put, and *agreed to*.

Clause, as amended, *agreed to*.

Clauses 7—10, *agreed to*.

Clause 11.

Amendment proposed, in page 3, line 12, after the word "probate," to insert the word "divorce"—(Mr. *Byrne*).—Question, That the word "divorce" be there inserted,—put, and *agreed to*.

Another Amendment proposed at the end of the Clause, to add the words "and until altered or repealed any rules already made as to appeals under Section 4 of the Matrimonial Causes Act, 1878, shall apply to appeals under this Act"—(Mr. *Byrne*).—Question, That those words be there added,—put, and *agreed to*.

Clause, as amended, *agreed to*.

Clause 12, *agreed to*.

Schedule, *agreed to*.

*Ordered*, To Report the Bill, as amended, to the House.

# REPORT.

THE SELECT COMMITTEE appointed to consider and Report whether the Provision now made for the TELEPHONE SERVICE in Local Areas is adequate; and whether it is expedient to Supplement or Improve this Provision either by the granting of Licences to Local Authorities or otherwise;——HAVE agreed to the following REPORT:—

YOUR Committee have examined numerous Witnesses upon the Matter referred to them, and have completed their Evidence, but have not, in view of the approaching Dissolution of Parliament, had sufficient time to consider their Report. They have therefore agreed to Report the Evidence they have taken to the House, and to recommend that a Committee on the same subject be appointed in the next Session of Parliament, to consider and report upon the Evidence already taken, and, if necessary, to take further Evidence.

## *Friday, 26th April* 1895.

MEMBERS PRESENT:

Mr. ARNOLD MORLEY in the Chair.

| | |
|---|---|
| Mr. Grant Lawson. | Mr. John Ellis. |
| Captain Bagot. | Sir Charles Cameron. |
| Mr. Snape. | Sir Julian Goldsmid. |
| Sir John Fergusson. | Lord Stanley. |
| Mr. Solicitor General. | |

Mr. *W. H. Dickinson* was further examined.

Sir *Edward H. Carbutt*, Bart., M.F.C.E., Major *S. Flood-Page*, and Mr. *H. Montague Bates*, were examined.

[Adjourned till Tuesday next, at Half-past Eleven o'clock.

---

## *Tuesday, 30th April* 1895.

MEMBERS PRESENT:

Mr. ARNOLD MORLEY in the Chair.

| | |
|---|---|
| Mr. Grant Lawson. | Mr. Benn. |
| Mr. Snape. | Sir John Gorst. |
| Sir James Fergusson. | Mr. Solicitor General. |
| Mr. John Ellis. | |

Mr. *George Berridge*, Mr. *John Archibald Dow*, Mr. *Robert Kay*, Mr. *James P. Waldie*, Mr. *Alexander Riach*, Mr. *Moncur*, and Mr. *James Crombie*, were examined.

[Adjourned till Friday next, at Half-past Eleven o'clock.

---

## *Friday, 3rd May* 1895.

MEMBERS PRESENT:

Mr. ARNOLD MORLEY in the Chair.

| | |
|---|---|
| Mr. Grant Lawson. | Mr. Benn. |
| Captain Bagot. | Mr. Baird. |
| Sir James Fergusson. | Sir Julian Goldsmid. |
| Mr. Solicitor General. | Lord Stanley. |
| Sir Charles Cameron. | |

The Committee deliberated.

Motion made, and Question put, "That in addition to the Evidence asked for by the Committee from Mr. *A. D. Provand* (a Member of this House), on the two points named in their letter of 30th April, Evidence be also received from him with regard to the Mutual Telephone Company, and the New Telephone Company in Manchester"—(Sir *Charles Cameron*).—The Committee divided:

| Ayes, 4. | Noes, 5. |
|---|---|
| Captain Bagot. | Sir James Fergusson. |
| Mr. Baird. | Sir Julian Goldsmid. |
| Mr. Benn. | Mr. Grant Lawson. |
| Sir Charles Cameron. | Mr. Solicitor General. |
| | Lord Stanley. |

Mr. *A. D. Provand* (a Member of the House), was examined.

Mr. *W. H. Preece*, F.R.S., was examined.

[Adjourned till Tuesday next, at Half-past Eleven o'clock.

---

## *Tuesday, 7th May* 1895.

MEMBERS PRESENT:

Mr. ARNOLD MORLEY in the Chair.

| | |
|---|---|
| Mr. Tully. | Mr. Benn. |
| Captain Bagot. | Mr. Baird. |
| Mr. Grant Lawson. | Lord Stanley. |
| Sir James Fergusson. | Mr. Snape. |
| Mr. Solicitor General. | Mr. Moulton. |
| Mr. John Ellis. | |

Mr. *W. H. Preece*, F.R.S., was further examined.

Mr. *R. E. Crompton* and Professor *Sylvanus Thompson*, were examined.

[Adjourned till Tuesday next, at Half-past Eleven o'clock.

---

## *Tuesday, 14th May* 1895.

MEMBERS PRESENT:

Mr. ARNOLD MORLEY in the Chair.

| | |
|---|---|
| Mr. Snape. | Mr. Baird. |
| Sir James Fergusson. | Mr. Tully. |
| Mr. John Ellis. | Mr. Solicitor General. |
| Sir Charles Cameron. | Sir John Gorst. |
| Mr. Benn. | Lord Stanley. |
| Mr. Grant Lawson. | |

Major General *C. E. Webber*, R.E., C.B., was examined.

[Adjourned till Tuesday next, at Half-past Eleven o'clock.

---

## *Tuesday*, 21*st May* 1895.

MEMBERS PRESENT:

Mr. ARNOLD MORLEY in the Chair.

| | |
|---|---|
| Mr. Baird. | Mr. Snape. |
| Sir James Fergusson. | Lord Stanley. |
| Mr. John Ellis. | Captain Bagot. |
| Sir Charles Cameron. | Mr. Tully. |
| Mr. Benn. | Sir John Gorst. |
| Mr. Grant Lawson. | |

Mr. *J. G. Ward*, M.H.A., and Mr. *James Staats Forbes*, were examined.

Mr. *W. H. Dickinson* was further examined.

[Adjourned till Friday next, at Half-past Eleven o'clock.

## *Friday*, 24*th May* 1895.

MEMBERS PRESENT:

Mr. ARNOLD MORLEY in the Chair.

| | |
|---|---|
| Mr. Tully. | Sir Charles Cameron. |
| Captain Bagot. | Mr. Benn. |
| Mr. Snape. | Mr. Grant Lawson. |
| Sir John Gorst. | Mr. Baird. |
| Sir James Fergusson. | Lord Stanley. |

Mr. *James Staats Forbes* was further examined.

[Adjourned till Tuesday next, at Twelve o'clock.

## *Tuesday*, 28*th May* 1895.

MEMBERS PRESENT:

Mr. ARNOLD MORLEY in the Chair.

| | |
|---|---|
| Mr. Snape. | Mr. Benn. |
| Lord Stanley. | Mr. Baird. |
| Sir James Fergusson. | Mr. Grant Lawson. |
| Mr. Solicitor General. | Mr. Tully. |
| Sir Charles Cameron. | Mr. John Ellis. |

The Committee deliberated.

Motion made, and Question put, "That the Evidence tendered by Mr. *Bennett* and Mr. *Hay* be received"—(Sir *Charles Cameron*).—The Committee divided:

| Ayes, 3. | Noes, 4. |
|---|---|
| Mr. Benn. | Sir James Fergusson. |
| Sir Charles Cameron. | Mr. Grant Lawson. |
| Mr. Snape. | Mr. Solicitor General |

Whereupon the *Chairman* declared himself with the *Noes*.

Mr. *James Staats Forbes* was further examined.

Mr. *A. C. Morton* (a Member of the House), and Mr. *Beveridge*, were examined.

Mr. *Lamb*, C.M.G., was further examined.

[Adjourned till Tuesday, 25th June, at Half-past Eleven o'clock.

*Tuesday, 25th June* 1895.

MEMBERS PRESENT:

Mr. ARNOLD MORLEY in the Chair.

| | |
|---|---|
| Captain Bagot. | Sir John Gorst. |
| Mr. Baird. | Mr. Grant Lawson. |
| Sir Charles Cameron. | Mr. Moulton. |
| Sir John Ellis. | Mr. Snape. |
| Sir James Fergusson. | Lord Stanley. |

DRAFT REPORT, proposed by the *Chairman*, read the first time as follows:

"Your Committee have examined numerous Witnesses upon the matter referred to them, and have completed their Evidence, but have not, in view of the approaching Dissolution of Parliament, had sufficient time to consider their Report. They have therefore agreed to Report the Evidence they have taken to the House, and to recommend that a Committee on the same subject be appointed in the next Session of Parliament, to consider and report upon the Evidence already taken, and, if necessary, to take further Evidence."

DRAFT REPORT, read a second time, and *agreed to*.

*Ordered*, To Report, together with the Minutes of Evidence and an Appendix.

---

# MINUTES OF EVIDENCE.

*Friday, 22nd March* 1895.

MEMBERS PRESENT:

| | |
|---|---|
| Captain Bagot. | Mr. Grant Lawson. |
| Mr. Baird. | Mr. Arnold Morley. |
| Mr. Benn. | Mr. Snape. |
| Sir Charles Cameron. | Mr. Solicitor General. |
| Sir James Fergusson. | Lord Stanley. |
| Sir Julian Goldsmid. | Mr. Tully. |

The Right Honourable ARNOLD MORLEY, IN THE CHAIR.

Mr. JOHN CAMERON LAMB, C.B., C.M.G., called in; and Examined.

*Chairman.*

1. You are an Assistant Secretary of the Post Office, and in charge of the Telegraph Department, are you not?—Yes.

2. You have been so, I think, since 1889?—Since April 1889.

3. When you followed Mr. Patey?—Yes.

4. I propose, in the first place, to ask a few questions with regard to the history of the telephone. When did the telephone first come into this country?—The first telephone was brought to this country by Lord Kelvin in 1876; it was in a very crude form. What might be called the first practical telephones were brought over in the following year by two officers of the Post Office who had been in America, Mr. Preece and Mr. Fischer. Professor Graham Bell presented each of them with a pair of his telephones.

5. Up to that time had there been anything corresponding to a telephone system?—The Post Office had had an exchange system worked with A. B. C. telegraph instruments. Before the Post Office, the Universal Private Telegraph Company had the same system in Newcastle-on-Tyne. They began that system in 1864, and their undertaking was purchased by the Post Office under the Telegraph Act of 1868; and this system of exchange, or putting one subscriber through to another by means of a switch, was extended by the Post Office, still with the A. B. C. telegraph instruments, to several other towns.

6. That was a system corresponding to the telephone system, only telegraph instruments were used instead of telephones?—Exactly; A. B. C.'s were used instead of telephones.

*Chairman*—continued.

7. Then you say that in 1878 the telephone was brought over from America?—In 1877 the first practical telephones were brought to this country, but they were not very efficient instruments, and it did not then appear that they were likely to be very useful; but, nevertheless, the Post Office made arrangements with the agents of the inventor, and secured the use of this apparatus for its private wire renters, in case any of them cared to have it.

8. And in 1878 there was an improvement invented, was not there, by Professor Hughes?—Yes; in 1878 Professor Hughes invented the microphone, and the microphone, used in conjunction with the telephone, converted it into a thoroughly practical means of transmitting speech.

9. And at that time was a company formed?—Yes; in the same year, 1878, a company was established for the purpose of acquiring and working Bell's patent for the telephone; and at first this company, to all appearance, was feeling its way; it did not announce any definite plan of business. In 1879 it sought an alliance with the Post Office, under which the Post Office would obtain telephones at cost price, and would in return facilitate the operations of the company. The company proposed to supply telephones and telephone wires to private persons. At that time there was no suggestion of an exchange system. The negotiations came to nothing. In the same year the Edison Telephone Company of London was established, and in the autumn of the year announcements began to be made in the public press that it was proposed to establish telephone exchanges. That was the

*Chairman*—continued.

first suggestion in this country on the part of a company to establish a telephone exchange. I might, perhaps, mention that the first telephone exchange in the world is understood to have been established in Chicago in 1878.

10. That is the year before this proposal was made in England?—That is the year before this proposal was made in England. I do not know whether you would like me to carry on the history a little?

11. I think so, if you would, please?—Immediately on this announcement appearing, of the proposal to establish telephone exchanges, the Post Office pointed out that the proposed operations would infringe the Postmaster General's rights, and an information was filed against the Edison Company on the 27th November, and against the United Telephone Company on the 20th December.

12. Are those the rights of the Postmaster General under the Act of 1868?—Rather, under the Act of 1869, which conferred on him the exclusive right of transacting telegraph business. In June of the following year (that is 1880), these two companies amalgamated under the title of "The United Telephone Company, Limited."

Mr. *Benn.*

13. That is Bell's and Edison's?—Yes. Legal proceedings occupied the whole of that year, and on the 20th December judgment was given in the High Court of Justice in favour of the Post Office. In anticipation of this judgment the Post Office made arrangements to establish telephone exchanges of its own, and steps were taken to obtain a sufficient number of telephones to enable the department to carry out the work. At the same time the department entered into negotiations with the Telephone Company for the grant to the Telephone Company of a license. Perhaps, I ought to say under what authority the license was to be given.

*Chairman.*

14. It would, I think, be desirable?—It was to be given under what was interpreted to be an authority under the Telegraph Act, 1869, 32 & 33 Vict. c. 73. To explain the matter, I must quote a little from the preamble and one of the clauses, and then show what the exception to the Postmaster General's exclusive right was. The preamble of this Act contains the following words: "And whereas in order to protect the public revenue it is expedient that similar powers to those conferred upon the Postmaster General with respect to the exclusive privilege of conveying letters should be enacted with reference to the transmission of public telegraphic messages within the United Kingdom of Great Britain and Ireland." Then Clause 4 says: "The Postmaster General by himself, or by his deputies and his and their respective servants and agents, shall, from and after the passing of this Act, have the exclusive privilege of transmitting telegrams within the United Kingdom of Great Britain and Ireland, except as hereinafter provided, and shall also

*Chairman*—continued.

within that kingdom have the exclusive privilege of performing all the incidental services of receiving, collecting, or delivering telegrams except as hereinafter provided." Then comes the exception under which it was held that the Postmaster General had the power to grant licenses, and it runs as follows: "Telegrams transmitted, with the written license or consent, either special or general, of the Postmaster General under the hand of any officer of the Post Office authorised for that purpose by the Postmaster General." It was under the power, which it was held was conferred on the Postmaster General in that exception, that the Post Office entered into negotiations to grant licenses for telephone exchange business.

15. And it is under that power that licenses have been subsequently granted?—Quite so.

Sir *Julian Goldsmid.*

16. Was not that also a part of the arrangement with the Telephone Company in order that they might not appeal. I think it is known that there was an intention to appeal against the court which was in favour of the Post Office; was that so?—Certainly. I was coming to that. The company, when they accepted the license, at the same time accepted the judgment. They were allowed to proceed with their operations, and they decided not to appeal against the judgment, which was in favour of the Postmaster General. That is quite so.

17. The condition of their not appealing was that those licenses should be granted, was it not?—I do not know that it was quite as the honourable Member suggests; I think I would rather say that there was a willingness on the part of the Government of the day to give these licenses. It was not exactly a bargain, I think, in the way the honourable Member suggests, but it was undoubtedly the case that the company accepted the judgment. I am speaking from my best recollection subject to correction.

*Chairman.*

18. I suppose if the companies could at all have successfully carried on an appeal against the decision, they would, in all probability, have done so?—Quite so. The Post Office had not the least doubt of its rights; it had the very best possible advice that there was not any fear: that it need not apprehend anything from an appeal.

19. I may take it that the policy of the Post Office in granting licenses was not influenced or biassed by any fear that the decision of the court would be overruled?—No; I am under that impression very strongly. If I may continue the history, I should say that on the 20th December (this is still 1880), the day on which the judgment was given in the High Court of Justice, the Post Office issued an advertisement in the principal papers of the country, describing its A. B. C. telegraph exchange system, which had been in operation at Newcastle-on-Tyne and other towns, announcing that the telephone would be substituted on those systems for the A. B. C., and offering to establish telephone exchange systems wherever they

*Chairman*—continued.

they were required by the public. Now I was coming to the point that the honourable Member raised; I do not know whether I need repeat it, but merely to get the date, perhaps I had better. In April 1881 the United Telephone Company was granted a license to carry on a telephone exchange business in London, and the company accepted the judgment of the High Court of Justice. The radius within which they were to carry on their operations was to be five miles from a central point selected by themselves, and of course a royalty was to be paid to the Post Office. As to the provinces, the policy of the United Company was to confine its own exchange operations to London, and to allow its patent apparatus to be used in other parts of the country by subsidiary companies, and it left these subsidiary companies to negotiate with the Post Office for licenses for provincial towns.

20. The company had a practical monopoly, had not they, of some of the patents, at all events?—The United Company were owners of the master patents, and in that way had a practical monopoly of telephone apparatus, with the exception of certain quantities of telephone apparatus which had been acquired by the Post Office, and by a few other people, throughout the country, which were held to be outside the rights of the United Company. I am not sure that I can give a perfect legal explanation of the matter, but they were outside in this way: The United Telephone Company only acquired their position of monopoly by disclaiming various details of the telephone; thus bringing within their patent rights variations of the telephone that had previously been outside the patent. When they secured by disclaimer a practical right over all telephones the apparatus which was already either in use, or which certain people had the right to use, was excluded from the operation of the disclaimers by fiat of the Attorney General, and therefore, in so far as that quantity of apparatus was concerned, the United Telephone Company had no power of bringing action against the users; and it was only as regards the future that they held a position of monopoly a very strong position, but it was only as regards the future.

21. But those patents have now come to an end?—Yes.

22. They have all come to an end now?—Yes; I thought I would explain that, because I thought it might be asked how it was that the Post Office had secured certain apparatus, and how it was that one or two other people had secured apparatus.

Mr. *Snape.*

23. What condition was attached to the licenses as to duration?—The whole of the licenses were for 31 years.

24. How is it they are at an end now?—Perhaps I misunderstood the honourable Member. I understood him to refer to the licenses that were given by the Post Office to the telephone companies, but perhaps I have misunderstood him. If he refers to the patents, they are at an end.

*Chairman.*

25. Will you go on, please, with the history?—I was just going to explain, that when once the license to the United Company was settled, licenses on similar terms, but with not so wide a radius, were granted to companies in the provinces, and all these licenses were for 31 years.

Captain *Bagot.*

26. In what year was it that the licenses were granted to the companies in the provinces?—They began to be granted in the year 1881.

27. The same year?—Yes.

Mr. *Snape.*

28. The license continued for 31 years; no matter in what subsequent year it was taken up, did not it?—The 31 years was to run in all cases from the same date; from the date of the original license to the United Company.

29. Have you that date?—It was in 1881; I do not know whether that is near enough.

30. That is quite sufficient?—I think I can answer the honourable Member's question in another way. All the licenses were granted so as to expire on the 31st December 1911. There is a little matter here that it might be well to mention. In 1881 the Postmaster General allowed the exchanges of the companies to be connected with post offices, to enable the company's subscribers to send telegrams for transmission over the public wires. The use of the connection was limited to that. It was merely to enable them to send telegrams into a post office for transmission over the public wires.

*Chairman.*

31. Through the Exchange?—Through the Exchange. The companies were to provide the wires, and the Post Office was to charge for the cost of working them at the Post Office end. The companies availed themselves of this privilege, but only to a limited extent; meanwhile, the Post Office itself established telephone exchanges in several additional towns, amongst others Cardiff and Newport.

32. Up to that time, had there been any trunk wire connections between the large towns?—No, there had not been any; but negotiations took place between the companies and the Department for the construction of trunk wires to connect one town with another, and the Post Office offered to supply trunk wires, on condition that the persons using them should pay the Department direct. This offer was not accepted but in a few cases wires between one town and another were provided by the Department for the use of the companies, at a fixed annual rental. For instance, a wire was provided from London to Brighton, and the company paid the Post Office for the use of that wire a fixed annual rental, and used it in their own way.

Sir *Julian Goldsmid.*

33. What company was that?—The United Telephone Company.

*Chairman.*

34. At that time, of course, no company had a license, except within the restricted area to which the license referred?—That is so.

35. And, therefore, they had no powers to make the trunk lines?—They had no powers themselves to erect trunk wires between one town and another.

Mr. *Snape.*

36. Then the use of that wire could have been revoked at any time; it did not continue for the 31 years?—No; it was under the agreement for a limited time.

Mr. *Benn.*

37. What was the date of that offer of the Post Office to provide trunk wires?—That was in the year 1881.

Sir *Julian Goldsmid.*

38. Would you tell us whether those exchanges you have mentioned at Cardiff and Newport exist now in the hands of the Post Office?—Yes, they do.

*Chairman.*

39. Altogether, how many towns have been supplied by the Post Office with telephone exchanges; you have mentioned, I think, Newcastle, Cardiff, and Newport?—Yes. If I give you the number of towns will that do, or shall I give the names?

40. The number of the towns will be sufficient?—Thirty separate towns, with a few outlying villages connected with those towns. Some of those towns, I ought to explain, are small; for instance, Morpeth. Meanwhile, the Postmaster General was gradually granting licenses to the companies for additional towns.

41. Was that the existing companies, or new companies?—In some cases to new companies, but generally to these subsidiary companies of the United Telephone Company to which I have referred. Then, in 1882, a new company, called the London and Globe Telephone Company, appeared on the scene, and applied for a license to carry on exchange business in London. This application raised a good many questions as to competition between one company and another, and the United Telephone Company urged reasons why there should be no competition; but eventually a license was given to the new company, and in the same year the Postmaster General granted licenses for the establishment of exchanges by companies, even in towns where the Post Office had, up to that time, retained the whole business in its own hands. For instance, at Newcastle-on-Tyne, where the Post Office had been carrying on an exchange business for many years, first of all with A. B. C.'s, and then with telephones, a license was given to a company to enter into competition with the Post Office. In 1884 the London and Globe Telephone Company (to which I referred a few minutes ago) was absorbed by the United Telephone Company; and in the same year attacks were made in the House of Commons and in the press on the policy of the Department.

*Chairman*—continued.

On the 22nd May of that year, Mr. Dwyer Gray, in a speech in the House of Commons, accused the Department of practising a policy of strangulation. Mr. Fawcett (who took the whole responsibility on himself, I ought to say) confessed that certain conditions imposed by the Department had checked the development of private telephonic enterprise, and stated that he hoped to be in a position to announce a modification of the conditions. On the 24th June he suggested, in the House of Commons, that the telephone companies should meet and put their demands in writing, and on the 28th July, after consultation with the companies, he sought the authority of the Treasury to abolish all restrictions as to areas, and to throw the whole country open to the operations of the licensees. Mr. Fawcett's policy appears to have been to encourage competition, for in his speech in the House he said: "If there is to be a monopoly in telephonic communication, or any other communication, it had better be in the hands of the Government, which can be controlled, and which is directly amenable to public opinion, rather than that a monopoly should be vested in a private company." Under this new arrangement, of course a royalty was to be maintained, and the operations of the company were to be still limited to oral communications; there was to be no transmission of written telegrams; the Treasury sanctioned the arrangement, and it was announced in the House of Commons by Mr. Fawcett on the 7th August 1884. As a result of this, the licenses now held by the companies were given in substitution for the old licenses; if necessary, I can supply the Committee with copies of those licenses.

42. I think it might be useful to have a specimen of them; those are the existing licenses, subject to the agreement which has been entered into?—Yes; they are described as "draft"; they are in blank, but they are actually the terms of the licenses, the names of the various companies being merely inserted in those blanks, so the Committee may assume that those are the actual terms, although the print is described to be a "draft."

43. And these licenses expire, you say, on the 31st December 1911?—Yes; that is so.

44. And are determinable at——?—They are determinable at six months' notice on the 31st December 1897, and the 31st December 1904.

45. But by notice of purchase by arbitration?—Quite so.

Mr. *Benn.*

46. Could you explain, in a sentence or two, the main difference between the Fawcett licenses and those which preceded them; that would help us, I think?—The main difference is this: What the honourable Member has described as the "Fawcett Licenses" were for the whole country. Each company holding a license was empowered by that license to carry on operations throughout the whole country (the United Kingdom of Great Britain and Ireland), and not merely within towns, but to connect towns together.

47. That authorised trunk wires practically?—Quite so.

48. That

Sir *Julian Goldsmid.*

48. That was in 1884, was it not?—That was in 1884, yes.

*Chairman.*

49. Can you say how many licenses had been given in that time, or how many licenses were in existence at that time?—Altogether, 23 licenses had been given, in this sense: the National Telephone Company had been authorised by separate legal documents to carry on exchanges in a number of different towns, but I am counting that all as one license, because it was to one company; the practice then was to enter into a separate agreement in respect of each town, so that you will kindly understand when I say "23," I am asking you to assume that I am not counting up the separate legal documents for every separate town.

Lord *Stanley.*

50. Twenty-three groups?—Yes, groups.

Mr. *Snape.*

51. Were these given in substitution of the old licenses, or how many were there of the old licenses for which new licenses were substituted?—At the time when the licenses of 1884 were given this number of 23 had been slightly reduced, by reason of amalgamations which had taken place at that time. I am sorry I do not at the moment remember exactly what the number was, but it was some number slightly less than 23; and to each of the persons or companies then holding licenses from the Post Office one of the new licenses (which Mr. Fawcett had explained to the House of Commons) was given.

*Chairman.*

52. That is to say, the restricted licenses were withdrawn?—Yes.

53. And in their place were given licenses extending over the whole of the United Kingdom?—Quite so; perhaps an illustration will show the thing better than anything.

54. Yes?—For Sheffield and Rotherham a Mr. Tasker held one of the old licenses to operate in those two towns; and Mr. Tasker, in 1884, in pursuance of Mr. Fawcett's policy, was given a license for the whole of the United Kingdom, in the terms that have been described.

Mr. *Grant Lawson.*

55. Do you know how many licenses there are now?—If the honourable Member will kindly refer to the drafts of the new agreements, which have been laid on the Table of the House, at page 21 he will find a list of 10 licenses which the National Telephone Company are to deliver up and surrender; and on page 54 he will find that there is one license mentioned which the New Telephone Company are to deliver up and surrender; that makes 11; and then the licenses of the two representative companies have to be added, which makes 13. So the answer to the honourable Member's question is, that at the present moment there are 13 licenses in existence; but, as a matter of fact, all the companies holding these licenses have been absorbed by either the National Telephone Company or the New Telephone Company, and, therefore, what are presented to us now are really only two companies, the "National" and the "New." I might, perhaps, further explain that the National Telephone Company hold nearly the whole of the shares in the New Telephone Company, which is now in process of liquidation, and that, therefore, for all practical purposes it may be assumed that there is only one telephone company in existence.

Mr. *Grant Lawson*—continued.

*Chairman.*

56. That was practically the state of affairs when the late Government, considering the whole question, developed the new policy which resulted in the agreement?—Yes, that is so.

Sir *James Fergusson.*

57. Except, that at that time the National had not acquired the shares in the New, had it?—I beg pardon, the Right Honourable Gentleman is quite right; and I am glad to have been corrected.

*Chairman.*

58. That fact would rather come afterwards; the absorption by the National of the New came after the change of policy, did it not?—Yes.

Sir *Julian Goldsmid.*

59. It is going on now, is it not?—Yes, it is.

60. It is a slow process?—Yes.

*Chairman.*

61. Now we will go to the time when the late Government began to develope their new policy, and perhaps you will state the reasons which, so far as you are aware, led to the Government considering the question of the agreement?—I believe that Her Majesty's late Government was led to consider the question of a fresh arrangement by the public dissatisfaction with the service which the telephone companies were rendering.

Sir *Charles Cameron.*

62. Perhaps I may ask you this to make it continuous: during Mr. Raikes' administration of the Post Office there was no great change in the policy which you have described, was there?—Well, trusting to memory, I think the only fact the Committee might wish me to mention is this: that when the United Telephone Company amalgamated with the National Telephone Company and the Lancashire and Cheshire Telephone Exchange Company, some concern was expressed in the House of Commons as to the result of this amalgamation, and Mr. Raikes caused a letter to be written to the companies, to say that he disapproved of their action.

*Chairman.*

63. With that exception, there was no great change in policy during the period that Mr. Raikes was at the Post Office?—No, I cannot remember any.

64. Then, you were telling us the reasons which led the late Government to consider the question?—I was saying that it was due, first of all, to public dissatisfaction with the service

*Chairman*—continued.

which the companies were rendering, and to the alarm of the public at the uncontrolled monopoly which was gradually being created. The Government were also influenced by the repeated demands of the companies for further powers to enable them to meet the public requirements; and again the Government were concerned at the effect which the competition of the telephone companies was having on the telegraph revenue.

65. Have you any figures you could give to the Committee upon that point?—The Government saw, for instance, that in six years the business of the companies had gone up; their gross revenue had gone up from about 261,000*l.* to about 465,000*l.*

66. Which six years were those?—From 1886 to 1891.

Sir *Julian Goldsmid.*

67. Is that over the same area, or over a larger area?—I am not quite sure whether I understand the honourable Member's question.

68. My question is whether the area of the business in the commencement of the six years was the same as at the end of the six years?—Yes; the business in 1886 was an all-England business, the change in the nature of the licenses having been made in 1884. While that increase was taking place in the business of the companies (which was 77 per cent.) the Government saw that the net telegraph revenue was going down. They saw that in the year to the 31st March 1889 there was a balance of revenue over expenditure in the telegraph business of the country of about 88,000*l.*, which, in the following year, decreased to 85,000*l.*, and in the next year to 68,000*l.*, and although they had not the complete accounts before them, they knew that in the year to the 31st March 1892 there was going to be a large deficiency instead of a balance; and, as a matter of fact, their anticipations were realised, for the balance of 68,000*l.* was converted into a deficiency of 90,000*l.*

69. You do not mean that you wish to induce the Committee to believe that that is to be put down to the telephones, do you?—Well, my own conviction is that it was very largely due to the telephones; it was also due partly to an increase in the pay of the telegraphists.

70. Is not there another reason, a very large extension of offices?—The extension of offices is made under a rule of the Treasury that in no case are you to make an extension unless you can show that the expenses will be covered by the receipts.

71. Oh, yes, I know that?—Or unless you get a guarantee from the neighbourhood to secure you against loss.

72. But it is not always observed, is it?—I think the only cases in which it has not been observed are a few in the Islands and Highlands of Scotland, where, owing to recommendations of Royal Commissions, certain public telegraphs have been given in the same way as harbours have been given.

73. And in Ireland?—Well, I am speaking only from memory, but I cannot at the moment charge my memory with any case in Ireland where it has been done, except in this way: There may have been, perhaps, one or two cases

Sir *Julian Goldsmid*—continued.

(I am sure they could not exceed one or two cases) in which it has been held that a telegraph extension was absolutely necessary for the administrative purposes of the Government, and the extension was given in the same way as a departmental telegraph would have been given; the only difference being that the public got the benefit of it, instead of its being absolutely confined to the administrative purposes of the Government.

*Chairman.*

74. Have you any figures showing the effect upon the number of messages sent?—In the years that I have mentioned, while the business of the company increased by 77 per cent., the ordinary inland messages of the department increased by only 44 per cent.

Captain *Bagot.*

75. Between 1886 and 1891 do you mean?—That is so.

*Chairman.*

76. And taking the figures up to the present time, up to the last completed year, how do they show?—Taking the figures to 1894, the revenue of the company was about 709,000*l.* (which is an increase over 1886 of 171 per cent.), and the ordinary public messages of the country were a little more than 58,000,000, which is an increase of only 50 per cent. over 1886; while if the Committee turn to the Parliamentary Account, they will see that the deficiency in the accounts of the telegraph service in the year to the 31st March 1894 had risen to 178,000*l.*, and it is estimated that in the year to the 31st March 1895 the deficiency will have increased to 240,000*l.*

77. And without attributing the whole of those differences to the telephone service, do you think it has to account for a substantial portion of it?—Yes, I am convinced that it does account for a very large portion. I quite admit that I could not claim that it accounted for the whole of it.

Sir *Julian Goldsmid.*

78. Would it be convenient to have a statement with regard to how this has risen; that is to say, how much the Post Office received now from the telephone. Can we have it as a separate figure?—The royalty in the year to the 31st December last (I am giving round figures) was 70,900*l.*

79. And six years before?—I beg the honourable Member's pardon, I have given that for a later date than he asked; I have given that for the 31st December 1894. In the year to the 31st December 1891 it was 46,500*l.*; then in 1886 it was 26,100*l.* I am giving round figures.

*Chairman.*

80. Was that for the year 1894?—The calendar year 1894. The years do not quite agree; the Parliamentary Account of the year is always to the 31st March.

81. Just to correct what I think is a mistake, you

*Chairman*—continued.

you mentioned a period of six years; it really is a period of five years, is it not: from the 31st December 1886 to the 31st December 1891 is a period of five years?—It is including both years; it is the year to the 31st December 1886 compared with the year to the 31st December 1891.

82. Quite so, that would make a period of six years?—Yes.

Mr. *Benn.*

83. You have said that when Mr. Raikes was at the Post Office, alarm was expressed at the uncontrolled monopoly which was being created by the buying up of the various companies. Can you tell the Committee what was the evidence showing that such alarm existed?—Questions were asked in the House of Commons.

84. And was it shown in any other way?—There were certain articles in the press.

*Chairman.*

85. You have mentioned the reasons which led the late Government to consider the advisability of developing a new policy. Will you now describe what course they took upon the matter?—First of all, they did not see their way to purchase the companies' undertakings at the end of the first period mentioned in the license, which was the 31st December 1890.

86. Had that policy been pressed upon them?—Well, that policy had certainly been presented to them.

87. But at that time it had not come before Parliament, the question of purchase, as it did in 1892?—No, it had not come before Parliament. In saying "pressed upon them," of course, I understand you to mean officially by the Postmaster General.

88. Then will you describe the decision the Government arrived at, and the action they took?—After a great deal of consideration, they adopted the policy which is set forth in the Treasury Minute laid on the Table of the House, on the 23rd May 1892. Their intention was to facilitate the operations of the companies, by conferring on them certain powers for constructing telegraphs which are enjoyed by the Postmaster General; secondly, to give additional facilities to the public by a closer combination of the telephone systems of the companies with the postal and telegraph systems of the Post Office; and thirdly, to safeguard the telegraph revenue by acquiring and working the trunk lines which connected local systems together. They also intended to extend the trunk wire system, so as to bring into communication the most distant places and enable conversations to be held even between Great Britain and Ireland, as had already been done between England and France. The right of the Post Office to establish telephone systems was fully reserved. Then a Bill was introduced to authorise the raising of the necessary sum of money to pay for the trunk wires which were to be acquired from the companies, and for the additional wires which were to be constructed by the Post Office. In this same Bill powers were sought for conferring on the companies, under due restrictions, certain powers of way-

*Chairman*—continued.

leave. The Bill was referred to a Select Committee in June 1892, and was reported to the House and became law as the Telegraph Act, 1892, 55 & 56 Vict. c. 59. I have copies of that Act if the Committee would like to have them.

89. I think the Committee have copies?—In reporting to the House the Committee expressed the opinion that the responsibility for the details of an agreement with the companies must rest with the Government. They made only one reservation, which was that the duration of the license should not be extended. Then, after considerable difficulty and a great deal of negotiation, an arrangement was made with the companies, and the heads of arrangement (which are with the print laid on the Table of the House) were signed on the 11th August 1892. Both these heads of arrangement and the drafts of the formal agreements to give effect to them, are set forth in the printed Papers which have been laid on the Table.

90. During that time what has the Department been doing with regard to trunk wires?—It has been proceeding with the erection of the trunk wires, for which part of the money provided by the Act of 1892 was given, and it has already expended a considerable sum of money upon these trunk wires.

Mr. *Benn.*

91. Can you tell us how much?—It has expended about 374,000*l.*

Lord *Stanley.*

92. In what period of time?—That, the honourable Member may take it, is up to the present time.

*Chairman.*

93. From August 1892, when the Act was passed?—Yes.

94. Perhaps you might shortly describe the trunk wires?—The Committee will no doubt kindly understand that the accounts have not been fully made up, and that the sum I have named must be taken as an approximate sum. The wires have been erected, not only in pursuance of the Act, but in pursuance of paragraphs 5, 6, and 17 of the Treasury Minute of May 1892. The Department has already completed a main line connecting Plymouth, Bristol, and the ports in South Wales with Birmingham, Leeds, and Newcastle-on-Tyne. It has also completed lines from Hull to Leeds, and from Leeds to Manchester and Liverpool; from London to Chelmsford, to Colchester, and to Ipswich; from London to Brighton; from Nottingham to Derby and Leicester; and from Edinburgh and Glasgow to Belfast and Dublin. Then lines to connect London with Bristol, Southampton, and Portsmouth are in hand, and a main line from London through Nottingham, Sheffield, and Leeds to Glasgow will, I expect, be completed early next month.

Sir *James Fergusson.*

95. There is a line belonging to the company from London to Glasgow now, is there not?—No; the company has a line from London

Sir *James Fergusson*—continued.

through Birmingham to Liverpool and Manchester.

96. Not to Glasgow?—Not to Glasgow. The communication which the Post Office is providing between London and Glasgow will be something entirely new.

*Chairman.*

97. And that line will give communication from London to Belfast and Dublin, will it not?—Belfast and Dublin as well as with Edinburgh.

98. And any other town which is in communication with Glasgow?—Yes, that is so; then, in addition to this main system, about 50 lines of minor importance have been constructed, or are in process of construction, in various parts of the country; I can give them to the Committee if they like, but they are of minor importance.

99. Oh no, that is not necessary?—I have now explained what has been described as the "backbone" system.

100. Have you got a chart showing the "backbone" system?—Yes (*the chart is handed in*).

101. I think now I will ask you to give a general description of the arrangements which will exist under the agreement with the telephone company?—I propose to refer to the various clauses in the new agreement. I will take first, Clause 2, Sub-sections 1 and 4, and the preamble in the middle of page 12: "On the 1st day of July 1895, or on such earlier day as may be fixed by agreement between the Postmaster General and the Company (which day is hereinafter referred to as 'the appointed day') the company shall deliver and hand over to the Postmaster General" these trunk wires (*see* Clause 2), and the Postmaster General will pay the purchase money which is now being ascertained by experts appointed by the Postmaster General and the company. The experts are mentioned in the preamble in the middle of page 12, beginning with the words: "And whereas the company's books." Then the operations of the company will be limited to the exchange areas specified in the 2nd schedule of the agreement, parts 1, 2, and 3; the schedule begins at page 22 of the print in the case of one company, *see* Clause 1, the paragraph beginning with "The expression, 'exchange area,'" near the bottom of page 13. Then the company are to construct connecting wires between their exchanges and post offices (Clause 5, Sub-sections 1 and 2), to enable the subscribers of the companies' exchanges to use the trunk wires of the Postmaster General (Clause 6, Sub-section 1), to enable them to transmit messages for any of the following purposes: (*a.*) For transmission over the postal telegraphs, and delivery as telegrams; (*b.*) For delivery as express letters; (*c.*) For conveyance and delivery as ordinary letters (Clause 6, Sub-section 2), and (*d.*) to summon a Post Office messenger (Clause 6, Sub-section 3). Then the Postmaster General is to make no charge to the company for working the wires between exchanges and post offices (Clause 9,

*Chairman*—continued.

Sub-section 2). I may explain here that in a few cases where such wires had been constructed for the mere purpose of enabling telegrams to be sent over the public wires, a charge was made to the company. This charge is now to be abandoned. The amount of the charge is about 1,600*l.* a year. To proceed with the explanation of what is to take place under the new arrangement: the Postmaster General is to authorise the company to exercise within any exchange area specified by the company all such powers of executing works (other than works under, in, upon, over, along, or across, any railway or canal) as are conferred upon the Postmaster General by the Telegraph Acts, 1863 and 1878, and by Section 2 (but not by any other section) of the Telegraph Act, 1892 (Clause 11, and the provisoes attached to that clause). Then the Postmaster General, if required by the company, is to provide underground wires between exchanges of the company situate in one and the same exchange area, on terms to be settled by mutual agreement. That is Clause 12. Then he is to allow the company to make agreements with railway and canal companies, over whose property he has exclusive rights of way, and for the construction by the Telephone Company of telephone lines, and he is to receive a merely nominal rental of a shilling per annum, instead of the charge of 20*s.* per mile, which he now makes (Clause 13, Sub-sections 1 and 2). This concession, I may explain, involves a reduction in the payments made by the company to the Department of about 2,400*l.* a year. Then the Postmaster General will continue the construction of the national system of trunk lines referred to in paragraphs 5, 6, and 17, of the Treasury Minute. I have already described what he has done up to the present time. Then the power of the Postmaster General to supply telephone exchanges, or to license others to supply them, is fully reserved (Clause 18). Unless the Committee wish to have some information about the powers of wayleave, I would sum up what I have been saying thus:—there will be a complete national system of telephonic communication throughout Great Britain, and between Great Britain and Ireland, and there will be placed at the disposal of the public facilities not merely for telephonic inter-communication, but for a combination of the telephone service with the telegraph and postal service of the State.

102. That is to say, the inter-communication will be in the hands and under the control of the Post Office, and the development of the local exchanges will be in the hands of the company?—Yes; that is so.

103. And, no doubt, the taking over of the trunk wires by the State is a step in the direction of State acquisition of the telephones?—Yes; I think that is obvious.

104. I should like to know your opinion shortly (perhaps we shall have an opportunity of hearing more from you afterwards) upon the question of competition in the telephone service, the effect of competition upon an effective service?—I believe that both reason and experience point to the necessity for only one exchange system in one area

*Chairman*—continued.

area; as a matter of fact, every competing company that has been established has been absorbed by some existing company, and it appears to me obvious that if you look for efficiency and economy you must have only one system in one area. Otherwise, if the users of the telephone are divided into two groups, the persons in one group cannot communicate with those in the other, unless they pay to both exchange systems.

105. You say experience shows that where there are two competing systems, one is inevitably absorbed by the other; you are not now merely referring to the absorption of the "New" by the "National," but experience gained in the old system, is that so?—Yes; I can also refer to a case in a country which has been very often mentioned, that is Sweden. The inconvenience of having two competing companies in Stockholm was so great that the Municipality of Stockholm brought all their influence to bear upon those two companies to combine. That is an illustration.

106. Then, I gather that the experience gained from foreign countries bears out the experience which the Department has gained from the past history of the telephone service in this country?—Yes; and I believe that there is absolutely no difference of opinion amongst experts, that competing systems within one area must result in inconvenience to the public, and expense, and want of efficiency.

Mr. *Snape.*

107. Then, is it your view that where the National Telephone Company at present has a local exchange, it would be undesirable for the State to introduce, or for the municipality to introduce, a competing system in that locality?—Well, of course, the evidence I give is scarcely evidence from the point of view of general policy. I think the Postmaster General (the Chairman of the Committee) wished merely to get my opinion on the broad question of competition. The case is quite different from the case of railway facilities. If there are competitive lines to a given town, the public can choose which line they will use, and when they choose their line they only pay for travelling on that line; but when there are competitive systems of telephones within one and the same area, if a member of the public chooses one of these systems, he cannot get all the facilities he requires, because he finds some of the people he wishes to speak to are on the other system Then he has to do what he is not required to do on competitive railways, he has to pay for both systems in order to get the facility that he requires.

Captain *Bagot.*

108. Would not the public always use the cheapest system, if there were two, and so the competition drive the other company out of the place altogether?—Well, I think the honourable Member, if I may say so, has almost supported my contention, because he contemplates one being driven out by the other; and that has been the result.

109. For the benefit of the public?—By the action of the public.

Captain *Bagot*—continued.

110. Supposing there were two exchanges, and one exchange was run on a cheaper system than the other, it would get most subscribers and, in time, all the subscribers?—That might be so.

111. And the other one would fail?—Yes.

Sir *Julian Goldsmid.*

112. Is it not this, they either agree as to price or the one drives the other out?—I think that would very likely be the case.

Mr. *Snape.*

113. Has it not been rather the other way, that some of the companies starting on a cheaper system, have been absorbed by the National Telephone Company, who charge higher rates. Are there not such instances?—I know one very striking case of the kind at Dundee, where a local company was established charging to the public I think only 5*l.* a year, and that local company was absorbed by a company which charged higher rates. The honourable Member is quite right.

Captain *Bagot.*

114. The dearer company bought up the cheaper company, because they were afraid of the competition. They might pay any price for them?—I am afraid I do not know all the intricacies or secrets of the transaction. The fact is that the company charging the higher rates did absorb the company charging the lower.

Mr. *Grant Lawson.*

115. I want to ask a question about the loss on the telegraphs. I suppose the telephones extended in some parts of the country much more than they did in others; do you know whether the loss to the telegraph department is greater in those parts where there were more telephones?—Yes, we had returns kept in some cases of the kind the honourable Member suggests; for instance, as between Liverpool and Manchester and between Glasgow and Greenock; and we found that as between Liverpool and Manchester (where there is constant communication in the way of business, and where, therefore, the rate of increase in telegrams ought to have been above the average) the rate of increase (I admit) that there was an increase) was very much lower than the average for the whole country; and in the case of Glasgow and Greenock we found that the telegraph business between these towns was practically annihilated.

116. Was there a great telephone communication between those towns?—Yes.

Lord *Stanley.*

117. Competing lines?—They were entirely in the hands of the National Company.

Mr. *Tully.*

118. You said in your evidence as to the history of this business, that the original companies got the whole of the original patents?—Yes.

119. The competing companies then have been all absorbed by one company?—That is so, nearly; as I explained, there is the New Telephone Company still in separate existence, but in process of absorption.

Mr. *Tully*—continued.

120. Then with regard to the telegraph service, in 1891 I think you stated that the revenue had an excess over expenditure of 68,000*l.* ?—That is so, an excess of revenue towards payment of interest.

121. Of 68,000*l.*?—Yes.

122. At present the telegraph system is working at a loss of 240,000*l.* ?—That is so ; that is the estimated amount ; the accounts are not closed yet.

123. You attribute this loss on the telegraph service to the existence of the telephone service? —Only partly.

124. You said largely, I think?—Yes, largely.

125. So it would appear that these companies first began by getting hold of the patents to cripple the efficiency of the Post Office service ; the original service in the early days?—The honourable Member must excuse me if I do not answer as to the object of the company.

126. I ask you what happened ; they originally got hold of the patents?—That is so.

127. Then they got rid of the competing companies by absorbing them?—That is so.

128. The telegraph service brought in a surplus of 68,000*l.* in 1891, and is now working at a loss of 240,000*l.* ?—That is so.

129. And you attribute that largely to the existence of those telephone companies?—I do.

130. Were those trunk lines you speak of (that are mentioned on that chart) erected by the Post Office ?—Yes, all the trunk lines which are shown on the map which the honourable Member has seen are erected, or are being erected, by the Post Office.

131. So that really the effect of the telephone service of these companies, as regards the general taxpayer, is that the service which gave a surplus of 68,000*l.* in 1891, is now being worked at a loss of 240,000*l.* ; that is the general effect, is it not?—I think I rather said, the existence of the telephone companies has contributed to that result.

Sir *Julian Goldsmid.*

132. I want to ask you a question or two about that. I remember cross-examining Mr. Patey on this subject a great many years ago ; I will just ask you this : Is not it true that all extensions are charged to revenue account every year, and that you have no separate capital account? —Yes, that is true.

133. A private company, if it did the telegraph business of the country, would have a capital account and bring in new capital for these extensions?—That is so.

134. Whereas you charge it to revenue, and then you tell us that the thing does not pay, because all your extensions have come out of revenue?—That is so ; but may I reply to the honourable Member, that it has always been the case.

135. I am perfectly well aware of that, I moved for the Telegraph Committee of 1875 ; I have gone through all this before?—In replying to the honourable Member my point is that what he says does not affect the question of the effect of the telephone companies on the telegraph revenue because, as the practice has always been the same, the comparison between one year and another holds good.

Sir *Julian Goldsmid*—continued.

136. Well, we will come to that in a moment ; you agree with me in wishing the Committee to understand that when you say that there is a loss, it is after you have provided all the money which is necessary for extensions in the year out of the revenue of the year?—That is so.

137. Now, just tell me this, for instance ; last year what was the total amount you spent on extensions?—About twenty thousand pounds.

138. I do not mean only telephone extensions, but telegraph extensions too?—I am afraid I have not got the accounts ; I can only say from memory what it is.

139. Telegraph and telephone, both?—May I explain to the honourable Member that those telephone extensions which are described in the map which the Committee have seen are being carried out out of capital, the capital provided by the Act of 1892.

140. Oh, they are, are they?—Yes.

141. How much was provided by the Act of 1892?—One million pounds.

142. That is being still applied in that way?— We are still drawing on that sum of 1,000,000*l*

143. All the telegraph extensions are charged to income?—That is so ; it appears on the Votes in the same way as salaries.

144. The next point I want to come to is this : will you kindly tell me what is the difference between the wages of the staff of the Post Office, say last year, as compared with 10 years ago?— I can get that information ; I have not got it at present.

145. It is very material, is it not?—Certainly, I quite admit that.

146. There has been an enormous increase, has not there?—There has.

147. Both in the numbers and in the pay?— That is so.

148. I do not wish to quarrel with it, I am merely stating a fact?—Yes.

149. You will kindly give the Committee figures, will you, showing last year, as compared with 10 years ago ; I do not want you to work that out now, but you will put it in later?—Yes.

150. Then, of course, this, too, would go in reduction of the loss upon what you call the telegraph revenue?—Certainly.

151. In addition to that, are there no other causes ; cannot you think of some other causes? —No ; I must say to the honourable Member that I cannot think of any other cause.

152. For instance, you have not known that, in years of great commercial depression, there is a great cessation in the increase of telegraphy, whereas in years of rapid increase of prosperisy, there is a much larger increase?—I think there would be very much in that, but it seems to me that if we look to the affairs of the company that must equally have applied to them.

153. You are speaking of telephones, I am speaking of telegraphs. You gave us figures which applied to the telegraphs as well as telephones?—Yes ; I think I quite understand the honourable Member, but if he would allow me, what I should like to point out is this, that if the commercial depression has affected the telegraphs, it must have affected the telephones ; therefore the comparison between the two holds good, notwithstanding the commercial depression.

154. May

Sir *Julian Goldsmid*—continued.

154. May I point out to you this: of course, in a great many places there was not sufficient trunk lines up to a very short time ago; you tell us you are providing them now,—the consequence was that people could not telephone as they would, in place of telegraphing, because the communication by trunk lines was incomplete?—That is so.

155. Consequently, there might be a very considerable tendency for business people to increase the amount of their telephonic communication and to diminish the amount of their telegraphic communication?—Quite so.

156. And what the Post Office would gain by that would be the net payment which is made by the company to the Department by way of royalty?—That is so.

157. And, as far as it goes, therefore, whatever additional profit the company made would be more or less in proportion to the increased royalty paid to the Department?—That is so; but I am afraid I cannot admit that any increase in the payment of royalty to the Post Office compensates for the loss of telegraphic business between places like Manchester and Liverpool.

158. I want to see if I can convey to your mind, by my questions, this fact: I believe business men very much prefer to communicate by telephone when they can do so rapidly, rather than by telegraph, because they can get their answer at once; what I want to ask you is this: whether you do not think, in common with the American experience, that the tendency to increase communication and facilities for telephonic work naturally causes a decrease in telegraphic work?—I quite agree; that is my position.

159. But that does not mean, of course, as far it goes, that the business is better, or worse; all it means is that the telephonic communication is better?—I am quite prepared to accept it in the way the honourable Member puts it.

Captain *Bagot.*

160. Was there supposed to be a loss or a profit to the Telegraph Department when the sixpenny telegrams were introduced?—Immediately before the sixpenny telegrams were introduced we not only paid our way, but we were within a few pounds of paying interest on capital.

161. After the sixpenny telegrams were introduced there was a loss?—Yes.

162. In what year were they introduced?—They were introduced in October 1885.

163. Then that was just before this loss to the Telegraph Department began, was it not?—I rather purposely took the year 1886 in speaking of the number of inland telegrams, because it was then that we had the lower rate in full operation; I thought a comparison could not fairly be made with the time previous to that.

*Chairman.*

164. But subsequently to the introduction of the sixpenny telegrams, the Telegraph Department has paid, that is to say, there has been a balance of receipts over expenditure for three years, has there not, 1888, 1889, and 1890?—That is so.

Captain *Bagot.*

165. Then you do not take the sixpenny telegrams into account in regard to this deficiency?—If the honourable Member will allow me, I would say I took a period so much in advance of the introduction of the sixpenny telegram as to practically exclude them; when I mentioned the balance of revenue available towards payment of interest I began with the year to the 31st March 1889, and in that year it was 88,000*l.*, then it decreased to 85,000*l.*, then to 68,000*l.*

166. So you think that the deficiency is not in any way due to that, but very largely to the increase of the telephonic communication?—From that time?

167. Yes?—Of course, if the honourable Member went back to the year immediately following, or about the time of, the introduction of the sixpenny telegram, I would at once admit that the introduction of the sixpenny telegrams caused a very great loss of net revenue.

Mr. *Benn.*

168. You described the policy of Mr. Fawcett to the Committee; would it be fair to describe that policy as free trade in telephones?—Yes, I think that correctly describes it.

169. Then may I take it that the present policy of the Post Office is a distinct reversal of that position?—I think I have rather guarded myself against describing policy, or expressing an opinion on policy; I have rather limited myself to expressing my own opinion on the broad question whether competition is for the benefit of the public.

170. Yes, but the Postmaster General asked you a very important question on that matter of policy, so I ventured to put these questions. Now can you point to any period when Parliament authorised the reversal of that policy, or can you point to any document which would show that?—I do not know that I can point to any. I do not know that the question has been directly presented to Parliament.

171. May I ask you whether you regard the Treasury Minute, with which you are familiar, as a reversal, it may be a modification; but would you regard that as a modification of Mr. Fawcett's policy?—It was a reversal clearly in this sense: that the companies who, under Mr. Fawcett's policy, were to have freedom to exercise their operations throughout the United Kingdom were to be limited to areas; and also (now that the honourable Member reminds me) there is a decided expression in that Treasury Minute against the granting of licences to any persons who might apply for them.

172. "Not financially sound," I think that is it?—Yes, I think so.

173. But with the exception of that reservation, may I take it, referring to paragraph 21 of that Minute, that there is nothing in the document which would discourage sound competition?—No; I think it is clear that in that clause possible competition was contemplated.

174. Then the objection to competition and the decision of the Post Office up to the present time to discourage or to refuse municipal authorities licences is a policy which is the outcome rather of the Post Office Department than

Mr. *Benn*—continued.

than of any expression from Parliament?—Well, I think I can answer the honourable Member so far as to say that I am not aware of any expression of Parliament contrary to competition—I am not aware of any expression in Parliament contrary to competition.

175. Then coming to the Heads of Arrangement. When these Heads of Arrangement were entered into it was in full view of competition?—At that point I think there must be some reservation.

176. Why?—Because the Committee which sat on this question in 1892 left the responsibility with the Government of the day to carry out an arrangement with the companies to give effect to the Act. In the course of the negotiations the difficulties connected with competitive companies made themselves very much felt, and I do not think the honourable Member would be right in assuming that when these Heads of Arrangement were signed there was any contemplation of competition.

177. But you remember that the Heads of Arrangement were signed between two companies (two financially sound companies) prepared to compete with each other, and that the tariff of the one company was lower than the other, and the system, I think I may say, certainly better?—I do not know whether the honourable Member wishes me to express an opinion on the relative merits of the systems of these companies.

178. No, I will withdraw that observation; my present point is this: those Heads of Arrangement were made in full view of two companies, and a prospect of competition for the protection of the public?—Well, I think I must say to the honourable Member that neither of these companies would accept the arrangement of the Government until they both of them came to some understanding; therefore, in that understanding, there was something opposed to the idea of competition, although the two separate agreements were signed.

179. True; but the New Company was not absorbed by the National until after a settlement of those Heads of Arrangement?—That is so; but, nevertheless, the arrangement, or rather understanding, was arrived at between these two companies before the Heads of Arrangement were signed.

180. Am I to take it, then, that the Post Office was a party to some secret arrangement whereby, after the signing of those documents, one company was to be absorbed by another?—No, certainly not.

181. Then, is it fair to say that when this document was signed it was in full view of competition between two financially sound companies?—The honourable Member must kindly take the information that I have given him, that the Post Office was aware of an understanding having been arrived at, and that the two companies were not prepared to enter into this arrangement until they had arrived at an understanding.

182. Arrived at an understanding that one was to be absorbed by the other?—I am not prepared to say that it went that length, but I think my reference to an understanding is sufficient to suggest that it was not an understanding under which they would actively compete with each other.

183. If that was so, do not you think that in making an arrangement or agreement in such a case, practically authorising and encouraging a monopoly, it was necessary that this agreement should contain similar provisions to those which obtain with regard to other monopolies where companies, say gas or water?—I would remind the honourable Member that this was not the licence to the companies; they already held their licence for the whole country; what was in contemplation was rather a restriction of that licence. The honourable Member will, perhaps, kindly bear in mind that there was not a clear board on which we could approach people for the first time to make arrangements with them of the kind that he suggests; we were already dealing with people who held licences which gave them the power of carrying on telephone business throughout the whole country.

184. Yes, I am aware that their two licences did not expire until 1911, but I think I may take it from you that, so far as the patents were concerned, they were all at the disposal of anybody who liked to use them?—That is so; they had expired.

185. So that further than holding this licence to carry on their business, they had no advantage over any other competitor?—Except that they held the field.

186. Except that they held the field?—Not merely by their licences, but by their works, by their business.

187. With regard to the two companies in existence at the time of the signing of this agreement, you are aware, of course, that the tariff of the New Telephone Company was lower than the National?—Yes, I am aware of that.

188. You are aware that dissatisfaction with the National was so great that in a very short space of time, notwithstanding the inconvenience of competition, the New succeeded in getting in London a very large number of subscribers?—I am not aware that those subscribers were ever served.

189. No, that may be, because that would involve the completion of the enterprise; but within a very short space of time they secured several thousands, I believe, of subscribers?—I believe that is so; I am also aware that the chairman of the company came to the conclusion that his charges were too low, and that he intended to raise them; he told me so himself.

Sir *Charles Cameron.*

190. Are you aware that the New Company had a contract with the Telephone Users Defence Association (which was published in their prospectus) by which they undertook to supply them with telephonic communication at a given rate?—I believe that is so; and the contract in regard to these particular people would no doubt have had to be carried out. When I say that their chairman came to the conclusion that his rates were too low, of course if he proposed to charge higher rates it could only have been in regard to additional people, people who came on in excess of the number that you refer to.

191. Then

Mr. *Benn.*

191. Then do I understand that if the Post Office had been dealing with a single company, practically a monopoly, they would have offered the same facilities and practically the same agreement as that which was offered to the two companies?—Certainly. It was an offer in restriction of the powers of the company.

192. You have referred to Stockholm, as showing that where two companies exist the municipality does, in some cases, use some effort to make the two companies one?—Yes

193. Can you give the Committee any information about the charges in Stockholm, as compared with the proposed charges of the National Telephone Company?—Yes, I think I can. In Stockholm the charge is 5*l.* 4*s.* a year.

194. £.5 4*s.* a year to each subscriber?—Yes; there are also, I ought to say, some arrangements for a different system of charge based on the number of conversations; but a charge of 5*l.* 4*s.* a year may, I believe, be taken broadly as the charge. In addition to that, the sum of 2*l.* 12*s.* is charged in the first instance towards the cost of construction; that is what I understand is the charge.

Mr. *Snape.*

195. Is that the charge after amalgamation, or before?—I must make a correction; it has just been pointed out to me, that when I spoke of Stockholm before, I ought to have spoken of Christiania; the rates I have just given are in respect to Stockholm (5*l.* 4*s.* a year), but when I spoke before of the two companies (I am sorry I made the mistake), I ought to have spoken of Christiania. It is there that there were two companies which the municipality persuaded to amalgamate.

Mr. *Benn.*

196. And what were the charges there?—4*l.* 3*s.* 4*d.* a year.

Mr. *Snape.*

197. Was that the charge after amalgamation, or before?—I am sorry to say I have not got that information.

Mr. *Benn.*

198. The advantage given under this agreement will, I think, be very considerable to the companies (or rather now the company) concerned?—Certainly.

199. Will it put the company practically on its legs again?—Well, I think I would rather not answer that question of the honourable Member, if the honourable Member will allow me not to do so.

200. Before passing to that, I forgot to ask you a moment or two ago, it is my fault entirely, to compare the prices of Stockholm with the prices of the National Telephone Company?—The charges of the company in the metropolitan area (which covers 630 square miles, and includes places like Dartford, Richmond, Epping, and Hampton Court), are as follows: On a five years' agreement, the first wire 17*l.* a year, additional wires 12*l.* 15*s.* a year, private houses 10*l.* a year.

Mr. *Benn*—continued.

201. Private houses; what would be the nature of that service?—Of course, I am speaking about a business that I am not intimately acquainted with, but I understand that a person, say, living at the West End, and wishing to be connected with a local exchange there, chiefly, probably, for speaking to tradesmen and to his neighbours, will be charged 10*l.* a year; but I understand that while he only pays 10*l.* a year, he can speak to anyone within the whole area for that rate as a private person; not as a business man.

202. Taking the Stockholm figure (which I take to be a business figure) of 5*l.* 4*s.*; can you give us the National Telephone figure, as compared with that?—17*l.*

203. More than three times the amount?—Yes.

Sir *James Fergusson.*

204. To make that complete, can you give us the number of subscribers on the Stockholm Exchange, of which the subscription is 5*l.* 4*s.*?—I am sorry I have not got it for Stockholm, but I can give it for Christiania, in regard to which I mentioned 4*l.* 3*s.* 4*d.*

205. Yes, that will do?—The number of subscribers in Christiania, according to our latest information, is 3,300, out of a population of 152,000.

Sir *Julian Goldsmid.*

206. And the area covered is what?—I am afraid I cannot, myself, answer the honourable Member as to the area in Christiania. It is stated in a Return to be a radius of a mile.

207. Only one mile?—A radius of a mile.

Sir *James Fergusson.*

208. I want to know also what number of subscribers that is compared with; what number of subscribers would be supplied for a subscription of 17*l.* 10*s.* in London?—I am afraid I cannot give that.

209. I ought not to interpose just now, but is the essence of the matter not this, that the expense increases with the number of subscribers?—Enormously. May I make this suggestion: that the Committee might wish at some stage to call representatives of the company to give evidence on these matters.

Mr. *Benn.*

210. I should like, in comparison to these figures at Christiania, to have, if you could give us, similar figures with regard to the number of subscribers in London, and the population, that will be an important comparison?—The number of subscribers in London is 9,000, out of a population of four millions and a quarter.

211. Then the proportion of telephone users in Christiania, as compared with London, is what? It is much greater.

212. The number is very much greater there?—Yes.

Mr. *Snape*

213. Before passing from Christiania, can we have furnished, at a future meeting of the Committee,

Mr. *Snape*—continued.

mittee, the information I asked for a little time ago, as to the number of subscribers in each of the companies before the amalgamation, and the charge made by each of the companies before the amalgamation at Christiania?—I will try and get it, certainly.

Mr. *Benn.*

214. You are aware that London commands one-seventh of the telephone business of the country probably?—I know it is very large; I do not know the exact proportion.

215. Have you any particulars as to how much of the business of London has to do with the trunk wires which are to be taken over by the Post Office?—I do not think that at present the business in London has very much to do with the trunk wires, because the trunk wires supplied by the company have rather been between provincial towns themselves, than between provincial towns and London. The company has provided a line of communication from London through Birmingham to Liverpool and Manchester; that is one of the later lines of communication, and I believe it is considerably used; but in the provinces they have supplied very large numbers of trunk wires between neighbouring towns (as between Manchester and Liverpool), and it is in those directions that the bulk of their trunk wire business lies.

216. Supposing at the present moment the local telephone business of London (which has nothing to do with your trunk wires) is taken as 90 per cent. of the business (I think that is probably a fair figure), and that that could be done at the same rate as at Stockholm, without any reference to your trunk wires, do not you think it is a little hard on London that, for the convenience of this connection of trunk wires, and the proposed arrangement, it should be called upon to pay a tariff of 17*l.* 10*s.* instead of 5*l.* a year for 90 per cent. of the business which concerns London only?—I am absolutely certain that the business could not be done in London at the rate that is charged in Stockholm or Christiania.

217. Let us put it at a higher rate. You are probably aware that one of the reasons why the tariff which you quote is so high is that provision has to be made to pay interest upon what might be described as watered capital, obsolete plant, and other items of that class?—I do not remember having said that. No doubt, of course, you must provide interest on your capital; but I think if the honourable Member went into the expenses he would find that those expenses which had to do with the working of the system, with its maintenance, with the working of the switch-boards, and with the cost of wayleave, and other expenses of that kind—current expenses—I think he would find that those expenses far exceed anything that might have to be provided by way of interest upon capital.

218. But supposing it could be shown, and the citizens of London were prepared to make the experiment, that the telephone business of London could be conducted for, say, half the tariff of the National Telephone Company, what would be your view in that case: do not you think it is a great hardship that they should not

Mr. *Benn*—continued.

be allowed to do it?—I am afraid I am rather being put into the position of an advocate for the company; a position which I do not altogether care to occupy.

219. I think, perhaps, you might answer this point. The Postmaster General asked you this question: whether you did not consider that the acquisition of the trunk wires was a step, an important step I think he said, in the direction of State acquisition of the telephones?—That is so.

220. You have admitted, I think, that this arrangement would very largely improve the property of the telephone company concerned?—I do not think I have admitted that.

221. Do you mean to say you do not think that this arrangement benefits the National Telephone Company?—I certainly do think it benefits the National Telephone Company; in this way, that it enables them to place at the disposal of their subscribers facilities which have not been previously placed at their disposal, and it relieves the National Telephone Company of certain payments, of a certain amount which I have mentioned, which they have hitherto made to the Post Office. I think those are the advantages, as far as I remember them at the moment, which it confers on the National Telephone Company; and it also confers on them certain powers in respect of wayleave which they have not had before. On the other hand, it takes away from the company the power of doing a business which they have hitherto done, the trunk wire business of the country.

*Chairman.*

222. Does it not also enable them to concentrate all their energies and their more or less limited capital upon the development of the telephone system in various areas?—That is so.

223. Which is a great advantage to them and to the public, is it not?—Yes.

Mr. *Benn.*

224. Looking at it in a financial point of view, placing the clerks of the Post Office at the disposal of the telephone company, and the powers of the Post Office over the streets, without troubling the company to come to Parliament for express powers in that direction, and other advantages, do not you think it is an immense advantage to this companies to be placed under this arrangement?—I think it is a decided advantage.

225. You have heard it described as a considerable advantage in the meetings of the companies concerned, have you not; you remember the statement of the chairman of the New Telephone Company, probably, and his description of the vista of profit?—I do not remember that.

226. For instance, I will take your reference to the fact that the companies had lost the power, or would lose the power, over their trunk wires; have you any separate figures showing what the companies made out of their trunk wires?—According to the information I have received from the company, their receipts in respect of trunk wires for the year to the 31st December 1894 were about 76,000*l.*

227. That was for how many years?—For one year.

228. For

Mr. *Benn*—continued.

228. For one year?—For the year ended 31st December 1894.

229. Are you able to place against that item the expenses, the capital charge, and the working expenses?—I believe, in reckoning their capital charge, the value (which, however, naturally, I cannot admit, seeing that I am now engaged with the experts of the Post Office in going into the question) that the company assign to these wires is about 490,000*l.*

230. May I take it that the trunk wire portion of their undertaking is the least profitable?—Well, it would be rather difficult for me to give an opinion without an examination of their books, which I have not had an opportunity of conducting. Of course, I can say very readily that, while as between places like Manchester and Liverpool, I have no doubt the trunk wires are paying very well indeed, I should expect that, perhaps, in some other cases, they do not pay so well.

231. Would you be prepared to say that the companies are very glad to get rid of their trunk wires?—I know that extreme difficulty was encountered in persuading them. I think the right honourable gentleman, the late Postmaster General, will fully support me in that.

232. Admitting that this agreement does benefit the company, and put it in a better financial position, is it not fair to say that when the time comes for purchase, regarding it as a step in the direction of the State acquisition of the telephones, very likely the Government of the day will have to pay a large sum for the repurchase of the facilities which are now given?—I think the honourable Member will see that the question he has now put justifies my reticence, because I think it is one of the last things I should like to admit in such an event as he suggests. May I say, before the honourable Member leaves this question, that in answering a previous question, I omitted to point out this fact,—that any wayleave powers conferred on the company are not to be taken into account on a purchase. If the honourable Member will refer to Clause 17, Sub-section 3, in the print, at page 20, he will see this, "The benefit of the covenants herein contained with reference to the execution of works by the company or by the Postmaster-General for the purposes of the company shall not be deemed to be property of the company for the purpose of such purchase."

233. My point was this, that the powers of the Post Office to invest the company with the same powers was a very great advantage to the company, and gets over one of the great difficulties that they have had to contend with for a very long time, and was a great financial benefit to them?—No doubt.

234. But on this point, might I describe the present policy of the Post Office as a policy which is intended to save the telegraph revenue; the result of which may be, that the public must pay more for its telephone service?—I do not think it can be correctly described in that way; I think it is clear, that under this arrangement, the Post Office is entering into a business which will place additional facilities at the disposal of the public in connection with the local telephone service, and will also place at the disposal of the public the facility of communicating between towns which the company had it not in contemplation to give (as for instance between such distant places as London and Belfast), and that the Post Office is doing this in a way certainly to safeguard its revenue, but not to safeguard the revenue specifically derived from telegrams. Of course, in giving all these facilities, and in providing these trunk wires, no doubt it is providing facilities which will affect the revenue derived from telegrams; but then the revenue derived from these new arrangements will come to the Post Office, and therefore the revenue of the Post Office will be safeguarded, although not the revenue derived from telegrams.

Mr. *Benn*—continued.

235. You are aware that the charges, taking the nearer towns (within a hundred or 150 miles round London, for example), under this new arrangement, are considerably increased, as compared with those which obtained, under the tariff of the National Telephone Company?—I think that there, there is perhaps a little misapprehension. In some cases, as regards towns that are very close together (or fairly close together) the Post Office charge will be higher; but perhaps the honourable Member will allow me to state what the scale of the company is, as compared with the scale of the Post Office. The scale of the company, is 3*d.* for the first 25 miles; 6*d.* for 50 miles; 9*d.* for 75 miles; a shilling for a hundred miles; 1*s.* 6*d.* for 125 miles; 2*s.* for 150 miles; half-a crown for 175 miles, and 3*s.* for 200 miles. Now, in connection with the last charge, I may mention, by way of example, that the company's charge between London and Liverpool is 3*s.*, and the charge of the Post Office will be only half-a-crown. The scale of the Post Office is 3*d.* for any distance not exceeding 20 miles; 6*d.* for any distance not exceeding 40 miles, and 6*d.* for every additional 40 miles.

236. Taking the distances of towns up to 100 miles, (and I think I am fair in assuming that the business done with the nearer towns is considerably more than that done by the more distant towns) would you be prepared to tell the Committee, that the increased charge is not more than 20 per cent.?—If the honourable Member is referring to towns that are reached from London, I think I am able to assert that the Post Office will put towns into communication with London that have not been put into communication hitherto, and that therefore the difference in charge will not appear; the company have only, I think, within that distance hitherto served Brighton and Birmingham, and perhaps a few others.

Sir *Julian Goldsmid.*

237. And Dover?—Well, I am afraid I cannot give that.

Mr. *Benn.*

238. Can you give us a typical example, say Northampton, for instance, to show much extra we shall have to pay?—Yes.

239. Any one will do?—Nottingham is a little too far for the honourable Member's question, is not it?

 240. I prefer

Mr. *Benn*—continued.

240. I prefer the nearer distance?—I can give Folkestone.

241. I will not press this question?—I am sorry I have not got it in the direction the honourable Member suggests; but I happen to have got the kind of information for Edinburgh, and also for Glasgow.

242. Yes, that would show the advantage probably?—No, it does not show an advantage.

243. I thought you meant from London to Glasgow?—No, if it would serve the honourable Member's purpose, I could give him some examples, which would of course apply equally, if I had the information for the south of England, always with the qualification that the companies have done comparatively little in the south of England from London; therefore, the public, when we supply our trunk wires will get an advantage in that way.

244. They will get communication, but at a higher tariff than that which previously obtained?—If the honourable Member will pardon me, the lower tariff would not have obtained in certain cases, because the communication was not there.

245. But still, I suppose it was within the range of possibility that the company might have put it there instead of the Post Office?—True; I find that from Edinburgh to Aberdeen, which is 106 miles, the Post Office charge would be 1*s.* 6*d*, and the company's actual charge is 2*s.*

246. What is the meaning of "actual charge;" has that anything to do with terminals?—No; I, perhaps, emphasised that word too much, but I think I may say that in some cases they do not appear to adhere strictly to their scale; there may be explanations for that which I am not able to give; for instance, if they cross a very wide estuary, or something of that sort, they may consider that they are justified in charging for the additional cost of the cable. Perhaps I ought not to have emphasised the word "actual" so much, but that is what I meant. I find from Edinburgh to Airdrie, which is 31 miles, the company's charge is 6*d.*, and our charge will be 6*d.*; to Alexandria the charge of the company is 9*d.*, and our charge will be 1*s.*; to Alloa both charges are 6*d.*; to Annan their charge is 9*d.*, and our charge is 1*s.*; to Arbroath both charges are 1*s.*; to Bathgate both charges are 3*d.*

247. I do not think I need pursue that?—I can give the honourable Member the average result of the rates between Edinburgh and about 75 towns. The average rates between Edinburgh and 75 towns in Scotland, under the Post Office rate, would be 8·06*d.*, and the average rate under the company's rate is 7·86*d.*

248. That is, of course, rather a misleading figure, because that would very largely depend upon the number of messages?—It is simply the average of rates, aud not the average of the user.

249. That does not help one much, because it would be necessary to take out the total of the rates, and work out the sum total in that way?—Yes, that may be.

Sir *Charles Cameron.*

250. I understood from what you said as to the effect of a secret understanding having been

Sir *Charles Cameron*—continued.

arrived at by the New Telephone Company and the National Telephone Company while they were conducting their negotiations with the Post Office, that you considered that the agreement in some way shut out competition, or that it was intended to shut out competition; is that so?—I should not like to put it quite so strongly as that; I would rather put it as tending against competition, not as shutting it out.

251. What I wish to prove is that it contemplated competition and made provisions for competition?—Yes.

252. And with a view of showing how far you are right or how far you are wrong, would you please read to the Committee the clause from the agreement which we have here, which you will find on page 50, section 8, sub-section 2?—Does the honourable Member wish me to read it?

253. Yes, I want to refer to two or three passages in the agreement which show that competition was contemplated?—"Where a telephonic message is transmitted over the trunk wires of the Postmaster General, between an office on an exchange of the Company and an office on an exchange of some licensee of the Postmaster General other than the Company."

254. That will do; does not that show that competition was contemplated?—I think that shows that the negotiators for the Post Office carefully reserved the right of the Postmaster General to grant licences, which was reserved throughout the whole of the negotiations.

255. Therefore we who get our information regarding the agreement from the agreement itself, must assume that the Post Office conducted the negotiations for that agreement having constantly in view the reservation of competition?—I think the insertion of this provision in the agreement shows that the Post Office was carefully reserving the rights of the Postmaster General. On the other hand I think it shows that the companies feared that the Postmaster General might exercise his rights, and therefore they wanted some protection against the possible competition of rivals. But, Sir, the fact that the companies feared competition, and the fact that the Post Office fully reserved the Postmaster General's rights, cannot affect the other fact that these two companies, before they could be brought to an agreement with the Post Office, actually did come to an understanding, an understanding in my opinion clearly tending to the concentration of the business of two companies in the hands of one.

256. Without entering into that argument, will you please read the Section 18, page 53, of the agreement?—Section 18; shall I read the whole?

257. I will tell you when to stop, when you have read enough for my purpose?—Very well; "Nothing in these presents contained shall prejudice or affect the right of the Postmaster General from time to time to establish, extend, maintain, and work any system or systems of telegraphic communication (whether of a like nature to the aforesaid business of the company or otherwise) in such manner as he shall in his discretion think fit; neither shall anything herein contained prejudice or affect the right of the Postmaster General from time to time to enter into

Sir *Charles Cameron*—continued.

into agreements for or to grant licenses relative to the working and user of telegraphs (whether of a like nature to those worked and used by the company or otherwise) or the transmission of telegrams in any part of the United Kingdom with or to any company person or persons whomsoever upon such terms and whether with or without authority to exercise the powers in Section 5 of the Telegraph Act 1892 referred to as he shall in his discretion think fit."

258. That is all I want; that is a very emphatic reservation of the powers of competition under this agreement, is it not?—That is so.

259. I do not know whether it is your opinion, but it seems to me explicitly to show that, while honourably fulfilling every jot and tittle the arrangement made under this agreement, the Post Office could, if it thought fit, grant competing licenses?—There is no doubt the Post Office could, without any breach of honour or contract, grant additional licenses.

260. Or faith?—Or faith; there is no doubt about that.

261. In fact, I do not want to trouble you to repeat it, but you are aware that it is a fact that the draft licence itself contains a paragraph identical with that which you have now read?—That is so.

262. And that the policy of the Post Office has from the first maintained this right of granting competing licenses where it thought proper?—In speaking of policy, may I say——

263. I am not speaking of policy, I am speaking as to retaining the right?—That is so.

264. Now we will come to the question of policy. In the very interesting and full account you gave of the policies of different Post Office administrations you struck me as rather passing by a notable period, that of Mr. Raikes, in a manner hardly commensurate with its telephonic importance. In that administration you tell us you had an amalgamation between the United Telephone Company, the National Telephone Company and another; and you tell us that that elicited a letter from Mr. Raikes: could you oblige us with a copy of that letter?—Yes.

265. Will you read that letter?—Yes. This was a letter written on the 4th June 1889, and signed by Sir Arthur Blackwood, who was then Secretary: "The General Post Office, 4th June 1889. Sir,—The Postmaster General has had his attention called to the notice issued by the United Telephone Company to its shareholders on the 24th ultimo, and to the course which the telephone companies propose to pursue with a view to an amalgamation. Whether such course can be legally adopted under the terms of the licenses granted by the Post Office is a question on which the Postmaster General does not at present offer an opinion."

266. Yes, and does not admit the legality?—No: "but he desires me to acquaint you, for the information of the directors and shareholders of the United Telephone Company, that the amalgamation of the companies was not contemplated when the licenses were issued, and that any assurances outside the licenses which the companies may conceive themselves to have received from the then Postmaster General cannot be regarded as applicable to the state of things likely to result from the proposed amalgamation. I am, &c. (signed) *S. A. Blackwood.*"

Sir *Charles Cameron*—continued.

267. That is not the utterance I referred to: what I refer to is something much more strong and minatory?—There was a reply to that, and perhaps it is the rejoinder that the honourable Member refers to. As far as I know these are the only two letters that could answer the description.

268. Well, if you can let us have any passages from the rejoinder let us have them. What Mr. Raikes in effect said, was, that he would exercise his ministerial powers to do away with what he considered the injurious policy of amalgamation; that is, injurious to the country, of course?—If the honourable Member wishes it, I can read the further letter.

269. I do not wish to waste time; but you have in the records of the Post Office cuttings of Mr. Raikes' speeches upon postal affairs?—Yes; perhaps something may have been said in a speech in the House of Commons.

270. I do not think it was in the House of Commons; I cannot recollect when it was; but if you could get it and fill it in to your proof I should like to get it on the record?—If the Chairman approves, I can search for such a thing.

*Chairman.*

271. Certainly, I think that will be the best way, and I will communicate with Sir Charles Cameron upon it?—

Sir *Charles Cameron.*

272. We have got Mr. Raikes' policy sufficiently expressed in that letter, and it will be further developed in the "cutting." Mr. Raikes was against amalgamation. Mr. Fawcett also, you told us, was in favour of free trade in telephones?—Yes.

273. You described it in answer to Mr. Benn as free trade in telephones?—Yes, I think that was a correct description.

274. And you have read passages from the agreement entered into by the late Postmaster General, showing that the rights of the Post Office to grant competitive licenses under him also were strictly guarded?—That is so.

275 You have given us your own opinion, and did you tell us that both reason and experience point to the excellence of monopoly and to the disadvantages of competition in telephony?—If the honourable Member will allow me to say so, I do not think I have said anything on the "excellence" of a monopoly in the hands of a private company; what I said was, the inconvenience of competition. While Mr. Fawcett's policy was, I have no doubt, one of free trade, may I say that, as a matter of fact, the companies amongst themselves secured that it should not be one of free trade, because the United Telephone Company arranged that each of its subsidiary companies was to work only within a given province, so to speak, or section of the country.

276. And under the agreement the late Postmaster General provided, and I think very wisely, that licenses should not be given to persons likely to use them for the purpose of sale, did he not?—Yes.

Sir *Charles Cameron*—continued.

277. That is now guarded against?—Yes.

278. And if a new licence were granted that miscarriage would be prevented?—Yes.

279. You mentioned Dundee, for instance, as a place, the experience of which showed that if a cheap telephone company were started it was likely to be bought up by a dearer one, and the latter condition of that town would be worse than the first?—Well, I mentioned the fact of such a case having happened at Dundee.

280. Do you think the fact of there having been competitive companies in Dundee has been any disadvantage to Dundee, even allowing that they have been bought up?—I do not know that I could give an opinion about that. I think the general tendency must be towards an increase of expense, because if one company buys another up I think there must be a certain waste of expenditure in the transaction.

281. Yes, but if the National Telephone Company in Dundee or in Manchester buys up another small competing company in Dundee or in Manchester it can spread its cost over a large district, can it not?—No doubt that is so, but still the expense of that amalgamation must in some way fall on the consumers.

282. Of course, it would be very unfair, if you do not know the facts of the case, to examine you as to the actual results in Dundee or in Manchester; but, assuming that it was proved to you that in consequence of the introduction of competition into Manchester a twin wire system was introduced into Manchester, and cheaper rates than existed before the competition, and that even after the new competitor had been bought up a good deal of the impress of its good work remained, would not you admit that that proved that competition, even as it had hitherto existed, was beneficial?—Well, I should like to safeguard myself again against being the advocate of any company; but really, if the honourable Member will allow me, I must adhere to the opinion that even there (even in Manchester) that must have tended in the long run to an increase of expense to the subscribers.

283. Would you meet me so far as to admit that, if I prove the contrary, that it has actually brought down prices and improved the service in Manchester, your opinion was ill-founded?—If the honourable Member stated that it had brought down prices, I should, of course, accept it without any proof; but I do not think that affects my evidence, which is, that the tendency must be eventually to increase expense.

*Chairman.*

284. May I just put this question, if Sir Charles Cameron will allow me to interpose: if it has that effect in Manchester, would it not have a detrimental effect upon the telephone subscribers in other places?—Exactly; somebody must pay the cost.

285. Somebody outside must pay for the advantages that Manchester has got in that way?—Under the state of affairs suggested by Sir Charles Cameron, certainly. I think I might also say that while persons who entered into agreements at those lower rates are safeguarded during the terms of their agreements, I do not

*Chairman*—continued.

think you will find that the charges in Manchester generally have been reduced.

Sir *Charles Cameron.*

286. That I have no doubt is perfectly true; but the people who started the thing, and who went on the new company, have got a benefit?—Certainly.

287. Now, I will take exactly the same case of the Telephone Users Defence Association, with regard to whom I interpolated a question in the course of Mr. Benn's examination: do you happen to know anything about that Telephone Users Defence Association?—I have a general knowledge of it.

288. It was registered as a limited company, was it not; and the agreement with the new telephone company was, I think, that they should supply telephonic communication to any of its subscribers at a reduced rate?—I think that was so, speaking from memory.

289. Therefore, the number of people to whom the company were bound to supply that telephonic communication was not limited to any extent as regards the numbers of subscribers to the Telephone Users Defence Association?—That was so. Of course, I must again point out that this never came into operation, and we never saw the financial results of it.

290. That is quite true; but if you had prevented the amalgamation of the new company and the National Company, the subscribers to the Defence Association would have been able to compel the New Telephone Company either to implement its bargain or to go into liquidation, would they not?—No doubt.

291. You mentioned that at one time, when Mr. Fawcett introduced his new policy, there was considerable dissatisfaction expressed by questions in the House, and especially by Mr. Dwyer Gray?—Yes.

292. You are aware that that was dissatisfaction expressed on behalf of the telephone companies by Mr. Dwyer Gray as chairman of a telephone company?—Yes, I am fully aware of that.

293. You are aware that it was that?—Yes.

294. There is one point I should like to be perfectly clear on, and that is this: you mentioned to us that as an effect of the agreement the Postmaster General undertakes to confer upon the companies the powers conferred on him by Act of Parliament, and to provide underground wires between exchanges in one and the same area?—Yes.

295. But that, of course, is subject always to the control of the local authority, is it not?—Such wires would not be subject to their veto.

296. That is exactly what I want to make absolutely clear. I understood (and I understood it had been admitted by the Post Office) that no licensee of the Post Office could exercise the absolute powers which the Postmaster General could with regard to underground wires?—That is quite so; it is subject to veto, absolutely.

297. So that no licensee of the Post Office could be provided with underground wires between exchanges in one and the same area?—No; pardon me, that is a different thing.

298. Will you please tell us what the difference is;

Sir *Charles Cameron*—continued.

is; I want to know exactly how it stands, because some of the municipalities consider that it is very important?—The powers which the companies cannot exercise, except subject to veto, are the powers conferred by the Act of 1892; and they can only exercise those powers if they are conferred on them by the Postmaster General; but the provision of connecting wires underground between the exchanges of the company within the same area by the Postmaster General himself, is not an Act carried out by the telephone company, but an act performed by the Postmaster General.

299. And, therefore, by this arrangement on the part of the Post Office, Sub-section (*b*) of Clause 5 of the Telegraph Act of 1892, so far as it provides for the protection of municipalities, is rendered absolutely nugatory?—I do not think the case can be presented in that way, because the provision of such wires by the Post Office was contemplated by the Treasury Minute, and was, therefore, before the Committee, and before the House, when it dealt with the Bill which became that Act.

300. At all events we will get this on the note; will you please read Sub-section (*b*) of Section 5 of the Telegraph Act of 1892?—"Notwithstanding anything in the Telegraph Act 1878, a licensee shall not exercise any powers under the said enactments without the consent in London of the County Council, and in any urban sanitary district outside London of the urban sanitary authority and elsewhere of the County Council, and shall be subject to any terms and conditions which the County Council or urban sanitary authority may attach to any such consent and shall comply with any regulations of such council or authority from time to time in force in relation to telegraphic lines."

301. As you have explained, the Postmaster-General on his own account is entitled to take wayleave, wherever he wants to; he has undertaken, as I understood your description of this, to provide, or to lease his wayleave, so to speak, to the company?—His power is not arbitrary, I may point out; while he is not subject to an absolute veto, he has to obtain the consent of the local authorities, which, however, may not be unreasonably withheld, because he has a power of appeal, and could carry them to appeal.

302. To whom?—To a county court judge in certain cases, and, under this Act, to some other tribunal.

Mr. *Solicitor General.*

303. With an appeal to the Railway Commissioners, is it not?—To the county court judge, or magistrates, as the case may be, with an appeal to the Railway Commissioners.

Sir *Charles Cameron.*

304. There is one point which does not strictly appertain to this inquiry, but it has been imported into it, with regard to sixpenny telegrams. I take rather an interest in sixpenny telegrams. I understood you to say that you had to admit that they were responsible for a considerable portion?—No, I did not say that.

305. I am glad, if I did not rightly understand you?—I was referring to the period just immediately subsequent to their introduction;

Sir *Charles Cameron*—continued.

and I said that at that time they caused a considerable diminution in net revenue.

306. Do you agree with this, that the introduction of sixpenny telegrams caused naturally, an immediate decrease in the revenue?—Yes.

307. But that the increase in the number of telegrams rose so rapidly, that if it had not been for the check received by telephonic communication, things would have been on a sound financial footing by this time?—And certain other unforeseen circumstances.

308. You are aware, that in the report of the Postal Committee of 1875 (I think the Committee that Sir Julian Goldsmid moved for), there was a paragraph stating that the principal objection was, that the cause of the diminution in the Postal Telegraph Revenue was the increased facilities and diminished charges?—There was no reference to telephones, because we knew nothing about them at that time.

309. You mentioned a provision as to wayleaves; you said, I think, that the company was under this agreement, to pay a nominal sum for wayleave, instead of the 20*s.* which they pay at the present time?—Yes.

310. These are not on trunk lines, of course, but on lines within exchange areas?—Yes; they will no longer require to pay outside areas, because we are to have the wires, except in cases where they carry a single wire out for an individual subscriber.

311. Take such a case as this: within the London area you pay a heavy wayleave to railways, do not you; you pay a pound a mile to railways, do not you?—As the honourable Member knows, in many cases we bought up the absolute and exclusive right to wayleaves at the time of the transfer of the Telegraphs to the State.

Sir *Julian Goldsmid.*

312. In most cases?—In most cases.

Sir *Charles Cameron.*

313. In cases where you pay the pound a mile for wayleave, would this agreement cover the arrangement that the telephone company should have it for a shilling a mile?—No; if the honourable Member will allow me to explain; while on the lines in question, the Postmaster General has the exclusive right of erecting his telegraphs, of course the railway is not his property, and therefore he cannot confer a right on anyone else; he only has the exclusive right to exercise it himself; but as he has the exclusive right, no one else can go there without his permission. He does not confer the right (the railway company confers the right), but he must give his permission; therefore, when the telephone company go to a railway company, they have to pay the railway company what the railway company choose to ask; and hitherto, they have not only paid the railway company, but they have paid the Post Office a pound a mile for permission to go to the railway company; now that permission is to be given at a shilling a mile instead of twenty shillings.

314. Do you consider that competing telephone exchanges have worked within single areas; that is so, as a matter of fact, is it not?—That is a fact.

Sir *Charles Cameron*—continued.

315. They were worked in Dundee, they were worked in Manchester, they were worked, I presume, in London, were they not?—I think not, practically.

316. They were intended to be worked?—Yes.

317. There were two or three companies started for that purpose, were there not?—Yes.

318. But they have been worked; and they have been worked, as you said, in Christiania?—Yes, that is so.

319. You mentioned that there would be the inconvenience of the subscribers having to be members of both exchanges; is there anything to prevent terminal charges such as exist, or are supposed to exist, in the case of exchanges separated by trunk lines?—We found by experience that two companies working together in the same area were bent on competition in the sense of each one endeavouring to exclude the other, and therefore they have never approached each other or been willing to work together.

320. Are there many people on the London Telephone Company who have a large number of independent telephones because of the difficulties they experience in getting through the exchanges; stockbrokers, for instance?—I am afraid I cannot give particulars.

321. Have you many postal subscribers, for instance, who are members?—We have a good many cases of people who have wires between their offices in the City and, say, their offices or their works on the banks of the river. That is an example.

322. Have you many private telephone wires in London?—Of that kind, yes; we have a fair number.

323. Could you give us any idea of the number?—I am sorry I cannot give you an idea.

324. Or the charges?—The charges are stated in the Post Office Guide. What we charge in London for double wires with telephones are these rates, 9*l.* a mile "over house" or "underground" for the wire, or 7*l.* a mile on roads; and then we charge in addition to that 2*l.* 10*s.* for each telephone.

325. You have no exchanges, of course?—In London, no.

326. I understood you to say that you have an exchange at Newcastle. You mentioned two or three towns?—I mentioned Cardiff, and Newport, and Newcastle.

327. Have you got these exchanges still?—Yes.

328. And you have the National Telephone Company there to?—That is so.

329. So that you have this system of competing exchanges there?—That is so.

330. Have you any means of interchange communication between them?—No.

331. There is no physical difficulty in interchange communication, is there?—None.

332. But the National Telephone Company surely could not have hoped to swallow up the Post Office?—I am afraid, if you take evidence from the National Telephone Company, they will be able to show you that they do in many cases practically kill our telephone business.

333. You had the start of them, had not you?—In certain cases.

Sir *Charles Cameron*—continued.

334. But the Post Office, as a matter of fact, has never been very keen about telephone exchanges?—Speaking for myself, I have been extremely keen.

335. Then how was it that, with a start, you practically admit that you have been beaten out of the field in those towns?—Well, I am afraid I must say that the Post Office was not allowed by its financial masters to pursue the same course as was pursued by the companies.

336. What are your charges; have you got your charges in Newcastle as compared with those of the company?—Our charges in Newcastle for the telephone exchanges are (this is for double wires) 8*l.* a-year, within a quarter of a mile of the exchange; 10*l.* within half-a-mile; 12*l.* within three-quarters of a mile, and 14*l.* within a mile.

337. And what are the company's charges?—Uniformly, within a mile, 10*l.*

338. If you had not those "financial masters" (I presume you refer to the Treasury, who are always the bugbear of every department), you would probably adopt at least, the same charge as the company?—Well, I am not quite sure, because in Newcastle there are, as you are aware, an immense number of business people within a quarter of a mile of the exchange; they are crowded together on the quay side; and under that scale of charges, providing for a difference between each quarter of a mile, we serve an immense number of people at a charge of 8*l.* a year, which is lower than the uniform charge of the company.

339. Then what you would probably do, I suppose, would be to keep on the 8*l.* minimum, and have the 10*l.* maximum?—I think, if the honourable Member will allow me, I could explain that there is some reason for it. I do not say that we might eventually adhere to this charge, but there is some reason for it.

340. Will you state what the reason is?—To take the case of Newcastle. You carry down main lines of communication from your central office into the heart of the business part of the city; it is a wholesale business; the wires are carried down there in pipes in large numbers, and these wires, to a large extent, if given up by one subscriber, are readily taken up by another. They go along the business quarter of the town; then they are carried by short spurs into the offices, and if one man gives up his wire, the probability is that that very same wire, minus the little connecting bit, is taken by another; therefore, taking into account the wholesale nature of the work, and also the fact that it is largely a permanent plant, you can afford to do these short distances for less than you can a long distance. Now when you get out to the outskirts of the town, you have sometimes to carry a wire independently, not along with others; and therefore, if you adopt the plan of the differential rate, you justify to yourselves, on financial grounds, the higher charge for these outlying wires.

341. I presume your opinion is that if you had been allowed a free hand with the telephone business in towns when you started your exchange, you would have held your own against all comers?—I should certainly have tried my level best to do it.

342. I suppose

Sir *Charles Cameron*—continued.

342. I suppose you do not admit that you would have been beaten?—No, I do not admit it.

343. At all events, we have got over one point, that is, that there is no physical difficulty as to the working of two exchanges in the one area?—No, there is no physical difficulty in combining the two.

344. You work in Newcastle and you have a company working alongside of you, and you do not combine owing to some "cussedness," I suppose, on the part of the one party or the other (but you could combine), and you do work there?—We do work there side by side.

Sir *James Fergusson.*

345. I will ask you one or two questions upon this, as some questions have been put a little beyond the Order of Reference. I would like to ask you, first, whether the facilities the Post Office conferred free of charge were intended to act as feeders to postal and telegraphic business, as set forth in paragraph 7 of the Treasury Minute?—Certainly.

346. That was the consideration for which the free entry was given, was it not?—On the one hand it was held that if the company's subscribers could communicate with the Post Office there would be an access of Post Office business; on the other hand it was held that the facility did improve the position of the company in enabling them to serve their subscribers better.

347. And you anticipate that this and other facilities given under the agreement will improve the telephone service in local areas?—Quite so.

348. But until the agreement comes into force there can be no great improvement?—That is so.

349. Then I would like to ask you this: was not the attitude of the Post Office in framing the scheme on which the agreement was founded this: that competition within the same area was *primâ facie* undesirable, but that the fullest power must be retained to grant new licenses or to open Post Office exchanges?—That is so.

350. Then I will ask you this: was the provision in Clause 8, Sub-section 2, of the agreement, that is to say, regarding the exchange of messages from one company to another, introduced to meet the objection of the companies that a license to a new or local licensee would enable an exchange with a small capital to benefit by the great expenditure of a larger company?—That is so.

351. And we met that, did not we, by saying, "But you shall have consideration for it"?—That is so.

Mr. *Solicitor General.*

352. You were asked by Mr. Benn some questions with regard to the relative rates at Stockholm and London?—Yes.

353. Now, from your experience, can any useful comparison be made between those two areas?—My personal opinion is, that a useful comparison cannot be made.

354. What are the elements that differ in either case, which lead you to give that answer?—Well, some of them, I think, are these: in Stockholm there is much greater facility of wayleave, materials are cheaper, the services of the operators are cheaper, and, generally, the operations of the companies are facilitated in every way; whereas in London the difficulties of construction are very great over houses, and the difficulties with regard to obtaining wayleave are very great, involving the company in expense, both the material and labour are more expensive, and the area covered is immensely greater, and the service rendered, therefore, is also greater.

Mr. *Solicitor General*—continued.

355. I see in a document that has been put before us it is stated that the area in London is 630 square miles; that is the metropolitan area?—Yes.

356. I do not know whether you know what the Stockholm area is; do you know that?—I am told that it is the municipal borough of Stockholm, whereas the London area includes a very much larger area.

Sir *Julian Goldsmid.*

357. It is 10 square miles, is it not, as against the 630?—I gave a radius of a mile.

Mr. *Solicitor General.*

358. You did not give us, I think, any figures indicating the extent of this municipal Stockholm area?—Except that I understood that it was within an area of a mile; but, perhaps, I ought to get some further information upon that.

359. You have been asked by Sir Charles Cameron some questions as to your experence of competing exchanges; he gave you as example of competing exchanges Dundee and Manchester; do you know what the result of competition in those cases was?—I know that in both cases there has been absorption, and an end of competition.

Mr. *Snape.*

360. In both cases the cheaper company was absorbed by the telephone company?—That is so.

*Chairman.*

361. One or two questions I want to ask about the effect of the telephone service upon the telegraph revenue; is it, in your opinion, due to the fact that the telephone service takes away the most remunerative part, or affects mostly the most remunerative part, of the telegraph revenue?—That is so.

362. Then you were asked about telegraph extensions being charged to revenue, and not to capital; that was the case at both the periods that you took for comparison, was it not?—That was so.

363. And therefore did not affect the value of the comparison, as indicating a serious falling off in the telegraph revenue?—I think not.

364. You were asked (I think by Mr. Benn) whether Parliamentary sanction had ever been given to a change in the policy of the Department, the policy having been favourable, rather than otherwise, to competition; Parliamentary sanction had never been given, had it, in any form, so far as you are aware, to the policy of competition?—No. Of course, I suppose it might be argued that Parliament acquiesced in

*Chairman*—continued.

the policy that was announced in Mr. Fawcett's speech, but there was no direct Parliamentary sanction.

365. No direct Parliamentary sanction?—None.

366. And the change which has taken place in the policy of the department has been the result of increased experience gained, not only in the working of the system in this country, but also of experiences gained from the telephone systems in foreign countries?—That is so.

Mr. *Tully.*

367. With regard to the difference in the price between London and Stockholm, has not the National Company had to increase their capital (to water their capital), to bring about all those absorptions of the other companies; and to pay a dividend on that large capital, have not they had to increase their price in London?—No doubt, the capital of the National Telephone Company is very large.

368. Have not they had to increase their capital in order to absorb the smaller companies?—Their capital was increased at several of those amalgamations; that is so.

*Chairman.*

369. With reference to that last question, is not the reasonableness of the charge rather dependent upon the service which is given?—Yes.

370. And is it not the case, therefore, that in a large area a large number of subscribers to a telephonic exchange with a large number of people, not only causes greater expense, but justifies an increased charge?—Yes, I think it does it, in two ways; the larger area not only requires a greater expenditure on plant, because the plant extends more widely, but it also brings into communication with each other a very much larger number of people, and the increase of cost in putting a large number of people in communication is not proportionate at all; that is to say, if you had a thousand subscribers who required to be put through to each other, each of these thousand persons could only possibly communicate with 999, whereas, if you put into communication on an exchange system 10,000 people, each of those subscribers could possibly speak to 9,999; and therefore, the more you increase your exchange the more you increase (and immensely so) the number of communications that each subscriber can make, or wishes to make, and so you increase enormously your cost at your central office (or your central offices if you have more than one), of putting these people into communication with each other.

Mr. *Snape.*

371. But taking that illustration, in the first case you only have a thousand persons contributing to the revenue of the Telephone Company; in

Mr. *Snape*—continued.

the second case you have 10,000 persons; so that, if there is increased expense, you have another 9,000 subscriptions towards it?—That is so. And of course the increase with regard to maintenance of wires and apparatus may be proportionate; but what I was speaking of was the cost of working the exchange in putting the subscribers into communication with each other. Now the increase there is much more than proportionate to the increase in the number of subscribers. If you have a thousand people on these wires, of course you have the expense of a thousand wires; and if you have ten thousand it may increase the expense of the wires only ten times. No doubt, it is proportionate there largely, but when you are dealing with the work that is done on the system, you are dealing with the possibility of putting each one of those persons, in turn, into communication with 9,999 people, that is to say, in a given day one of these subscribers on the larger system could ask the company to put him into communication in succession with 9,999 people, whereas on the smaller system he could only possibly ask them to put him into communication with 999.

372. That is so; but the possibility of his doing it is not probable, and I presume the provision of working arrangements would be according to the law of averages and not according to possibilities?—I have put it in the extreme case, because the extreme is the only figure known to me; but the average follows exactly the same law.

Sir *James Fergusson.*

373. You can give a case, cannot you; do you know what the rate of subscription is at Chicago in the case of a switch board with 10,000 subscribers?—In Chicago the charge is 36*l.* a-year, and in New York it is 50*l.*

Mr. *Tully.*

374. Are not materials much dearer in America than in this country?—I am not aware that they are; I should say that probably the services of operators were more expensive. With regard to materials, we have had the offer of some materials here on rather favourable terms from America.

Sir *Charles Cameron.*

375. I want to ask whether you can give us the number of subscribers to Post Office exchanges in Newcastle and other large towns where the Post Office has exchanges; you need not do that now, but you can do it?—I can give it to you at once.

*Chairman.*

376. Put it in the evidence when you get your proof; and perhaps you will also fill in with the number of Post Office subscribers the number of the National Telephone subscribers?—Alongside; yes.

Sir ROBERT HUNTER, called in; and Examined.

*Chairman.*

377. You are the solicitor to the Post Office are you not?—I am.

378. I do not propose to ask you any questions, but there may be points arising as to the agreement which Members of the Committee may wish to put to you?—Certainly.

Sir *Julian Goldsmid.*

379. I understand you have gone into all the legal aspects of these different clauses?—Yes, I have.

380. Clause 12 provides: that "the Postmaster General will, in any case, so far as it is practicable so to do (but not otherwise), at the request of the company, and upon such terms as may from time to time be agreed upon between the Postmaster General and the company, connect by means of underground wires any two or more exchanges." Can you tell me whether the intention of that clause was to provide for cases such as Glasgow, which requires, I understand, to have underground communication between the local exchanges?—I do not know that Glasgow was specially in contemplation, but it was contemplated all through the arrangements in 1892, that the Postmaster General should assist the companies in connecting exchanges, as distinguished from giving them powers themselves to lay down or erect wires. You will find a paragraph about it in the Treasury Minute.

381. The reason for that would be obvious, would it not; that they might not interfere with the local authority in any way?—Quite so; we might have pipes there already, and we might put their wires in our pipes.

382. The Postmaster General would also be able to make arrrangements with the local authority, and might simply instruct either the municipality or the company (as was agreed), to carry out the work?—We should carry out the work under our way-leave powers.

383. Then if Glasgow, for instance, desired to have improved underground communication, it would be the Post Office that would have to carry it into effect?—It could be done in either one of two ways; either the company could exercise their powers with the consent of the Corporation, or, in the case of connecting two exchanges (the clause does not go beyond that), we could, where we found it practicable, exercise our powers.

384. That applies to the exchanges?—Yes.

385. If it were desired by the Corporation of Glasgow that they should have improved communication, otherwise than between two exchanges, they would have to arrange it with the telephone company?—Yes.

386. One of their conditions might be, for instance, that they should do the work?—There is a technical difficulty about that. I do not know that a corporation has, strictly, any right to take up its own streets except under statutory powers.

387. Is there that difficulty?—Technically, I take it, any interference with a street is an indictable obstruction of the highway, unless they have statutory powers.

Sir *Julian Goldsmid*—continued.

388. To take up their own streets?—Yes.

389. But so far as it goes, you intended this clause to cover the more important of the two matters, namely, connection with exchange?—Yes.

*Chairman.*

390. It is confined entirely to connection with exchanges?—Yes, it is.

391. In the case of Manchester, I think the Corporation of Manchester have come to terms with the National Telephone Company, by which the Corporation do the work and the National Company pay them?—I have seen an agreement of that kind.

Sir *Charles Cameron.*

392. Have they any statutory powers?—I do not think they have any statutory powers to put down wires for telegraphic purposes.

Sir *Julian Goldsmid.*

393. Then the wire would be put down probably by the National Company during the time the Corporation was doing local works?—At the time that agreement was made the National Company had not any powers of way-leave. After the agreement with the Post Office is made no doubt the matter would be arranged in that way; the National Company would exercise their powers with the consent of the Corporation.

Sir *Charles Cameron.*

394. Then, about the validity of this Sub-section (b), of Section 5 of the Telegraph Act: the corporation by this method (by the Postmaster General conferring his powers upon the telephone company), would lose its rights of control altogether?—So far as the connection of exchanges goes; but that would not enable the telephone companies to connect their exchanges with subscribers.

395. Then what would be the effect, so far as overhead way-leaves are concerned, crossing streets, and so on?—There they depend on their own powers.

396. And the Postmaster General cannot give them powers?—Yes, he can; we give them the same powers that we have ourselves.

397. You have powers, have you?—The power consists (speaking shortly) in a right of crossing the street, with the consent of the road authority; or, if they withhold their consent, then we have an appeal to a stipendiary magistrate or a county court judge, with further appeal to the Railway Commission.

398. I see you have in your definition clause, a definition showing the application of the Act to Scotland, but you do not give any equivalent for the county court judge?—I think there is an equivalent in the Act of 1878.

399. Is the Act of 1878 read with this Act?—Yes it is; I think it is the sheriff in Scotland. It is in Section 4 of the Telegraph Act, 1878. In Scotland it is an appeal to the sheriff, with further appeal to the Railway Commission.

Sir *Charles Cameron*—continued.

400. On points of law I suppose, there is absolutely nothing in this agreement which can be held to restrict or limit in any way the power of the Postmaster General to grant competing licenses as he may think proper?—Certainly not.

401. Except that he undertakes not to grant them to private individuals without the consent of the municipality?—He does not even undertake that in the Agreement. That is merely a statement in the Treasury Minute of the view that commended itself to the Government of that day; but it is expressly guarded in the succeeding paragraph of the Treasury Minute.

402. So that in the case of the agreement even that restriction is not laid down?—Certainly not.

403. But that is a restriction, I suppose, which would commend itself to anyone, and one that the Post Office would be likely to act upon?—That was the view at the time the Treasury Minute was drawn up.

404. Was it the view of the Treasury, or the view of the Post Office?—I do not know that I am competent to speak upon that; you will find it in the Treasury Minute, as laid on the Table of the House.

Mr. *Snape.*

405. As the Agreement gives full and free power to issue licenses to companies and municipalities; does it also reserve power to the Department to establish in localities a telegraphic exchange?—Yes, absolutely.

406. The Post Office itself could enter into

Mr. *Snape*—continued.

competition with any existing or proposed company?—Oh, yes, certainly; Article 18 is the article that shows that.

Mr. *Tully.*

407. I do not know whether I should be in order in asking this question or not, but I should like to know this for my own information; at the time this draft agreement was drawn up there were these two companies in existence; does that affect the binding nature of the agreement at present?—As a matter of law, there is an agreement with each of the companies. As a matter of fact and of law, if I may say so, there was laid on the Table of the House an agreement with each of these two companies, and we are going to enter into an agreement with each of these two companies, the "National" and the "New."

408. Have they been amalgamated?—They are not technically amalgamated; technically they are still two companies, and we are going to enter into agreement with the two companies.

409. The agreement contemplates the old time, when they were dealing with a state of competition, and not a state of monopoly?—That does not affect the legal position.

Mr. *Snape.*

410. In answer to my question just now you referred me to Section 18 of the Agreement; but looking at that section I find that it exclusively applies to "telegraph," and makes no reference to "telephone"?—"Telephone" is included in "telegraph"; it is only one kind of "telegraph."

*Friday, 29th March* 1895.

MEMBERS PRESENT:

Captain Bagot.
Mr. Baird.
Mr. Benn.
Sir Charles Cameron.
Mr. John Ellis.
Sir James Fergusson.
Sir Julian Goldsmid.
Mr. Arnold Morley.
Mr. Moulton.
Mr. Snape.
Mr. Tully.

THE RIGHT HONOURABLE ARNOLD MORLEY, IN THE CHAIR.

BAILIE SAMUEL CHISHOLM, called in; and Examined.

Sir *Charles Cameron.*

411. YOU have been in business in Glasgow for many years, have you not?—I have.

412. And you are at present, and have been for the last seven years, a member of the Glasgow Town Council?—That is so.

413. You are also a magistrate of the City, and a Justice of the Peace of the County of the City?—I am.

414. The Town Council of Glasgow, I understand, on the 6th April 1893, appointed a special committee to consider and report on a motion that had been brought forward by a member of the Council?—That is so.

415. Will you please read the motion; give us the terms of the motion?—The motion was: "That in terms of Treasury Minute of 23rd May 1892, the Corporation, as a local authority, resolved to apply to the Postmaster General for a licence to supply the community with an efficient telephone service."

416. And you were appointed a member of that committee?—I was appointed a member of that committee.

417. And since then you have taken an active part in the discussions?—Yes; I have taken a considerable interest in the matter.

418. Will you tell us what was the result of the deliberations of this committee?—The committee resolved to recommend the Council to apply to the Postmaster General in terms of the Treasury Minute, for a licence to supply the community with telephone service.

419. And was the licence applied for?—The licence was applied for.

420. On what date?—On the 12th August 1893.

421. What was the wording of the application for the licence; will you please just give us the wording of the application?—"To empower the Lord Provost, Magistrates, and Council, to establish a telephone exchange service within the City and Royal Burgh of Glasgow."

422. You have not received any definite reply to the application since, have you?—We have not received an affirmative reply since.

423. And you have from time to time made further representations to the Post Office, I think, on the subject?—Yes; we have applied in writing and by interviews, to the Postmaster General.

Sir *Charles Cameron*—continued.

424. Now will you please explain to the Committee the considerations which influenced the Corporation of Glasgow, in taking the step which they have done in applying for the licence?—The primary reason was the very unsatisfactory nature of the service which the National Telephone Company gave to the citizens.

425. Before we go on from that point you are prepared to state that the service in Glasgow is very unsatisfactory, are you not?—Yes, I am prepared to state that.

426. Can you give any examples of the extent to which dissatisfaction has been expressed?—Well, in conference with subscribers one hears continually complaints about the difficulty of getting connection.

Sir *Julian Goldsmid.*

427. Is it not a Scotchman's privilege (like an Englishman's) to complain?—We are pretty like one another; there is a good deal of human nature in Scotsmen.

Sir *Charles Cameron.*

428. In one of your interviews with the Postmaster General you referred to a case where some subscriber had been so dissatisfied with the service that he had taken violent measures, I think, to remove it?—Yes. There was a friend of my own, a member of the Corporation of Glasgow, who was so dissatisfied with the continual impossibility of getting connection, or with the interruptions he found when he had got the connection, that after putting up with it for a long time he became so provoked that he just smashed the whole thing down and threw it out. I mentioned that, I may say, to the Postmaster General, and when I got home from London I found a letter from another friend who fancied I had been referring to him (it was not him to whom I had been referring), and he said I had not quite accurately described the method in which

Sir *Charles Cameron*—continued.

which he had got rid of it; but he had done something of the same kind; he had taken it down and allowed it to lie, and had written to the Company to come and take it away.

429. That incident, which occurred with you personally, in the shape of this letter, I suppose, impresses you with the idea that such instances as you quoted to the Postmaster General were not solitary?—They are not solitary by any means.

430. What are the chief complaints that the Glasgow citizens or telephone users make about the telephone service?—I have already referred to the difficulty they have frequently in getting into communication with the parties with whom they wish to correspond. Then frequent interruptions take place while they are in the midst of a conversation. Sometimes they discover (I have discovered myself, and I have heard of many others who have discovered) that while they are speaking with, it may be a client, they are being overheard by a third party; it may be a party in the same line of business as one or other of us, an interested party therefore in the subject of our conversation; and these and such like things are the sources of that dissatisfaction and irritation which prevail to a large extent in Glasgow.

431. You attribute the delay you experience to defective exchange arrangements?—Yes.

432. And the interrupted conversations, or rather the mixed conversations, and the noises to the single wire system being used instead of the double?—We believe that to be the occasion of it.

433. And you believe there is only one way of getting rid of the latter drawback to telephonic communication; that is by the twin wire system?—We understand so.

434. Do you think there is any chance, or any great chance, of the National Telephone Company introducing a twin wire system into Glasgow?—We really scarcely expect that they will introduce it.

435. What are the grounds for your belief?—Well, they could not introduce the twin wire system without requiring, practically, to obtain something like the control of our public streets. That is one important reason. It is impossible that this system can be carried out without their having a right of access whenever it suits them, or whenever they desire it, to our streets; and that is a thing in regard to which the Corporation of Glasgow feels very strongly.

436. And which the Corporation would resist to the uttermost?—I am satisfied that they would.

437. The Corporation have, at great expense, acquired the control of the streets, have they not?—The Corporation have done a very great deal to show how determined they are that no private company shall have a right to control or to access to their streets. They have bought over, at a large expense, the water undertakings of the companies which existed prior to the municipality taking them over, and the gas companies. They have taken the electric lighting into their own hands, although the use of it is confined to a comparatively small number, and latterly they have taken over the tramway system

Sir *Charles Cameron*—continued.

of the City; and in all those cases they were very largely influenced by the consideration to which I have referred.

438. In connection with the tramway system, it has been under consideration to use electric traction, has it not?—That has been under consideration.

439. I shall not examine you minutely on the point, but it has been found that the telephone companies objected to electric traction being used, on the ground that it would interfere with the underground wires, and so on?—That is so; they object to that.

440. You believe that serious difficulties would result were underground way-leaves granted to a private company like the National Telephone Company?—Great complications would necessarily arise.

441. In fact, you find complications arising, do not you, between the different departments of the City. Will you please explain to what extent you find that to be the case?—Well, the operations of the gas and the water, and the tramway, and the electric lighting, are under the charge of separate committees, and they require to consult and confer with one another in order to prevent each of them running at separate times, and keeping the streets in a continual turmoil.

442. And without that conference and co-operation, and identity of interest, that would be impossible?—That would be impossible.

443. Do you think that in a large community like Glasgow, where so many things involving the control of the streets, namely, sewers, tramways, water pipes, electrical culverts, and gas, are all in the hands of the Corporation, any other thing requiring control of the streets should be in the same?—Yes, we are satisfied on that point.

444. And you believe that the twin wire system cannot be introduced without that right which you have acquired, and paid so much money to acquire, being encroached upon?—We are led to understand that.

445. But independently of that you think there is a difficulty, so far as the capital of a private company is concerned?—Yes, we see difficulty in that direction also in regard to the possibility of having the twin wire system introduced.

446. The National Telephone Company is very heavily capitalised, and that has prevented it from lowering its charges, has it not?—Yes, that is our belief.

447. You, on the other hand, could raise money very cheaply?—Very cheaply, and we require to pay no dividend, no profit.

448. And you could afford to work the telephones, practically, at cost price?—Yes, we could.

449. Would you please tell us what the subscription for the telephone in Glasgow at present is?—At present the subscription is 10*l*.

450. You consider that that is a much larger charge than is conducive to the full use of the telephone, do you not?—Oh, yes; we feel satisfied that if it were reduced to a more moderate amount the telephone would be brought within the reach of the ordinary citizen, the shopkeeper, who

Sir *Charles Cameron*—continued.

who feels the present amount practically prohibitory.

451. The charge has not always been 10*l.*; it was formerly considerably dearer, was it not?—It was formerly 20*l.*

452. About 10 years ago it was 20*l.*?—Yes, 10 years ago it was 20*l.*

453. Can you give the Committee what would at that time be the number of subscribers in Glasgow?—A little over a thousand.

454. I believe the reduction was in consequence of competition?—Threatened competition.

455. And since the reduction, within the 10 years, the number of telephone subscribers has largely increased?—Largely increased.

456. It now amounts to 3,000, does it not?—Three thousand.

457. That is to say, it has increased about threefold since the charge was reduced?—About threefold.

458. The rental has increased as a matter of arithmetical calculation simply?—Yes.

459. And, consequently, the amount of percentage which is paid to the Post Office has increased also?—It must, necessarily, have been so.

460. Now the Telephone Company, as you say, has to keep up rates which will enable it to pay dividend and interest on its money?—Precisely.

461. And you say that a large amount of that capital represents really intangible goodwills of bought-up licensees?—To a very large extent.

462. Your committee has taken evidence as to Continental experience, has it not?—It has.

463. I shall not ask you, particularly, as to that; but you have found, generally speaking, that in a number of Continental countries, and notably in Norway, Sweden, and Switzerland, very much smaller charges prevail?—Yes. In a report presented to the Council by the committee it is noted that Stockholm, with its population of 228,000, has upwards of 8,000 users, while Glasgow, with a population of 815,000 (that includes the suburbs), has not more than 3,500. The 3,000 I referred to was within the city; the 500 includes the suburbs, there being one subscriber to every 27 inhabitants of Stockholm, where there is only one to every 230 in Glasgow.

464. Your committee went into the matter so far that they got some estimates upon the subject?—Yes. This report which the committee presented also states that "reliable estimates in detail have been prepared showing that for a capital of about 15*l.* per user, the latest and best system can be laid down in Glasgow within the municipal radius. On this basis a thoroughly efficient service could be given at an annual charge of about 5*l.* per user, or possibly less."

465. You are aware of the agreement which has been entered into between the Post Office and the Telephone Companies?—Yes.

466. You are aware that it is admitted that that agreement does not prejudice the case for granting licences to Municipalities?—Oh, no; the rights of the Postmaster General are expressly reserved.

467. And you have no objection to the agree-

Sir *Charles Cameron*—continued.

ment, and do not come here to say a word against it?—I am giving no evidence about the agreement whatever.

468. But what you want is to make a protest in favour of your rights; that is to say, of the rights reserved under that agreement?—Yes.

469. Pending the negotiations that have taken place since your application, you have had no definite refusal of a licence, have you?—Well, I am afraid we regarded Mr. Morley's last answer as very nearly a refusal.

470. What date was that, and what was the effect of it?—The date was 11th February 1895, and at the close of that interview I am reported to have said to Mr. Morley: "I understand you have not said 'no;'" to which Mr. Morley replied, "I have said I cannot grant it just now; I have indicated my own opinion with as much courtesy as I can."

471. Surely a Glasgow Scot would not take that for a definite refusal?—No.

472. But what I meant was this: You have had in the course of these negotiations, from the date of your application, no official communication to the Corporation from the Post Office, stating that the application could not be entertained?—No, we have not.

473. In fact, you have not had the smallest evidence that there was officially any change in the previous policy of the Post Office?—We have not.

474. You mention on your notes certain statements of my right honourable friend, Sir James Fergusson (ex-Postmaster General), who spoke words which led the Municipality to believe that there was no intention of refusing them the licence?—Yes; both Sir James Fergusson and (notably) Mr. Goschen spoke words which led us to believe that.

475. You have got on your notes here certain quotations from speeches by Sir James Fergusson and Mr. Goschen which, in your opinion, and the opinion of the Telephone Committee, were calculated to encourage them in the belief that the Post Office was not about to adopt a policy hostile to competition, and granting licences to Municipalities?—Yes; statements made in the House of Commons led us to believe that.

476. Just read them?—Sir James Fergusson said in the House of Commons on the 22nd March 1892 (it is 1893, I see, in the manuscript, but it should be 1892): "When the local authorities are certain that a Telephone Exchange is desirable in their area, and the Government is satisfied that the licensees are in a position to carry out the undertaking, that it is in the public interest that they should have a licence, then it will be granted," and Mr. Goschen said on the 29th of the same month, "My right honourable friend" (referring to Sir James Fergusson) "has explained how the trunk lines will be taken in hand by the Government, leaving to the localities the working of the local exchanges. If this is done I believe the public will be better served than if the Government take over the whole business, because there would be competition in the localities to serve the public as well as it can be served." Then he says, "It has been suggested during the course of this discussion that the local authorities might be willing

Sir *Charles Cameron*—continued.

to undertake the telephone business themselves. I see nothing" (says Mr. Goschen) "contrary to the Government policy in such a proposal."

477. The local authorities in Glasgow are, in Sir James Fergusson's words, "certain that a Telephone Exchange is desirable in their area"?—Yes.

478. And there can be no reasonable doubt that they are in a position to carry out the undertaking if granted to them?—I think we can satisfy the House of Commons upon that point.

479. The Corporation of Glasgow are great telephone users, are they not?—We are.

480. Will you please state to the Committee the amount of rental you pay for telephones used by the Corporation?—Over 1,600*l.* per annum the Corporation pays as an individual subscriber to the Telephone Exchange.

481. The Corporation is therefore a very large telephone subscriber, and its members are in a position thoroughly to understand the drawbacks and defects of the system?—Yes, they are. I have a map with me of the lines which the city use as a Corporation; if it is at all desirable I can hand it in.

482. Let Mr. Beveridge hand it to us. (*The map was handed in.*) The Corporation of Glasgow, I believe, are inclined to be perfectly reasonable in their demands if the licence were granted them?—Yes, we are disposed to meet the Government in every way we can.

483. The Corporation, I believe, are in favour of the Post Office taking over the whole thing as "a pious opinion"?—I have no doubt they would be if that were to be done just now.

484. But you are prepared to say that the Telephone Committee of Glasgow are quite ready to recommend the acceptance of a licence terminating at the same date as the licence of the Telephone Company?—We are; and terminating at an earlier date if, prior to this, the Government resolve to take the exchanges into their own hands.

485. But you would be prepared to get up a first-class service in Glasgow and would enter into an agreement with the Post Office to hand it over, if required, on the most reasonable terms and without any object of more than covering your outlay in it?—Precisely.

486. Do the company pay any wayleaves to the Corporation?—Oh, no.

487. So that they get your 1,600*l.* subscription for telephones, and do not pay you anything for the rights that you allow them of crossing your streets, and so forth?—No.

488. And fixing their wires on your buildings?—No.

489. Mr. Morley wishes me to ask you how the 1,600*l.* is made up; whether it is for wires between your various offices, or for wires on to the exchange; just give us a statement of how it is made up if you have it?—They are largely exchange lines; some of them are private lines, but the most of them are exchange lines.

Mr. *Moulton.*

490. Have you had any detailed estimate of the cost of a municipal telephone service in Glasgow?—The committee in its memorandum, or report, submitted to the Council in 1893, had estimates before them.

Mr. *Moulton*—continued.

491. Were those estimates put before them in detail?—They were put before the committee in detail.

492. But the result was 15*l.* capital per user, and the possibility of working it at 5*l.* rental?—£.5 or less.

493. And would that have been a system with underground wires?—With underground wires.

494. I may take it, I presume, that underground wires are mainly used between the exchanges; the wires to exchanges will always be more or less overhead, will they not; it is not worth while putting a wire underground if it is only going to the nearest exchange?—No.

495. Have you given any attention to the Telegraphs Act, 1892?—I have not given it any special consideration, apart from any bearing it has upon this subject.

496. You know the provisions which require that a Telephone Company should get the consent of the local authority before it interferes with the streets?—I am aware of them.

497. May I ask you whether your Corporation attach importance to that?—Oh, a very great deal of importance.

498. It is in Section 5 of the Act; perhaps I may hand the Act to you (*handing same to the Witness*); you say you attach very great importance to that?—We do.

499. I may take it that you think that that is a provision in favour of local authorities that should not be tampered with or interfered with in any way?—We are very strongly of that opinion, or of that belief.

500. Have you examined the agreement that has been made with the National Telephone Company and the New Telephone Company?—Yes, I have had it under my consideration.

501. Have you got it before you?—I have not.

502. Perhaps I may pass you a copy (*handing same to the Witness*)?—Thank you.

503. Will you look at Section 12 of that agreement?—Yes.

504. Now that binds the Postmaster to connect, by underground wires, any exchanges of the Telephone Company when asked to do so?—Yes, when they are situated in the same area.

505. Therefore, that does not require the consent of the municipal authority?—I am not prepared to say that.

506. Has your attention been called to that fact?—Yes.

507. In other words, the whole benefit of the provision of the 1892 Act is taken away from the municipal authority by the Telephone Company being able to require the Postmaster General to connect its exchanges; that is so, is it not?—Yes.

508. And the Postmaster General has not to get your consent, has he?—No, I do not think he has.

Sir *Julian Goldsmid.*

509. If the Postmaster General was going to work underground in your city, would not your municipal officers endeavour to arrange with his?—We should endeavour to arrange.

510. Would

Sir *Julian Goldsmid*—continued.

510. Would he not, as a matter of fact, ask you about it?—That is a question to ask the Postmaster General, and not me.

Mr. *Snape.*

511. Did you say the Post Office would have to come to your Corporation for consent?—That is a question which the Postmaster General alone can answer.

Mr. *Moulton.*

512. So far as that is concerned, all the powers of the Postmaster General can be used for connecting exchanges, can they not?—They can, according to Clause 12 of the Agreement.

513. You have told us that that is the use that is made of underground connection?—Yes.

514. Now, you have told us that the reduction to 10*l.* a year was made under threat of competition?—Yes.

515. And that, at a time when only a thousand subscribers were on the Telephone Company, the price was double?—The price was 20*l.*

516. Do you know how that competition was got rid of?—By their reducing their charges.

517. Was there any arrangement between the two companies?—Not that I know of; those things are generally kept secret.

518. You have told me that you have read this Agreement between the Telephone Company and the Postmaster General; that is so, is it not?—I have.

519. I believe in that Agreement there is absolutely no protection to the public as to the charges that can be made by the Telephone Company?—None.

520. Now, do you think that a satisfactory state of things for the public?—We do not.

Mr. *Benn.*

521. In answer to Sir Charles Cameron, you said, I think, that you had no fault to find with the proposed Agreement?—In regard to the special point, regarding which Sir Charles was questioning me (that is to say, reserving the rights of the Postmaster to grant licences when he chose), I do not profess to say that I approve everything in the Agreement. That was the point, I think, to which Sir Charles was speaking.

522. Supposing the Postmaster General declined to grant a licence to Glasgow, you would very seriously object to the Agreement, I think?—We would, in regard to such points as Mr. Moulton questioned me about just now.

523. Do you remember a document, which I believe was circulated by your Corporation; *that* particular memorandum; (*handing the same to the Witness*)?—I have seen this before, of course.

524. That was sent out as representing, I think, the views of your committee?—I presume it would be; it is not mentioned as such, but I have no doubt it was sent out. Very likely (I think) it was sent out by the convener of the committee; I do not remember it.

525. I just wanted to ask you whether one or two of the views expressed in it still represent the views of your Corporation; I find it says here: "The Agreement will, therefore, practically make the Post Office and the National Telephone Company partners in the telephone service, and will debar any other service from being possible, and will enable the company to continue the present excessive charges, in order to pay dividends and provide a sinking fund, on and for millions of capital which are largely unrepresented by any property of any kind." Is that still the view of your committee?—That never was accepted or approved either by the committee or by the Town Council. That is a memorandum issued by the convener of the committee to the committee, for the consideration of the committee when it came up, or for information to them when they should meet.

526. Can you tell me by whose authority it was circulated to the municipalities of the kingdom; did the convener send it out on his own responsibility?—Oh, no; it would be sent by the committee.

527. Then if it were sent out it would represent at that time the views of your committee?—Yes.

528. It would?—Yes.

529. In another part of the document I see it says here: "A grave crisis has thus arisen in reference to our future telephone system, which demands the immediate and careful consideration of Members of Parliament, of the London County Council, and of all Corporations and local authorities throughout the country, and unless steps are at once taken to prevent this proposed Agreement being concluded with the National Telephone Company, local authorities will find themselves hampered in their work, and the community saddled in perpetuity with a liability to pay charges calculated on the enormous capital created by the National Telephone Company, only a part of which has been expended on plant and property." Would that, do you think, represent your view at the time?—Yes, I think so.

530. The answer of the Postmaster General you regarded as "No," or as "Yes," to your application for a licence?—We regarded it as delaying it; declining it meantime; but as was remarked by a gentleman, a member of the deputation who moved a vote of thanks to Mr. Morley, we did not accept it as a final reply which would require us to sit still.

531. You considered it such a reply that it was necessary to move your Scotch Members to try, in the House of Commons, to convert the Postmaster General to your way of thinking?—Precisely.

532. Now, I want to ask you, with regard to valuable information you gave to the Committee as to the cost of a telephone service for Glasgow; you told us that, after careful consideration, you had come to the conclusion that an efficient service could be provided for Glasgow at 5*l.* per subscriber, or less?—Yes.

533. Supposing that you were allowed to organise this system for the convenience of Glasgow; suppose at the same time the National Telephone Company had their system, you recognise that some confusion might occur owing to there being, probably, a double set of exchanges?—Do you mean confusion in the transmission of messages?

534. For instance, one set of subscribers would be

Mr. *Benn*—continued.

be on one exchange, and another set of subscribers would be on another?—Precisely.

535. Notwithstanding that inconvenience, may I take it from you that Glasgow would be still glad to go forward with a system of its own?—Oh, yes.

536. "Yes"?—I think so.

537. In full recognition of that inconvenience?—I think so.

538. Therefore, the contention of the Postmaster General, that refusing a municipal licence to you would save you from any such inconvenience, would rather fall to the ground; you are prepared to put up with it?—We are, quite.

539. You were quite prepared to put up with it?—We would accept it; there would be mutual assistance from each company, or the Corporation and the company.

540. I rather gathered from your former answer, that if you got your licence for Glasgow, you would not be particularly concerned as to what happened to the rest of the country?—So far as the Corporation are concerned, we are only here as a deputation from them, applying for the licence for the local area, and I cannot give any opinion on the part of the Corporation with regard to trunk lines.

541. What I want to point out to you is this, that there are certain portions of the country which are not in the happy position of Glasgow, able to organise a system for themselves; in such cases all the evils which you in your memorandum attribute to the monopoly of the National Telephone Company would apply to these districts?—Yes; but the trunk lines are in the hands of the Government.

542. Yes, I am aware of that; but I want to point out to you that you in Glasgow may be in the convenient position of using a licence, and providing your subscribers with a *5l.* system, and other portions of the country may not be so happily situated; and may I ask you this, where such opportunities did not obtain as in Glasgow, do not you think that the terms of this agreement and the monopoly thus created would be a great hardship on those parts of the country?—I think so.

543. You think so?—I think so.

Sir *Julian Goldsmid.*

544. You were kindly telling us about the little event of your friend getting into a temper and smashing his telephone, because he could not get connection with the exchange, was it not?—It was the result of a series of incidents.

545. Did you take the trouble just to inquire as to the proportion of complaints to the number of messages telephoned at Glasgow?—That this individual had made, do you mean?

546. No, generally; the whole of Glasgow?—No, I did not.

547. You did not; and possibly that gentleman, being a little irascible, might have made more complaints than anybody else?—Anything is possible; but I know of a sufficient number of aggravated cases of complaint to satisfy me that it was not by any means a solitary instance.

548. Do you know the number of exchange calls in Glasgow in a day; have you any idea?—I would not like to say.

549. I have been given some figures upon that subject which are very interesting; I daresay you would take them from me, possibly?—Quite.

550. The number of exchange calls in Glasgow per day averaged last year 28,213?—I can quite believe that.

551. You can quite believe that?—Yes; that is about eight a-day to each subscriber.

552. In London the proportion is 29,700 calls, or to each subscriber 3·069; so that in Glasgow you are double as busy (about) as people are in London. Then the proportion of complaints, I understand, in Glasgow is 3·79; that would not show the enormous amount of difficulty that you speak of, would it?—If you mean by "complaint," writing a formal complaint to the company, that is quite a different thing from complaining and grumbling because there are difficulties and obstructions in the way; there are thousands of occasions for complaint when a formal complaint is not made to the company.

553. You think so?—I am satisfied of it.

554. Was it, as a matter of fact, at the beginning of last year that most of the complaints were made?—No, I am not aware of any particular time when "most of the complaints" were made.

555. Was it at the beginning of 1894?—I am not aware of that.

556. What was the period at which the smashing of the telephone took place?—About six months ago.

557. Therefore, you do not think there was any particular time at which there were more complaints than at others?—No.

558. You stated just now, in reply to Mr. Moulton, owing to a misapprehension, I think, upon the law, which is both unusual and astonishing on the part of so learned a counsel, that your Corporation had nothing to do with the Post Office, if they wanted to go under your territory. This is 26 & 27 Victoria, chapter 112, section 9; let me read you this: "The company" (that is now the Postmaster General) "shall not place a telegraph under any street within the limits of the district over which the authority of the Metropolitan Board of Works extends, or of any city or municipal borough or town corporate, or of any town having a population of thirty thousand inhabitants or upwards" (you are "upwards," I think, according to the last census), "except with the consent of the bodies having the control of the streets to within such respective limits"?—Is there nothing further in the clause?

559. The only further power is the power of appeal, in case of difference; from what you have said, I imagine you do not very often differ; you would not therefore maintain that the Corporation had no power after that has been read to you?—I think they have practically no power under that.

560. Will you kindly read it for yourself, if you will not believe my reading?—I quite accept your reading.

561. Clause 12 of the agreement says; "So long as this indenture is in force, the Postmaster General

Sir *Julian Goldsmid*—continued.

General will in any case, so far as it is practicable so to do (but not otherwise), at the request of the Company and upon such terms as may from time to time be agreed upon between the Postmaster General and the Company, connect by means of underground wires any two or more exchanges." Then the method of connection depends upon 26 & 27 Victoria, and 26 and 27 Victoria (in which "the Company" is now represented by the Postmaster General) prescribes the method in which the Postmaster General is to carry out this connection. Then the Postmaster General has to consult with the local authority under the clause which I have just read; and, subject to an appeal (with regard to points which do not affect the consultation), he "shall not place a telegraph under any street, within the limits of the district over which the authority of the Metropolitan Board of Works extends, or of any city or municipal borough, or town corporate, or of any town having a population of 30,000 inabitants or upwards (according to the last census), except with the consent of the bodies having the control of the streets within such respective limits;" therefore, reading you that, and pointing that out to you, do you still maintain, as against that Act of Parliament, that your Corporation has no power; perhaps you are not on the committee of the streets?—I am not on the statute labour committee.

562. Then perhaps you do not know?—Yes, I do.

563. You understand what I said to you with regard to complaints; I understand the figure is 3·79 per annum, the complaints of such subscribers. I just want to ask you this: have you really considered the disadvantages to a great many subscribers of being upon different telephone exchanges?—We have.

564. Now supposing, for instance, that a man is in a large way of business, and there are two sets of telephone exchanges, would it not almost be necessary for him to subscribe to both?—In several cases it might; but two subscriptions of 5*l.* each are just the same as one of 10*l.*

565. You are reducing it to 5*l.* Upon that you gave a quotation with regard to Stockholm which is often given. I should like to ask you whether you have made any inquiry which satisfies you that the conditions are the same?—The committee did make inquiry at the time, and got what they believed to be a satisfactory account of it.

566. Very well, then, I can ask you this question: do you know the area over which the telephones extend at Stockholm; let me just give you an example; in London it is 630 square miles; we were informed the other day that in Stockholm it is a radius of one mile; a very different thing to 630?—It is not a radius of 630 miles, is it, in London?

567. No; over the area?—And what is the area in Stockholm? It is not fair to compare the "area" with the "radius."

568. I assumed the other day that there were 10 square miles, but was laughed at for my want of knowledge in imagining that it was as much as that?—I understand it is 43.

569. Let me take 43; what is 43 compared with 630; it is not a twelfth of it; it is only just about a fifteenth?—It is a smaller place, of course, and the number of subscribers, therefore, would be proportionately smaller.

570. It does not follow. Then another question: are you aware at all of the difference between the wages paid to operators in London and Stockholm?—Yes, I am quite aware there is a difference.

571. Do you know what the wages of the operators in Stockholm are?—I do not know at all.

572. Would you be surprised to hear that the wage is under two shillings?—Two shillings?

573. Under two shillings?—Per day?

574. Per day?—No, I would not be surprised to hear it, if you say so.

575. Well, I do say so. In London it is nearly five shillings, is it not, and, I suppose, in Glasgow, too; no Scotchman would be paid worse than an Englishman, I imagine?—I think they are.

576. Then another question: are you satisfied that the whole of the circumstances have been explained as to why the reduction of price was made?—In Glasgow?

577. Yes; you say it was because of the threatened competition?—Yes.

578. Was it not a fact also that the patents expired, which made a great difference?—The patents did expire.

579. Ought not that to be mentioned to the Committee also?—There was no word of reduction until a large number of citizens signed that agreement in connection with the proposed opposition, and then the price came down.

580. Was it then, also, that the patents expired?—The patents had been out for some time, if I am correct.

581. For how long?—I could not say.

582. You do not know?—I do not know.

583. But you know that they did expire somewhere about that time?—Some time prior to that.

584. Naturally, if it was not after?—That is so.

585. Then, next, all the subscribers, you say, or many of the subscribers, may have to subscribe to both telephone systems if you have two?—Yes.

586. What would you do, for instance, for those who had taken a subscription for five years with the existing company?—I beg your pardon.

587. By-the-by, with regard to the patents expiring, I will just add one other question: was it a fact that the reduction of price at Glasgow when the patents expired corresponded with the reduction of price all over the country upon the same ground?—I do not know of any reduction all over the country.

588. You did not know of that?—No.

589. I am afraid Glasgow did not concern itself with that?—No, not particularly.

590. Certain subscribers, we were told the other day when you were not here, took out five years' subscriptions to get better treatment from the National Telephone Company; what would you propose to do for those subscribers if there

Sir *Julian Goldsmid*—continued.

is to be a new system?—I am not aware that they exist to a large extent in Glasgow.

591. It was understood so. I do not know that it specially applied to Glasgow?—It is Glasgow I am speaking about, and Glasgow only.

592. You think that the Glasgow citizens do not subscribe for five years?—I am not aware that they do.

Mr. *Tully.*

593. We were told a minute ago that you are doubly as busy in Glasgow with the telephones as the subscribers are in London; that is accounted for because the price is exactly half what the price is in London; is that so?—I am quite satisfied that that is the explanation.

594. If there was competition by the Corporation and the price was reduced, as you say, would a greater number of people use the telephones?—Undoubtedly.

595. What would be the effect of a greater number of people using the telephones on the postal service or on the telegraph service?—It depends, of course, upon the proportion between the increase in the number of subscribers and the decrease in the amount of subscription; but I have no doubt the revenue to the Post Office would be larger.

596. We were told here the last day we met that in 1891 the telegraph service paid a surplus of 68,000*l.*, and that in 1894 the telegraph service had to put up with a loss of 240,000*l.*, and that that was largely due to the telephone service. If you say that in Glasgow and in other towns where the corporations would compete, a greater number of people would use the telephone, would that cause a greater loss to the telegraph service?—I do not think it would. I understand that the apparent loss to the telegraph system is because they pay out of revenue each year.

597. They paid out of revenue in 1891 as well as in 1894; that gets rid of that; and they had a surplus in 1891, and a deficiency of 240,000*l.* in 1894?—Yes, but it is an evident impossibility to draw a comparison between two years as to the revenue, unless you know what the revenue expenditure, as apart from the capital expenditure, was in each year.

598. We were told that it was very much the same?—You have not a fair basis of comparison.

599. We were told by an expert witness that this great loss was due to the telephone service being largely expanded. I want to know this: if the telephone service is more extended by the Corporations getting licences and reducing prices, how would that affect the telegraph revenue?—I have already said that I believe the increase in the number of subscribers would be so large that the revenue of the Post Office would not suffer.

600. When persons use telephones in the towns they do not send telegrams to each other; they give up sending telegrams?—That is quite true; I can quite understand that there may be a diminution in the number of telegrams that will be used.

601. The point I want to come at is this: that if the price for the telephone service is reduced there will be a greater number of people using it and therefore there will be less telegrams sent

Mr. *Tully*—continued.

in that town?—There is no doubt that that will follow to a certain extent, but inasmuch as telegrams are (in Glasgow, at all events, which is so much less in area than London) not so frequently sent from one part of the city to another, and as the trunk lines are under the charge of the Government, it will only be telegrams from Glasgow to another city, and they will not be affected.

602. So your view is that if the Corporation of Glasgow got this licence, and the telephone service became more extended in Glasgow because of the cheapness by reason of the competition, the telegraph service would not suffer in its revenue?—I do not think it would suffer much; I do not think that the amount of telegraphic communication between different parts of the city can be a very great source of revenue in Glasgow.

603. So that it is your view that the Postmaster General in refusing you a competing licence in Glasgow could not refuse it on the ground that the increase in the telephone service would diminish the receipts to the telegraph service? I do not think so.

Mr. *Snape.*

604. Is it the intention of the Glasgow Corporation if the licence be granted to them, to establish a local exchange on their own account?—The Corporation have authorised the committee to apply for a licence.

605. That is not an answer to my question: are they merely asking for the licence to protect their interests or with the intention of acting upon it?—I have no doubt what their intention is, but I can only speak of what they have actually decided on.

606. You say you have no doubt of what their intention is; what is that intention?—Speaking for the committee I can say that the committee certainly purpose asking the Corporation to use the licence, the moment the licence is granted.

607. Do they intend to use it simply for the purpose of evading the payment of this 1,600*l.* or to give the public the advantage of it?—Oh, it is for the advantage of the public.

608. If the effect of the licence when it was obtained was to lead the National Telephone Company to reduce its charge to 5*l.* would the "intention" still remain on the part of the Corporation to use it?—I could not answer that question at all; I could not answer a hypothetical question as to what a fluctuating body like a Corporation might do in given circumstances.

609. Do you think it probable. You say you have no doubt of their present intention or of the intention of the committee: what is your view as to that?—Well, I really cannot answer more than I have done. A reduction in price that was not accompanied with an infinite improvement in the service would not satisfy our Corporation, no matter what the price was.

610. In that case the difficulties and inconveniences of a dual system existing would not prevent your carrying out the intention if it were deemed, on account of the defective service, to be desirable, even though the price were reduced?

Mr *Snape*—continued.

duced?—I have already referred to the unwillingness of the Corporation to give the control of their streets to a company.

611. I will come to that in a moment?—And that would hold good, no matter what the price was.

612. Supposing that you had the licence, had acted upon it and established the system, and it became desirable for the Government to take over the right of the municipality eventually, would you be prepared to surrender that licence without asking the Government to do more than recoup the actual outlay they had made?—I am quite satisfied that the conditions the Corporation would seek to have imposed would be very reasonable. I would not like to say that that alone would be all that the Corporation would ask; for example, it would depend on the length of time we had had it established. There might be some of the servants as to whom we might expect to see that their interests were preserved, or something of that kind; but I am quite satisfied that there would not be the slightest difficulty raised on the part of the Corporation to any conditions which business men would be disposed to recommend.

613. Then, as to reasonable conditions of transfer, I take it that, after protecting such vested interests as you have indicated, the Corporation would not expect anything for goodwill?—No, nothing for goodwill; I think I can take it upon me to say so; I know the Corporation sufficiently to know that.

614. If the Government were to find it necessary to take over the system eventually, those difficulties of the control of the streets would arise, I suppose, with reference to the Government interference as well as with reference to the interference of a private company?—Well, there never could be the same objection on the part of the Corporation to the Government that there is to a company trading for private gain.

615. Then you do not think that would be an obstacle to the Government taking it over?—No, I do not think that would be an obstacle.

616. In estimating that you would be able, probably, to reduce the charge to the extent that you have told the Committee, have you taken into account the difference in wages to which Sir Julian Goldsmid referred?—Yes.

617. You think that with that difference you could still, if you had the system, by your cheap raising of funds, reduce the price?—The Committee are quite satisfied of that.

Sir *James Fergusson.*

618. Your exchange just now under the National Company embraces, you have said, some of the suburbs as well as the municipal burgh of Glasgow; your proposed exchange would be confined to the municipal area, would it not?—In all probability, unless arrangements were made with the suburbs.

619. You are aware that by the agreement between the Post Office and the National Company it is intended to give a very extended area for the Telephone Exchange. Are you aware of that?—Yes.

620. Including the city, the burghs of Rutherglen, Govan, Pollockshaws, Partick, and the

Sir *James Fergusson*—continued.

adjoining area, including Kirkintilloch and Cambuslang; that, if the service was given would be a great boon, would it not?—Undoubtedly.

Mr. *John Ellis.*

621. I want to get, if you please, something a little more definite with regard to what you have called the unsatisfactory service: you come before us, I think, as chairman of the committee of the Glasgow Corporation?—I am not chairman of the committee; I am a member of it.

622. It was appointed in April 1893, and it asked for the licence in July. May I ask you how many sittings that committee had, without binding you to a particular figure?—We met pretty frequently.

623. Did you meet once a week during that time?—Oh! no; we did not meet once a week.

624. Can you give me an idea as to how many sittings you had?—No; I think we met eight or 10 times.

625. That will be sufficient for me. Did you call any evidence before you as to the state of the service?—No.

626. You had no evidence before the committee, from the inhabitants, as to the state of the service?—No; each member of the committee had his own experience, the experience of his own circle of friends, and each member of the committee is a representative of the city, and has abundant opportunity of knowing the views of the citizens.

627. You consider that the members had sufficient personal knowledge to enable them to dispense with the necessity of any evidence?—Yes.

628. Are you a practical user of the telephone, may I ask?—Do you mean to say, have I a telephone in my office?

629. Yes?—I have.

630. You have found it a very great convenience, have you?—I have found it a very great annoyance.

631. In what respects?—Just the respects I have already named; the ringing for a long time before you get the connection, getting sometimes the wrong connection, being told again and again and again that the party is engaged, and then when you meet the party and taunt him with having used his telephone a great deal he will tell you that he has never used it at all that forenoon.

632. And that experience of yours was confirmed by your colleagues?—Yes, it was.

633. And that was the ground, I gather, of your application to the Post Office?—That was one of the grounds; the other was the expense.

634. That it was a costly service and an unsatisfactory service?—Yes.

Sir *Charles Cameron.*

635. Mr. Benn called your attention to a circular issued by the Telephone Committee expressing certain views. Are you aware that the date of that circular is the "1st September 1893"?—Yes, I presume it is.

636. Since then you have had a very considerable amount of information which must have modified to a certain extent the views expressed in that circular; is that so?—Yes, that is so.

Sir *Charles Cameron*—continued.

637. Then I wish to ask one further question: Mr. Benn pointed out that there must be a number of Corporations who are not in the position of Glasgow or other Scotch Corporations, who could undertake the working of an exchange, and I think he asked you: Would not they be left out in the cold under such an arrangement as this; but you are in favour of competition, are you not?—We are.

638. Are you aware of the distinct statement in favour of competition in the Treasury minute?—Yes.

639. Will you kindly read that statement from Article 19, page 6?—"As to fresh licences, no further licence for the whole country will be granted; and even for a licence to establish an exchange in any particular town, no application will be entertained unless a formal resolution in its favour has been passed by the Corporation, or other municipal authority, and evidence given that there is sufficient capital subscribed to carry out the undertaking. In this way competition will not be excluded, but a check will be imposed on the formation of companies whose sole object it is to force the existing licences to buy them up. But although this is the policy which commends itself to Her Majesty's Government, it must be distinctly understood that should licences hereafter be granted on other principles, no company now or hereafter to be licensed will have any ground to complain of breach of contract, or want of good faith on the part of the Postmaster General. It will be a condition of any licence to a new company that their system must be constructed entirely of twin-wires, or metallic circuits, so that there may be an assurance of its efficiency."

640. Well, that points to an admission of the principle of competition, does it not?—It does.

641. It points to the desirability of the twin-wire system, and it points to the control by the Corporations?—Yes.

Mr. *Tully.*

642. How far is the Liberal Club in Glasgow from the Central Hotel?—I think about 300 yards.

643. This is an experience that happened to myself in Glasgow last January, and I suppose it is an experience that other people have had in Glasgow; if you attempt to use the telephone from the Liberal Club to the Central Hotel, you cannot make the connection in sufficient time; you can walk in less time than that to the hotel; would not that be quite so?—I quite believe it.

Mr. *Benn.*

644. With reference to the document to which Sir Charles Cameron referred, which was circulated to the municipalities since that date, are you aware of any other document sent out by your committee intimating to the municipalities that you had modified your views from those of the original document?—We have certainly never called attention to any modification, but we have sent out other documents, the tendency of which is perhaps slightly different from that, but not calling attention to any modification of view.

*Chairman.*

645. You referred to the answer which I gave to the deputation from the Scotch municipalities as having left some doubt in the minds of the deputation whether it was a definite refusal to the application that was made?—Well, I am sorry if I have conveyed a wrong impression. We regarded it as definite enough in the meantime, but temporary.

646. Definite in the direction of refusal?—Definite in the direction of refusal.

647. And it led you, you say, to take steps to protest as to the rights which were reserved under the agreement?—We took steps in order to see that the Postmaster General should exercise the rights which were reserved under the agreement.

648. You are aware of course that if I had given a licence to the Corporation of Glasgow they could not have opened exchanges without Parliamentary sanction, by either a public or a Private Bill?—If that is so, we would have been quite prepared to come to Parliament.

649. You are aware of the fact that the Corporation has no power which would enable it to carry out an exchange under such licence, and that it would have had to come to Parliament for Parliamentary sanction to enable the Corporation to carry on telephone business?—I believe that is a question with regard to which there is some difference of opinion; but even if it were absolutely necessary to do that, there would have been no difficulty on the part of the Corporation coming to Parliament and asking for the requisite statutory powers.

650. Do you say that you are advised that there is a doubt as to whether the Corporation could carry on telephone business without seeking special powers?—I do not say that we have taken the advice of counsel upon the subject, but amongst the members of the Corporation themselves there is a difference of opinion; some holding that we have at present the power, and some denying it.

651. You have not taken steps to get a definite opinion upon that point?—No, we have not.

652. Would your proposal be, if you came to Parliament, to deal with the Telephone Company in Glasgow as you have dealt with the water companies and the gas companies; that is to say, to buy them up?—Oh, no; I have no idea that we would propose that.

653. It would be to open a competitive system against them?—Yes. If the Telephone Company at present had what the water and gas companies did have, the right to lay their pipes (their mains) under our streets, it might be necessary then that we should take steps to get them deprived of that right, and so put them out; but there is no inducement to us whatever to buy the company at present.

654. Do you contemplate as the result of a municipal telephone a continued system of competition, or that you would gradually drive the company out of the field?—We look forward to the expiry of the licence, when the Government possibly may take the whole thing over, and we would be quite prepared, I daresay, to have the benefit of competition during the 15, 16, or 17 years which the company still have of their licence to carry on.

655. You say the "benefit of competition"; what do you mean by that phrase?—Well, there would be a desire on the part of each of two competing

*Chairman*—continued.

competing parties to provide the most effective service, with the most recent instruments possible, and so secure the goodwill of possible users.

656. Would you call it a benefit that there were two competing systems in which the subscribers on the one system might not be able to communicate with the subscribers on the other system?—There are drawbacks, of course, as I have admitted, but there are also advantages in the direction that I am speaking of, and the drawback of requiring to subscribe to two companies would be very much lessened if each of them was to be at very much less price than the present charge for one.

657. That is not, of course, the opinion of the Corporation as a whole?—The Corporation, as a whole, has come to no opinion on anything further than instructing the committee to apply for a licence.

658. And there is a difference of opinion in Glasgow, as evidenced by the papers in Glasgow, as to the advisability of a municipal licence being granted?—I have no doubt there is a difference of opinion.

659. Do you think it would be an advantage or a disadvantage that there should be two net works of telephone wires starting from two centres in the town?—In itself, if that were the only element, it would not be an advantage.

660. It would be a disadvantage?—Yes, if that were the only element in the case.

661. Have you formed any estimate, or have you taken steps to get information as to the number of subscribers a municipal system would secure?—No, nothing further than the estimate that one can form from past experience, that the number doubled or trebled when the price was reduced.

Mr. *John Ellis.*

662. In spite of the grumbling?—In spite of the grumbling.

*Chairman.*

663. Sir James Fergusson asked you a question about area for which you proposed the licence should be granted; I suppose you are aware that the telephone is made use of considerably by merchants and others who have offices in the borough to their houses outside the borough, in the suburbs?—That exists to some extent doubtless.

664. And that that is a very substantial part of the use of the telephone?—I do not think it will amount to a very large number, but still it does exist; there is no doubt about that.

665. And a municipal telephone would not be able to supply a service of that kind?—Not without an agreement with the National Telephone Company or whoever had charge of the area within which these parties reside.

666. And of course you are aware that the National Telegraph Company could if they chose (I do not say they would), refuse to come to an agreement of that kind?—They could, but it would be their own interest to come to an agreement.

667. You mentioned an estimate of the cost of installing a municipal service; was that an estimate of a single or double wire service?—A double wire service.

*Chairman*—continued.

668. Who was the estimate made by, was it by some one experienced in telephone work?—Yes; it was an expert. I cannot say at this moment who it was. The convener submitted the price to the committee at the time (in July 1893), but I have not the detail with me, and I cannot say who it was; but it was a detailed estimate which the committee quite accepted as authentic.

669. Was any total figure given for supplying a given number of people?—I can say no more than the minute that is before me; that says: "Reliable estimates in detail have been prepared, showing that, for a capital of about 15*l.* per user, the latest and best system can be laid down in Glasgow within the municipal radius." Further particulars than that I have not before me.

670. And you have had no practical experience yourself in work of that kind?—No, I am not at all an expert in the matter.

671. You mentioned as one of the principal reasons which led you to approve of a municipal system, that in order for the company to provide an effective service it must have the control of the streets?—Practically so.

672. Are you aware that the company has come to terms with the Corporation of Manchester under which arrangement the Corporation do all the underground work themselves and the company do not interfere with the streets at all?—Yes.

673. Would not that be possible in the case of Glasgow, and so maintain the absolute control of the streets in the hands of the Corporation?—No; I do not think the Corporation of Glasgow would like that.

674. But it would be a possible course?—It would be a possible course.

675. As an alternative to a municipal system?—It would; but still under that system the Corporation would be bound whenever the company asked them, to break up the streets in order to secure the company's desire.

676. Wherever the Corporation were satisfied that the work was necessary in the interest of the inhabitants, the telephone subscribers?—Yes.

677. You mentioned a statement made by Mr. Goschen in the House of Commons to the effect that it was suggested that the local authorities might be willing to undertake the telephone business and that he saw nothing contrary to the Government's policy in such a proposal?—I read that.

678. Would you just read the next few words if you have them?—I have not. I have handed in my extracts.

679. I will read them and perhaps you will take them from me. "If there were a town in which a telephonic system had not been established, and in which the local authority wished to undertake the system, there was no reason against such a course, the communication with the rest of the country being established by the trunk lines in the hands of the State." So that Mr. Goschen's statement which you referred to goes only to the case of a town in which there was no telephonic service in existence?—That last clause does; but it does not necessarily carry the reference back to the preceding clause, does it?

*Chairman*—continued.

680. It is consecutive; it is the next paragraph; so I think we may take it that Mr. Goschen's statement referred to a town in which there was no telephonic service in existence?—I did not so read it.

*Chairman*—continued.

681. I was going to ask you a question about the matter Mr. Moulton examined you about, but I think I understand that you have not gone carefully into that question?—I have not.

Councillor JAMES COLQUHOUN, LL.D., called in; and Examined.

Sir *Charles Cameron.*

682. YOU are a Solicitor in Glasgow, and an LL.D. of Glasgow University?—That is so.

683. And you have been in the Town Council of Glasgow for 12 years, you have been a magistrate for three years, and you are at present one of the judges in the police courts of Glasgow?—That is so.

684. You are also a member of the Telephone Committee that we have been informed of by Bailie Chisholm?—Yes.

685. You corroborate, I suppose, generally, what he said as to the unsatisfactory nature of the telephone service in Glasgow?—Entirely.

686. Do you think he put the dissatisfaction sufficiently strong?—Well, I can give my experience of the telephone in connection with my own firm during the past eight days. I have been taking special note of it with a view to being able to speak fairly about it to-day. Last week, on three days out of the six, the telephone was practically not working to any useful purpose.

687. In what way?—Well, we could not in many cases get the connection with the Exchange when we rung up. When we succeeded we were told that the wire we wanted was engaged when it was not so, and if we got the connection with the people that we wished to communicate with, we found that the sounds coming along the wire were so faint and so mixed up with other conversations passing along the wires that it was impossible to make out the messages, and in one particular case I had to send round a messenger to see what a gentleman meant by his communication, it was so indistinctly delivered.

688. That is your personal experience in the last eight days?—Yes.

689. That is corroborated, I suppose, by all the hearsay evidence?—No one can speak with a telephone subscriber in Glasgow without hearing similar statements of the inefficiency and delay that takes place.

690. The Corporation, we have been told, are very large telephone users, and their experience, the experience of members of the Corporation, influence them in the action they take on the matter?—Very largely.

691. Your firm, Messrs. J. and D. T. Colquhoun, are, I believe among the original subscribers to the telephone service in Glasgow?—Yes; we adopted it when there would be, I suppose, only two or three others connected with the Telephone Exchange.

692. And the service then provided was not that of the National Telephone Company?—No, we got the supply from Messrs. Graham, electrical engineers in Glasgow.

693. Before we go on to that, did you happen to be among the subscribers to the Telephone Exchange of Mr. Symington?—No, I was not on the A. B. C. Exchange, but I knew about it.

694. You knew about it?—Yes.

Sir *Charles Cameron*—continued.

695. And you knew that when a superior service came in he was refused a telephone licence; are you aware of that?—I do not know whether he applied and was refused, but I know that he did not get one.

696. What was the charge of Messrs. D. and G. Graham?—£12.

697. And they were bought up by the National or some other company, were they not?—I do not know whether they were absorbed directly by the National or whether they went into another company, which, in its turn, was swallowed up; but they ultimately became connected with the National Company.

698. What did the National Telephone Company charge?—£20.

699. Did you get the benefit of the old rates?—Yes, we were continued at the 12*l.* I believe they tried to raise it in connection with our firm, but I told them to take the telephone away, and rather than do that they allowed us to have it at the old price.

700. They found it necessary, however, to charge, or they did charge 20*l.*, whereas the old company had supplied you for 12*l.*?—That is so.

701. Was the service supplied superior to that of the old company?—My recollection is that the connection we had with the telephone system of Messrs. Graham was better than anything we have had since.

Sir *Julian Goldsmid.*

702. Can you tell us how many subscribers there were?—I do not suppose there would be more than half-a-dozen when we joined, but they ultimately had a considerable number.

703. How many?—Several hundreds.

Sir *Charles Cameron.*

704. At all events you were connected at 12*l.* and the public were charged 20*l.* The charge is now 10*l.*?—Yes.

705. How was that brought about; can you tell us?—The dissatisfaction with the telephone system in Glasgow became so great, some considerable time ago, that a number of gentlemen met together and resolved that they would if possible get a remedy; and communications were opened up with the Mutual Telephone Company of Manchester, who held a licence for the whole country.

706. About what date would that be?—I cannot give the year.

707. Not many years ago?—Not many years ago. The result was that circulars were sent round, and I believe in response to the first circular, between one and two thousand replies were received from parties who stated that they would connect themselves with the Mutual Telephone Company's exchange if it were established. Shortly after that, the rate of the National

Sir *Charles Cameron*—continued.

National Telephone Company was reduced to 10*l.* and promises were made that the system would be greatly improved; they were to provide another switch-board, which would prevent all blundering and irritation for the future; and with these promises, and with the great reduction in the price of the telephone, the gentlemen who were acting in the matter resolved that they had accomplished their object, and would go no further in the meantime.

708. And another permanent obstacle was interposed, was it not, by the absorption by the National Company, or by some other Company which has since been swallowed by the National, of the concern to which you refer?—I understand the Mutual Company sold its business to the New Telephone Company.

709. Which sold its business, or went in liquidation?—I understand there was a penal clause in the agreement by which the New Telephone Company was to pay 15,000*l.* to the Mutual Telephone Company, in the event of their allowing themselves to be bought up. The National Telephone Company has practically become the New Telephone Company by acquiring the shares of that Company, and they simply did not absorb the New Telephone Company, in order to escape the payment of this 15,000*l.*

710. Now Bailie Chisholm was cross-examined about the benefits of competition, and he was asked whether he believed in the benefits of competition. When these 2,000 gentlemen in Glasgow signed this invitation, as it were, to the Mutual Company, or some of its people, to start a rival exchange in Glasgow, do not you think that that was tolerably good proof that they were prepared to face any disadvantages it might involve, and that they thought that competition would be a great advantage on the whole?—It will be the best of all proofs that in the event of our getting the licence for which we are applying, Glasgow will have both a good service and a cheap service.

711. As to the disadvantages of competition, are you aware that in some towns there is competition between the National Telephone Company and Post Office Exchanges?—I am not personally aware of that.

712. One of the reasons of which you wish to speak, or for which the Glasgow Corporation wish to acquire the telephone system, or at all events to have a telephone system with the twin wire, is connected with the tramways; please explain how that is?—Yes; the Glasgow Municipality are not only the owners of the tramway lines, but by special power obtained from Parliament we have the privilege of working the tramway car service ourselves. In our Bill, I think of 1891, we got power to work the tramway system by electricity. The Telephone Company objected to our getting that power, unless on condition that we would come under an obligation to do whatever was necessary to absolutely protect their overhead wires.

713. They proposed that the Corporation should be at the expense of providing for the necessary insulation, and the result was that, for the present at least, the idea of the overhead electrical system in connection with the tramway system had to be given up?—When we came to

Sir *Charles Cameron*—continued.

consider the expediency of introducing an electrical tramway service, we found that the cost of insulating the wires in order to absolutely protect the National Telephone Company was so great that for the present it was not possible to have an overhead tramway electrical system; and that gave us the most absolute proof of the inexpediency of allowing any private company to acquire any right over our streets. The National Telephone Company is a private company working for its own gain, and yet they have, by taking possession of our streets, put the Corporation in this position; that when they come to ask for power from Parliament to use their own streets, this private company says to the Corporation: "You can only use your own streets, on condition of making compensation to us for any damages that we may sustain through your action."

714. The Postmaster General would like you to explain the phrase you use, "taking possession"?—By "taking possession" of the streets, I mean that they have run their wires in every direction across the streets of Glasgow, and it would be hardly possible for us to run an electrical tramway along any street in the city, without subjecting the overhead telephone wires to being influenced by the electrical wires of the tramway system.

715. That occurred some time ago, did not it?—Yes. I may say, though, that that point has been got over by our having now the protective clauses of the Board of Trade introduced into our last Tramway Act, by which, if the Telephone Company do not adopt the twin-wire system within two years, the Corporation will be freed from any responsibility in that direction.

716. That is to say, you found yourselves headed by this obstacle before the Board of Trade clauses were settled?—I believe we would have had an electrical tramway system in Glasgow by this time but for the protective clause of the Telephone Company in our Act of 1891.

717. Now, will you explain the financial position of the Corporation which would give it a special advantage in connection with the telephonic arrangements of the city?—The Corporation of Glasgow in its corporate capacity, apart altogether from any monies it might raise by taxation, has a very large capital fund called the "Common Good," which could be made available for providing the necessary capital to work the telephone system.

718. The "Common Good" is an accumulated fund, regarding the disposal of which the Corporation has very great latitude, is it not?—Yes; amounting at the present time to close on a million of money.

719. So that money could be raised on most advantageous terms?—The Corporation just now is borrowing money at 2 per cent.

720. And there is no scarcity of money at that, I suppose?—None whatever.

721. I need not trouble you about the absorption by this National Company of all the previously existing companies; we have had evidence about that, and the obvious deduction that you would make as to the huge capitals; but you believe that the telephone communication, the monopoly,

Sir *Charles Cameron*—continued.

should be in the hands either of the Government, or, if that is not convenient to the public, then of the municipality?—Certainly; or if the monopoly is to be left in the hands of a private company, such as the Telephone Company, it should only be under such conditions as to efficiency, and maximum price, as would prevent the public from being victimised.

722. But you do not ask for monopoly?—Certainly not.

723. You are quite prepared for competition?—Quite; and I have not the least doubt that if we got the licence we would be quite willing, and no doubt the National Telephone Company would be quite willing, to work in a friendly way; they would hardly cut off their nose to spite their face.

724. Do you see any practical difficulty in working two telephone companies in the same way?—None whatever. We see three telephone systems working in Stockholm, and the reports from that town are that the business works well enough; there is interchange of messages between two exchanges; and the State Exchange (which is the third one) can be used in connection with either of the other two on payment of a small way-leave.

725. And as to the terminal charges, if the Corporation were working its exchanges it could either arrange for reasonable terminal charges with the rival Exchange, or it could arrange for the interchange of messages free?—Precisely so. I believe there are two exchange systems working just now in Manchester. The New Telephone Company, which is, practically, the National Telephone Company, keeps up a system of subscribers of its own, and the National Telephone Company have their own exchange; the subscribers to the one being charged 8*l.* 10*s.*, and the subscribers to the New Telephone Company under their contract with the "Mutual" being charged only 6*l.*

726. Do they interchange messages?—I cannot say; but I understand that both systems are working quite smoothly there.

727. There is nothing to prevent the interchange of messages?—Nothing.

728. Your Corporation, the Glasgow Corporation, is on friendly terms with other Corporations?—Perfectly.

729. And if other Scotch Corporations were to get licences, and start telephone exchanges, I suppose you could say confidently that Glasgow would be prepared to treat with them for free interchange, free of terminal charges?—It stands to reason that we would make an arrangement for the interchange of messages by means of trunk wires with other Corporations having exchanges.

730. Then you can bear out, I suppose, the opinion expressed by Bailie Chisholm, that the Glasgow Corporation would be prepared to take a licence terminating at the same time as the existing licence of the National Company?—Certainly.

731. And that it would be prepared, in case of a national assumption of the telephone system, to hand over its system without any idea of profit?—A Corporation such as ours would never expect

Sir *Charles Cameron*—continued.

to be paid anything for goodwill of the business by the Government in the event of the system being taken over. I do not see why the telephone business should not be put very much on the same footing as tramway enterprises, which Corporations are entitled to take over; they are entitled to take them over without paying anything in the shape of goodwill, and a similar stipulation could be made in connection with the telephone system if taken over by the Postmaster General from municipalities.

732. The usual custom that attaches to the working of municipal enterprises in Scotland is, that all profits are applied to the reduction of rates; that applies in the case of water, I understand, gas, electricity, and so forth?—That is so.

733. And the same rule would be followed in connection with the telephones?—Precisely.

734. You have heard a number of questions put to Bailie Chisholm about the wayleaves and the rights of the Postmaster General and the obligation he is under to put those rights, in respect of wayleaves, at the disposal of the telephone companies?—I have.

735. You are a lawyer, and I understand you have looked into the matter; therefore can you give us your view of how it stands?—Practically in my opinion the Postmaster General has the right to use our streets. The right, of course, is said by the Act to be subject to the consent of the municipality; but there is a power of appeal to the sheriff, or in certain cases, to the Railway and Canal Commissioners, in the face of which appeal it would not be possible for the Corporation to refuse the demand of the Postmaster General to open our streets.

736. And that right under this agreement the Postmaster is bound to place at the disposal of the telephone companies for the connection of exchanges in the same way, is he not?—I gathered so from Mr. Moulton's questions.

737. That right is nominally subject to the veto of the town council, but the consent must not be withheld on (I think it is) "unreasonable" grounds; and there is a right of appeal to the sheriff which you have explained?—That is so under the Act of 1878. I have the Act here, and can read the section if desired.

738. There is no absolute vetoing power at all in the town council; the absolute vetoing power really lies with the sheriff after a provisional veto has been given?—That is so.

*Chairman.*

739. The absence of veto only exists where the Postmaster General exercises the powers which the statute has conferred upon him; is not that so?—That is so.

740. Where he delegates any powers which he has to the company or to any licensee, then the veto comes into operation at once?—The veto in that case is absolute by the Act of 1892.

Sir *Charles Cameron.*

741. But there is an undertaking on the part of the Post Office, is there not, Section 12, page 19?—It would appear to be so.

742. Will

Mr. *Moulton.*

742. Will you look at Section 12, page 19?—"So long as this indenture is in force the Postmaster General will in any case so far as it is practicable to do (but not otherwise) at the request of the company and upon such terms as may from time to time be agreed upon between the Postmaster General and the company connect by means of underground wires any two or more exchanges of the company situate in one and the same exchange area." There is no doubt that under that clause the Postmaster General is to do the work; and the Postmaster General, doing the work directly and not through any delegate, he has the right of appeal in the event of the Corporation refusing their sanction.

Sir *Charles Cameron.*

743. And he is bound to do the work at the request of the company, is he not?—So says the agreement.

744. So that the effect is precisely the same as if he were to give the power to the licensee?—By this clause practically the absolute veto which is secured to the Corporations in the case of licensees of the Post Office under the Act of 1892 is got over.

*Chairman.*

745. Perhaps I may supplement that by another question; that only applies to what we call "junction wires," connecting exchanges, and in any area where there is only one exchange, it would not come into operation at all; is not that so?—The words of the 12th section are: "connect by means of underground wires any two or more exchanges of the company situate in one and the same area."

746. It is confined to connecting between exchanges, is it not, and not wires between exchanges and subscribers?—I suppose that is the interpretation of the section.

Mr. *Moulton.*

747. I suppose you would agree with the last witness that any such wires would in practice require to be underground between exchanges, and that the wires from the separate houses to the exchanges, it would not be worth while putting underground?—Not necessarily.

748. The main use of the underground wires is between the separate exchanges?—Yes, that is so.

749. So that, so far as the chief interference with the streets is concerned, this clause of the agreement gets rid of the proviso as to the veto of the local authorities?—I think so.

750. Now would you kindly look at Clause 5 of the 1892 Act?—Yes, I have it.

751. I want you just to say whether this is the effect of it: this gives to licensees the powers of the Postmaster General under the Telegraph Acts of 1863 and 1878, subject to a veto of the municipality?—That is so.

752. The effect of Clause 12 of the agreement is to get rid of that veto in the case of wires between exchanges?—Precisely.

753. And those, as you have told us, are the important underground wires?—Yes.

Mr. *Moulton*—continued.

754. Now I believe you have given a good deal of attention to the question of telephones. In your opinion are telephones a great social convenience, rapidly becoming a great social necessity?—Oh, they are a necessity. Even with the disturbances and the inconveniences, and inefficiency of my telephone, I should not like to give it up.

755. You have told us that if a social necessity like this is to be in the hands of a private company, which is practically a monopolist, there ought to be conditions as to efficiency and maximum price?—I think so.

756. In your opinion ought those to be sufficient to secure an effective service at a reasonable cost?—Certainly.

757. Now, are there any conditions (other than the possibility of competition which I will deal with directly) in this agreement which either secure the public from exorbitant prices or which secure them an efficient service?—I have not found any in any of the documents that I have seen.

758. Do you believe that you can in our populous towns get an efficient service without metallic circuits?—Well, not being an expert, I cannot speak from my own knowledge; but I remember reading a statement by the Chairman of the National Telephone Company when he was examined before a Committee of the House of Commons; he made the statement quite distinctly that nothing but a twin-wire system would ever give an efficient service.

759. Next as to price: It has been suggested that there was a considerable lowering of the price in London when the patents expired; I do not know whether you know the London prices?—I do not know the London prices.

760. But so far as Glasgow is concerned, you think it was the threatened competition that did it?—Oh, undoubtedly; the running out of the patents had nothing to do with it.

761. I may take it that all patents necessary for working these telephone exchanges have expired by now?—I believe so.

762. Your Corporation, you have told us, came to the conclusion that with a rental of 5*l.* they would be able to make the thing pay?—Yes; the convener of the telephone committee of the council stated quite distinctly that he had gone into the thing in detail; and it is no secret that he got his information from Mr. Provand, the Member of Parliament for the Blackfriars and Hutchesontown division, and that the estimates were based upon the actual experience of the Mutual Telephone Company of Manchester.

763. Some questions have been put to you in this inquiry as to the drawbacks of competition. If competition is an inefficient check to these abuses then the general public have no protection whatever under this agreement, have they?—Absolutely none.

764. Now, let us take the case of the inhabitants of a town, I will take a city like your own, Glasgow; in your opinion is the municipality in a position to give an efficient service?—Oh, certainly.

765. Take first the capital, have you con-

Mr. *Moulton*—continued.

sidered the question of the capital of the National Telephone Company?—I have been watching it for years; it is one of the financial monstrosities of the age.

766. Do you think that it has an effect on the terms on which the public get its service?—Well, to pay 5 per cent. on their 4,000,000*l.* takes 200,000*l.*, and out of the 4,000,000*l.* of capital, I suppose, a liberal estimate of what is represented by tangible assets would not be more than a million and a half, the rest being represented by watered stock created for the purpose of paying promoters and buying up opposition. It is hardly possible for any company with an inflated capital like that to give a cheap service, and at the same time to pay 5 per cent. to their shareholders.

767. So that where money has been expended in buying up competition you think it took away benefit from the public and made the public pay for it afterwards?—One can come to no other conclusion than that such large sums would never have been paid to promoters of rival companies, but for the purpose of creating a monopoly and victimising the public, because I do not hesitate to say that the public have been victimised by the original promoters of this National Telephone Company.

768. With regard to obtaining capital, you have told us that the Corporation of Glasgow would be in a specially good position for doing it?—We could borrow the money and provide the installation, as I have said, at 2 per cent.

769. Now, with regard to the influence of the public on the Corporation, so as to obtain efficiency of service; in your opinion, is the Corporation in a position in which it must keep up to public requirements?—Undoubtedly.

770. And, therefore, it would be likely to be very quickly responsive to public demands, even apart from any threat of competition?—That is so.

771. Or any actual competition?—That is so.

772. Do you believe that if a Corporation like that of the city of Glasgow were to take up the telephones, there would be any continuance of this inefficient system of single wires?—The system would be established on the twin-wire principle; and I am told by experts that the service of a twin-wire system is absolutely perfect.

773. And if it be true that competition is a disadvantage, can you see any other way of securing a cheap and effective service than by placing it in the hands of somebody that is a servant of the public, and that has no other interest than that of the public to serve?—I think that licences for this purpose should only be given to municipalities, because they are the only bodies who cannot be bought up. I can quite see the impolicy of giving a licence to an individual or to a private company to compete with the National Telephone Company in Glasgow, because it simply means that the Postmaster, by giving that licence, is presenting the individual with a large sum of money which he will get from the National Telephone Company to relinquish his right. No such contingency will happen in the case of a municipality receiving a licence.

774. And the competition between the two companies might be arranged for in such a way that they would get the maximum profit out of the public?—Yes.

775. Would it be possible to take away the benefit of competition if the municipality had the telephone exchange in its own hands, by any such arrangement?—No; if the municipality were to have the licence and establish the system the price of the service would be the price which was required to pay a reasonable return to the Corporation on the money expended, and the competing system would have to bring its price down to the minimum price charged by the Corporation.

776. Now, a question has been asked as to whether the Corporation ought to buy up the National Telephone system in Glasgow. I believe the power of granting other licences is specifically reserved, is it not?—By the agreement it is expressly reserved. With reference to the suggestion that the Corporation might buy up the National Telephone Company if we got the licence, I do not see that there is anything to buy up, because, admittedly, their system of wiring is so defective, that it will have to be superseded by the twin-wire system sooner or later. It may as well be that the Corporation should fit up that twin-wire system as the Telephone Company. As for paying them anything for goodwill of business, the original promoters of the National Telephone Company have already feathered their nest tolerably well.

777. Have you gone into the question of Stockholm?—I have a number of figures here.

778. It has been suggested that Stockholm cannot compare with our English towns because it is much smaller?—That is not so.

779. Is the number of subscribers in Stockholm insignificant?—No; the number is very large compared with either London or Edinburgh, or Glasgow, and the area served by the system at Stockholm is a very much larger area than the area of London; it is an area having a diameter of 87 miles.

780. And subscribers can telephone over all that area?—That is so.

781. Could you give the Committee the number of subscribers?—The population of Stockholm is about 250,000, and the city is telephoned by the State, by the General Company, and by the Bell Company. The State has 2,400 subscribers; the General Company has 8,334 subscribers; and the Bell Company has 800 subscribers, a total of 11,534.

782. How does that compare with the numbers in Glasgow; it is nearly four times as many, is it not?—About that.

783. Do you believe that if the service had been efficient in Glasgow at reasonable rates, Stockholm would have had more subscribers than Glasgow?—Oh, Stockholm would not have been "in it" with Glasgow.

784. There is an example of three telephone companies or systems in the same area; does it at all differ from the case of three neighbouring towns joined by trunk wires?—I should think the cases are almost parallel.

785. So that there could easily be exchanges from one to the other on trunk lines if it was to the

Mr. *Moulton*—continued.

the interest of the various companies that it should be so?—Yes, without any difficulty.

786. I believe the service in Stockholm is on the double wire system?—I understand so, with the Erichsen instruments, which are admitted to be very much superior to any of those in use by the National Telephone Company.

787. Those in use by the National Telephone Company are what they have used from the first; does the subscription in Stockholm admit of profits to these companies?—I believe so. The General Company pays 8 per cent. per annum, and has reserve funds now amounting to more than half of the company's entire capital.

788. Do you know of any reason why we should not have a similar service in Glasgow if the municipality has a licence?—I do not see any barrier.

Mr. *Benn.*

789. You remember the document issued by the convener of your telephone committee?—I heard you refer to it when Bailie Chisholm was being examined.

790. You remember it, do you?—Yes.

791. Do you think it fairly represents the present view of your committee?—I believe it does; it expressed a very strong feeling against what we thought was an attempt on the part of the Postmaster to come to an agreement with the Telephone Company without allowing its terms to be made known in Parliament.

792. Then may I take it that if you saw no prospect of persuading the Postmaster to agree to your application, your strictures on the agreement would be as strong now as in 1893?—Of course our strictures on the agreement would be modified by the fact that the agreement is not quite what we anticipated it would be. When we found that the agreement was not to be laid before Parliament we fancied that it was more favourable to the company than it has turned out to be.

793. Now, with regard to the charges under that agreement, have you considered the increased charges (the trunk wire charges) which would be made for the shorter distances?—No, I have not gone into that.

794. You told us just now that if it were proposed that you should buy up the National Telephone system in Glasgow, in your judgment there would not be much to buy up?—No; what is there to buy up?

795. I take your answer, that there would not be much?—Yes, that is my view.

796. What would be your view, supposing the National Telephone Company proceeded under this agreement, this partnership, with the Post Office; do you think the same condition of things would obtain in 1911?—I fancy that at the expiration of their present licence the Postmaster would take over the thing on what might be called a "break-up" value, but he would not be bound to take over anything. They would certainly have no claim whatever to anything in the shape of goodwill.

797. Do not you think the consequences of the partnership would be that they would then have certain rights for which they would require compensation, and which it would be difficult to disentangle?—I have not gone into the agreement with a view to ascertain whether it amounts to a partnership with the Telephone Company or not, but I should think if there is anything in the agreement which would give the telephone company in 1911 anything in the nature of a substantial claim for goodwill of business, then the agreement ought to be very much modified by Parliament.

Mr. *Benn*—continued.

798. Now, as to the policy mentioned by Bailie Chisholm, the policy indicated in observations made by Mr. Goschen and Sir James Fergusson, with regard to granting to municipalities licenses to work their own system; have you ever regarded those observations as being restricted to municipalities which had not hitherto possessed a system of telephony of any kind?—Certainly not.

799. Until you heard the Postmaster General put that construction upon those observations to-day, did it ever appear to you that there was any limitation to this policy or promise?—It did not occur to me. I do not think the words bear any such limitation. Either a municipality can legitimately get a licence, or it cannot. If a licence can be granted to a municipality in a town where there is no other telephone system, then I do not see why a licence should not be granted to a municipality in a town where there is a telephone system.

800. Then I understand you to say that you would consider it unfair if any municipality were disqualified owing to the unfortunate existence within its area of such a system as that which you suffer from at Glasgow?—I would consider it very unfair.

801. You have studied this question probably from the days of Mr. Fawcett. May I ask you whether you consider the present attitude of the Post Office consistent with the policy which obtained up to the date of your application?—No; I do not think it is. In the days of Mr. Fawcett the principle seemed to be to give licenses to all who applied for them.

802. I will just ask you this question in regard to the Treasury Minute. Did you discover anything in that which would lead you to suppose that free trade in telephone would be limited?—The Minute expressly says the reverse. There are passages in it which clearly indicate that the framers of the Minute had competition in their eye.

Mr. *Tully.*

803. You say you have watched the operations of this Telephone Company for a number of years?—Yes, that is so.

804. You could not tell me what their net profits were for last year, could you?—Yes, I think I could. I have in my hand the balance-sheet for the half-year ending 31st December 1894, and in the net revenue account for the half-year ending 31st December 1894 the balance of net profit carried to the balance-sheet is 122,858*l.* 2*s.* 1*d.* for the half-year.

805. That would be, practically, 240,000*l.* for the year?—Nearly 246,000*l.* per annum.

Sir *Julian Goldsmid.*

806. What is the capital?—With a capital of four millions.

Mr. *Tully.*

807. You have heard it stated here, have you not, that the loss to the telegraph service by reason largely of the operations of the Telephone Company was 240,000*l.* for the year 1894?—Yes, I heard you say so.

808. So it would seem according to these figures that what the public service has lost the company has gained?—If it be the case that the one sum is represented by the other that would appear to be so.

809. And the effect of the tremendous powers granted under this agreement will be, according to your opinion, to increase and aggravate that state of things; that is, the company gaining and the public losing?—I do not think the granting of telephone licenses to municipalities would have such a serious effect upon the Post Office revenues; because, speaking for Glasgow, I do not think that the town telephones affect the telegraphic revenue very much.

810. That is a different question; that is where it is carried on in the Corporation areas; but this service is carried on between different towns like Glasgow and Greenock, where the use of the Telegraph Service has been destroyed, I believe, practically annihilated. Do you think the telephone service within the Corporation area would interfere with the receipts for telegrams and postages by the Post Office within that area?—I think not.

811. You prefer the competition, with the risk of having to put up with two exchanges, rather than endure the monopoly of this company and its working, although it causes great loss to the public service?—Undoubtedly I do.

Mr. *Snape.*

812. You made the remark earlier in your evidence that, if the service were left in the hands of a private company, a maximum charge should be stipulated for?—That is invariably done in all cases of monopolies granted to private adventurers, notably in the case of the electric light. The Board of Trade have a limit beyond which electric light companies cannot make a charge.

813. It is not the habit of the companies, when such stipulations are made, to make a less charge than their maximum allowance, is it?—Sometimes they do.

814. But you do not think that it would remedy the evil even if the maximum charge was reduced below what is at present charged?—It would not remedy the evil if the maximum charge was fixed at such a sum as would enable the National Telephone Company to go on still making their extravagant charges.

815. I gathered from the later part of your evidence that there is no doubt in your own mind as to the desirability of municipalities taking up this instead of private companies; am I right?—I feel very strongly that if the State does not take over the telephone system, the proper parties to manage the telephone system are the municipalities.

816. I do not know whether you have the information; can you tell me how it is that one of the three companies in Stockholm has so much larger a number of subscribers than the other two?—I cannot tell you.

Mr. *Snape*—continued.

817. You do not know?—I do not.

818. Do you know what arrangements exist there so that the subscribers to one of those companies can be put into communication with the subscribers on another?—I understand that the interchange is mutual between the General Company and the Bell Company, and that no charge is made for communication between the subscribers of those two exchanges.

819. Practically they are one company, then?—Well, they are not one company, but they work together, and I anticipate that if Glasgow got a licence for the establishment of a telephone system the National Telephone Company would be quite willing to allow their subscribers to communicate with the subscribers to the Municipal Exchange.

820. Without charge?—Without charge.

821. What about that third company in Stockholm?—That is the Government.

Sir *James Fergusson.*

822. You made a general statement of opinion as to its being preferable that municipalities should have the telephones rather than companies, if the Government does not keep them in their own hands; are you aware that in America, where the telephone is very much developed, it is in the hands of companies?—Yes; but we all know what kind of municipalities they have in America; I have not the least doubt that there is gross corruption somewhere in America, or the telephones there would be much cheaper than they are.

823. Have you sufficient acquaintance with the subject to say that you think the subscription to telephones in America unduly dear?—Well, comparing them with the estimates that I have seen, they are certainly unduly dear; it may be that in America the patents have not run out. I do not know much about the patent law in America, but it may be that there are still patent royalties to be paid of which I know nothing.

Mr. *John Ellis.*

824. Is it your opinion that the telephone service in Glasgow is improving, or that it is becoming worse?—After they introduced that new switch-board which has been spoken of, and which was to do such wonders for us, the telephone system became absolutely unbearable; I wrote them to come and take my telephone away.

825. You are speaking of the present moment?—Yes; but it has been, I should say, improving.

826. Did the memorial or circular from the 2,000 gentlemen you mentioned to some company in Manchester have any effect in improving the service at all?—Well, it caused them to take such steps as led them to say that it would cause an improvement; but the result of their steps was, in the first instance, to make things worse.

827. Which has continued until now?—No; as I have said, matters are not quite so bad as they were. At the time when the Corporation applied for the licence the telephone system in Glasgow was simply unbearable, as I have said.

Sir *Julian Goldsmid.*

828. How long ago is that?—Eighteen months ago.

829. Has

Mr. *John Ellis.*

829. Has your application for a licence had any effect upon the company?—I have not the least doubt of it.

830. In improving it?—In improving it.

831. Then it is improving, is it?—It is improving; still it is capable of very much greater improvement.

832. Is the number of subscribers increasing?—Yes, the number of subscribers is increasing.

833. Is increasing now?—Is increasing now. The lowering of the price had a very considerable effect in increasing the number of the subscribers.

834. I understand you come before us to confirm all that the last witness said with regard to the widespread dissatisfaction which exists in Glasgow, is that so?—Yes. I think I can from my personal experience corroborate what Bailie Chisholm has said.

835. You think that the majority of those who use the telephone agree with you that the service is unsatisfactory?—I think so.

*Chairman.*

836. You were asked a question about the difficulty with regard to the tramways and the overhead electric power for the tramways. That was a matter which was, I think, referred to a Joint Committee of the two Houses under the chairmanship of Lord Cross?—That is so.

837. And clauses were settled by that Committee which are now in operation, and which work satisfactorily?—We got them substituted in our last Act for the protective clause which we were obliged to insert in the Act of 1891.

838. And do you find the new clauses work satisfactorily?—The new clauses work satisfactorily in this sense: that if the Telephone Company does not within two years from the date of our Act provide an insulation for their wires we can go ahead with our electrical system without being subjected to any claim for damage or injury to their system.

839. And whether they introduce a twin-wire system will depend, of course, upon the co-operation of the Corporation of Glasgow?—They have not applied to us for permission to make any change; but I think that with our present information we would be very chary about giving them permission to open up our streets.

840. Or to open up your streets yourselves for them, keeping the control in your own hands?—That is a matter, of course, which has not come before the Corporation, and I would be unwilling to say that I represent the views of the Corporation upon that point; but, personally and individually, I should be averse to giving the Telephone Company facilities for opening up our streets.

841. You are aware, are you not, that the Manchester Corporation have come to terms of that kind with the Telephone Company there?—I am not aware of that.

842. I think you told the Committee that the estimate of the cost of an underground service by the municipality was given you by Mr. Provand, and based upon the figures of the Mutual Company in Manchester?—That is my information.

*Chairman*—continued.

843. Have you ever seen a balance sheet of the Mutual Company, so as to form an opinion as to whether it was a successful company or not?—No, I have not seen a balance sheet.

844. Has one ever been published?—I do not know.

845. You were asked by Mr. Moulton as to whether the necessity for underground wires is not confined practically, if not entirely, to the junction wires between exchanges?—I would not say that the necessity for underground wires is confined to junction wires.

846. Are you aware that a very large proportion of wires to subscribers in provincial towns where they are concentrated in a small area are underground wires from the exchanges to the subscribers, or to the neighbourhood of subscribers?—I would not be surprised to know that that is so.

847. You were asked a question about the effect of competition, and you said you did not view it with apprehension?—Not at all, from the public standpoint; if I was a shareholder of the National Telephone Company probably I would.

848. Viewing it from the public standpoint there must, of course, be a great loss of capital in having two systems radiating from two centres to cover an area like that of the town of Glasgow?—I do not take it that there would be any waste, because if we got the licence now we should establish the twin-wire system, and the National Telephone Company need not do so.

849. Still you would have the two systems in operation side by side covering the same ground?—Yes; but, admittedly, the system in operation by the National Telephone Company is a system which is condemned.

850. Do you think it would be disadvantageous to the telephone subscribers that there should be two systems, and that they should only be able to communicate possibly with the subscribers on their own system?—No; I believe it would be a great advantage, because if the municipality of Glasgow was to get the licences and establish the twin-wire system underground the result of the competition would be to reduce the price, and it would be profitable for the subscribers to connect themselves with both exchanges.

851. I do not quite see that?—Assuming our estimate of the cost to be right, we could give a service for 5*l.*; our reduction of the price to 5*l.* would bring all the subscribers over to the municipal system unless the National Telephone Company chose to reduce their rate to a similar sum; if they reduced their rate to a similar sum so as to keep their subscribers, then, according to present prices, a subscriber could connect himself with both exchanges without increasing the cost, and he would have the advantage of having the twin-wire, a perfect system, as well as the imperfect system of the National Telephone Company.

852. But is it not the case that in Glasgow a large proportion of recent subscribers have entered into a five years' arrangement?—Well, "five years" is not a long period, it would soon run out.

*Chairman*—continued.

853. But during that time they would have to pay the increased amount?—Possibly.

854. Are you aware that in Manchester, where there are the two competing systems, a considerable number of subscribers have to pay the two subscriptions, the national and the new?—I would not be surprised to hear that that is so, although I cannot understand why the National Telephone Company's Exchange in Manchester does not allow an interchange of messages with the exchange of the New Telephone Company, seeing that the National Telephone Company practically controls the other. It seems to me a most inexplicable thing.

855. I am informed that there are 480 subscribers in Manchester who subscribe to the two companies?—I would not be surprised to hear that that is so.

856. You were asked by Mr. Moulton about the apparent inconsistency between the agreement and the Act of 1892; are you aware that the proposal or the provisions in the Agreement were set out in the Treasury Minute of May 1892?—I have the Treasury Minute of 1892 here.

857. Will you look at page 5?—Which section?

858. Section 10?—"As far as practicable, the Post Office will provide underground wires at an agreed rent to connect together the exchanges of a company within one and the same exchange area, so that municipal authorities may not have to complain of their streets being disturbed by the companies, which in some places might be in competition." It would appear as if clause 12 of the Agreement were intended to carry out that stipulation.

859. You say it does appear?—It does appear, yes.

860. And that was a stipulation in the Treasury Minute which was before the Committee of 1892, before the Bill of 1892 was passed through Parliament into an Act?—Yes; but at the same time it does not obviate the difficulty that clause 12 practically gives the company the absolute right to have our streets disturbed; it takes away the veto that we have under the Act of 1892, and confers on the Postmaster General the right to disturb our streets, and, if that be objected to by the municipality, to appeal against our veto.

861. Certainly; but in accordance with paragraph 10 of the Treasury Minute of 1892?—Yes; I have already admitted that clause 12 seems to me to be intended to carry out clause 10 the Treasury Minute.

862. And does, in terms, carry it out?—Well, I should not like to say so without further consideration; it is quite possible that clause 12 may do more than what is stipulated for in clause 10 of the Minute.

863. And the powers which the agreement confers upon the company are also in accordance with paragraph 12 of that Treasury Minute, I think?—That is so.

864. Then, you were asked by Mr. Benn as to whether at the termination of the license in 1911, there might not be some foundation for a claim of compensation. Have you looked at clause 17 of the agreement on page 20, sub-clause 2; perhaps you would just read that?—"Subject

*Chairman*—continued.

and without prejudice to the proviso for determination hereinbefore contained, this indenture shall (save so far as relates to the sale of trunk wires referred to in Article 2) remain in force so long as the indenture of 1884 is in force, and no longer, and upon the determination by any means of the powers and authorities granted by the indenture of 1884, the powers and authorities hereby granted shall absolutely cease and determine, and the provisions of this indenture shall cease to have effect."

865. Does not that answer the question Mr. Benn put to you, and show that in 1911 these powers absolutely cease and determine, and that there would be no foundation for claiming compensation?—I should not like to say offhand that sub-section 2 of clause 17 of the agreement has that effect; but I would say that if it does not have that effect, it ought to be so expressed as to bring about that result.

866. But you do not express the opinion that that sub-section 2 does not have that effect?—I have only heard the point raised to-day, and I have not given it consideration; but I should certainly think that in the year 1911 the country should not be called upon to pay anything in the shape of goodwill to the National Telephone Company on the expiry of the license.

867. And so far as you are aware there is nothing in this agreement which would call upon the Government to pay compensation?—It did not occur to me that there was anything.

868. I understand that your general opinion is that the State should have the telephone?—I am very strongly of that opinion personally.

869. And if the State is not prepared at the present time to take it, that the municipality should have the right to it?—That is so.

870. Do not you think that the granting of municipal licenses would tend to put great difficulties in the way of the State acquiring the telephones?—No, not at all; it would greatly facilitate the State acquiring them, because in the first instance it would bring down the price of the telephone service; and if it were thought expedient to buy up the National Telephone Company at any time during the 16 years that remain of the license the purchase would be effected on much more reasonable terms than it could be if they were bought up on their presently inflated profit.

871. Although at that time the State would, under the circumstances you suggest, have to take over two competing systems side by side in the same area?—I believe myself that the existence of two systems in Glasgow would not be in the long run a source of expense, because it is quite possible that the demand for the telephone in Glasgow would be so great that a double system of wiring would be almost necessary even though there were no two licensees. I think Sir James Fergusson said a little while ago that one source of the cost in America was the great number of subscribers on one exchange, showing that it might be an advantage to have two exchanges.

872. I think Sir James Fergusson was referring to the very large number of subscribers upon the exchange of one system?—Yes, which caused an increased expense.

873. That

*Chairman*—continued.

873. That difficulty might be overcome by having further exchanges, you think?—Two exchanges could communicate the one with the other.

874. Extending your exchanges on the same system?—My opinion is decidedly that the granting of licences to municipalities would have a contrary effect to what you, sir, seem to imagine.

875. Sir Julian Goldsmid wishes me to ask you this question: You have said that, supposing the Post Office decided to buy up the National Telephone Company, the existence of municipal telephones would facilitate that operation. I confess that that has not conveyed much to my mind; perhaps you will explain a little more fully. Suppose the State determined to take into its own hands the whole telephone system, in what way would that operation be facilitated by the fact that, instead of having to deal with one licensee, the National Telephone Company, it would have to deal with the National Telephone Company and the municipality in each of these areas?—I have already said that I consider the cost would be so reduced, and the number of subscribers would be so largely increased, that there would be room for two exchanges in the City of Glasgow.

876. Do I understand you to mean that the cost being reduced you think the effect of the municipal telephones would be to reduce the value of the property of the National Telephone Company?—No, I do not believe it would have the effect of seriously reducing its actual worth; it would have the effect of seriously reducing the nominal value.

Mr. *Moulton.*

877. You believe that the revenues of the new, or the National Telephone Company, now are what I might call monopolist revenues?—Certainly.

878. And that the rental they charge is more than the value of the service measured by the cost it is to them?—By a long way.

879. And that, if there were two telephone agencies, the effect of competition would be to reduce the rentals to their fair amount?—I have been most unhappy in my expressions if I have not conveyed that meaning to the Committee, because that is what I have been saying all along.

880. And you think that the most effective competition for this purpose would be that which would be introduced by the municipality?—Undoubtedly. Taking it as a general rule, if you have to buy up two people instead of one you will have probably to pay more, but in this particular case, if the National Telephone Company is to be bought up at any time during the next 16 years, while the licence is running, and there is no competition, you will have to buy them up and to pay compensation in view of the enormous profit that they are making at the monopoly rates.

Mr. *Moulton*—continued.

881. Do you believe that the reduction of profit would more than compensate for the fact of your having to deal with two wires?—Much more.

Sir *Julian Goldsmid.*

882. I want to know how the granting of municipal licenses would facilitate the making of arrangements which you can now make with one company, when you would have to make them probably not only with the one company, but with a great variety of municipalities?—I do not know that I can make my meaning any plainer.

Mr. *Moulton.*

883. Do you think the Corporation of Glasgow would object to terms being inserted in the licence by which the Post Office would, in case it was buying up the telephones, take the Corporation system at a fair price?—I should think not.

Mr. *Tully.*

884. Do not you say that the Corporation would be willing not to charge for goodwill?—It would be most unreasonable of the Corporation or any corporation to expect to be paid for goodwill.

885. And the Telephone Company would charge for goodwill?—If you buy them up before the licence runs out they will make you pay the full market value of their licence.

886. Would not that make a very substantial difference in the price?—I should think so.

Mr. *Snape.*

887. You have said that if the Government had to buy at any time from the municipality, supposing they had the licence, they could buy on reasonable terms: what do you mean by "reasonable terms"?—The fair value of the installation at the moment of transfer.

888. By "fair value" do you mean the outlay of the Corporation, or some addition to it for some vested interest?—There might be the vested interests of a few employees to consider, but I should not think they would be of any great consequence.

889. Of what class; what sort of vested interests?—If you took over the whole staff that was working the telephone system there might be no vested interest to compensate.

Mr. *Benn.*

890. On that point I want to be quite clear. The point is this: Supposing two systems obtained in Glasgow (one worked by the Corporation and another by the Company) in the year 1911; supposing the municipal system were the better of the two, would not the Post Office have the advantage of having the pick of two systems; that is to say, if they preferred to acquire the municipal system, the better of the two, they would be able to do so without any regard to the system of the National Telephone Company, would they not?—That is undoubtedly the case.

891. Would not that be a great advantage to the Post Office?—A very great advantage.

Sir JAMES ALEXANDER RUSSELL, LL.D., called in; and Examined.

Sir *Charles Cameron.*

892. You have been a member of the Town Council of Edinburgh for a very long time, have you not?—Yes; about 15 years.

893. And you have occupied the office of Lord Provost of that town?—Yes, I have.

894. Previous to your Lord Provostship you were one of the magistrates?—Yes.

895. The Town Council of Edinburgh is, like that of Glasgow, a considerable telephone user, though not nearly so large?—Not nearly so large; still they do use it.

896. Just mention the extent to which they use it?—We have paid the Telephone Company, first and last, a little over 2,000*l.* for the Corporation telephones.

897. And that is extending over a long time?—Yes; we have been using them for 13 years; on a small scale at first, and gradually rising. In that I do not comprise some part of the town's work; only the watching, fire engines, and public health.

898. You do not comprise those?—I do not comprise the water and gas, but only the watching, fire engines, and public health. These are the figures I have in my hands.

899. So that if you were to take in these other departments, it would add to that amount that you have mentioned?—It would add something to it.

900. Will you please inform the Committee what the telephone charges in Edinburgh are?—We used to pay 15*l.* a year; but for the last two or three years we have had a reduction in the price to 10*l.* for an instrument within half-a-mile radius of an Exchange, and 2*l.* 10*s.* for every additional half mile.

901. How many subscribers are there in Edinburgh?—There are about a 1,000 in the city of Edinburgh proper, and 1,420 in Edinburgh and Leith. You must always treat Edinburgh and Leith as one town for all these services.

902. What is the population?—The joint population is about 340,000.

903. You have heard what the Glasgow Corporation witnesses have said as to the unsatisfactory nature of the service in Glasgow; will you please give us your experience as to the service in Edinburgh?—I do not think the service in Edinburgh is so unsatisfactory as it is in Glasgow; but on the other hand, I must say that I have never spoken to a telephone user in Edinburgh who is completely satisfied with the service; they complain not merely of the delays at the Exchange, but especially of indistinct speaking, and of hearing other persons than those with whom they wish to speak.

904. You mention in your *précis* here an interesting fact, a fact which may interest the Committee, though it has not very much practical bearing upon our inquiry, that is, that Professor Graham Bell, the inventor of the telephone, is a native of Edinburgh?—Yes, he is a native of Edinburgh, and only left the town a very few years before the telephone was brought out in America.

Sir *Charles Cameron*—continued.

905. So you think that Edinburgh naturally should have a first-class telephone service on that ground alone?—We ought to have an interest in the telephone.

906. You say that the number of subscribers in the town of Edinburgh is only about 1,000?—Only about 1,000.

907. And you believe that a very much larger number would be subscribers if an efficient twin service at moderate rates were provided?—I have no doubt of that at all; it is an absurdly small number for a town of the size of Edinburgh, inhabited by such a wealthy class of citizens.

908. There is a special reason that exists in Edinburgh, is there not, more almost than in any other town of the kingdom, against overhead wires?—Yes.

909. Edinburgh is a very beautiful town, is it not?—Amenity is a very important feature of the town, and we have a great objection to overhead wires in consequence.

910. The Telephone Company does not appear to treat you, in Edinburgh, as badly in the matter of wayleaves as they treat Glasgow, or you may be tutoring them; they pay you, do not they?—They pay nothing for going across streets, but the Corporation does get money from them for leave to attach their posts and wires to various buildings throughout the town, which happen to belong to the Corporation; and I know they pay considerable sums to private people; in fact, I am a director of a company which is just now considering how large a sum it should charge them for having 110 wires attached to a building.

911. Did not they oppose one of your Improvement Bills in Parliament?—They did.

912. Because you proposed to pull down some building on which they had their wires?—We have had many controversies and conflicts with them in Parliament. I can give you an account of all those. In one case they were the only opponent of one of our Bills, the Improvement Bill of 1893, and they caused it to be an opposed instead of an unopposed Bill; you can understand the expense of that.

*Chairman.*

913. What was the ground of their opposition?—It was a Bill for the improvement of the town by widening streets, and one of the points on which they opposed was a claim for compensation for the removal of their wires from one of the old houses we wished to throw down. We had bought the house from the owner. They had originally attached the wires to the house without his knowledge or leave. When he found it out he made them pay smartly for having the wires attached; and they were left there during his pleasure and subject to a month's agreement or a month's notice; yet they opposed us in Parliament and tried to get a compensation clause.

Sir *Julian Goldsmid.*

914. What was the result?—They were beaten in

Sir *Julian Goldsmid*—continued.

in Committee. They wished to compromise it, but we would not compromise; we thought it a case of principle.

Mr. *Tully.*

915. Who paid the costs?—We had to pay our own costs.

916. You did not get costs against them?—I do not know that we asked for them.

Sir *Julian Goldsmid.*

917. Why did not you get your costs?—I am not sure that we asked for them. I am told that we never did ask for the costs.

Sir *Charles Cameron.*

918. That is not a solitary instance in which the action of the Telephone Company in Edinburgh has landed you in difficulty and expense, is it?—I have just spoken of their opposition to our Improvement Bill. In the same year we had a Tramway Bill in Parliament. The Corporation owns its own tramways. We wished to take power to use mechanical or electrical power on the tramway. They objected to the word "electric" in our clause, and we felt their opposition so serious that we were obliged to drop the power out of the clause altogether rather than take the protective clauses which they had secured against some other tramway owners. We would not accept these clauses, and so we dropped out the power to use electricity altogether. This Bill, of course, was promoted before the recent report of the Joint Committee appeared.

919. But the practical result of that has been, has it not, that in leasing your lines to the company that works them you have been debarred from making use of electricity for tramway purposes during the currency of your lease?—That is so. We have a Water Bill in Parliament this very session, and they have been corresponding with our Parliamentary agent trying to get up opposition in respect of clauses.

920. That is rather an audacious case of opposition, is it not, in your opinion?—Their whole Parliamentary intercourse with us has been of the most audacious description.

921. Will you please read us what they say with regard to this last Water Bill?—This is part of the correspondence: "We are instructed by our clients, the National Telephone Company, to ask for the addition of the words to Clause 37 of the Bill, which you will find noted on the accompanying copy. An answer in the course of the next few days will oblige.—Yours, &c. (signed) *Martin* and *Leslie.*" Then our agents (Messrs. Beveridge) replied: "We duly received your letter of the 12th, requesting an addition to be made to Clause 37 at the instance of the National Telephone Company. Our clients cannot admit any right of the Telephone Company to require any amendment to be made on the Bill, nor any *locus* to be heard against it. We are sorry, therefore, that we cannot comply with your request."

922. That is only one of many cases?—That is only one of many cases; there are others beside this. It is right that I should say we

Sir *Charles Cameron*—continued.

have opposed them. We were amongst those who opposed in 1892 the National Telephone Company and the New Telephone Company, when they deposited Private Bills in Parliament to obtain powers over roads and streets of towns. The Corporations generally petitioned against that. We thought they were trying to infringe our rights over our streets, and we expect that if they are kept in their present position by the postal authorities they will probably lodge a Bill very soon again, and that we shall once more have to come to Parliament to protect our rights.

923. There is a good deal of evidence in our *précis* that you are prepared to give, but have you some very strong objections in Edinburgh to allow your streets to be interfered with?—Extremely strong objections; I have just found a list of further fights in Parliament: In the case of our Electrical Lighting Order in 1891, we were put under an obligation, much to our disgust, to protect the Telephone Company. This order was obtained in 1891 before the protective clauses of the Joint Committee came out. They only came out in 1893; but here we are at this moment in our order crippled by clauses of this sort. We have not yet come into practical collision with them, because the current is only to be turned on on the 11th April.

924. You have told us that in Edinburgh there is the same objection to interfere with your powers over your streets as exists in Glasgow, and I suppose you would, on that point, corroborate what has been said by the Glasgow witnesses?—I corroborate what has been said by the Glasgow witnesses.

925. I understand that quite recently the Lord Provost's Committee of the Edinburgh Town Council, consisting of all the magistrates, and the chairmen of the different committees, have resolved to recommend the council to apply for a licence to set up a Municipal Exchange in competition with that of the National Telephone Company?—Yes, that is so.

926. I suppose there is no question but that that application will be made?—Yes, I have no doubt of it.

927. And that it would be made if this Committee were to report in favour of the Glasgow application?—Yes, it depends on the result of the Glasgow application. We kept it back until we saw what our Glasgow friends succeeded in doing.

928. You corroborate, I suppose, also, as applicable to Edinburgh, the statements made by Bailie Chisholm, particularly as to the ability of the Corporation to supply a much better service than that at present existing, and much cheaper?—That is our belief.

929. You do not ask for any monopoly?—No, we do not require any monopoly.

930. You would be quite willing to meet the National Company?—Yes; we should make no profit. The Corporation carries on works for the citizens, not with a view to making any profit; in the case of the water and gas, we are not allowed to make a profit; in fact, we spend the money in improving the service and making it cheaper. We must supply at cost price.

Sir *Charles Cameron*—continued.

931. You hold, in fact, that the licence should be obtained—that the monopoly, in fact, should be held either by the nation or by the municipality?—Yes, that is my view.

932. Do you agree with what Mr. Colquhoun said as to an arrangement for the transfer of the undertakings to the Government being likely to be effected more easily, and on cheaper terms, if the municipalities are granted licenses?—My personal feeling is rather in favour of the municipalities working the telephones within the local areas than the Government working them; but the next best to that I think would be the Government. I have the greatest objection to any private company doing it. I think there would be no difficulty at all, should the Government wish to take over the telephones, in taking them over from the municipalities; as they would not be held by them on a profit-making basis, they would have no reason to ask for any payment for them excepting to cover the cost and provide for the servants who would be transferred; and, besides that, municipalities are loyal to the State and would wish to support a State department.

933. You think that by far the most important use of the telephone is in areas?—I do, and especially with reference to my own town.

934. You find that in Edinburgh most people prefer telegraphing rather than telephoning long distances?—Yes, many people in Edinburgh to whom I have spoken have told me that they would surrender the right to telephone to other places if by so doing they could only get a really efficient service inside their own town; they would pay the sixpence or shilling for a telegram.

935. You heard, did you not, what Bailie Colquhoun said about facilities between Glasgow and Edinburgh in case they should both work telephone exchanges. I suppose in Edinburgh the readiness to exchange without terminal charges would be equally applicable?—That goes without saying. The corporations help each other constantly in every possible way just now.

936. You see no difficulty in interchange between the National and the municipal service in case of its being started in Edinburgh?—I am not aware of the technical details of carrying out such an exchange, but so far as the willingness of the Corporation to accept messages goes, I am quite sure they would accept messages from anyone. They must run the telephones in the interests of the citizens and only for the good of the citizens. They have no other aim before them, and, therefore, it would be their interest and their duty to accept messages for their fellow citizens, whoever sent them.

937. I suppose that Parliamentary fight that was forced on you by the Telephone Company where they made an opposed Bill out of an unopposed, cost a very considerable sum of money?—Yes, we had to bring witnesses here from Edinburgh, besides going through the opposition.

938. I suppose you had to pay counsel, too?—Yes.

939. You think that if licenses were being granted to municipalities Edinburgh would be quite prepared to go into the business?—I think so.

Sir *Charles Cameron*—continued.

940. With the approval of its citizens?—Yes.

Mr. *Tully.*

941. Leith, I believe, is the seaport of Edinburgh?—Yes.

942. And I suppose, before the telephones came into use, there was a large telegraphic communication between Leith and Edinburgh?—Yes.

943. That has been annihilated by the existence of the telephones?—No doubt it has.

944. And that is how it affects the general revenue of the country. This monopoly affects you in Edinburgh specially by harassing and expensive litigation?—Yes. As regards the falling-off in the telegraph revenue, I do not see that it can matter to the Government whether they get a sovereign from the telephone licence, or from some other portion of the postal service; it is all the same.

945. Royalties?—Royalties. I do not wish to be exempted from taxation, nor does my city. We are quite willing to contribute our fair share to taxation.

946. That is a different question?—I beg your pardon; I thought it was the same question.

947. No; I am asking you as to the revenue derived from telegraphing which has been largely done away with by telephones, from which the postal revenue will get a certain royalty; but that does not make up the amount that is lost in consequence of the telephone service; what do they charge you for the use of the telephone?—£10 within the first half-mile; then 2*l.* 10*s.* for every half-mile beyond from the exchange.

948. Is that a higher price than at Glasgow?—Possibly it may be the same.

*Chairman.*

949. I think you are under the impression that the two sources of revenue are distinct?—Yes.

950. The telegraph revenue and the falling-off in it takes into account the royalties?—I was not aware of that. It shows that the royalty is not large enough, possibly.

Sir *Charles Cameron.*

951. You think you could give a very much cheaper telephone service, and yet pay the Postmaster a much bigger licence than the National Telephone Company at present does?—Well, we have been advised that we can do it for about 5*l.*, and I think there is great room between 5*l.* and 10*l.* even to give something to the Postmaster General.

Mr. *Moulton.*

952. I understand you agree with the last witness that the telephone is a social convenience which is rapidly becoming a social necessity?—Quite; I do.

953. And you are of opinion also that the public ought to have a cheap and effective service for that purpose?—Decidedly.

954. You think that it is chiefly valuable in local areas?—I think so; yes.

955. In

Mr. *Moulton*— continued.

955. In fact, that it is a local need, and that the long-distance telephone is of very minor importance?—Yes, that is my view. It may be partly affected by the peculiar position of Edinburgh.

956. So that that points to its being in the hands of the municipality?—I think it does.

957. Do you think that there would be the least difficulty in arranging in such a case with the outside districts so that they should come in too; I mean the districts that lie close around it; do you think there would be any difficulty in arranging with them?—The municipality would most heartily enter into any arrangement; there would be no obstacle on their side.

958. Of course, you have heard of the agreement with the existing telephone companies, and we are agreed that there is no provision for either a cheap or an efficient service in that except so far as there is the power of granting new licenses?—That is all I can see in it.

959. Is there any competition which, in your belief, would be more effective in securing a cheap and efficient service than that of a municipality?—I think not. It is quite fair to say that my own private view is that competition would not last long within the municipal area. A municipality which is not going to make any profit must, I think, inevitably exterminate any competitor.

960. But, at all events, it would either exterminate it or reduce it to such terms as would make it also reasonable and efficient?—That is so.

961. In your opinion would it be possible for a dear, inefficient service to live side by side with a municipal cheap and efficient one?—Quite impossible; people would change from the one to the other.

962. Therefore, whatever may be the advantages or disadvantages of competition, if it is to be the means of securing a good service it could not be applied better, in your opinion, than by giving it to a municipality?—No, I think not.

Sir *Julian Goldsmid.*

963. Competition, in fact, will result in municipal monopoly?—I think that will be a still greater benefit to the public.

Mr. *Tully.*

964. You would not do that by making it a legal monopoly, would you?—We would make the monopoly by our good and cheap service; we do not want any legal monopoly whatever.

965. You would not ask us to knock down the monopoly of the New Telephone Company in order to set up the other monopoly?—Not in the least. We only ask for the monopoly so far as we create it for ourselves by good work.

*Chairman.*

966. I understand you are primarily in favour of municipal telephones as against the State taking them over?—I think it would probably be found to work better. There would be considerable difficulties in the State breaking up streets, or even going over the roofs of houses, on such a large scale as a good telephone service would mean. I do not see why Edinburgh should not be like Geneva and other cities, where almost everyone has his telephone.

967. Have you ever found any difficulty with the Post Office in connection with underground way-leaves?—We are very loyal to all Departments of the State, and have never required the Post Office to exercise its power of appeal; we have always gladly given them everything they have asked, but as yet the Post Office have asked for very little from us. It has only asked leave to put down a few telegraph wires instead of putting down telephone wires by the thousand.

968. I hope you have found them anxious to meet the wishes of the municipality?—There has never been the smallest dispute with them. The town council have been most anxious to meet the Post Office.

969. You have mentioned the controversies and contests you have had with the Telephone Company with regard to electrical matters; do you think the granting of a municipal license would put a stop to these contests with the company?—I think it would have that effect in a short time.

970. I will come to that in a minute; you mean by destroying the company in the area of the city of Edinburgh?—That would be the effect in the end; in the meantime I do not know that they would be so anxious to defend the 5*l.* rate as they are now to defend the 10*l.* rate.

971. But those controversies took place before the Report of the Joint Committee, I understand you to say?—The last one took place only this Session, the Session of 1894-95. I mean the attempt to attack our Water Bill.

972. But with regard to the electrical currents, what do you say?—With regard to the electrical currents, our Tramway Act was in 1893, and our Improvement Act was in 1893, and our Electric Lighting Order was in 1891.

973. That was before the date of the Joint Committee?—Yes, that was before the date of the Joint Committee.

Sir *Charles Cameron.*

974. The effect of the tramway contest remains to this day, does it not?—Yes, it does.

*Chairman.*

975. In consequence of a lease you have given?—No, not in consequence of the lease. We were obliged to alter the powers we sought in our Bill, and then we gave the lease upon the Bill which we passed into an Act.

Sir *Julian Goldsmid.*

976. A lease of what?—Twenty-one years.

*Chairman.*

977. I understand the council has not had this matter before them, and have come to no decision, therefore, upon it?—It has not come to any final decision; it was brought up by motion and mentioned to the council more than a year ago. At that time the Glasgow corporation applied for a license, and we said that as they had got up the information and were prepared to go

*Chairman*—continued.

on there was no use in our incurring the expense and trouble until we saw the result of their application. I may say that the Glasgow corporation has always given us their reports; they have given us information and all the help they could in any matter, and we have done the same by them.

978. You have mentioned that the corporation of Edinburgh have taken over the gas and water?—Yes.

979. Do not you draw a distinction between gas and water, which are necessary to every inhabitant, and telephones which, after all, must be restricted to a particular number of the inhabitants?—There are some people who do not use gas, not very many; but what I feel about it is this, that, as a general principle, wherever a monopoly affecting the whole of the streets is introduced, that ought to be in the hands of the public authority, and not in the hands of a private company. The Telephone Company must use the streets and either go overhead or underground.

980. Or come to the corporation and ask them to do the work for them, under their own control?—If the corporation put down the cables underground it would be possible for them to charge rent to the Telephone Company; but introducing different people, I am afraid would introduce friction between the officials.

981. You are aware of the agreement between the corporation and the company at Manchester?—Yes; I do not know how it works.

982. You have said that Leith and Edinburgh are, for telephonic purposes, one city; but they are two corporations, are they not?—They are two corporations. I do not think the people can tell where one begins and the other ends; when I am in the streets I have difficulty in doing so myself.

983. Now would you propose that the municipal license should be limited as regards Leith and the adjoining districts?—Just as we share the water with Leith and Portobello and the gas with Leith; the water and the gas are "joint" to the corporations.

984. You would suggest that it should be limited to the area of the two municipal boundaries?—Yes; the two municipal corporations.

985. How would you get over the impossibility of subscribers in the city communicating with their houses outside the city, which is a very common use of the telephone?—Well, with us, that does not exist to a large extent. There are some, I admit. We would be quite willing to take their messages in if they have the power to have telephones in their own houses.

986. Perhaps Edinburgh is not like other towns, where a large number of inhabitants live outside the town, and carry on business within it?—No. If we had them, the question might arise; but I have not the smallest doubt that the corporation would be willing to take in messages.

987. They would have to pass through two exchanges instead of one?—There would be no exchanges outside, these would be single houses. Anyone living in the country round about Edinburgh would have to send into the Edinburgh Exchange single wires.

*Chairman*—continued.

988. You do not suggest that the Edinburgh corporation should ask for rights extending over roads beyond the limit of their boundary?—No; but if they had a wire there we would join it to ours.

989. An individual subscriber would have to bring his wire in?—Yes.

990. You are aware, of course, that the restricted area that is given to the National Telephone Company, in the case of Edinburgh, is an extended area, including Edinburgh, Leith, Portobello, Musselburgh and the police burghs of Dalkeith, Lasswade and Loanhead?—Yes; these are all practically within a raidus of five miles.

991. Still it is a more extended area than the restricted area which you would suggest for telephonic purposes?—Yes. When I suggest the area I am giving my own opinion rather than that of the corporation. We are joined, in the case of water, to Portobello, and it might be convenient to take that burgh in in the case of the telephone.

992. You would not admit that if you obtained the license from the Post Office you would give to the National Telephone Company way-leave powers corresponding to what you would be able to exercise yourselves?—No; we are quite willing, I think, to accept their messages so far as that is convenient to our citizens, but not to give them way-leave powers.

993. Therefore you would have an advantage over them in that respect?—Yes, a decided advantage.

994. And probably the advantage of putting down the twin wire system underground?—I may mention a small matter just now that will show how we can take advantages of circumstances. We are presently going to cable our corporation tramways, that means a good many miles of cabling. Now when the streets are opened, I am told it would be easy to arrange for carrying telephone cables alongside in the cable tramways apparatus, in the ground.

995. You could do it for the National Telephone Company as well as for yourselves, could you not?—Yes.

Sir *Julian Goldsmid.*

996. Or for the Post Office?—We should do it for the Post Office at once; but I do not think we would do it for the National Telephone Company under any circumstances if we could avoid it.

997. Not if they paid you handsomely?—No.

*Chairman.*

998. But your opinion is that within a short period the effect of a municipal license would be to destroy the National Telephone Company within that area?—That is my own personal opinion. I do not see how a company that has to earn dividends can compete with a municipality that is not going to earn dividends, but which is going to supply the convenience at cost price.

999. And you do not think that that would be in any case a hardship that a company which was formed under Parliamentary powers, or rather under powers conferred by Parliament upon

*Chairman*—continued.

upon the Postmaster General, should be destroyed and driven out of the various areas where productive work can be carried on by municipal telephones?—It would be a hardship if they had not had sufficient time to pay themselves for their initial enterprise. Notwithstanding the great outlay frequently involved, a patent is only allowed to run 14 years, and very often it is much more difficult and expensive for a patentee to get anything out of his patent than for a telephone company to get anything out of its telephones.

Sir *Julian Goldsmid.*

1000. How long has the National Telephone Company been there?—About 13 years. They bought up the Scottish Telephone Company in 1881.

*Chairman.*

1001. That is about 14 years?—Yes.

Mr. *Tully.*

1002. What would be your objection from the municipal point of view to the Government taking over the telephone service?—I am only expressing my own private opinion; I do not express the opinion of the Corporation on that matter. I think it would be better worked by the municipality than by the Government; the municipality should be taken rather as an agent of the Government.

Sir *Julian Goldsmid.*

1003. You have no faith in Government management?—I think the Corporation management is, on the whole, better; there is a certain unwieldiness about big concerns.

Bailie Kinloch Anderson called in; and Examined.

Sir *Charles Cameron.*

1004. You are, I believe, one of the Magistrates of the City of Edinburgh, and have been a member of the Corporation for many years?—That is so.

1005. You have heard what Sir James Russell has said, and you corroborate him?—I quite concur in his statement.

1006. You have, however, some facts to add to show the importance which the Corporation of Edinburgh attach to the control of the streets?—They are exceedingly anxious to do all they can to maintain in their own hands the control of the streets. Prior to 1869 there were three companies which had a right to open the streets—the water company, and two gas companies. The exercise of the powers by these companies was found exceedingly inconvenient, and complaints were frequently made on the part of the public as to the annoyance caused by their opening the streets so frequently, and repairing them very often badly; so that in 1869 the Corporation and the two neighbouring Corporations of Leith and Portobello bought out the water company at a large price—the price of 24,840*l.* of perpetual annuities. In like manner in 1888 the Corporation in conjunction with Leith bought out the two gas companies at a price of 34,000*l.* of redeemable annuities, meaning a capital value of a million. That was done very much with the view of having the control of the streets in the hands of the Corporation. In the same way, in order to prevent a new company coming into the city, with powers over the streets, the Corporation themselves promoted an electric lighting order (they now have that order); and in 1892 the Corporation acquired by purchase the tramway system at a very large price, all with a view to keeping the control of the streets.

1007. And I think Sir James Russell was asked whether there was not a great difference between water, which was necessary for every one, and telephonic communication, which might be considered the luxury of the few; but is it not a fact that electric lighting is a luxury?—Quite as much as telephones, at any rate; more so, I should say.

Sir *Charles Cameron*—continued.

1008. Generally you corroborate everything that Sir James Russell has said?—Yes.

1009. You think that the City of Edinburgh, if it got a licence, would be quite willing to accept it for a period terminable with the licence of the National Telephone Company, and to give up their undertaking to the State on absolutely equitable terms, and without any view to extracting profit?—I do. The Lord Provost's Committee unanimously made the recommendation that they should apply for a licence.

*Chairman.*

1010. Do you concur with the last witness that competition would destroy the National Telephone Company in Edinburgh?—Well, I quite believe that it would have the effect of reducing the price to the price at which the Corporation would be able to supply the service, but if they came into competition by improving the service, I do not see why it should destroy them altogether. The two companies might exist, and exchange messages even; there might be some such arrangement as that.

1011. So you view with equanimity the two competing services side by side in the same area?—Yes; I think they might both do well; both form connections of their own, and that it would be to public advantage if there was an arrangement whereby they could transmit messages from one to another.

1012. Assuming that they did not come to an arrangement like that, what would happen?—Then, if the price was reduced, as has already been said, to 5*l.*, the public could join both and have the advantage of both services for the 10*l.* that they pay at present. That is assuming the National Telephone Company reduced their rate to that at which the Corporation believe they would be able to supply the Telephone Service; and then the public would get the advantage of two services.

*Chairman*—continued.

1013. Do not you think the fact that the corporation would be restricted within the area of the municipal limits would be a serious handicap to them as against the company with the larger area which has been given them?—I should say that it would not be quite so convenient, but we might apply for an Order to have the area made co-extensive with that of the company. They have the area including Portobello, Musselburgh, Dalkeith, and these places that you mentioned a few minutes ago, and I think the corporation might apply for that area just to work it as the company do at the present time.

1014. Is there any instance of a corporation carrying on a business of that kind outside the area of its burgh?—I do not know that there is any instance of a corporation carrying on a telephoning business at all. At the present time we are associated in the water undertaking with Portobello and the district, these several places which you have named; we supply the water by arrangement there; the "Edinburgh and District Water Trust" it is termed. We supply all these places with water.

Sir *Charles Cameron.*

1015. Are you aware that Glasgow supplies a number of surrounding places with water?—Yes.

1016. And gas?—And gas. We supply gas widely as well.

Mr. George Bisset, called in; and Examined.

Sir *Charles Cameron.*

1017. You are the City Treasurer of Aberdeen, are you not?—I am.

1018. And you are chairman of the finance committee of the town council of that town?—Yes.

1019. Your finance committee have charge of all the financial arrangements of the City of Aberdeen?—Yes.

1020. Will you please tell the Committee how much the telephone subscriptions of the City of Aberdeen or of the municipality of Aberdeen amount to?—£200.

1021. Besides that you are a director of a large trading company and have a large number of instruments on hire from the telephone company?—Yes.

1022. In that capacity you pay how much?—£120.

1023. What is your experience of the service in Aberdeen?—My experience of the service in Aberdeen is that it is very bad indeed.

1024. It is cheaper than it is elsewhere, is it not?—It is cheaper than in Edinburgh and Glasgow.

1025. What is the price?—£8 10*s.* within a certain radius, and if you get a connection beyond that radius it is by agreement.

1026. How many subscribers have they, and what is the population?—There is one subscriber to every 125; but in this connection I may say that in 1892 negotiations were entered into with another telephone company (the New Telephone Company, I think it was) who offered to come to Aberdeen, providing that a sufficient number of subscribers could be obtained. A large number of people signed an agreement or entered into negotiations, with the result that the charge was reduced to 8*l.* 10*s.* At that time the number of subscribers was one in every 165, and the reduction in the rate has effected an increase until we have one subscriber in each 125, a larger number, so far as I can gather, than there is in any other town in the United Kingdom.

1027. I do not know whether you heard Bailie Chisholm tell us that concurrently with the diminution in the telephone charges in Glasgow from 20*l.* to 10*l.* the number of subscribers had multiplied threefold. You tell us that in the case of Aberdeen a large increase has been effected by the reduction of price?—Certainly.

Sir *Charles Cameron*—continued.

1028. Do you happen, personally, to be aware that where the reserve procedure has taken place, where the price has been raised as in the case of Dundee, there has been an absolute stoppage put to it?—Yes, I believe that is so.

1029. But you are not going to speak to that?—No.

1030. You are entirely in favour of competition, are you not?—No. Anticipating this question from what I saw in the evidence asked of some witness here, I had a meeting with my committee who have charge of this matter before coming here, so that I might be able to speak with some authority on that question. We feel in this position, that the National Telephone Company has no right whatever in the City of Aberdeen. They got admittance to the city by an application, which I have set out in my evidence. That was granted on the distinct condition that they were going to remove the whole of their wires on getting one month's notice from the town council to that effect.

1031. Every wire they put up they have to remove, have not they, if requested so to do?—Yes. I have here a copy of the application which accompanies every request to extend the wire (they have to send that in signed), which stipulates that they shall remove that wire when asked at the request of the borough surveyor; that has to be done in the case of every single wire that they put up.

1032. So that you have actually the power under the agreement to send them out bag and baggage right off?—We hold that we have that power. At one month's notice, under this agreement, they are bound to take down every wire in the City of Aberdeen, and remove it.

1033. You have got, I think, some powers more extensive over your streets, both overhead and below ground, than they have in other towns in Scotland, have you not?—It is a fact that in no single instance is the municipal administration of Aberdeen carried on under any general Act, but under Acts which we have obtained from time

Sir *Charles Cameron*—continued.

time to time in Parliament, and the powers in that respect as well as in public health matters are much stronger than in anything I know of, or as compared with any public Act, so far as I am aware.

1034. The Aberdonians generally are, in fact, able to look after their own interest?—They claim to be able to do that.

1035. Having got the Telephone Company so well under your thumb, do you make them pay wayleaves?—No, we have made no charge for wayleaves; but coming back to the question (I beg your pardon, I have led you away from the question you put to me), I was saying that anticipating that this question was going to be asked me, I had a meeting with my committee, who have charge of this matter, and they stated that they did not see their way to enter into any working arrangement with the National Telephone Company, but that they did not want to be unreasonable, and if a license were granted they would be perfectly willing to take over the business of the National Telephone Company (although we do not admit that they have any claim for it) on something like the same conditions as those upon which the Government have taken over the trunk wires; and beyond that we would be willing to enter into negotiations with regard to what might be paid for the goodwill of the business, that is to say, give them the value for their plant as it exists in Aberdeen, whatever it is, after being ascertained by an independent authority and 10 per cent. in addition. Those are the terms, I was told, we should be willing to agree to rather than have the difficulties of a competing system or give the National Telephone Company any authority whatever over our streets.

1036. That shows what a drawback Aberdeen thinks it would be to give the company any pull or any authority over the streets?—We feel that in connection with our own departments. We find we have the greatest possible difficulty in getting them to work well, and so much has this been the case that we have established an independent body of workmen who are not under control of any special department, but which is charged with looking after and maintaining the service of the streets; and they keep a note of which department, gas, water, electric light, or sewage, causes the damage; and the charge of this special staff is allocated between the different departments.

1037. In other words you found the different departments of the Town Council came into collision in their operations in the streets, and in order to keep things working smoothly you were obliged to have a special street department to look after the streets?—A special staff to maintain and repair streets broken up, or rather not to "maintain," but to repair streets that have been broken up.

1038. I suppose you are afraid the telephone companies will go on trying to get other Parliamentary powers too?—Yes, that is so; and I may say that our only interest in this matter, at least not our "only interest," but what really made us take the steps we have done, is the fear that we are going to have them upon us, and that they will get legislative rights which

Sir *Charles Cameron*—continued.

will require that we should pay them (if ever we should come to carry out such operations as Edinburgh has contemplated) very handsomely for any interference we might make with their system; for instance, after having permitted them under these conditions to come into our streets, when we want to establish an electrical tramcar service we think it very hard that we should have to be at the expense of preventing induction when the company has no right to be in our jurisdiction and are only there under our suffrage.

1039. Have you any reason to think that if you were to order them to turn out under the terms of that agreement they would quietly comply with your request?—The fact is, we should not do it unless we were prepared to give our people another system. We could not compete with other cities without the use of the telephone.

1040. Have they ever given you any trouble in the way you have heard described by Sir James Russell in the case of Edinburgh by opposing Bills, or anything of that sort?—No, we never have been promoting Bills that conflicted with their interest, and, therefore, never came into contact with them.

1041. You think the telephone service in Aberdeen is wholly inadequate?—That is so.

1042. When you say that, are you referring to a general description given by the chairman of the National Telephone Company in his evidence before the Select Committee in 1892, that the service was "monstrously bad"; and do you think that that description is eminently applicable to the state of things in Aberdeen at the present time?—I do.

1043. They are all single wires; in fact, the state of matters is very much what you have heard described in connection with the other towns; is that so?—That is so.

1044. You have got a lot of figures in your evidence about foreign charges; do you speak to that matter from your own knowledge?—That is from reports that we have got from time to time.

1045. You agree that the present financial condition of the National Telephone Company renders it hopeless, in your opinion, to expect any improvement, or anything, from them?—Yes, we are of that opinion from what we have been informed by those who profess to be in a good position to judge, and from the statements that have appeared with regard to the way in which the National Telephone Company has paid for other companies which they have bought up. The statement seemed to us true. I have been informed, for instance, that they have about 3,000,000*l.* of capital that they have no asset to show for. Well, at present they are charging something over five per cent., taking the capital "all over head"; and to pay a dividend on that of five per cent. requires 150,000*l.*; and I observe that one of the witnesses for the Post Office stated that to enable them to wipe out the capital that they have no assets to meet they would require to lay aside about 114,000*l.* to the reserve fund every year. Together I make that out to be 260,000*l.*, which is equal to about 4*l.* 8*s.* per annum for each subscriber that the National Telephone Company has; and if this

Sir *Charles Cameron*—continued.

statement is correct (and I think it is) it would go to show that the estimate we have got, that an efficient service can be had for about 5*l.*, is correct.

*Chairman.*

1046. Where did you get that figure of 3,000,000*l.*?—I got the figures from a paper handed to me by Mr. Provand, the Report of the National Telephone Company for December 1894; and I may also say that I observed in the evidence of Mr. Lamb before the last Select Committee, in 1892, that he stated that, roughly speaking, he understood, so calculated, that the value of the National Telephone Company's plant 19 years hence would be about a million pounds. Now, this would allow it to be at present about 1,500,000*l.*

Sir *Charles Cameron.*

1047. Generally, your town council would prefer the Government taking over the matter; that is their view, I think, is it not?—We, of course, in this matter wish to act along with the others; and as Glasgow had put it in that way we were perfectly willing that we should be unanimous on this question; but I quite agree personally with Sir James Russell. I believe that a local system of management would be better than a national one, for this reason: that the people in the locality could correct any abuses or any neglect of duty more sharply through the local authorities than they could through a national authority; the people in charge of this matter would be more directly responsible to the citizens in the locality than they would be if it were administered from London through the Post Office.

1048. If the Government did take over the telephones, Aberdeen would be quite willing to hand over her telephones to the Postmaster General on equitable terms and without any view to making any profit out of the transaction?—We should certainly be willing to hand them over on exactly the same terms as would be arranged for the other parts of the service. Of course, it would be understood that we could not give ours at cost price if the Government were paying a premium of 50 per cent. in another district.

1049. In fact, you would require as good terms as any other district obtained?—Exactly; and we would ask no better.

1050. And if you had to buy up the National Company you would naturally require to have equally good terms with the National Company themselves?—Yes, we would require to be recouped.

Mr. *Moulton.*

1051. I understand you consider that the chief value of telephones is their local service, and not the long distance telephony?—That is so; the difference in charge would not be so great as would make it worth our while communicating by telephone as against telegraph. I do not know that there would be any serious difficulty in that.

1052. Therefore, you think it is a business that is suitable for being put into the hands of the municipality?—I do.

*Mr. Moulton*—continued.

1053. And that it has to adapt itself rapidly and perfectly to local needs?—That is so.

1054. So that you think it would be better that it should be done through municipal funds and under municipal management than that it should go through the Post Office and be subject to the criticisms of the Treasury?—That is my own opinion.

1055. You think that the people of Aberdeen would keep a sharp look-out to see that there was no waste, and at the same time would require an efficient and cheap service?—In fact, they could know what was being done on this system; whereas if we were mixed up with the whole system of the United Kingdom we should not know what particular expenditure belonged to Aberdeen, and what particular expenditure belonged to any other part of the country.

1056. Quite so; I quite understand that. Now, on the position of the National Telephone Company; you have looked at the agreement, I believe, have not you?—Yes.

1057. And you will agree that it specially reserves the right of granting competing licences, and that there is no other protection at all for the public?—I do not see any.

1058. If a company has accepted an agreement of that kind, and does not give a cheap and efficient service, do you see anything unjust to it in allowing competing licences?—I do not.

1059. Supposing you are going to allow competing licences, is there anyone that would do so much good to the public as one to the municipal authority?—I do not know any other body that could get capital at so low a rate of interest, or who would be willing to undertake the management at purely cost price.

1060. Or who would have so much motive for doing it in the best way for the public?—That is so.

Mr. *Benn.*

1061. You said just now that you did not favour competition?—Well, our reason for that is simply because of the difficulties that we have with our own departments in getting them to work smoothly together, and getting the work efficiently and speedily done. We think that if we had to consult with the National Telephone Company and with the different heads of our departments, serious inconvenience and delay would take place in the public service, and that the public would suffer; and rather than have that we would be willing to come to fair terms with the National Telephone Company, to get rid of the bother. We find considerable difficulty, and the tramway company complain that we put them to considerable and needless expense with regard to the operations they carry on on the streets, as, of course, we have not the tramway in our own hands, as Edinburgh and Glasgow have.

1062. But you are desirous that a licence should be granted to Aberdeen?—That is so.

1063. Then, as a matter of fact, you really come in support of competition: that is to say, you desire to be in a position to compete with the National Telephone Company?—I have no doubt whatever that if our contention is a good one we can require the National Telephone Company to remove at a month's notice, and to take down any

Mr. *Bean*—continued.

any wire at our request, and if we were in a position to give an effective service we would require the National Telephone Company to clear out; but we would not do that without being prepared to pay at any rate a fair return for the expenditure which they had been at within our town.

1064. I quite understand that; but the point I wish to make clear is this: that you are very anxious that Aberdeen should be in a position, if necessary, to compete with the National Telephone Company?—We want a licence to carry on the telephone service, so that it can be done efficiently, which we hold the National Telephone Company cannot do with its powers.

Mr. *Tully.*

1065. Do you think the development of the telephone service in a town would not affect the number of telegrams sent by the people in that town one to another?—My view of the matter is this, that it is the service of the public which first has to be considered, and that the question of revenue is a secondary consideration.

1066. You do not exactly see the point of my question. I want to know, if telephones were more extended in their use than they are at present, would there be fewer telegrams sent by the people living in the town from one part of the town to another?—I should say that in a town of the size of Aberdeen there would be very little telegraphic business from one person residing in one part of the town to any person residing in another.

1067. So that extending the telephone service would not affect that?—I think only to a very very slight extent.

1068. So that there would be no loss to the telegraph service if the telephone service were extended more than it is?—If it were a benefit to the community they would be able to make up the loss to the public service in some other way.

1069. It would be no loss, you think, to the telegraph service?—I do not know anything about that; but I would not be affected by the consideration.

1070. You think there would be no loss of postal business?—I am not in a position to speak upon that point, but it would not affect my opinion if there were.

1071. You think the two competing services in the town would be compensated for by the reduction in price?—As I have already stated, we are not in favour of competition in this matter, especially if the system has to be carried on underground.

1072. That is a different question. Do you think two competing services in a town would be an inconvenience?—On that account only.

1073. That is a matter of how the wires are run; that is not a matter of the double cost it would make to people to be connected with the exchanges?—On that point we accept the evidence which has been given, on which all this legislation has taken place; that an effective service cannot be provided by an overhead system, and that, therefore, powers are intended to be conferred upon the National Telephone Company under certain conditions to allow them to do it

Mr. *Tully*—continued.

underground; and it is on that account that we wish to take the matter over principally, as we cannot consent to any other body within our jurisdiction having anything whatever to do with our streets.

1074. The point I want to make clear is this: If there are two competing services in the town a great number of people will have to use both services?—As at Dundee; I do not speak from personal knowledge, but from information I have received, no serious inconvenience was felt by the citizens of Dundee when they had the two systems.

1075. Do you think the effect of the refusal of the licence to a corporation authorising them to establish a telephone service amounts simply to protecting the property of this monopolist company, whose capital is 4,000,000*l.*, and whose tangible assets, I think you said, are a little over a million?—I do not enter into the question or the argument of the "effect" in this at all.

1076. It is not a question of "argument"; I am asking your opinion of the effect of refusing a licence to a competing corporation?—I understand your question to be whether I thought the refusal was prompted by protection.

1077. No; my question is whether the effect of the refusal of the licence to the corporation would be to protect the property of this company?—Unquestionably.

1078. Whose capital is 4,000,000*l.*, and whose tangible assets are something over a million?—This is allowing for its being 1,500,000*l.*

*Chairman.*

1079. I think you said that there is one in 125 of the population who have telephones in Aberdeen?—That is subscribers; for instance, this company, of which I am a director, is only counted as one subscriber, although we have 17 instruments. We have only one or two, or perhaps half a-dozen instruments having exchange connection; the others are instruments between our different places of business throughout the town.

1080. That seems to indicate a general admission of the use and effectiveness of the telephone system in Aberdeen; those figures you have given?—Yes; but I am perfectly satisfied that it is not so general as it would be if the system were better and cheaper.

1081. That, I think, would be so with regard to the telegraphs, the post, and everything. If the charges were less, no doubt the user would be greater?—Of course in that case you have reduced the telegraph service, I understand, to below cost price. Now, I do not intend to do that with this telephone service, but we can reduce it considerably, and bring it within the reach of a very large number without making it a charge upon any other department of the public service.

1082. You have stated that the Town Council have expressed a willingness to purchase the business of the National Telephone Company in Aberdeen?—We would do that rather than have them competing with us too. Although we hold, and hold strongly, that we have entire power with our "Common Good" fund to start an exchange or any other business, we would never

*Chairman*—continued.

do it without Parliamentary powers, and any conditions could be affixed in the Bill that Parliament, in its wisdom, thought proper, as to purchase or any other matter.

1083. Do you say that you have the power to do it without coming to Parliament?—Yes.

1084. Upon whose advice is it that you entertain that view?—Upon the advice of the Town House officials; they hold that their power over the "Common Good" extends to any part of their work for the behoof of the citizens. We have about 130,000*l.* surplus of "Common Good," and that, we hold, we could use for this purpose; but we would not do this (it would not pay us so well) without Parliamentary authority, because we can borrow money cheaper with Parliamentary authority than we could without it. It has this advantage, that people in charge of trust funds can invest under the authority of Parliament; and we get the money at a cheaper rate of interest.

1085. I do not know whether you are aware of it, but the opinion of some high authorities is quite against that which you have just expressed; they are of opinion that there is no power in the corporation to carry on telephone business without express Parliamentary sanction?—It is a matter of indifference to us, because supposing we could do it we would not; we would come to Parliament all the same. If the Postmaster General grants us the licence we will come to Parliament and ask for power to carry on the business.

1086. If the corporation were to purchase from the National Telephone Company their business, would the corporation expect the State to repay them the money in the event of the State taking it over into its own hands?—I should say yes, if you were to take it over before the expiring of the lease. I understand that in 1911 the licence of the Telephone Company will come to an end. The Government is not bound then to take them over or to pay them anything. The Government could do the same with us; but if we had a 19 years' lease we would have to make our sinking fund correspond to the period when we would have to redeem our whole capital; and if the whole capital is redeemed we would say, "You are entitled to it if you ask it in the public interest without any expenditure whatever, as the public have paid us in that time."

1087. Then you would provide a sinking fund to repay to the ratepayers of the Corporation of Aberdeen the amount they had expended in purchasing from the National Telephone Company?—I anticipate that Parliament would require that; otherwise they would be giving us powers which they have not given us in any other undertaking we have gone into.

1088. You have expressed an opinion in favour of local, rather than national, dealing with this question; would you apply the same to telegraphs?—No, because, as I have already stated, the telegraph is not so much intended to be used within a limited area. Telegraphing has rather been used for a more extended area, and therefore it is necessary that a national authority should have the charge of an authority which has the right to go here or there, or anywhere,

*Chairman*—continued.

but, of course, the telephone is more a local matter, and has been recognised as such by the Post Office when they have restricted the powers of the National Telephone Company to local areas. I think the Post Office have themselves indicated that they regard this as a local matter.

1089. Are you aware that the telephone is being largely used now for communication between the large towns in the country, such as London and Manchester and London and Birmingham?—I do not see any difficulty with regard to different towns communicating. I have no doubt whatever that the Government would insist that the plant used by the different municipalities should be such as could be connected readily with their trunk wires. I cannot see any more difficulty in our local subscribers in Aberdeen getting connected with the local subscribers in Edinburgh than in the subscribers of the National Telephone Company, in the restricted area which you have tied down the National Telephone Company to, in Aberdeen and in Edinburgh, getting connection through the trunk wires now.

1090. I do not think you appreciate the question. I was going to ask you whether you are aware of the increasing user of the telephone between large centres of population; that is to say, that the telephone is every day becoming more national in its use?—I can quite understand that.

1091. Yet you think the local control in the hands of various bodies, which differ in their constitution, would be better than control in the hands of the State or of one body under the State?—Yes. Although I quite grant the force of your question, the use of the telephone is much more a local matter than an intercommunicating matter.

Mr. *Moulton.*

1092. Do you believe that there is one message from one town to another town for every hundred in the same town?—I do not think there is one. I would not say that there was one in a thousand.

1093. Perhaps I might ask this one question: do you know the number of messages from Aberdeen to other places outside Aberdeen?—No, I do not.

1094. Would you be surprised to hear that it is 16,000 in a year?—I would not be surprised to hear that, because, of course, I should say that between Leith and Aberdeen there would be a very large number, owing to the fact of several shipping companies who trade between Leith and the north having their head-quarters in Aberdeen; and I understand that a considerable amount of their business is transacted by telephonic communications.

Sir *Charles Cameron.*

1095. Might I ask you this: would it not be a very great advantage to the people in Leith who wanted to telephone to Aberdeen to have the Aberdeen connections first class, so that they could get promptly on to their subscribers and make themselves thoroughly well heard?—I understand from those who use it that it is better in

Sir *Charles Cameron*—continued.

in the evening than in the daytime; and my own experience coincides with this; I have attempted to speak with Edinburgh during the day and found it impossible to do so. Coming back to my place of business at night, I can do so when everything is quiet.

Sir John Leng (a Member of the House); Examined.

Sir *Charles Cameron.*

1096. I have asked you to give evidence before us, but you do not come before us as a Member of Parliament for Dundee?—No; I have been requested by the Lord Provost and the Town Clerk to appear generally to support the views of the Glasgow and Edinburgh gentlemen who have given evidence, but more particularly to speak with regard to the peculiar experiences of Dundee with regard to competition.

1097. Now, Dundee is one of the places where you have that competition, and where it has proved to be of very great advantage?—Dundee at present is benefitting very considerably from the competition that formerly existed. We had in the years 1880 to 1885 several remarkable positions. First of all, we had a branch of a distant company in Dundee whose rate of charge was 20*l.* This was thought by our local merchants to be too heavy. They established a local company, proposing to charge only 10*l.* That company was formed. A number of the leading merchants of the town (some of whom have become Lord Provosts since that period) were the directors. Since it was formed the telephone company, which is now absorbed into the National Company (I am not quite sure whether at that time the National had taken hold of it; however, it is now part of the National Company) at once reduced the charge from 20*l.* to 5*l.*

1098. Then the benefit of competition, and the first benefit, was to cut down the charge from 20*l.* to 5*l.*?—That was so. The local company could not go down to 5*l.*, but they went down to 5*l.* 10*s.*; the reason was that they had to pay the royalty upon their instruments. Their instruments at that time were costly; 25*l.* each they had to pay for them; they were also somewhat difficult to obtain. The local company during the whole time of its existence had to contend with that difficulty.

1099. Notwithstanding the fact that the local company had to charge 10*s.* more for its instruments than the other, it did well, did not it?—It did, remarkably. The original company, with the 20*l.* charge, only had about 30 subscribers.

1100. That is the original company?——Yes. The local company, when it started with its 10*l.* charge, had about 80 subscribers; but no sooner did the charge go down to 5*l.* and 5*l.* 10*s.* than the National Company had a considerable increase of subcribers, and the local company a very large increase. At the time of the amalgamation four years afterwards, so far as I can ascertain, the local company had about 600 subscribers and the National Company about 400. The effect of this small charge was that the number of subscribers went up from 30 to upwards of a thousand.

Mr. *Tully.*

1101. Were both the companies charging the low price?—One was charging 5*l.*, the other 5*l.* 10*s.*

Sir *Charles Cameron.*

1102. Now would you tell us the amount of capital that was required on the part of the Dundee and District Company in order to bring about that revolution in Dundee?—The company started with a nominal capital of 10,000*l.*, divided into 2,000 shares of 5*l.* each. At the date of the 18th February 1885 the shares taken up were 1,000 shares first issue, 4*l.* 10*s.* paid up; 372 shares second issue, 2*l.* 5*s.* paid up; making the total amount of capital subscribed 5,337*l.*

1103. And the result of their cheap rate was to enable them to pay a handsome dividend while they lasted, was it not?—Yes; the first year they carried 400*l.* to the reserve fund (with Scotch caution they did not divide the money that they earned), but the following year they paid a dividend of 10 per cent. and carried 200*l.* to the reserve.

1104. The National then offered to buy them up, and bought them out at 40 per cent. premium, did they not?—Yes. At the final meeting of the local company the ex-provost congratulated the shareholders on having received 9 per cent. per annum on their capital for the four and a-quarter years of their existence, and on getting their capital back with 40 per cent. of bonus.

1105. Now while they made that good bargain for themselves they made the bargain on behalf of the people of Dundee that if they allowed themselves to be bought up, the charges should not be advanced beyond 10*l.*?—That was so. They also stipulated for a year's salary for their principal officers, and a month's wages for all their workpeople.

1106. Before we go further, you were in Dundee when this competition was going on; did you hear any complaint of the inconvenience of competition?—Not the slightest.

1107. Did you hear everyone who made any remark expatiating upon the benefits of competition?—Yes, rejoicing in it, and hoping that it would continue.

1108. It did not degrade the company that introduced the competition; on the contrary, they made 9½ per cent.?—Yes, that was so.

1109. The result of that cheap telephony in Dundee was that you had an enormous number of telephone subscribers, was it not?—At that time Dundee was the best telephoned town in the country; the proportion of subscribers was larger relatively to the population than in any other place.

Mr. *Moulton.*

1110. What is the population of Dundee?—

Mr. *Moulton*—continued.

About 160,000; at that time probably it was 10,000 less.

Sir *Charles Cameron.*

1111. Now we have heard that in the case of Glasgow, and I think in the case of Aberdeen, decreases in charges for telephones have been followed up by large increases in the number of subscribers, notwithstanding the imperfection of the service?—That is so.

1112. We have been told that in the case of Glasgow in 10 years, the price charged having dropped from 20*l.* to 10*l.*, the number of subscribers has risen from 1,000 to 3,000?—Yes.

1113. In Dundee you have had the reverse operation; you have had low charges and an enormous number of subscribers?—Yes.

1114. You had then the charge raised from 5*l.* to 10*l.*; and will you tell the Committee what the result was there?—The result was that a very large number ceased to be subscribers. At that time the small grocers, dealers, butchers, and others, with a 5*l.* or a 5*l.* 10*s.* charge, almost all went in for the telephone; but when they raised the charge to 10*l.* this smaller class of shopkeepers went off almost in a body, and there was a reduction of several hundred subscribers within the first year.

1115. And since then has the number of subscribers expanded, as it has done in Glasgow and elsewhere?—It has undoubtedly gradually increased from year to year; it is larger now considerably than it was in 1885 after the amalgamation took place and the rate was raised.

1116. But while in Glasgow, between 1885 and 1895; it has increased what is the increase in Dundee; what is the number now?—I should think it has increased about one-third of the number.

Mr. *Moulton.*

1117. What is the number now?—I have made inquiries about that. In Dundee the National has now about 950 lines or instruments; but this does not represent the true number of subscribers, as many subscribers have several instruments; no return is kept of the number of subscribers.

Sir *Charles Cameron.*

1118. You gave us 600 and 400?—Yes.

1119. That is a thousand?—That is a thousand.

1120. You told us the number of subscribers subscribing to both lines; so that you have got a very fair comparison between the 950 lines and the 1,000 lines of the old companies?—Yes, I should say that the number now is approximating very nearly to what it was at the time of the amalgamation.

1121. In other words, the increase of rate has absolutely cramped the telephonic progress of Dundee during the last 10 years, whereas the decrease in rate in Glasgow has encouraged it to expand, and it has multiplied itself by three; is not that so?—Yes.

Mr. *Tully.*

1122. We have heard a lot about the loss to the telegraph service caused by the expansion of the telegraph service. Are you aware that it has been suggested to make up this loss on the telegraph service by increasing the rate of press messages to newspaper proprietors?—That I am aware of; and on grounds that I think are entirely fallacious if they come to be investigated.

Mr. *Tully*—continued.

*Chairman.*

1123. You said just now in answer to a question, or you assented to a statement made by Sir Charles Cameron, that the increase in the number of subscribers had been crushed out by the increase of rates, and that whereas in Glasgow the number had increased during a certain period three times, by 200 per cent., here it showed no increase?—That is not precisely how I wish it to stand. The view I take is that since the year 1885, when the amalgamation took place, there has been an increase of about one-third in the number to which it was then reduced.

1124. Yes; but is not the comparison between Glasgow and Dundee somewhat inappropriate; because in the case of Glasgow you are comparing the period of 10 years ago when the rates were very high with the period now when they have been reduced; whereas in the case of Dundee, you are comparing a period of 10 years ago when there was a competition which led to a very great diminution in the charges with the period of the present time, when no doubt the charges have gone up?—That is so.

1125. You are comparing Dundee at the present time with a very exceptional period of 10 years ago when the rates were driven down by competition?—No doubt at that time the low rate encouraged a great many to become subscribers, who, when the rate was practically doubled, ceased their subscriptions. Our rates are comparatively moderate now; the charge is 8*l.* 10*s.*; and when you take more instruments than one you have 15 per cent. deduction upon that on the second; and so on.

1126. You have no complaint, have you, about the rate charged by the National Telephone Company now in Dundee?—No, there is no strong feeling on that point; but there is no doubt that if the rate were lowered again there would be a very large accession of subscribers.

1127. And have you complaints against the service provided in Dundee?—The local service has the defects of the single-wire system; when you speak through it you hear a babel of tongues. From my house, which is in Fife, I can speak to Aberdeen, Montrose, Forfar, Arbroath, Perth, and I forget whether I have not other connections, but to all those places the voice of the response seems to be almost through the plaster of the wall, whereas if I speak to Dundee, which is only two miles across the river (and it is the same speaking from any point of Dundee to any other point), it is often very difficult to make out what is said owing to the induction and the noise that comes in at the Exchange.

1128. Do I gather from you that the company have given you a twin-wire telephone service?—We have twin-wires in connection with the trunk lines.

1129. The wire to your house from the Exchange, I mean?—Yes, I have a twin-wire.

1130. You have that exceptional advantage given

*Chairman*—continued.

given to you at Dundee?—I should mention that there are about half-a-dozen subscribers in Dundee who have twin-wires. In all cases the twin-wires have been introduced by large commercial houses for the purpose of improving the hearing when speaking to long distances.

1131. Are you aware whether it is a fact that the company are gradually extending their twin-wire system?—I understand so. The most important thing is that it should be extended in the large cities. Of course, the number of messages sent to a distance are comparatively few as compared with the intra-mural messages.

1132. I do not know whether you are aware that the area given to the National Telephone Company under the head of "Dundee" includes other burghs and populous districts around Dundee?—That is so; I should think it includes all those I have mentioned except possibly Aberdeen.

1133. It includes: "The Royal and Parliamentary Burgh of Dundee, and the police burghs of Broughty Ferry and Carnoustie, with the adjoining area as defined by the red line" on the map?—Yes; and I presume it would include Newport and Tayport.

1134. Newport, probably, is included within the area?—I should think so.

1135. Of course, you are aware that if the Corporation of Dundee had the municipal licence they would be confined to the municipal area of Dundee?—No; I think, first of all, the Municipalities would federate themselves; they would enter into a federal arrangement; and then the Government, working in the interests of the public, would place the trunk wires under such arrangements for the services of the Municipalities as they propose to do with a private company. I think the Municipalities would have a much stronger claim.

1136. I am dealing not only with the burghs and municipal authorities in those burghs, but with the areas in between (say) two adjacent burghs, or two adjacent populous districts: the licences, if given, might be conferred upon the populous districts and burghs; but what about the districts in between; take, for instance, the area outside Dundee, where many of the commercial men of Dundee may live?—Yes; Carnoustie and Broughty Ferry.

1137. How would you get over that difficulty, that the Corporation of Dundee would not be able to provide for them a telephone service?—Well, it would seem to me to be in the interests of the Telephone Company to come to a working agreement with the Municipalities.

1138. You recognise the fact that the Corporation would not be able to give the telephone service to these residents outside Dundee who want to be in communication with their offices inside Dundee?—At the beginning there

*Chairman*—continued.

would be difficulties of that kind, but I think they would soon melt away.

1139. How do you suggest they would "soon melt away"?—It would appear to me to be the interest of the Telephone Company to come to an arrangement with the Municipalities.

1140. Those subscribers I referred to would have to be on the two systems, so as to get the benefit of the Telephone Company outside the area and the benefit of the Municipality inside the area?—Yes, unless, as I say, the Municipalities effected working agreements with the Telephone Company.

Mr. *Moulton.*

1141. Do you see any difficulty in the outlying districts of Dundee being served by the Municipality of Dundee; would there be any difficulty in that?—I should think not. I should think the subscribers, say, in Broughty Ferry (who are very numerous) and in Newport and Tayport, would be very glad to make arrangements with Dundee to extend their wires there.

*Chairman.*

1142. Would it not be rather a new departure for a Corporation to be carrying on a business far outside the area of its municipal authority?—Dundee is already supplying water and gas to Broughty Ferry, and there are proposals in the air for the extension of the Municipality so as to include these outlying places; and I have little doubt that before many years are over they will be brought within the municipal area.

Mr. *Tully.*

1143. Would a licence such as Professor Fawcett granted for the telephone service enable the Corporation to give telephonic communication to people outside the Corporation area?—There is no limit imposed on the power of the Post Office to grant licences. That power would rest with the Post Office. I should like to add that the experience of the inhabitants of Dundee with regard to water, gas, tramways, and electric lighting has made the inhabitants, and, through them, their municipal representatives, strongly in favour of the principle of municipalisation, and that they do not see any peculiarity or distinction, with regard to the telephones, adverse to their also being included.

*Chairman.*

1144. But you do not admit that the fact that the telephone is part of the telegraph service of the country, and has been so decided by the Courts of Law, has any bearing upon that question?—I admit that it has some bearing, but I see no difficulty in working arrangements being made in the interest of Municipalities. It would not conflict with the national interest and the general working of the telephones.

*Friday, 5th April* 1895.

MEMBERS PRESENT:

|---|---|
| Captain Bagot. | Sir John Gorst. |
| Mr. Baird. | Mr. Arnold Morley. |
| Mr. Benn. | Mr. Moulton. |
| Sir Charles Cameron. | Mr. Snape. |
| Mr. John Ellis. | Mr. Solicitor General. |
| Sir James Fergusson. | Lord Stanley. |
| Sir Julian Goldsmid. | Mr. Tully. |

THE RIGHT HONOURABLE ARNOLD MORLEY, IN THE CHAIR.

Mr. HARCOURT EVERARD CLARE, called in; and Examined.

*Chairman.*

1145. YOU are, I believe, the Deputy Town Clerk of Liverpool?—Yes.

1146. And, I believe, for many years you have had the whole responsibility and control of the Parliamentary business of the corporation?—I have had the responsibility and control for the last 14 years.

1147. And you are a member of the council of the Municipal Corporations Association?—Yes; as representing Liverpool I am a member of the association, of the council, and of all the committees of the association, including the special committee on telephones.

1148. And with the Town Clerk of Leeds you have been requested by that committee to give evidence?—Yes, the committee passed a resolution asking us to give evidence on behalf of the association.

1149. Will you state the general views of the committee as representing the association upon the question?—The view of the corporations with regard to the telephonic system is that it is now an absolute commercial necessity, and also that it is a great convenience for private and domestic purposes. Looking at it as a trade necessity it seems to the corporations most important that inter-communication between the large centres of commerce should be made as easy and cheap as possible, and that for trade it is far more important to develop inter-communication between trading centres than it is to cheapen inter-communication between subscribers in any given exchange area.

1150. Within any given exchange area?—Within any given exchange area.

1151. You mean with the trunk wire system; the communications between one town and another town?—Yes; I mean in a town like Liverpool. It is far more important for business purposes that we should have easy and efficient communication with Manchester, London, Leeds, Bradford, Birmingham, and all the other large centres that we have to deal with, than it is that we should have a little cheapening in the local exchange from one office to the other. You can send a clerk from one office to another within a radius of a mile or half a mile if necessary; but you cannot do that if you want to communicate with an office in Manchester or in London. I may say that I believe a considerable portion of the Stock Exchange business between Liverpool and London is done through the telephone, and certainly the largest portion of all business between Liverpool and Manchester. So looking at it from that point of view, the corporations consider that the whole system must be considered as a national undertaking, and not as one to be treated as a local matter.

*Chairman*—continued.

1152. If that is your opinion I suppose you think the Government have done right in taking over the trunk wire system of the telephone service?—Our view, looking at the case so far as we can do (superficially), is that the Government ought to take over the whole of the telephonic system, because the law has declared the telephonic system to be part of the Postmaster General's monopoly under the Telegraph Acts, and therefore it seems to us that it is his duty to carry out the monopoly which the law has given him; and looking at it generally it seems to us that the natural course is for the Government to take over the whole system; but if the Postmaster General and the Treasury, with their greater knowledge of the details than we can possibly have, come to the conclusion that, in the interests of the country, it is not advisable to take over the whole system, but only a portion, of course we must accept their decision as being founded upon much better grounds than we have an opportunity of considering. I may say that we anticipated that if the Government would take over the whole of the system, eventually some considerable reduction in the charges might be brought about by their working it at, say, something like cost price, and that the development of the system would possibly take place in cases where it might not pay at once, but that, in the interests of the public and to meet a public demand,

*Chairman*—continued.

demand, the Postmaster General would spend the money although he could not see directly a profit arising from it, which might not be done in the case of a company.

1153. But you anticipate advantages from the Government having taken over the trunk wire system which, I understood you to say, was, in your opinion, the most important part of the telephone system?—I do not think it follows because the Government ought to take over the whole, in our opinion, that it is a beneficial thing to the particular subscribers that they should take over a part which includes the trunk lines, excepting so far as it may be necessary to protect the public, as a whole, from a financial point of view. As far as I can see, by the Government taking over the trunk lines, the immediate effect of it will be to cause a certain amount of delay in getting the intercommunication owing to the increased number of transactions which must take place if you have to join the post offices in addition to the exchanges, before you can put one subscriber into communication with another one; but, of course, that delay can be rectified by increasing the number of the trunk lines; and if the Government are prepared to increase the number of the trunk lines to a greater extent than possibly the National Telephone Company would, then undoubtedly the effect of the Government taking over the trunk line system will be a benefit to the public; but I cannot see, from the agreement, that we are going to get any practical reduction in the charges or any greater facilities for communication excepting on the theory that the Government will increase the number of the trunk lines.

1154. But you are aware that the policy of the Government, as set out in the Treasury Minute, indicated a large extension of the trunk wire system?—Yes; and if they carry out that policy, then it will be a benefit, I think, to the country.

1155. Have you anything further to state upon the general question?—I may say that, looking at the telephone system as a national one, if the Government do not take over the whole system, but only take over the trunk lines, it then appears to us that there is only one course to be followed, and that is to place the whole of the local exchanges in the hands of one body and under one control. The inconvenience which would arise by allowing any particular area to isolate itself from the rest of the country would be very great in all commercial matters. For instance, supposing Liverpool isolated itself from the systems which pertained over the rest of the commercial part of England: In Liverpool we should not be able to communicate with any other town without an extra payment in addition to the payment made to the Government for the trunk line, because we should have to pay an extra fee to the body (whatever it might be) that had the exchange in the town that we wished to communicate with. On the other hand, no one in the country would be able to communicate with anyone in Liverpool without paying, in addition to the trunk service, the charge (whatever it might be) that the body in Liverpool would charge for using their instruments: so consequently it is to my mind a national evil if any local area is allowed to separate itself (in the way I have indicated) from the rest of the country; and in order to avoid that separation, I am strongly of opinion that the whole system of the local exchange should be under the control of one body.

*Chairman*—continued.

1156. And that body, you think, should be the State?—*Primâ facie* that body should be the State; if not the State, of course it must be some company.

1157. Then do I understand you to express a strong opinion against municipalisation of the telephone service?—I think I am only expressing the feeling of the whole of the Municipal Associations practically, in saying that we think the idea of municipalising the local exchanges is impracticable and wrong in principle.

1158. We have heard evidence from witnesses representing Scotland who have expressed, I will not say a desire for competition, but at all events the absence of any objection to competition within the same area. Have you any views upon that question?—Well, I cannot see how competition in telephones can do any good. It seems to me that it must result only in increased expense. In any town where there is any custom that is worth catering for, the National Telephone Company have practically made an exchange; they are in possession. Supposing any other company were to get a licence to compete with the National Company in that exchange only, what chance would there be of the competition of this new company being of any practical use when dealing with a company with six millions of capital, who can put their subscribers on, practically, every other exchange in the country, whereas the competing company can only put their subscribers on any other town by their subscribers paying an increased charge? In a very short time it would result, as it has resulted hitherto, in the competing company being bought out by the National Company, and then the National Company naturally have their capital unduly inflated by having to pay for this competitor, and practically every purchase they make of a competitor means unnecessarily increasing their capital on which dividends have to be paid. It is like constructing two railways when one is quite enough.

1159. That statement refers rather to two competing private companies, does it not?—Yes.

1160. Would you give the same opinion with regard to competition between the existing company and a municipality?—Suppose I take the case of a municipality attempting to compete with the company. The same circumstances would prevail—namely, that you would have the corporation attempting to compete with a company who could (what I call) "always go five better" than a corporation, in any charges that they chose to make. The corporation then would be practically pledging the rates for carrying on an undertaking which, in my opinion, ought never to be charged on the rates at all. With the competition they would have to meet, it is perfectly obvious to my mind that they would not be able to pay their working expenses; consequently, it would be a charge on the rates; and that the ratepayers would not

*Chairman*—continued.

stand for very long. Besides, I do not think, myself, that Parliament ought to sanction the expenditure of any money charged on the rates on a trading undertaking of this character, which may end in a loss to the ratepayers as a whole. The telephone system is a system for the benefit of capitalists and the more well-to-do people, and not generally of the public at large. It is not like gas and water, which are a necessity.

1161. And on that ground you think that Parliament would not be acting wisely in conferring power upon local bodies to carry on the business, with a possible charge and obligation upon the rates?—I think it would be very wrong indeed for Parliament to authorise the expenditure of money charged on the rates in carrying out an undertaking of this character. The less corporations undertake these trading businesses the better it is for the country at large.

1162. Is that the view of the association as a whole?—I think so. I am speaking not from any definite resolution on the subject; but I have been at all the meetings that have taken place when this telephone question has been discussed. I have strongly spoken upon these points myself. I have not been contradicted, nor have I heard objections raised to what I have said on the matter, and I believe myself that I am speaking the general opinion of the corporations of England when I say that municipalising telephones would be a great mistake.

1163. I believe the association represents most of the corporations in England?—Practically, the whole of the corporations in England.

Mr. *Snape.*

1164. Including London?—No; the City of London has never come into the association, and we do not consider that the vestries of London are corporations; and the London County Council, of course, is a separate body.

*Chairman.*

1165. But outside London it represents practically all the municipalities?—Practically.

Sir *Julian Goldsmid.*

1166. Except Glasgow?—In England, sir, I said.

*Chairman.*

1167. It is confined to England?—Yes; the Scotch burghs are not members of our association.

1168. Are the Committee to assume from that that you are satisfied with the present system, or have you any evidence to give with regard to the future?—I may say, so far as Liverpool is concerned, I believe the telephones are managed as well as they can be under the circumstances. We have a very large exchange area extending to a radius of several miles, and the communication is very good indeed; of course, subject to it being interrupted by occasional storms and unforeseen accidents, which must happen in the case of an undertaking of this character; but, speaking generally, I think there are very few complaints

*Chairman*—continued.

to be made against the way in which the telephone system in the Liverpool area is carried out; but what we are convinced about is this: that we shall never get the telephones as cheaply as they ought to be supplied, or as efficiently conducted, so long as the telephone company have to work under a licence which terminates in 16 years, and have to work under conditions which do not authorise them to maintain their undertaking. At the present moment their undertaking is being conducted on sufferance, and it is simply maintained by a policy of conciliation; they have no right to exist as against private owners of property; and, consequently, they must be necessarily hampered by the excessive charges they have to pay for wayleaves, and by a system of blackmailing which, no doubt, does go on periodically in case of owners who think they have them in a hole, and say: You must now pay us an increased sum of money or remove your standards; and as the telephone system is one for the national benefit, I think Parliament would be justified in endowing the company with such necessary powers as to enable them to maintain their undertaking in a proper way over private property; and, subject to the control of corporations, to utilise the streets, where it is convenient or where the corporations desire it; but that, of course, sir, being subject to very strict restrictions which ought always to accompany the endowment of compulsory powers by Parliament.

1169. What restrictions do you mean?—Well, sir, it is difficult for me to say exactly what the restrictions are that should be imposed upon this company, because, as corporations, we really know so little about the circumstances of the company; but our idea is that a Committee of the House should be appointed to inquire into the whole of the circumstances of the case, and to ascertain not only what powers are necessary to be given the company, or what powers it is advisable to give them, but also what the restrictions and conditions are which should be imposed upon them as a return for the concession of the powers.

1170. That comes strictly within the Reference to this Committee?—If it does I am extremely glad to hear it. May I, then, sir, go on to point out very generally the chief points which I think ought to be considered with regard to giving either the National Telephone Company or any other company compulsory powers to maintain their works.

1171. Certainly we shall be glad to hear what you have to say upon that?—In the first place, sir, of course you will have to decide upon what powers are necessary; and possibly the powers that the Postmaster General has under the Telegraph Acts might (subject to some modification) be all that was necessary. With regard to the powers to utilise the streets, I think that some conditions of this character should be introduced: that if a corporation desired the company to lay their lines under the streets then the work should be done by the corporation at the expense of the company, that is to say, done for them; but if in a town the corporation think it undesirable to have the streets broken up, and would prefer to

have

*Chairman*—continued.

have the wires overhead, I do not think the company should be empowered to force the corporation to allow the company to go under the streets; I mean I should leave it to the corporations to decide whether the system should be an underground system, or whether it should be an overhead system; but, subject to its being decided to be an underground system, then all necessary powers for breaking up the streets as against the public must be given; but the corporation should have the option of carrying out the work themselves, and charging the company with the cost instead of allowing the company to do it.

1172. Then the change you would propose, instead of the company (as they now hope to do) obtaining the consent of corporation either to do it themselves, or to get the corporation to do it at their expense, would be this: you think they ought to have compulsory powers to compel corporations to do the work at the expense of the company?—No, sir; I did not put it in that way. I said the question as to whether the system in any particular town, or a portion of the town, should be what I call an underground system, or an overhead system, should be left in the absolute discretion of the corporation; but that if the corporation decide that they prefer to have the system laid underground, then in that case it must follow that the company must have the powers as against the public to break up the streets, otherwise they might be indicted for a nuisance.

1173. But is not that the state of the law at the present time under the agreement which has been confirmed by Parliament?—No, I do not think so, sir. My opinion is that no corporation, unless they have some special power given them by a Private Act, has power to break up the streets themselves, or to authorise the telephone company to break up the streets for the purpose of laying their mains; it is done, but I do not think it is right.

1174. You are aware that the Manchester Corporation have entered into an agreement of that kind, are you not, with the Telephone Company?—The Manchester Corporation entered into the agreement under a clause in a local Act by which they constructed the works under the streets for the company, and charged them a rental for doing it; but it is a totally different thing, sir, to an agreement under the Act of 1892.

1175. Then may I take it that the change in the law, which you would recommend, would be that the corporations should be empowered by Act of Parliament to break up the streets for the purpose of putting down underground telephone wires at the request of the company?—Yes; the Act would not distinctly set out those powers. What the Act would do would be to authorise somebody or other to break up the streets for the purpose of laying telephone wires; then it would go on, according to my idea of drafting, to provide limitations, namely, that the work should not be carried out in a town excepting with the consent of the corporation; if the corporation gave their consent, then the company should be bound to allow the corporation to do the work themselves, if they thought fit to do it, charging the company with the cost. We do that in most of our cases in Liverpool.

1176. Does it not practically come to this: that the only change in the law that you consider necessary is the authority by an Act of Parliament to the corporations to break up the streets for the purpose of putting the telephone wires underground?—Yes; if you do not have that power given by Parliament anyone breaking up the streets might be indicted for a nuisance. I speak subject to the correction of several learned Members of the Committee.

1177. Do you suggest that the company breaking the streets for the purpose of laying underground wires, with the consent of the corporation, would be acting outside their legal powers?—At the present time, yes. I do not consider that we have any power in Liverpool to authorise the breaking-up of our streets for the purpose of laying telephone cables under the streets.

1178. Did not the Act of 1892 contemplate the company having powers conferred upon them by the Postmaster General?—Certainly, sir; but until those powers are conferred they cannot be exercised, and those powers have not been conferred at the present time as regards Liverpool.

1179. I mean did not it contemplate those powers being conferred by the Postmaster General under the draft agreement which has now become a practical agreement. You do not suggest, then, that the exercise of those powers would be contrary to their legal rights, do you?—It is perfectly true, sir, that under the agreement those powers can be conferred by the Postmaster General on the telephone company, but the telephone company cannot exercise those powers without getting the consent of the corporation, and as the corporation, if they gave their consent, would be putting the company in a strong position, and the corporation are not in a position to force these proper restrictions on the company, which I think necessary, all the corporations have practically agreed as a body to withhold their consents to the exercise of those powers under the Act of 1892 in order to have the thing properly settled by an Act of Parliament.

1180. Then with regard to the restrictions and regulations which you think ought to be imposed, what do you say as to those?—Having fixed the powers that it is desirable to give to the company, I think then that the main points for consideration with regard to restrictions are: First, what will be a fair maximum dividend to allow the company to pay on their capital, having regard to the amount of capital fairly represented by their works? By that I mean that if on investigation and inquiry (I do not say it will be so, but if it appears to be so) any considerable portion of the capital of the company is not capital upon which the public ought to be charged with a dividend then instead of fixing the maximum dividend (as you would do possibly in the case of a gas or water company) at, say seven per cent., you would fix it at some lower percentage in order to prevent the public from being charged with the payment of dividend on capital which has not fairly been spent in the

*Chairman*—continued.

undertaking. Then the next point, sir, that I think should be considered would be the fixing of maximum charges in conjunction with maximum dividends; and the maximum charge which the company should be allowed to make in the different classes of local exchange areas should be fixed; and then there should be accompanying provisions to prevent the company from unfairly favouring one exchange area at the expense of others. I think it would be very unfair, for instance, if it answered the purposes of the company to supply telephones in Liverpool, say, at just about cost price, to make the rest of the country pay the dividend on their capital. I merely give that as an illustration of what I mean.

1181. What is your charge in Liverpool?—£10 for the office; and if you have it at your house too, 8*l.* 10*s.* for the second one.

Sir *Charles Cameron.*

1182. Is there any restriction as to area?—There is no restriction as to area until you come on the trunk line.

1183. No restriction within so many miles, or within one or two miles of the exchange?—It is for the whole of the Liverpool area, which comprises, I think, three county boroughs and 10 or 11 local authorities.

*Chairman.*

1184. Including Birkenhead and Bootle, I understand?—Yes.

1185. You have mentioned different classes of local exchange areas; how would you suggest they should be classified?—Well, my knowledge of the subject is so meagre that I can only throw out a very general suggestion. When I read through the Parliamentary Memorandum of the Postmaster General I noticed that at the end of the agreement the whole of the country was practically cut up with exchange areas, and it occurred to me, sir, that many of those exchange areas were such as might be called similar in character, and that you could classify them, and then say that the maximum charge in each class should be so much.

1186. Based upon population or the probable number of telephone users?—Well, I would not like to commit myself to any suggestion of that character; I only suggest that the Committee should inquire into the point, and see whether there is anything in it.

1187. Have you any other restriction you would suggest?—Then, sir, I think that, having fixed the maximum dividend and the maximum charge, if it is thought desirable, and made provisions to prevent what I call undue preference being given as between different local areas, the question should be considered whether it is not desirable to prevent undue preference as between one subscriber and another subscriber where the circumstances are exactly the same. I do not say that it is advisable; I only say that it is a point that should be considered and inquired into. It is a principle that is adopted in the Electric Lighting Acts, and I think possibly it might apply to telephones. Then there is another point; that is, that the company should

*Chairman*—continued.

be forced to give such a number of call offices as Parliament might think ought to be given. I think that the telephone system being, as it is, an expensive article and practically limited to capitalists and people who are fairly well off, the use of it might be considerably extended (to people who cannot afford to pay 8*l.* or 10*l.*) by having call offices where it could be used, say, for some small fee, something less than a telegram. Call offices for small tradesmen would be a very great benefit when they cannot afford to pay the 10*l.* for the subscription. I do not pretend to suggest the number or the character, or how it should be done; I only point out that I think it is desirable in dealing with the subject to try to bring the telephone system more within the reach of the people, who at the present time cannot afford to have it.

1188. Is that the last restriction you suggest?—Those are the main ones, sir. There may be other matters of detail which would occur to one's mind after one had heard the inquiry into the circumstances of the company.

1189. I should like to ask you this: you propose that certain very serious restrictions should be imposed by Act of Parliament upon the company?—I do.

1190. That is to say, a maximum of dividend, a maximum of charge?—And, generally speaking, compulsion to supply.

1191. Compulsion to supply equally to all people?—Yes.

1192. Or to different classes?—Yes.

1193. And the providing of call boxes which might not be considered necessary by the company?—Yes.

1194. What is the consideration you would propose which would justify the imposition of these restrictions upon a company which has an unrestricted licence for 16 or 17 years more?—I quite recognise the fact that you cannot impose these restrictions unless you give something in return. The first thing that you give in return would be the extended powers to maintain their undertakings; secondly, I think the term of 16 years of the licence should be abolished, and that the company should be put in the same position as a gas and water company, namely, with a Parliamentary existence, subject to provisions preventing a monopoly being created which would be oppressive (or which might be oppressive) to the country; and in order to prevent that I should suggest that there might be given to the Government the power to acquire the company's whole undertaking at any time upon some reasonable notice (such as 12 months or something of that kind), on some stated basis to be set out in the Act of Parliament itself, so that the company and all their shareholders would know exactly what is hanging over their heads.

1195. You are aware, of course, that the Committee of 1892 strongly reported against any extension of the term of the existing licence?—So I understood, sir; but I may say this, that the corporations did not appear before that Committee, and even if the Committee did report against the extension of the licence for the purposes of the Government, I can only point

*Chairman*—continued.

point this out, that it stands to common sense that if a company is working under conditions which practically bring them to an end at the end of 16 years they cannot develop their system or supply so cheaply as if they had a permanent existence, and knew exactly what was going to become of them. It is obvious that they must put by, out of their revenue, a much larger reserve fund to provide against what will happen when their licence terminates than would be necessary if they had a permanent existence; and what it comes to is this: that the increased amount, or the increased sum, that they put into their reserve fund comes out of the subscribers' pockets. The extra amount they have now to pay for wayleaves and for blackmailing, as compared with what they would have to pay under fair compensation, also comes out of the pockets of the subscribers. Their dividend of 5 per cent. (which is only in the market now worth 20 years' purchase) also comes out of the pockets of the subscribers; but if that dividend was reduced to, say, 4 per cent., with a more permanent security behind it, the 4 per cent. would be worth as much in the market then as the 5 per cent. is to-day; and that would be another great saving which could be effected towards reducing the price of the telephones to the subscribers. What the corporations want is this: We want either the Postmaster General or some company put upon conditions which will enable them to supply in the best possible way, and at the cheapest possible cost, and we do not want to be hampered now at the present time, and to pay high prices for our telephones, and to have the system in an uncertain and unworkable condition, simply to benefit somebody that is to come 15 or 16 years hence.

1196. You would not suggest that the Postmaster General should be put under restrictions and obligations of that kind, I should hope?—The Postmaster General is sufficiently governed, I think, by public opinion and Parliament; I say it with all respect, sir.

Sir *James Fergusson.*

1197. I did not quite follow your proposal for the limitation of the dividend of the company. I understood you to suggest that, inasmuch as the capital had been largely swelled by the absorption of rival companies, the company should have a more moderate maximum dividend fixed for it. Is it not the case with all commercial undertakings that there is a great deal of unproductive capital arising from its initial expenses?—I agree, sir; and I do not say that my own opinion is that the company should be unfairly treated at all. All I mean to say is that the Committee in considering the question of dividend ought to have regard to the way in which the capital has been spent; and so long as you do not fix the maximum dividend at a price which would depreciate the present value of the company's shares, I do not think myself that you are doing any injustice to the company by putting them under conditions which would practically limit the increased value of their shares to some small sum compared to what it is at the present moment.

Sir *James Fergusson*—continued.

1198. But the consideration for such interference would be their possessing a virtual monopoly?—A monopoly subject to termination at the end of, say, 12 months at any time; it would be a regulated monopoly subject to acquisition by the Government whenever they thought it was in the national interest to take it over.

1199. Then, would you contemplate the withdrawal of the freedom of the Post Office to set up exchanges of their own. You would contemplate the entire transfer of the business to the company, would you?—I understand that the Post Office refuses to undertake the question of local exchanges. My contention is that all the local exchanges must be in one hand; consequently, it is either Post Office or company, and I think it is not advisable to have both.

1200. But are not you aware that in the agreements the power is absolutely reserved to the Postmaster General to set up an exchange in any area?—I understand it is reserved; but it does not necessarily follow that because the power is reserved it would be exercised.

1201. Oh, no?—Then, sir, I may point out that the agreement was made under conditions that now pertain; not under the conditions which would pertain if my suggestion of an Act of Parliament were carried out.

1202. You have said that the telephone should be brought more within the reach of the public than it is. Have you considered the extent to which it may be expected to be improved by the agreements now made with the companies?—Yes; I understood from the remarks of the Right Honourable Chairman that the Postmaster did intend to very materially increase the trunk lines, the trunk system, and to give facilities for connecting the Post Office exchanges with the local exchanges; and, of course, that will be a benefit to the public.

1203. Of course, the professed objects of the agreements made with these companies was to greatly extend the facilities of the telephones by removing the hindrances that had hitherto been thrown in their way?—I am firmly convinced that the object of the Government was to benefit the public by the agreement.

1204. My reason for asking you the question is this: You have considered the provisions of this agreement, and I should like to know whether you consider they fall short of the requirements of the public. I do not know whether you are aware of the actual conditions made; for instance, that in consideration of the company being allowed to carry their wires into the post offices, to have their wayleaves at nominal rates, and so forth, telephone messages may be written down and delivered; that they may be transmitted over the public postal telegraphs, or through the post, as ordinary letters, or delivered as express letters; that the public may be placed in telephone communication with other towns, and that the services of the officers of the Post Office shall be given without charge; all these things would give greatly increased facilities, would they not?—Undoubtedly; great benefits will arise, I believe, to the public by many of the provisions of this agreement being carried out; but, of course,

Sir *James Fergusson*—continued.

my own view was that these benefits might have been given without the necessity of buying the trunk lines; but that is merely an observation of my own.

1205. It is hardly worth considering, is it?—No, I quite agree, sir. Under the agreement which the Postmaster General has made, I believe very considerable benefits will accrue to the public, that is as to the agreement as a whole; but there are certain portions of it to which we, as corporations, very strongly object.

1206. And which you have specified?—And which, I may say, sir (perhaps it will be within your recollection), we did object to when the Bill for the Act of 1892 was introduced.

1207. Yes?—And we have not changed our opinion on the point.

Sir *John Gorst.*

1208. If all the local exchanges are in the hands of a single company, is there any good in the Postmaster General having possession of the trunk lines?—I am not sufficiently acquainted with the working of the telephone system and telegraph system to answer the question. I accept the decision of the Postmaster General and the Treasury on the subject as being the one most calculated to benefit the nation as a whole.

1209. Then do you confine your opinion to the opinion that the exchanges, at least the local exchanges, should be in the hands of a single authority?—Starting from the point that I am bound to accept the fact that the Postmaster General takes over the trunk lines and will not take over the local exchanges, then I submit that the whole of the local exchanges should be in the hands of one company.

1210. Then do I understand that you do not criticise the decision of the Government to retain the trunk lines, that you accept that decision?—I think, sir, that personally I am not, and I do not think any members of the Municipal Association are in a position to attempt to criticise the decision of the Government upon the point.

1211. Now, with regard to the facilities which you think should be given by call offices, have you ever considered the effect that that would have upon the telegraph revenue?—No. That is a subject which this Committee should consider on evidence from the Post Office Department.

Mr. *Snape.*

1212. Do I understand you to say that the opinions that you have expressed to the Committee are those authorised by the Association of Municipal Corporations?—Yes. May I read the last Resolution of the Special Committee? I may say that this is a Resolution passed by the Special Committee appointed by the Association to consider telephones, and it was passed on the 20th March 1895: "Resolved that the principles involved in the resolution of the Council of the 22nd November, 1894, should be adhered to, namely: 'That in the opinion of the Council no powers should be given to any telephone company which will enable them to interfere with streets or with the rights of individuals in property, unless statutory conditions and obligations are, at the same time, imposed on the company for the protection of the public, particularly with regard to maximum charges, maximum dividends, and obligations to supply; that the subject should be treated as an imperial, and not as a local one; and, therefore, it should be urged on Parliament that so much of the draft agreement between the Postmaster General and the telephone companies as relates to vesting in the companies the wayleave powers of the Postmaster General under the Telegraph Acts should not be carried out.' That as the Postmaster General has refused to strike out of the agreement the provisions objected to by this Association, the Corporations be recommended to refuse to give their consents under the Telegraph Act, 1892, to the exercise by the National Telephone Company of the powers of the Postmaster General under the Telegraph Acts. That the Town Clerk of Leeds and the Deputy Town Clerk of Liverpool be asked to represent the views of this Committee, as expressed in the foregoing Resolution, before the Select Committee."

Mr. *Snape*—continued.

1213. The question of buying out the companies, you say to the Committee, is not before us, and it is one that you do not recommend; in that case is the only alternative leaving the present supply of telephonic convenience in the hands of this National Telephone Company; is that your opinion, that there is no alternative to this?—I think there is no alternative except to leave it in the hands of the present National Telephone Company, but with very altered conditions to those pertaining at the present time.

1214. And some of these conditions, you have told us, mean giving very greatly increased powers to that company?—Not "very greatly increased powers."

1215. Well, increased powers?—Powers which are necessary to enable them to give us cheaper telephones; nothing beyond that.

1216. If Parliament refused to give any increased powers to the company, is it still your opinion that the single authority which you advocate should be the authority of the National Telephone Company?—Well, I can only say that when Parliament does refuse to give those powers we must deal with the situation; but as the Government has undertaken to give them the powers by this agreement, and as I understand the House of Commons is presumed to have endorsed the action of the Government in that respect, I can hardly think that the powers will not be given in some way or other.

1217. But some of the restrictions which you have advocated are not comprised in the agreement?—No.

1218. For example, you advocate the abolition of the 16 years' licence and giving a permanent control, subject to the right of assumption by the State under certain conditions?—Of course, they are not included in the agreement, because the agreement was made under the conditions which were then in force. What I am advocating is, that the conditions which were in force when the agreement was made should be substantially altered by an Act of Parliament.

1219. But

Mr. *Snape*—continued.

1219. But you have lost sight of my assumption, that is, that Parliament might refuse to give these powers under any Act, and under that state of things is it your opinion that the municipalities would still wish the monopoly to remain as at present, in the hands of the National Telephone Company?—If Parliament refuses to give the power to a company, I presume they will also refuse to give it to anyone else; and I fail to see then what benefit will accrue to telephone subscribers from that. We find ourselves now in a position when we cannot get the telephones as cheaply as they ought to be supplied, simply because the conditions under which the telephonic system is worked are such as precludes cheap telephones. What we want to do is to remove those conditions which are inimical to cheap telephones; and I have merely thrown out a suggestion for the consideration of the Committee with a view to bringing about that end.

1220. Would any of those restrictions be necessary if the municipalities had the right of telephonic supply within their own areas; that is to say, to establish a telephonic exchange within their own areas?—You could not, for instance, limit the maximum dividend that a corporation could pay, because the dividend that a corporation pays is practically interest plus the sinking fund. Supposing, for instance, that the Corporation of Liverpool at the present moment undertook to supply telephones; well, I take it that the telephonic works would be of a character where the capital ought to be repaid, at any rate, within a period of 20 or five-and-twenty years; consequently, we shall have to pay 2¾ per cent. on the money actually spent, and in addition, we should want probably another (say) two per cent. for sinking fund; consequently the Corporation would practically have to earn, over and above working expenses, 4¾ per cent. to 5 per cent., which is practically what the Telephone Company earn at the present moment.

1221. But still many of these restrictions to which you refer, such as the utilisation of the streets, and so on, would be unnecessary if the municipality had the matter in their own hands?—Quite so. Even if the legal power to break up the streets is given to the company, the exercise of the power should be in the hands of the Corporation, and the work done at the request of the company.

Mr. *Moulton.*

1222. You attribute great importance to the telephones, do not you?—Very great, particularly for commercial purposes.

1223. For intramural telephonic communication they are probably even more important than the telegraphs, are they not?—I should think so; of course I do not know what the telegraph business is, but I should imagine that the number of telegrams sent from one point of a town to another is comparatively small.

1224. For instance, take any office which has a telephone, do not you suppose that that is used 10 or 20 times as often in a day as telegrams are sent from that place to another part of the town?—I should think so; but then you must remember this: that in a great many of the large offices (take, for instance, the Stock Exchange business), the telephones are very largely used to communicate with Manchester and with London; in fact, the trunk line, I believe, which is assigned to the Stock Exchange between business hours in Liverpool, is so crowded with work that the stockbrokers have to stand in line to get "on."

1225. I am talking about the intramural business. The number of messages sent by telephones within the limits of any district are very much more numerous than those sent by telegram, are they not?—Of course; that must be so.

1226. Have you ever compared the number of intramural messages with the number of messages sent from town to town by means of the telephone?—I have no knowledge of the figures.

1227. You have told us of the Stock Exchange, and you have told us of the Liverpool usage; but taking this country as a whole, do you think that the messages over the trunk wires are one in a hundred, or perhaps one in a thousand, to the messages that are not over trunk wires?—I do not know what the relative proportion of the numbers may be; but taking it from a business point of view, as a rule, the importance of a telephone message which goes over a trunk line is far greater than probably a dozen messages that go from office to office; they are smaller matters.

1228. I am not talking about that, but about the user?—I could not at all say; I know nothing about the figures.

1229. But the user within the limits of a district is, I suppose you will agree, very large compared with the user from town to town?—Certainly; but may I suggest for one moment a remark there, that is that I think that the user from town to town is at the present moment very much limited and cramped, owing to the want of increased trunk communication.

1230. Take, again, any person who has a telephone, he will probably send 50 messages to different parts of the same town for every message that he sends to any other town, will he not?—Yes; and one reason is that you have to pay extra directly you get on the trunk line.

1231. Now this telephone system is taking up a great deal of work that was done, or would have been done, by telegraph if the telephone had not been invented?—I have been told that between Liverpool and Manchester the telegraph business is practically ousted by the telephone.

1232. And within the limits of the same town it is a still more effective competitor, is it not?—I should think so.

1233. And do not you think that it would have been a great advantage if this portion of the telegraph business had never passed out of Government hands?—Yes; with great respect to the action taken by the Post Office in the days gone by, I think myself it was a very great mistake, as a matter of policy, for the Postmaster General ever to have farmed out any portion of his monopoly.

1234. And the only satisfactory solution is to get that monopoly back into the hands of the

Mr. *Moulton*—continued.

Government, is it not?—That seems to me the most natural solution of the difficulty.

1235. Now I will take you to the period of the present licences; do I understand you to represent it to be the opinion of the municipalities of England that the period of the licence to the National Telephone Company should be lengthened?—I think it is hardly fair to put it in that way. We have gone upon one basis throughout, and that is this, we want to cheapen the telephone.

1236. To make it cheap and effective?—Cheap and effective. The only way to do that is to take away everything which forces the company to spend money unnecessarily; and one of the things which forces them to spend money, I think, unnecessarily, is the short term which forces them to put by a reserve fund which might oe applied in reducing charges if they had a continuous existence, subject to termination, at the instance of the Government.

Mr. *Snape.*

1237. I should like to ask, if I may, whether this is your own opinion, or the opinion of the corporations?—I believe that in saying that I am expressing the opinion of the municipalities. I can only say I have spoken at a great many meetings; I have there expressed these views which I am expressing to-day; I know they have raised a great deal of discussion, and I have never heard them received with any dissent; so that I simply conclude that the great majority, at any rate, of the municipalities would be of the same opinion that I am upon the subject.

Mr. *Moulton.*

1238. We know that it is an evil to have an inefficient or a dear system of telegraphy, and, of course, this Committee wants to find out how to avoid that; but taking your specific remedy, that the licence to the National Telephone Company should be lengthened or made perpetual, will you mention the name of any one large corporation in England that you can tell this Committee is definitely of that opinion?—I do not think they have ever expressed an opinion upon the subject in that way, and it is hardly fair, I think, to put it in that way. The right way to put it, I think, to my mind, is that the municipalities desire to remove everything which tends to the increasing of the price; and one of the ways to remove it is to remove the obligation to set by this big reserve fund. We do not propose to create a monopoly for all time, because I propose that the Government should have the power, at any time, of giving 12 months' notice to buy up the whole undertaking upon some reasonable terms, which should be stated definitely in the Act of Parliament.

1239. No such scheme as that has been before the municipalities, has it?—I have spoken about it in Committee; and I spoke about it, I think (the Right Honourable Chairman will say if it is correct) when I had the honour of speaking before him not very long ago on the question of the agreement.

*Chairman.*

1240. That was so?—I did speak about it at that time.

Mr. *Moulton.*

1241. Of course the municipalities are desirous to remove everything that occasions cost in the service, but they would only do so provided they could do it at not too great a sacrifice. Now I will ask you, has this question of the prolongation of the licence to the Telephone Company ever been considered by any large municipality that you know of, and approved of, as a means of lowering the cost of telephones?—Not in the sense in which you put it.

1242. Have you read the agreement between the telephone companies and the Postmaster General?—I have.

1243. You have expressed your opinion strongly against competition in the same area?—I think competition must end in increased expense.

1244. Therefore, you look upon it as impracticable?—It is to my mind just as impracticable as having competition with the water companies in the same area.

1245. In that agreement is there any means by which either a cheap or efficient service can be secured for the public, excepting by the threat of competition?—I am not responsible for the agreement, and I really cannot say what can be done under it; I only know the portion I object to.

1246. Can you point to anything, except the power of granting new licences, which enables the Postmaster General to secure any benefits for the public?—I think the point, sir, that you have in your mind is the same that I have in mine; namely, that the powers are to be given in this agreement to the telephone company; but the restrictions are left to be settled by the corporations as best they can settle them; and my contention has always been that the corporations are not in a position to be able to make those conditions properly.

1247. I am not dealing with the question of streets?—No, I am not dealing with the question of streets either; I am dealing with the question of the telephone company in connection with the subscribers.

1248. Are there any powers, even to corporations, to require either an effective or a cheap service from the company?—I do not think myself that under the agreement the corporation can bring about either a cheap or an effective service to the public, except so far as the company choose to give it.

1249. Is it not the same with regard to the Postmaster General, except so far as the power of granting rival licenses is concerned?—But the Postmaster General would be, what I may call, subject to Parliamentary control.

1250. Has he any powers to require either a cheap or an effective service under that agreement?—Not that I am aware of; but I speak without remembering the whole of the agreement.

1251. Then, if competition be not an effective weapon, the public are without any protection under that agreement?—I am afraid that if those provisions of the agreement which relate to endowing the company with the powers of the Postmaster General are carried into effect by the Postmaster General, the public, generally, will be very much damnified; and it is for that reason

Mr. *Moulton*—continued.

reason that I have so strongly objected to those provisions in the agreement throughout.

1252. Now you have not given special attention to the prices at which telephonic communication is given in other towns, have you?—No, except what I have been told.

1253. Have you examined into cases in which there has been competition?—I believe there was a case in Manchester where they had competition, and I have been told by friends of mine there that the result has been that they have had to subscribe to two undertakings, and the two subscriptions came to more than one.

1254. Is that the only information you have, because I will not press you if that is all?—That is simply what has been given to me in talking about the thing generally.

1255. Supposing that the price of telephonic communication was brought down considerably (we will say to 5*l.* or 6*l.* a year), do you doubt that there would be a very much larger number of telephones taken?—Reduction of cost, I think, almost invariably leads to increased consumption.

1256. You were talking about the telephone being an "expensive article only for capitalists"; 5*l.* a year would be about 2*s.* a week, would it not?—I think that calculation is correct.

1257. Do not you suppose that if the price was brought down to that, a very large number of small business men would find it worth while to have them?—I believe so; and it is for that reason that I am advocating the reduction of cost.

1258. In that case you would not describe it as an expensive article, only for capitalists, would you?—My observation with regard to a 10*l.* subscription would be proportionately reduced, if I may so.

1259. "Capitalist" is a rather big word for the persons who would be the users under those circumstances, is not it?—I do not think I used the word in the limited sense in which you put it; I think I said the present charges for telephones prohibit it being used by people who are not capitalists or fairly well off.

1260. Now, supposing a Municipality were to take up the telephone business, would it not be the most effective competitor of the National Telephone Company?—I do not see that it would; because if the Corporation undertakes any works, it practically has to pay a dividend, whether it earns it or not, or it has to fall back upon the rates.

1261. This dividend of 4¾ per cent., you mean?—Whatever it may be; at any rate between 4½ and 5 per cent.

1262. That is to say, interest plus that which is made to be the sinking fund?—Yes, the sinking fund.

1263. That is not so much as the dividend of the National Telephone Company?—I believe the National Telephone Company pay 5 per cent.; and if it costs the Corporation 4¾ per cent., there is not very much in it.

1264. Do you know whether they put by a sum of money in view of the termination of their licence?—I believe that last year they put by something like 70,000*l.*, which, if it had not been for the 16 years' term, might have been applied in reducing the cost of telephones.

Mr. *Moulton*—continued.

1265. So that in addition to the 5 per cent. there is this money that they are putting aside to replace their capital?—Yes.

1266. Then the 5 per cent. is on the amount of capital as it stands in their books?—Of course, it must be so.

1267. Which includes large sums paid for buying out competitors?—That is only a matter that I know by hearsay and not by personal observation.

1268. Supposing, then, that you wish to introduce competition, are not you of opinion that the most efficient competition would be that of the Municipality?—No. My experience of local government leads me to this conclusion: that if a thing can be done by a Corporation for a fixed sum of money, it can be done by a contractor or a company for a less sum, because there is always a certain amount of expense in connection with a public body which a contractor manages to save, and to make a profit where a Corporation would practically only pay its way.

1269. You have acquired your waterworks, have you not?—We have; and that is a very right thing to do.

1270. You have acquired your gasworks also?—We have not, I am sorry to say.

1271. Oh! that is Manchester; you have acquired your waterworks and wish to acquire your gasworks?—We wish to acquire the electric lighting, if we can get it at a reasonable price.

1272. And, as far as you are concerned, you would like to acquire the gasworks?—Generally speaking, I think the gas and the water ought always to be in the hands of the local authority.

1273. I want to know why telephones should not be in the hands of some public authority; it is exceedingly important, is it not, that they should be worked in the interest of the public at as cheap a rate as possible?—I do not think myself that the telephone system is of such a general nature that Parliament would be justified in allowing a Corporation to pledge the rates for the purpose of supplying it. It would be, to my mind, a far sounder argument or proceeding were you to municipalise all the bakers' and all the butchers' shops than to municipalise the telephone system.

1274. It is a portion of telegraphy which has been taken over by the State, the great public authority, in the interest of the public, is it not?—That is because it was vested in the State, to start with.

1275. The State took over the telegraphs from private companies, did they not?—Yes; in 1868 I think it was.

1276. Do you consider that that was a wrong step?—I believe myself that a properly regulated monopoly is much better for any public service of that character, generally.

1277. If that is your opinion with regard to the telephone, is it not equally part of your opinion as to telegraphy generally?—I cannot go back upon legislation of 1868. You asked me for a sort of abstract opinion as to whether it was desirable.

1278. Can you draw a line between telephones and telegraphs, and explain why it is not advan-

Mr. *Moulton*—continued.

tageous that the telephones should be in the hands of a public authority as well as the telegraphs?—I do not think the telephone system is one of such a general character that it justifies the thing being charged on the rates.

1279. It is even more general, is it not, than the telegraphs; is it not more largely used per head by those who use it than telegraphs?—Yes; the telegraph is in the hands of the Government, and that is a different thing to a local authority altogether.

1280. You think it ought to be in the hands of some public authority?—What?

1281. The telephone?—The telephone ought to be in the hands, first of all theoretically of the Government, but if the Government will not have it, it ought to be in the hands of a properly regulated company.

1282. And not of a public authority?—I do not think it is within the function of any local authority to undertake the supply of the telephone system.

1283. Now let me see the objection you raise to it. First of all you say that in all towns the telephones ought to be in the hands of the same authority; now will you explain what is the need of that?—Because the necessity of intercommunication between, not only large, but all centres of trade is so great that it would be a very great evil if one or two of these systems were isolated from the rest.

1284. I will just take Manchester and Liverpool: Would it make the slightest difference with regard to interchange whether they were in the same or different hands?—Yes; because every subscriber in Liverpool who wanted casually to telephone to Manchester would have to send to Manchester to get one of their catalogues to commence with; otherwise he would not know what number to ring up. In addition to that he would have to pay the additional 3*d.* or 6*d.* for the pleasure of doing it.

1285. Will you explain to me why?—Because the agreement with the Postmaster General does not provide that the competing companies in the exchanges shall give inter-communication.

1286. I do not understand how they compete; as many messages go from Manchester to Liverpool as from Liverpool to Manchester, do not they?—Suppose, for instance, the Manchester Telephone Exchange belonged to the Manchester Corporation, and the Liverpool Exchange belonged to the National Telephone Company; unless some provision were made by Parliament to compel the Manchester Corporation to allow their instrument to be used by the subscribers in Liverpool, and *vice versâ*, they would not be able to use them, unless they paid the charge demanded.

1287. Whose interest would it be to put that charge on?—It is in this agreement.

1288. I will take a case; we will say that the Liverpool Corporation and the Manchester Corporation have the telephones in their own hands; whose interest would it be to charge as against the other town?—I think it is obvious that all the towns would not do the work for other subscribers.

1289. I want to know why?—Because, if you are not obliged to do anything without being paid for it, as a rule, you like to get paid for it.

1290. Let us see how you are paid for it; for instance, take the letters to France; does France get any of the postage on those letters?—I do not know anything about that. All I know is that in this agreement with the Postmaster General there is this provision——

1291. I ask you why they should be isolated, because the exchanges are in different hands; it is as great an advantage to Liverpool to be able to telephone free to Manchester as for Manchester to be able to telephone free to Liverpool, is it not?—Unfortunately, we have not that advantage, and I do not see how we are going to get it.

1292. I want to know why there would be any need of a charge if they were in different hands, any more than there would be if they were in the same hands?—I do not know about there being any "need" of it, but if the Manchester Corporation owned the telephones in Manchester, they would not allow the National Telephone subscribers to use their instruments without paying some charge.

1293. But why not if, in return, they got the privilege for their subscribers to telephone to Liverpool?—I do not know "why not," but I assume that they would not do so; and this agreement bears out my contention, because it makes express provision to limit the charges.

1294. I want to know if you can give me any reason why it should be more to the interest of the one than to the interest of the other to impose a charge?—It probably might be the best public policy to have no charge at all; but when you are dealing particularly with local authorities, they always make a charge if they possibly can; but then I may point out this, that the questions are all asked on the assumption that the exchanges in Liverpool and Manchester are in the hands of the corporations. Now the corporations can never get the thing into their hands until they have by competition practically killed the National Company who are there. Well, I should be very sorry to see the Corporation of Liverpool attempting to compete on the question of price with the National Telephone Company with their 6,000,000*l.* of capital behind them. I am afraid there would be a very considerable charge on the rates at the end of the first year if they attempted to do anything of that kind.

1295. Would not they also have the Government to compete with the Telephone Company?—As far as I can see the telephone is the only thing the Government make any profit out of. They lose about a quarter of a million a year which they give to the Press; they also lose on the sixpenny telegrams; and they make a clean profit of 70,000*l.* out of the telephones for doing nothing at all.

1296. Do you call that a "clean profit"?—It is 10 per cent. clean profit, so far as I can see.

1297. Does not that displace a large portion of their telegraphic business which they had the monopoly of?—That is not the fault of the telephone subscribers, but the fault of the Government in days gone by.

1298. Do

Mr. *Moulton*—continued.

1298. Do you call it a net profit when they have a very much smaller number of messages over their own wires?—It is net profit in this sense, that the cost of getting that 70,000*l.* is *nil*, and the amount got is 70,000*l.*

1299. You call that a net profit even when it is obtained by a sacrifice of business which would have brought a profit because it would have been a profitable user of their lines?—I do not think the two things are, so to speak, properly connected, if you come to a question of ascertaining what is profit as against gross receipts.

1300. Now, with regard to the question of the powers of a corporation; have you examined the statutes to see what powers are conferred on the Telephone Company?—No powers are conferred on the Telephone Company.

1301. None?—No.

1302. You said that the Corporation could not put wires underground because it had no statutory powers for doing so. Do you suggest that they cannot put them underground for the telephone companies?—At the present time, no; that is my opinion, subject to correction.

1303. Have not the telephone companies the power of putting their wires underground subject to the consent of the Corporation, who can impose terms?—They have not the slightest power at the present time. They will have the power if the Postmaster General exercises the provisions of the agreement, and gives them the power.

Mr. *Tully.*

1304. You have said that the telephone is for the use principally of capitalists, and people who are well-to-do?—It is generally used by people in trade and for commercial purposes, and by people who are fairly well off, if they have it in their houses.

1305. Because it is for the use of (or a luxury for) the rich, you are against the Corporation spending any rates on a rival or competitive system?—Yes; I do not think myself that it is a business of a character which justifies even the running of the risk of having to charge it upon the rates, which are paid by everybody, while the large majority of the ratepayers do not use the system.

1306. You advocate the extension of the powers of this National Telephone Company because you say it would be for the public benefit?—I advocate the extension of the powers because it would necessarily follow that there would be a reduction in charge, according to my way of doing it.

1307. As against the corporations, you think it is a luxury for the rich, and in favour of the company; you think it is for the benefit of the public?—No, not at all; it is for the benefit of the same people in either way; but if you can make any provision which will have the effect of reducing the charges, I think then you extend the area, so to speak, over which the telephones would be used; that is to say, you enable a number of people who would be willing to pay 5*l.*, for instance, to take it, who would not be willing to pay 10*l.*

1308. You are for saving the rates; but we were told here by a Post Office witness, that on account of this company having got hold of the

Mr. *Tully*—continued.

telephone business of the country, the telephone business had superseded the telegraph business to such an extent that at the present time the telegraph business is being worked at a loss of a quarter of a million a year?—Yes; and I also heard it stated that about 300,000*l.* a year goes into the pockets of newspaper proprietors.

1309. The point I want to ask you about is this: we learned here from an official witness who was examined that they lose a quarter of a million a year on account of the telephone business superseding the telegraph business; one of the Post Office witnesses stated that?—I did not understand that; I understood that the net loss on the telegraph business, generally, was 240,000*l.* a year, and that probably a considerable amount of that loss was owing to the competition of the telephones with the telegraphs.

1310. Yes; the witness said that it was largely due to that fact. The general taxpayer has to make up that loss, has he not?—He has.

1311. And although you object to the Corporation taxpayer having to provide a competitive system, you do not object to the general taxpayer having to pay towards the loss on the telegraph system?—Yes, I do; I do not think there ought to be a loss on the telegraph system; I do not see why Press telegrams should be carried at less than cost price at all.

1312. We are not considering the question of Press telegrams now?—That is involved in the 240,000*l.* loss.

1313. But we were told that the telegraph revenue in 1891 showed a surplus of 68,000*l.* when they were carrying the Press messages the same as they are now?—All I mean is this, that if certain portions of the telegraph monopoly are being carried on at a loss, I think it is rather unfair to the rest of the country; I think the telegraphs ought to be made to pay their own way somehow or other.

1314. But you do not object at all to part of the telegraph business being given over to the monopolist company who have watered their capital up to the extent of four and a-half millions. You would like the newspaper proprietors to pay for the loss which has been occasioned by giving over that business to this company?—Of course, as I have said, I think it was a mistaken policy for the Postmaster General ever to have parted with any portion of his monopoly.

1315. Exactly; that is what we have to deal with, the results of this mistaken policy; we want to try and get rid of the results of the "mistaken policy." Under this agreement, if it is carried out, will not the company be practically restricted to the local areas?—Yes.

1316. The trunk wires will belong to the Government?—Yes.

1317. And will not the corporations if they get licenses be restricted to local areas?—If a corporation got a license I think it would be restricted to its own area. If the company had the whole of the exchange areas in its own hands, there would practically be only one body to deal with.

1318. But as regards all those great disadvantages you spoke about, the trunk wires and the difficulty of communicating between

Mr. *Tully*—continued.

towns; when this agreement is carried out, will not it be the Post Office who will have to provide these trunk wires?—Yes.

1319. And the company will have to provide for the local areas?—Yes.

1320. And if the Corporation were allowed to have the license, would not they be confined to local areas?—Yes. The disadvantage would be this (as I pointed out in answer to Mr. Moulton), that if you have the local area in one town, belonging to one body, and the local exchange in some other town, belonging to another body, then, in addition to the trunk wire charge, there will be a further charge for going on any other company's system.

1321. Would not the price be considerably reduced. We were told that in Glasgow when there was a threat of competition it was reduced from 20*l.* to 10*l.* to each subscriber?—I do not know whether that was the fact or not; but it is obvious that a Corporation cannot work at less than the working expenses, plus 4½ per cent. at least, unless they are prepared to charge the rates with the cost of the telephones, which I maintain would be very wrong.

1322. The rates are paying already for it, are they not, because the telegraph system is losing?—I do not think the fact that the telegraph system is worked at a loss is at all a justification for the municipality throwing upon the rates a loss upon the telephones.

1323. You say that because the Corporation would have to pay this 5 per cent. they could not compete with this company that has six millions of capital behind it; are you not aware that this company, in order to pay a dividend on that six millions of capital, must put on to each subscriber a charge of 4·8*l.* a year?—Well, if it costs 4·8*l.* a year to pay the 5 per cent dividend, it would not cost very much less to pay 4¾.

1324. Their tangible assets, we were told, are something over a million and a-half; they have about 3,000,000*l.* of capital which they have used in buying up, or swallowing up, other companies; to pay a dividend of 5 per cent. on this watered capital requires an extra charge of 4*l.* 8*s.* to each subscriber for the year?—May I say I have no knowledge of how the capital of the company has been raised or spent, and I can hardly answer questions on assumptions, which I do not think have ever yet been proved.

1325. But without having this knowledge, you are come here to tell us that the Corporation would have to pay what would be equivalent to 5 per cent., and that the company pays 5 per cent., and that therefore the Corporation could not compete against them?—I have the knowledge that the Corporation would have to pay what would be equivalent to a dividend of somewhere between 4½ and 5 per cent., for the simple reason that we have the figures; we know we should have to pay 2¾ per cent. on the money we borrowed; we should also have to pay the capital back within twenty or five and twenty years, which would involve another 2 per cent. for a sinking fund.

1326. The point I want to make clear is this: suppose the company has to pay on tangible assets, which represent about a million and a-half, and suppose the capital is increased to four and a-half millions, would not the charge to each subscriber be greater to pay the dividend upon the four and a-half millions than it would upon the million and a-half?—If you have the same amount of net revenue in the one case as in the other, and have only to distribute it between a million of shareholders, as against five millions or four millions, why, of course, the million must get more in proportion than the four millions.

1327. The net revenue is produced by the charge to each subscriber, and will not the charge to each subscriber be less if the 5 per cent. dividend is only to be paid on a million and a-half, instead of on four and a-half millions?—Yes, that would follow.

1328. To pay that dividend means an additional charge of 4·8*l.*, I believe, to each subscriber?—I will take the figures from you, sir, if you have calculated them.

1329. I have them here; they were given here by a witness on the last day, Mr. Bisset. Supposing that there was competition between the Corporation and the company, you say that the company would have to reduce their price, or would reduce their price, below what the Corporation would charge?—The company would reduce their price to whatever point was necessary to enable them to retain their existing subscribers, and to enable them to induce other would-be subscribers to go on their system, instead of on the Corporation system.

1330. So that the first result would be that it would be cheaper to each subscriber and the service, probably better?—I do not think it would follow. The first result would be, if you had any quantity of subscribers attached to the competing undertaking, that you would have a duplication of the wires overhead, or the inconvenience of breaking up streets doubled; and my impression is that it would very soon result in one or the other of the undertakings shutting up, and the other absorbing the whole thing.

1331. You think it would result, at all events, in the people getting a cheaper service?—It might be possible that they would get a cheaper service for the first short period; but I do not see that it would be very much benefit to the present subscribers, because they would not be allowed to give up their telephone instruments to the company.

1332. We are not talking of "present subscribers," but of the general public, in whose interest you are speaking?—I am speaking not so much of the public as of the present subscribers, who want to get the thing cheaper; and the present subscribers could not give up their instruments to the National Telephone Company probably for three or four years after the competition started.

1333. Take Glasgow, where each subscriber at present has to pay 10*l.* for his service; there the Corporation are willing to supply (if they get the license) at 5*l.* to each subscriber; it would be a great advantage to those subscribers to get the price reduced, would it not?—It is all very easy to say you would supply at 5*l.*, and that it would be a great advantage; but before doing that you must show that you can construct it at a price which will enable you to benefit the subscribers and to pay your way as well.

1334. The

Mr. *Tully*—continued.

1334. The officials of the Corporation of Glasgow gave us figures which justified them in that belief?—I must say that my own opinion of Parliamentary Estimates is not such that I should consider statements of that kind very seriously.

1335. And in Glasgow they have this disadvantage, that they have only a single-wire system, and if they had a competition licence the corporation would undertake to provide a twin-wire system?—If the twin-wire system really was necessary, I believe myself that the National Telephone Company would put it up, provided they were put in the position which I say they ought to be put into.

1336. You would not like the corporation to be put in the position of having the twin wire?—I should be very sorry indeed to see corporations endowed with any power to construct telephones.

1337. But if the corporation got the licence to put up a more efficient system, that is to say, a twin-wire system, and could supply the service at 5*l.* to each subscriber, say, in the city of Glasgow, would not that be a great advantage to the people there?—I do not think so; I would very much rather Parliament forced the National Telephone Company to put it up, if they thought it was really the right thing to do.

1338. These are excellent remedies that you are proposing Parliament should adopt, but we have to deal with the tools to our hands?—I understood from an observation made by the Right Honourable Chairman that it was within the power of this Committee to consider these suggestions; and for that reason I throw them out.

1339. If there were two competing systems, for instance, in any area, of which the corporation had one and the company had another, do not you think that when the Government proceeded to take over the telephone system they would have their pick, and could choose between those two systems, and take whichever would be the best?—My impression is that if the municipality once got hold of any system that paid it, so to speak (yielded it a profit), the Postmaster General would find it a very difficult thing to take that system out of the hands of that municipality; I have no doubt he might easily acquire the thing if they were working it at a loss.

1340. Would it not be better for him to have the pick of the two systems if he was going to take over the telephones?—Yes; but if the system he wanted to take over belonged to the municipality, I think the Postmaster General would find it a pretty hard nut to crack to get hold of it, if it was paying.

1341. Would not he find it "a pretty hard nut to crack" to get hold of this company and exterminate all the rival companies?—Yes; but I am suggesting that powers should be given to come to an arrangement by which the Postmaster General should be able to take it over when he thought fit.

1342. He cannot do that without consideration, and the consideration you propose is to give to the company perpetual monopoly or a licence for ever?—It cannot be a "perpetual monopoly" if it

Mr. *Tully*—continued.

is subject to termination at any time on 12 months' notice.

1343. Is it not possible that the Government would have to pay (as in the case of the telegraph companies) 17,000,000*l.* for what it was supposed only cost 3,000,000*l.*?—I suggest that the Act of Parliament should expressly define some reasonable basis for the purchase, and not leave it to arbitration.

1344. When the Act of Parliament defined that the trunk wires should be taken over at the cost price it was found, was it not, that the books of this company did not record the cost price?—I am not advocating "cost price" at all. I do not think, myself, that the cost price really is the proper basis to go upon in buying up any undertaking. The value of an undertaking is what it is really worth for the use to which it can be put.

1345. There is one other point under this agreement, page 19, Clause 12; you have read that, have you?—Yes.

1346. That provides that the Postmaster General, at the request of the companies, must lay the underground wires in the streets?—Not generally; only in order to connect two exchanges.

1347. And those are the principal underground wires, are they not?—No; I understand this, that the underground lines connecting the exchanges would simply be a sort of local trunk line, and that, at the most, they could only pass under a few streets which would lie between the two or three exchanges.

Sir *Charles Cameron.*

1348. I wish, in the first place, to understand exactly the evidence which you give as a representative of the municipal corporations, and to distinguish that from the views you have explained to us which are merely personal. You have handed in here some resolutions come to by the Telephone Committee and by the Special Committee. That of the Special Committee of the 20th March explains fully, I presume, the views you were sent here to represent on behalf of the association?—Not altogether, sir. These resolutions have been passed after discussions which have taken place from time to time on the subject, and I have been speaking rather from what I know was the line of discussion and the general expression of opinion than, possibly, on the exact wording of these particular resolutions.

1349. Well, we will come to the exact wording of these particular resolutions, which are very distinct. Apparently the only objection that the Association of Municipal Corporations takes to the proposal is to that portion of it which relates to the vesting in the company of the wayleaves power under the Telegraph Acts?—Those are the only provisions that we specially objected to in the agreement.

1350. And from your objection to these provisions in the agreement you passed a resolution to the effect that "the corporations be recommended to refuse to give their consents under the Telegraphs Acts, 1892, to the exercise by the National Telephone Company of the powers

Sir *Charles Cameron*—continued.

of the Postmaster General under the Telegraph Acts"?—Yes.

1351. So that practically the association objected only to this one portion of the agreement, specifically at all events. Their recommendation was directed to that one point, and it was to the effect that the corporations connected with the association should not "give their consent" "to the exercise by the National Telephone Company of the powers of the Postmaster General under the Telegraph Acts"?—That is so far as the particular agreement was concerned; on the general subject we go much further.

1352. Let us stick to that, because "on the general subject" it appeared to me that you entirely agreed with the proposals of the agreement between the Post Office and the Telephone Company?—I did not intend to give the impression that I was giving evidence in support of the agreement between the Postmaster General and the Telephone Company. What I intended, sir, to indicate was that from the view of the corporations, with such limited experience of the subject as they have, it seemed to them that the natural course was for the Government to take over the whole; but as the Government have only decided to take over the trunk lines we must accept that as being the best for the public.

1353. You accepted the decision of the Postmaster General to take over the trunk lines, as calculated to benefit the nation as a whole; I think those were your words?—I assume, sir, that the Postmaster General would not enter into any agreement which he would not consider for the benefit of the nation.

1354. We need not state the reason, but you agree to the assumption of the trunk lines by the Postmaster General?—Yes.

1355. That is an important portion of the agreement which you agree to; you tell us you are very anxious to see inter-town communication improved?—Yes.

1356. You are aware that the Postmaster General has under the Act of 1892, already spent 300,000*l.* in improving inter-town communication?—Yes; and that he is extending it still more.

1357. And you are aware that a million of money is provided for it?—I understand that a portion of the million has to be applied to buying up the existing trunk lines, and the balance towards improving and extending.

1358. At all events there are many thousands to be spent in improving and extending?—Yes.

1359. Therefore, with that portion of the policy of the agreement you entirely concur?—Yes.

1360. You propose that the number of call offices should be increased, and increased to such an extent, you said, as Parliament should consider necessary?—Yes.

1361. Are you aware that under the agreement with the Postmaster General an enormous increase in the number of call offices will be effected; every post office will be made into a call office?—If that is so, then it would not be necessary to make special provisions in an Act.

1362. You may take it from me (and I speak

Sir *Charles Cameron*—continued.

in the hearing of the Committee) that as a matter of fact, under the agreement there will be an enormous accession to the number of call offices through the post offices being made call offices for telephonic purposes?—Then, to that extent, sir, it will meet my observations.

1363. You agree with the proposed agreement on that point?—Yes.

1364. You fear an increase of inter-town charges, I understand you?—Owing to the agreement, do you mean?

1365. Yes?—As far as one can see from the agreement there will not be, at present, at any rate, any reduction; and, of course, that means that there may be a possibility of increase; I believe there will be an increase in some cases, and in others a reduction.

1366. The rates fixed are maximum rates in inter-town charges; and the Postmaster General can, on the pressure which Parliament sometimes brings to bear upon him, reduce the charges, if he thinks fit?—I do not think that the increase, even if there is any, would be of what I may call a material character; and if the result of this agreement should turn out to be that the trunk lines will be much increased, and the facilities for inter-town communication increased, why then the extra charges would not be really a loss to us.

1367. So that, practically, you agree with the entire of the agreement except that portion which relates to the streets?—Practically so, sir. What we object to is the Postmaster General throwing on the corporations the necessity of protecting the public against the action of his own licensees.

1368. There is one portion, and a very important portion, of the agreement with which you are not in accord, and that is, that portion of the agreement which expressly provides for the rights of competition; paragraph 18, for instance, which provides: "Nothing in these presents contained shall prejudice or affect the right of the Postmaster General from time to time to" grant competing licences; you dissent from that?—I do not dissent from the agreement reserving to the Postmaster General every possible right that he thinks it necessary to reserve. I understood, I was asked rather, whether I thought the competition would be beneficial.

1369. Your opinion is that the competition would be detrimental?—I may say that it is the general opinion of the corporations that it would be impracticable.

1370. Has the association of municipal corporations ever passed a resolution on that point?—We have not discussed that specific point in that way.

1371. You have had no resolution whatever upon it before you?—Not in the shape in which you put it.

1372. Has the Liverpool Corporation ever discussed the point and come to any resolution upon it?—The gentlemen appointed to represent Liverpool have often discussed it.

1373. I am speaking of "the Corporation." You have told us that the Municipal Corporations Association have never adopted any resolution against competition; and I understand that the Liverpool Corporation has never passed any resolution

Sir *Charles Cameron*—continued.

resolution against competition either?—No, sir; but I should like to explain.

1374. I will take the fact?—That is so; it is perfectly correct.

1375. You are aware, on the other hand, that various corporations have passed resolutions in favour of telephonic competition, and that certain corporations have applied for telephonic licences?—I understand that some of the Scotch corporations have done that.

1376. Exactly; and I presume that, as the Scotch corporations do not wish to force that policy upon any other corporation, and do not claim the right to force that policy upon any other corporation, there is no reason why they should not be allowed to advocate their own views in their own way, and to carry them out in their own way, subject to their convincing the Postmaster General, is there?—Well, speaking generally, I do not think there is, excepting to this extent, that I think it would be a disadvantage to everyone who wanted to communicate with Glasgow to have to send to Glasgow to get the catalogue to find out the number of the subscriber with whom they wanted to communicate.

1377. Is there much communication between Liverpool and Newcastle?—I would rather somebody from the Telephone Company should answer that question. I do not know anything about it.

1378. I do not ask you as to detail; but, as a matter of fact, you have told us, and as we all know, Liverpool is a very large commercial centre, and Newcastle is also a very important town; have you ever heard any complaint as to telephonic communication between Newcastle and Liverpool?—I cannot answer that question.

1379. You can tell me whether you have ever heard any complaint?—I have never heard any complaint, but I have never heard of anyone telephoning there.

1380. Should you be surprised to hear that there are two telephone exchanges in Newcastle?—At Newcastle there is the Government and there is the National Telephone Company.

1381. And notwithstanding that you have never had any complaint as to the difficulty of telephonic communication between Liverpool and Newcastle?—No; but I should imagine——

1382. We do not want imagination; we want facts; you have not had any complaint?—I have not heard of a complaint because I have not heard of a transaction taking place.

1383. There must be a large amount of communication between Liverpool and Newcastle?—Yes, certainly.

1384. And you have not heard any complaint?—May I point out that the reason why there has been no complaint is very probably this, that the shipowner in Newcastle who wants to be put into communication with Liverpool is on both exchanges, and therefore there would be no difficulty.

*Chairman.*

1385. There is no trunk wire at present between Liverpool and Newcastle, is there?—No.

Sir *Charles Cameron.*

1386. You have a trunk wire between Liverpool and Manchester?—Many, I believe.

1387. You are rather proud of the service there, I believe?—I think the Liverpool service is as good as any I know; it is much better than the London at any rate.

1388. Have you had any complaints of it?—No; I seldom hear of substantial complaints as to that.

1389. There is an immense amount of business done between Manchester and Liverpool, is there not?—I should think myself that the wires are more than fully occupied during business hours.

1390. You are aware that there was a competing licence in Manchester?—There was the Mutual in Manchester.

1391. And you have told me that you have had no complaints as to Manchester?—No; but if a man was on the National you could not get on to him from the Mutual.

1392. We can theorise about anything, but I want your actual experience; you have had no complaints. Now, as to the effects of competition, you have told us that it would lead to great public inconvenience, that even if the corporation attempted it it would be an expensive thing, and that the expense would fall upon the rates. That I think is your position?—What I think the probable effect of competition by a corporation with the National Telephone Company would be, that the National Telephone Company would, in order to get rid of the competition of the corporation, cut down their charges to such an extent as might force the corporation to work at a loss.

1393. We were told, at the last sitting, of an experiment in competition that has taken place in Dundee; we were told that in 1884 in Dundee there was a telephone company which charged 20*l.* a year for its telephones, that a small local company was formed with a capital, I think, of 5,000*l.* or 6,000*l.* (the total amount of capital subscribed was 3,537*l.*), and that the old company cut down its charges at once from 20*l.* to 5*l.*; we were also told that the competition went on, that the amount of telephonic communication in Dundee became enormous (it was, I think, the second city in the United Kingdom but certainly in Scotland), that this small company with its small capital earned 9 per cent. on its capital, that it was brought up finally at a premium of 40 per cent., and that everybody there was delighted with the competition; would that fact not rather lead you to inquire whether your theories were quite sound?—The case you quote, sir, would not, I think, alter my opinion; that if the Liverpool Corporation attempted to compete with the National Telephone Company in Liverpool, it would end disastrously to the rates.

1394. There is no one asking the Liverpool Corporation to compete with anything or to do anything in the matter; what I am cross-examining you on is the statements that you have made in opposition to the desire of the Corporations of Glasgow, Edinburgh, and Aberdeen (and Dundee probably) to have competition against the National Telephone Company?—I do not object to them either having

Sir *Charles Cameron*—continued.

having the telephones themselves or having competition.

1395. Then this is excellent; we are now coming to accord; you do not object to those corporations that want it having competition, but you do not want to have competition forced upon yourselves?—I do not see how we can object to it if Parliament chooses to allow it. At the same time, I think it would be a mistake on the part of Parliament to allow it, for the reasons I have stated.

1396. That is quite right; but if you object to Parliament allowing it you object to it in the most practical way. I thought we had come down to the point that you did not object to our doing it in Scotland, so long as it was not forced upon you?—What I mean is this: for the English corporations possibly the communication with the Scotch towns is not so important as it is for the communication with towns in England.

1397. You tell us that the communication in Liverpool is very good?—Speaking generally, I think it is good as any in the country.

1398. Do you know Mr. Forbes, who is the chairman of the National Telephone Company?—I know him by name; I am not personally acquainted with him.

1399. You will take it he is the chairman of the National Telephone Company?—I know he is the chairman.

1400. Will you please read out what Mr. Forbes says upon the general subject (*handing a document to the Witness*): Mr. Forbes is there giving evidence before the Parliamentary Committee of 1892?—Mr. Forbes says in answer to Question (366, page 18) "What would you amend that to"? this: "Some reasonable term. We have talked of 10 or 14 years. I should like at once to make an admission."

1401. Now this is what I want you to commence at: "I should like at once to make an admission"?—"I am prepared to concede that the Telephone Company, which conducts about 93 or 94 per cent. of the whole telephone business of the country, conducts a great deal of it monstrously badly; but it is not their fault, it is the fault of Parliament. I should like to follow that by saying that London, Liverpool, and many other large centres cannot be efficiently served without what is called a twin-wire or metallic circuit system."

1402. Thank you, that is what I want; Liverpool cannot be effectively served without a metallic twin-wire system. Now is the system in Liverpool upon the "twin-wire" without which, by the admission of the chairman of the Telephone Company, we were told it could not be efficiently served?—I really could not answer that question. All I can say is, that the telephone system, as a whole, is very fairly good. I have no doubt that by some twin-wire system or some other system it might possibly be improved; and I should be very glad to see it done.

1403. That is quite true; you wish to have a twin-wire system, and you, in the municipal corporations, have sent out the recommendation to the Municipalities not to allow telephone companies to make underground use of their streets?—The corporations do not object absolutely to the wires being laid under their streets; what they object to is the method in which the powers are proposed to be given.

1404. Well, we will see exactly what the association does object to; the opinion of the council is, that "no statutory powers should be conferred on telephone undertakers, unless statutory obligations and limitations are imposed," that is one thing?—That is exactly what I mean.

1405. That is the resolution of the 27th July 1893; but it is the resolution of the 22nd November I want to refer you to. This is the opinion of the Association of Municipal Corporations: "that in the opinion of the Council no powers should be given to any Telephone Company which will enable them to interfere with streets, or with the rights of individuals in property, unless statutory conditions and obligations are at the same time imposed on the company for the protection of the public"?—That is exactly what I have been trying to say, sir.

1406. And in regard to the failure of those statutory limitations being imposed under this agreement you expressly recommend the corporations to refuse to give their consents under the Telegraph Act, 1892, to the exercise by the National Telephone Company of the powers of the Postmaster General under the Telegraph Acts?—For what we considered the very sufficient reasons set out in the report.

1407. Quite so, I am not questioning your report; but that is what it comes to?—Yes.

1408. You recommend the corporations not to give facilities to the Telephone Company that are necessary for the inauguration of a good twin-wire system?—Under the particular Act of 1892.

1409. Exactly; under the particular Act of 1892, you say that competition means expense; you have told us that a corporation could not compete with the Telephone Company in your opinion; on the other hand, we heard a witness tell us the other day that a corporation could at once wipe out the National Telephone Company?—A corporation could compete if it was authorised by Parliament to do it; but I think the result would be as I have stated, a charge on the rates, which I think is an improper thing.

1410. Assuming that the corporation was forbidden to make any charge on the rates, and compelled to provide a sinking fund, and everything of that sort, you think it would be obliged to keep up charges to such an extent as would give the National Telephone Company or any other company a fair chance of working?—A fair chance of competing; in fact, if it was necessary the Telephone Company would lose money in that particular area and make up the loss out of the other areas in order to kill the competition.

1411. That would be greatly to the convenience of the public, would it not?—I do not think it would lead to the convenience of the general public, because it would mean duplicating the already large number of wires overhead, or great interference with the streets.

1412. That I quite understand, but that again

Sir *Charles Camperon*—continued.

is a matter for the local authorities, is it not, and for the central authority. Let us stick to that. Any local inconvenience arising out of duplicating the wires or interference with the streets is a matter which ought to be under the control of the local authority?—Yes, certainly; but may I point out this. I do not think it would be a benefit even if you had a competing body which was prepared to supply at a lower charge than that now being made, for this reason, that if (say) one-fourth of the area of the town was supplied by one company, and three-fourths by the other company, it would mean that everybody would have to subscribe to both undertakings and pay a double subscription; otherwise they never could be sure of being able to telephone to the particular person they wanted to telephone to.

1413. Quite right. Take the case of Dundee, where the original subscription was 20*l.*, and where, owing to competition, it fell to 5*l.* Do not you think, if the man had subscribed two 5*l.* subscriptions, he would have got better value for his money, especially when he had an enormously increased number of people to communicate with, than he got when he had to pay the 20*l.* single subscription?—I should think the case of Dundee was rather an exceptional one, because if you take the case of Liverpool, where the subscription is 10*l.*, I do not see much benefit to be got in paying two five pounds as against one ten pounds.

1414. Suppose he paid two fours?—Of course, if you "suppose" that it would be a benefit; but then, you must show that it can be done.

1415. We are not wishing to force any competition upon you; your corporation has actual control of the whole matter; you can veto competition; but in case a town thought that it could charge 4*l.* instead of 10*l.*, and was willing to do without any powers of rating, do you see any objection in theory to that town getting a licence?—Speaking on behalf of other corporations in England, I do not suppose it matters very much to us if Dundee chooses to have its own telephone system; but if you ask me whether I think it is an advisable thing to do, I must say that I do not. I am merely expressing my opinion, that is all.

1416. You think, no doubt, it would inconvenience Dundee; but if Dundee thinks it knows its own business better than Liverpool, what then?—Let it do it, sir, by all means.

Mr. *John Ellis.*

1417. I have not many questions to ask you after your long examination. I want to take your mind back, in the first place, to the Telegraph Bill of 1892. You let fall the expression that the Associated Corporations did not appear before the Committee. You will remember they drew up some resolutions with regard to that Bill?—Yes, I recollect them.

1418. You recollect this resolution (*handing a document to the Witness*)?—Yes.

1419. Have you referred to those Clauses 5 and 6 in the Bill?—Yes.

1420. Are you aware that as the Bill came before that Committee of 1892, those clauses

Mr. *John Ellis*—continued.

were very different to the shape in which they left the Committee?—Yes; when they came before the Committee the provision that the Corporation should have the absolute veto practically over the exercise of the powers of the Company was not in the Bill; that was put in at the instance of the corporations.

1421. Yes; I am speaking as a Member of that Committee. The suggestions that were made by the associated corporations in their resolutions as to Clauses 5 and 6 were adopted by that Committee, were they not?—Yes.

1422. Therefore, although the corporations did not appear before that Committee, all the suggestions that they made were adopted in the Bill and in the Act?—That is so; if I may say so, on paper; but, practically, our position was this: We objected entirely to the principle of any powers being conferred on the Telephone Company excepting by an Act of Parliament, which, at the same time, settled the restrictions. When the Bill was introduced by the Right Honourable Baronet, a Member of this Committee, on behalf of the Government of the day, if I rightly recollect, it was introduced rather late in the Session, and I do not think the Committee met until nearly the end of April to consider it. The Session was getting on, and things were getting rather pressed. I was representing the corporations at that time on this matter, and I know that in communication with the officials of the Post Office they represented to us the strong desire of the Postmaster General that there should not be any obstruction given to the Bill; and, practically, we said, "Well, we do not like it; at the same time, if you will give us the absolute veto to stop the exercise of those powers we will not offer any further difficulties." That is practically how it came about.

1423. I do not wish to interrupt your explanation or your addendum, but I may take from you what is a fact, namely, that the suggestions of the municipal corporations as they came before that Committee were adopted by the Committee?—Oh, absolutely.

1424. Then in the reasons you have given for the position you take here, you have given us strong evidence against municipalisation. By one honourable Member of the Committee there was some analogy attempted to be drawn between gas and water and telephones: I suppose you would place gas and water on an entirely different footing to telephones?—I think they are entirely different matters. Gas and water are necessaries of life, and ought to be supplied at about the cost price and of the best quality by the local authorities.

1425. They are absolutely necessaries of life, you would say?—Yes; the lighting of the streets is an essential to the security of life and property in any town.

1426. Whereas telephones are only desired by a very limited class and are more or less a luxury?—Yes, and I think you cannot have a very much better illustration of that than the fact that (I should think) in a population of between 800,000 and 900,000 people in the Liverpool area there are only between 6,000 and 7,000 subscribers.

 1427. Whereas

Mr. *John Ellis*—continued.

1427. Whereas every householder consumes gas and water, I suppose?—Every householder; yes.

1428. Or is interested in them?—Yes; and every person who walks the streets is interested in having the streets lighted.

1429. You hold out the danger, in case the telephone service was municipalised, of a charge coming upon the rates, which you consider would be unfair; but I rather gather that your inclination would be in favour of State purchase?—Theoretically, I think, the State ought to purchase the whole thing; but not knowing the details in connection with the administration and the other circumstances which must be present to the minds of the Postmaster General and the Chancellor of the Exchequer, I should not feel justified in expressing an opinion upon the subject in face of the decision they have arrived at.

1430. You are, of course, aware from the answers you have given us of the very unfortunate, if not disastrous, financial results to the country of the State purchase of the telegraphs?—I understand that they are worked at a very great loss. I do not know whether it follows that it was the result of purchasing the telegraphs or whether the loss has been brought about by the alteration in the method of charge since the purchase has been made.

1431. I will not ask you any question upon that; we will get that from another witness if necessary. Do you think then that, whatever be the cause, the State purchase of the telegraphs forms no precedent; on the contrary, rather a warning, if anything, against the purchase of an instrument like the telephone?—I do not think it follows, because the experience that the Government have gained over the dealing with the telegraphs would probably assist them in dealing more satisfactorily with the telephones.

1432. I think I have gathered from you that you would not buy out at cost price, but that you would buy out at what the thing was worth (that is the expression you used). If that be so, might not the same consequence follow, that you would have to give something more in the case of the telephone, as in the case of the telegraphs, which would or which might be disastrous to the State?—What I look at is this: if you acquire a given undertaking at a fair price it is not a bad bargain, but if you pay a high price for a rotten undertaking, of course, it is very bad. If the undertaking is a sound one and it is realising a revenue which, after paying all working expenses, will cover not only the interest on the money you have to borrow, but your sinking fund, and possibly leave a margin beside for the reduction of charge, then I call it a good bargain for the State. I might explain on that point that I have in my mind this: that as the State can borrow money at 2½ per cent., if they have an undertaking handed over to them which shows a net profit, say, of 5 per cent. after paying all working expenses, or something more, they have a clean margin then of 2½ per cent. to provide their sinking fund, and for a reduction of charges or for improving the administration.

1433. I gather that as regards administration, you have already indicated to us that State and municipal administration are more costly than private administration; is that so?—I think, speaking generally, that anything done by a municipality would be done at a less charge by a contractor working for his own profit. Speaking, not specifically, but generally, a public body does not get work done as cheap as a contractor who is allowed to make a profit out of the thing.

Mr. *Tully.*

1434. That is where the contractor would be working in competition, or where competition is invited?—I take it that contractors who are in the same line are practically competitors.

1435. The contractor would not have a monopoly?—No; but where you give a monopoly you only give it subject to such restrictions as prevent the exercise of that monopoly to the detriment of the public, and that is my great point in this matter.

Mr. *John Ellis.*

1436. Do you draw any distinction between the undesirability of a loss on a commercial undertaking (such as this would be) coming upon the rates and upon the taxes?—Yes; I think there is even a distinction to be drawn in that case, because in the case of the telephones, the telephones were originally part (or are rather a part) of the Postmaster General's legal monopoly, and, therefore, part of his duties; but I do not think myself that it is right as a matter of policy for Parliament to allow corporations to go into trading concerns more than they can avoid, and this is not a matter which is of such general public utility as to justify the pledging of the rates for the purpose of carrying it out.

1437. Then it is only the element you have mentioned, that of its being part of the Postmaster's monopoly, which brings it within the proper purview of the State, is it?—Not altogether; it is to a large extent.

1438. I am anxious to get your view upon it?—Of course you ask me whether it is right, as I understand it, sir, for the general taxation of the country to bear the burden of the loss on the telegraphs.

1439. I am asking your opinion?—Personally speaking, I do not think it is. I think everything ought to be made to pay, at any rate, its way; that everything in the nature of a public service should be supplied as nearly as possible at cost price. As a general principle, I think it is wrong in the public service either to make a loss or to make a profit if you can avoid it.

1440. And by "public service" you mean both rating and taxation?—Yes.

1441. Rating on the one hand or taxation on the other?—Yes.

1442. You do not distinguish between local and imperial taxation, or do you distinguish?—Not generally speaking. Of course one can draw a distinction in certain cases.

1443. I mean on this particular point?—On this particular point I think there is no distinction practically. The thing ought not to be worked at a loss in either case.

1444. This is my last question; I gather you do not come before us to complain of any particular defects in the service in the Liverpool area, with

Mr. *John Ellis*—continued.

with which you are immediately connected; but on the other hand you think you have a fairly reasonable service which might be improved by the suggestions you have made?—Yes; I think the service in Liverpool is as good as any in the country, and, perhaps, under the circumstances under which the Telephone Company have to work, it is about (almost) as good as we can expect. What I advocate is, abolishing everything which prevents the company improving the service in every possible way in order to make it as efficient as it is possible, under existing scientific knowledge, to do it.

Mr. *Solicitor General.*

1445. You have not told us yet, I think, what is the service of Liverpool: what is the company working it?—The National Telephone Company.

1446. Has there been any competition at any time in Liverpool?—No.

1447. It has always been worked by the National?—It has always been worked by the National, I think. I will not be sure whether there was not one of the subsidiary companies before the National absorbed it I would rather not answer that question. Perhaps you will ask it of some other witness who knows what it was from the beginning. I am not quite sure whether the Lancashire and Cheshire Company had to do with it.

1448. I am told (you will tell me whether I am rightly instructed) that it used to be called the Lancashire and Cheshire?—Yes; I recollect the change of the name now; but there was only one company at any particular time.

1449. There was only one company; no competition?—No.

1450. Up to what date did the competition continue in Manchester; do you remember that?—I believe theoretically it is continuing now, or was up to quite a recent date; but practically the National bought up all the shares and got the Mutual under their control.

1451. You have been asked a good many questions about this agreement; have you had your attention called to the provisions in this agreement that relate to the transfer of "trunk lines, trunk wires, and works." That is the second clause, I think, of the agreement?—Yes.

1452. You are familiar with that portion of the agreement, I suppose; I only call your attention to it in order to put a question to you as to whether or not you think those provisions will be beneficial to the public?—I think that on the whole the additional facilities for telephonic communication which the Postmaster General proposed to give if this agreement is carried out will undoubtedly be a benefit to the public. I am not saying that we shall get any reduction of charge; I do not think we shall under the agreement; but I think that on the whole it will be a benefit to subscribers.

1453. Then, further, there is the portion of the agreement that relates to the connection of post-offices with exchanges; do not you think that that will also be a convenience to the public?—Yes; it will undoubtedly be a great convenience to telephone your telegrams if proper facilities are made for doing it, without too much

Mr. *Solicitor General*—continued.

of what I call "red tape" restrictions as regards paying for them, and so on.

1454. That would be a matter of detail?—Yes.

1455. But you think those are beneficial provisions also?—Undoubtedly those are too. We are experiencing the benefit of them at the present time. It is a great convenience to deposit a sovereign at a post-office and then telephone your telegrams until the sovereign is exhausted; it saves a great deal of trouble.

1456. You mean that you have known cases in which the provisions of this agreement have been actually tested in practice?—I know that the communication between the telephone and the Post Office has been given in many cases, because I have used it myself in houses at which I have been staying.

1457. You have had practical experience of the benefits arising from it?—Yes. I know that at one house especially that I stay at in the country it is a great convenience to be able to telephone telegrams.

1458. You have told us (and I am not in any way differing from you) that this inter-communication in the telephone system, in your judgment, is more important than local communications?—I think they are more important to trade.

1459. You gave an illustration, which appeared to me to be a very apt one, that is, that within the municipality, a clerk might be sent round from one office to another?—I understood that the intention of the honourable Member who asked me the question was this, to ascertain whether I thought it would be a greater benefit, say, to have a couple of sovereigns taken off your subscription in your local area, or to have not so good a communication with other towns. My contention is that for commercial purposes it is far more important to get this inter-communication with all the towns you are likely to want to communicate with than to save two sovereigns a year in your subscription.

1460. Speaking of the area in which Liverpool is situated, your own area, what would be the effect of granting licences to municipalities as affecting the inter-communication?—It seems to me that if you take Liverpool as a case to illustrate the effect, it would bring the telephone system to an end almost. We have in the Liverpool area the three county boroughs of Liverpool, Bootle, and Birkenhead. Then when you get beyond those areas there are, I think, 10 or 11 different local authorities. Now, the majority, a great number of the people, at any rate, are people who have business in Liverpool.

1461. We have it in the schedule: "The city of Liverpool, the county boroughs of Birkenhead and Bootle, and the urban districts of Walton-on-the-Hill, West Derby, Wallasey, Much Woolton, Childwall, West Kirby and Hoylake, Weston-and-Parkgate, Bromborough, Lower Bebington, Wavertree, and Huyton, with the adjoining area, as defined by a red line on the map"?—Yes. What I would point out in a case like that is this: it is a very general system for a man who has a telephone to his office, for which he pays 10 guineas or 10*l.* a year, to also have a telephone to his house, for which he pays 8*l.* 10*s.* Now, as a rule, I should say that in Liverpool

Mr. *Solicitor General*—continued.

the man never lives in what I may call the same area as that in which his office is. In many cases in the Liverpool area you would have to go through the district of, perhaps, two or three different local authorities before you arrived at the man's house. Now, if you had the telephone of Liverpool in the hands of the corporation up to the extent of the city boundary, and then you came to another telephone in the hands of the Birkenhead Corporation, and then if you had to go all through the local board districts down to West Kirby and Hoylake, I think one can easily see how utterly impracticable it would be to manage the telephone system under such circumstances.

1462. I suppose a great many Liverpool merchants live the other side of the river, in Birkenhead, and other places, do not they?—Not only that, but many of them live out at Walton, at Aigburth, Garston, Huyton, and about there; you have to go through at least two different localities before you arrive at a gentleman's house in those parts. And then, too, it seems to me you would have to pay increased charges, because I do not see that the Liverpool subscriber would be allowed to use the Birkenhead works without paying something for doing so. The thing seems to me impracticable in itself.

*Chairman.*

1463. You express a strong opinion in favour of the areas throughout the country being in the hands of one authority?—Yes.

1464. You probably were not connected officially with the Liverpool Corporation in 1870, but perhaps you are aware that the purchase of the telegraphs by the State was pressed upon the Government at that time in order to secure uniformity of administration throughout the whole country?—I take it from you that it is so, sir.

1465. And you would apply the same principle to the telephone?—Yes.

1466. Whether in the hands of the State, or in the hands of some other authority, the whole conduct of the telephone business within the restricted areas ought to be in the hands of one authority rather than in the hands of different corporations?—Certainly.

Mr. *Moulton.*

1467. On the same basis all over the kingdom?—Not necessarily. What I suggest is, that the Committee should consider whether it could not classify the areas and fix a maximum according to classes. I do not know whether it can be done or not; it is a matter for inquiry.

*Chairman.*

1468. And I suppose you would be of opinion that if the corporations obtained licences, there being different administrations conducting the telephone systems, there might be confusion in the systems which those various corporations might adopt?—Yes. But may I just remark, upon the question of licences, that when the corporations have got their licences they are not, so to speak, more than half-way on the road to becoming telephone undertakers, because they must come to Parliament to get authority to spend the money; and then it seems to me the Committee they go before will inquire into the question whether there is any real necessity for authorising the corporation to spend money where there is a company supplying at something like a reasonable charge. The whole question would turn upon the question of estimates. As far as I can see, the only people who know anything about the telephone system are either in the employment of the Government or of the telephone company. What chance, therefore, has a corporation of getting any evidence which would be really worth bringing before a Committee to show what the effect is going to be.

*Chairman*—continued.

1469. You have expressed an opinion against competition, and in answer to another question you stated that if the Scotch corporations wished to have competition in areas you saw no objection to the experiment being tried; are not you of opinion that competition in the case of the Scotch corporations might possibly lead to serious loss not only to the corporations themselves, but to the company, through the competition which would exist, and that any loss which the company suffered in the competition with the Scotch corporations would have to be made up in the English areas, and that that would mean increased charges to the subscribers in consequence of that loss?—That would follow if the company were not able to pay their maximum (if you did not limit the maximum) dividend.

1470. I am now speaking of what exists under the present system?—Under the present system, of course, if they make a loss in one area they must make it up in some other area. It is for that reason that I think it is wrong to allow preferential charges, which it would practically come to if you allowed the company to reduce their charges for the sake of meeting the competition of the corporations.

1471. Therefore, unless your suggested restrictions are imposed by Parliament you are directly interested, in Liverpool, in competition not being allowed in the Scotch corporations?—We are; but at the same time, in answer to a question of the Right Honourable Baronet on your left, sir, I hardly felt justified in saying that if the Corporation of Dundee wanted to do something we have any right in Liverpool to interfere. I think Parliament ought to see these points for themselves.

1472. Quite so; but if the result would be detrimental to the telephone subscribers in Liverpool you would have that objection to it?—Yes; I think the system would be detrimental to the whole country, because if you once start the idea that one area can isolate itself from the rest of the country I do not see how you can logically refuse to carry it out all through, or wherever it is asked for.

1473. I will only ask you one other question. As a matter of fact, no English corporation, so far as you are aware, has asked for, or desires to have, a telephone licence?—I never heard of one ever asking for it or desiring it.

Mr. *Snape.*

1474. Before you leave the chair, I should like to be quite clear as to how far the opinions you have expressed are the opinions of the association

Mr. *Snape*—continued.

ciation you are here to represent; you have told us that you are opposed to Municipal Corporations having conferred upon them any powers to construct telephones; is that the opinion of the association you represent?—I have never known anybody at any of our meetings, when I have so strongly expressed my opinion upon these questions, get up to suggest (or to hint) that any Corporation should have a licence. That is all I can say.

1475. Then the opinion that you express, that the powers of Corporations should be limited to providing necessities of life, would be scarcely in accordance, for example, with the policy of Parliament to-day with reference to the working of the tramways?—I did not follow the proceedings of the House yesterday; but I understand that the principle of working the tramways is put forward somewhat in this way: that if a Corporation cannot lease their tramways at a fair rent, then they are to be allowed to work them themselves subject to certain restrictions by the Board of Trade.

1476. Precisely; but you would not call it a necessary of life the working of the tramway?—I do not approve at all of the Corporations working tramways. I believe in their owning them, but not in their working them.

1477. If members of your association appealed to their representatives in Parliament to support such a proposal (as I know they did), then it is evident that your association is not unanimous in the view you have expressed to the Committee?—I do not think it follows. We very often, as a matter of courtesy to towns, send round circulars which are sent to us asking Members to take a particular line of action with regard to some particular Bill; but on the question of working the tramways it is necessary that some power should be given to the Corporations to work their tramways in certain events; otherwise they would be "cornered," so to speak, by a syndicate when the lease of the tramway terminated. The exact wording of the conditions, and the exact way in which these powers should be exercised, is, of course, a matter for consideration; but it is necessary to have a power like that.

1478. I only ask as to the unanimity of the view you express; I want to know whether you represent the unanimous view of your association, or only part of it?—I cannot say what the proportion is, either for or against, because it has never been "divided" on the subject.

1479. It is of importance, having regard to the evidence you have given on the subject?—I think I may safely say that, generally speaking, I believe the Municipal Association would endorse the opinions I have advocated.

Mr. *Snape*—continued.

Mr. John Harrison, called in; and Examined.

*Chairman.*

1480. You are Town Clerk of Leeds, I think?—I am, sir. I have held that position, if I may say so, for some three years; but I do not appear here as a representative of the Corporation (from whom I have no mandate), but in pursuance of the resolution which has been quoted to you of the Municipal Corporations Association. The deputy town clerk of Liverpool and myself represent the views of that association upon the points which are set forth in the resolutions which you have before you.

Mr. *Snape.*

1481. The Association of Municipal Corporations?—If you please.

*Chairman.*

1482. Would you, without going over the evidence which has been given by the last witness, who appears with you, state the points which you wish to express on behalf of the association as bearing upon this question?—Speaking generally, I agree with what Mr. Clare has said; but there are some points (possibly not of great importance) upon which I entertain a different view; but I feel that Mr. Clare has given much greater attention to this business than I have, and has been much longer associated with the association, so that possibly he is better able to speak upon the subject than I am.

1483. Perhaps I might ask you: do you generally agree with the view expressed by Mr. Clare with regard to the question of the municipalisation of the telephone?—No, sir.

*Chairman*—continued.

1484. Would you express your view upon that, then?—With regard to that point, I have a sort of descending scale. I should say, in the first place (as he said), that the true view of the Municipal Corporations (the Corporations associated) would be that the best course of all would be for the Government to take over the lines; next to that, that one strong company should do so, having its operations all over the whole country.

1485. Excluding the trunk wires?—Excluding the trunk wires, but particularly insisting upon conditions and obligations as set forth in the resolutions, that being really the condition of the agreement, that one company should operate over the whole country.

Sir *Julian Goldsmid.*

1486. That is what Mr. Clare said?—I have not said otherwise. I quite agree with that view, so far. Then, I do not quite agree with Mr. Clare on this: I do not know that the Municipal Corporations have expressed a view beyond the points which are set forth in the resolutions; but so far as I have been able to judge from my interviews with different representatives of Corporations, I should scarcely agree that the Corporations were not in favour of competition, but the contrary, of competitions in case the one great company should not have the conditions and obligations which I have spoken of imposed upon them; and if there were competition, such persons as I have spoken to would certainly be in favour of Corporations being allowed to join

Sir *Julian Goldsmid*—continued.

the competition if they deemed it necessary themselves to do so.

*Chairman.*

1487. As a matter of fact, no Corporation in England has asked for a license?—I understand that to be the case.

1488. Do you think it would be desirable, or practicable, to establish separate undertakings in different areas; that is to say, undertakings under different authorities?—There unquestionably would be disadvantages in that course; but if that course would secure the advantages which would be derived by the imposition of obligations upon the one company, I should say that the balance of advantage would be in the competition.

1489. And those disadvantages would exist whether the competition was between municipalities and the existing company, or between the existing company and another company?—It would appear to be so.

1490. Then I understand you to say that, in your opinion, competition would be only justifiable in the event, first, of the State not taking the whole matter into its own hands; and, secondly, in the absence of such conditions as would compel the existing company to give a better service than it has given under restrictions and under obligations which might be imposed upon it by Parliament?—Yes; particularly as to charges.

1491. Particularly as to charges. Do you agree with Mr. Clare that it would be advantageous to increase the limit or period of the license of the present company?—I do feel that there is a great deal of force in what Mr. Clare says on that subject; but, to my knowledge, that has not been a point which has been carefully considered, or considered at all, in fact, by the Associated Corporations; it seems to me that a good deal may be said on both sides of that subject.

1492. You would be opposed to any proposal which would put difficulties in the way of the State acquiring the telephone system?—Absolutely.

1493. Have you any strong opinion with regard to the question of breaking up the streets for the purpose of putting twin wires underground?—Yes, a very strong opinion; but it seems to me, if I may say so with great respect, that the provisions of the Act of 1892 (which provisions are imported into the agreement, or the proposed agreement) meet the case.

1494. "The agreement," we call it?—The agreement, if you please.

1495. The existing agreement?—If you please.

1496. You consider that those provisions meet the case?—I do. I understand the position to be that the Corporations have (first) the power to exclude the operations of the company; and (second) that if they agree to any interference with the streets, it may be upon such terms and conditions as the Corporation may require.

1497. Assuming that underground twin wires are necessary for effective service, competition would mean the breaking up of the streets for each of the two systems, the two systems belonging to two competing companies?—That would be so.

*Chairman*—continued.

1498. And that objection would be another serious difficulty in the way of competition from the point of view of the Corporations?—Well, not so serious, sir, having regard to the fact that the Corporation could make its own terms and conditions; that is to say, they would make it a condition of granting consent that they should do the work themselves. I have no very great fear about that. I do not look upon it as a very serious matter.

1499. I believe the association passed a resolution that the Corporations of England should oppose as a body the exercise of the rights to be conferred upon the company by the Postmaster General?—That is so, sir, with a view of the conditions to which they attach so much importance being secured.

1500. And, so far as your Corporation are concerned, they would be prepared to enter into an arrangement similar to that which the Manchester Corporation has entered into upon reasonable conditions being agreed to by the company?—I am not able to say that, sir; but I may say that some time ago the Corporation did make an agreement with the Telephone Company in regard to underground wires as to a very small part of the city, and that negotiations are now pending with regard to their extension, and that probably the serious difficulty will only be in regard to terms.

1501. Did the agreement extend only over a portion of the town?—A small portion.

1502. Did that work successfully?—Yes; I have not heard any complaints; it is an agreement made some five and a-half years ago.

1503. And it works successfully, so far as you are aware?—So far as I am aware, yes.

1504. And you think that something on the basis of that agreement is a reasonable and possible solution of this difficulty with regard to underground wayleaves?—Yes; the whole question, so far as I have been able to gather, will turn upon payments, fees, charges.

1505. What is your telephone charge in Leeds?—£10 for one instrument.

1506. With any reduction for a second telephone?—I suppose so; I think the Corporation pay 8*l.*

1507. As part of the agreement, is that?—Oh, no, not at all; it is quite distinct.

1508. As a public body they pay it?—As a public body, for the large number of telephones which they have; 40 or 50.

1509. What is the area of Leeds, or, perhaps, the population of Leeds and the number of the telephone subscribers in the area will be the better way of putting it?—The area is 21,572 acres, and the population, in round numbers, is 400,000.

Sir *Julian Goldsmid.*

1510. Is that the borough?—That is the whole of the borough, sir; the city.

*Chairman.*

1511. The area granted under the agreement to

*Chairman*—continued.

to the company extends far beyond the area of the borough?—That is so.

1512. It includes the city of Leeds, the municipal borough of Morley, and the urban districts of Drighlington, Tonge, Gildersome, Methley, Ilkley, Otley, Rawdon, and Guiseley, with the adjoining area, as defined by a red line on the map?—That is so.

1513. That extends far beyond the limits of the borough?—Oh, yes.

1514. And includes a number of populous places outside?—Yes, not towns, but populous villages and industrial districts.

1515. And would it not be a serious curtailment of the advantages of the telephone service if the area were restricted to the area of the borough boundaries?—It certainly would in some regards; but there might be greater advantages on the other side.

1516. Such as—what?—Such as securing a better service and a reduction of price. Leeds is differently situated (if I may add this) to Liverpool in some respects, and particularly, as I understand from Mr. Clare's evidence, in regard to service. In Leeds, from statements made to me from time to time, we are greatly dissatisfied with the service in regard to delay in connections, cuttings off whilst speaking, disturbances whilst speaking, and the fact that other people frequently hear the conversations which are taking place besides those who are speaking to each other.

Mr. *Moulton.*

1517. Cross-talk, you mean?—Cross-talk. Then, of course, there is the all-important subject of charges. On the other subject, sir, I understand the great and special cause of the difficulty is the fact that we have single wires only, and that that difficulty would be removed by a return current by return wires.

*Chairman.*

1518. Which it will be possible for the company to supply as soon as they have come to terms with the Corporation for the use of underground way-leaves?—"Possible," yes.

1519. Are you speaking from your personal experience of the telephones in Leeds, or from hearsay evidence?—I am speaking of these difficulties from both; but more particularly from what has been said to me, because I do not use it personally very much.

Sir *Charles Cameron.*

1520. You have just said that you do not use the telephone personally. Why do not you use the telephone personally?—I did not perhaps speak quite specifically; I do use it personally; but usually I only go to it when the person to whom I wish to speak has got to the other end.

1521. Is it because you find it not a very pleasant or easy method of communication?—No; it is rather the commencement of the conversation that I am speaking of, and the delay that frequently takes place before you can get the connection.

1522. What does Leeds pay for the telephone?—£10.

Sir *Charles Cameron*—continued.

1523. What does the Corporation pay, as a rule?—£8.

1524. That is per instrument; and, as a whole, what is it?—I do not know for certain; I think they have about 50 telephones; that would be about 400*l.* a year.

1525. £400 a year?—I should think so; but that is a mere guess.

1526. It is of great importance, of course, to a municipality, especially like that of Leeds, which is scattered over such a wide area, to have perfect telephonic communication with its different offices, police offices, water offices, gas arrangements, and officials all over the town?—Certainly.

1527. Do you agree with Mr. Clare as to the comparatively minor importance of the extra-mural telephony?—No; that is one of the points of difference. There may be quite a different state of things as affecting Liverpool to that which obtains at Leeds.

1528. But, as a matter of fact, in Leeds, I suppose, there are very many hundreds of messages sent between people within the town for everyone that goes to a distant town?—Yes; if I may say so, I attribute very great importance to the trunk wires, but even more to the wires within our own exchange area.

1529. I think everyone attributes great importance to the trunk wires; but, as a matter of fact, the introduction of long-distance telephony will be brought about under the operations which are being undertaken by the Postmaster General, and will be quite new, will it not?—That, I understand, if I may be privileged to say so, is one of the advantages of the agreement.

1530. But the system that will be inaugurated under the agreement will be a new public convenience; at present the great mass of telephony in Leeds, I suppose, is within your own municipality?—Yes; but, of course, there is a good deal of outside communication; it would not be new, it would be improved.

1531. When you said you were in favour of competition, did you speak for Leeds or for yourself?—Myself; I have no authority to speak for anyone but myself.

1532. And do you think that the views of the Association of Municipal Corporations as a body are against competition?—The subject has never been considered, sir. Mr. Clare has told you that the gentlemen with whom he has spoken would be, so far as he could judge, against competition; on the other hand, the gentlemen with whom I have spoken would rather be in favour of competition, provided the conditions and obligations that I have spoken of were not imposed upon the National Telephone Company.

1533. Therefore, as a matter of fact, the association, as an association, has never given expression to any view upon the subject?—That is admitted; but Mr. Clare is a greater authority than I am.

1534. That is your modesty, possibly. Do you see now, from a Leeds point of view, any objection to granting to those corporations that desire to have it a licence, or to allowing competition where the municipalities care to support competition?—I should very much prefer conditions

Sir *Charles Cameron*—continued.

ditions being imposed upon one company so that we should have a good service by one company at reduced rates; but if that could not be so, I do not see any objection to the competition.

1535. As a matter of fact, I suppose you have read the agreement, and know that the one point of leverage which the agreement presents to the Postmaster General for insisting upon a good service is the power you refer to which grants competition?—Yes.

Mr. *Tully.*

1536. Are you a member of the same association as Mr. Clare?—Yes, but not so old a member, and I do not take so active a part in the discussions as he does.

1537. I suppose Mr. Clare told the corporations that Parliament could make all the reforms needed without their having to resort to the necessity of competition; that is, if they did not care for the risk and worry of competition?—I scarcely understand your question, sir.

1538. When Mr. Clare said the disadvantages caused by the present system could be remedied by the action of Parliament, the corporations then did not care to embark on the risk and worry of competition with the existing company?—I think that is the view of the corporations, apart from the expression of Mr. Clare.

1539. Mr. Clare did not tell them that Parliament is very slow in acting, and that competition is the remedy to their hands?—No, we had some general knowledge on that subject.

1540. If the corporation had a license to act, and the company had a license, would you think that the company should have the same powers to tear up the streets as the corporation has?—No; I think that the corporation should be supreme in the matter of the tearing up of the streets.

1541. So that if there were competition the corporation would have this advantage: that they would have the control of the streets, whereas the company would not?—That would be so.

Mr. *Moulton.*

1542. You think it of great importance that there should be a reasonable, a cheap, and an effective service of telephones?—I do.

1543. Now taking the existing state of things, that is, the existing agreements, you may take it from me that there is no power to secure either a cheap or an effective service in the agreements with the telephone companies excepting the power of granting competing licenses?—So I understand.

1544. Now if in any town the telephone companies failed to grant a cheap and effective service, in your opinion, ought that power to be exercised; that is to say, ought the power to grant competition to be exercised?—Yes; but allow me to explain.

1545. Perhaps my next question will put it right. If you are going to bring in a competition, in your opinion, is there any competition so good in the interests of the public as giving a license to the municipality?—No.

1546. Therefore do you think it would be a fair settlement to say that in the cases in which

Mr. *Moulton*—continued.

telephone companies failed to give a cheap and effective service in any town, the municipality should have a license if it chose?—If it chose, yes, but not an obligation.

1547. No; but it should if it chose?—I should be very strongly opposed to its being imperative upon a corporation to work the telephone.

1548. But you think it should have the power if it chose to do it?—If there should be competition (which would be a regrettable thing) then I do not see why the corporation should not be at liberty to enter the competition.

1549. And the question whether there should or should not be such a privilege given to the corporation you would decide by the consideration of whether the telephone companies had or had not given a cheap and effective service?—Largely so.

1550. Now you consider that the protection to the municipalities in regard to breaking up the streets contained in the Act of 1892 is sufficient?—In regard to companies, yes.

1551. Would you just look at Section 12, page 19, of the agreement; have you got the agreement before you?—Yes, I have it, "underground connection of exchanges," that is what I had in my mind.

1552. The protection in the Act of 1892 is this: The company shall not exercise the powers given to the Postmaster General by the Acts of 1863 and 1878, without the consent of the municipalities, that is the protection, is it not?—Yes.

1553. Now just look at Section 12 of the agreement. So far as joining exchanges is concerned they get out of that protection by asking the Postmaster General to do it, do they not?—Yes, practically it would seem to me as if the Postmaster General would be the agent of the companies for these specific purposes.

1554. But that repeals the protection so far as underground wires are concerned joining exchange?—So I should understand.

1555. And those are the most important part of the underground wires?—That is so.

1556. So that (I do not know what you think) do you think that the municipalities ought to have some protection with regard to that?—Yes, certainly I do; but I understand it in this way (I do not know whether I understand it correctly), that the Postmaster General must act with the consent of the corporation, subject to his right of appeal; so that there might be an obligation upon the corporation which would be entirely discord, or which would not be at all in accord with, their views of the proprieties of the case.

1557. You think that the power of veto in the corporation with regard to underground wires should not be taken away by such a clause as Clause 12?—Yes, sir; I naturally believe that the corporations should have complete control against everybody in regard to their own streets.

*Chairman.*

1558. Against the Postmaster General as well as anybody else?—I should like to see it with regard to everybody, with great respect: I should

*Chairman*—continued.

should like to add, seriously, that I quite recognise a difference between the position of the Postmaster General acting on behalf of the whole country and that of other people who are merely trading for profit.

Mr. *Snape.*

1559. By the "strong company" to which you referred, do you mean a company to which larger powers and of longer duration than those which the National Telephone Company at present possess should be given?—Yes, I do not regard those matters as of very great importance. The "strong company" I referred to was a company exercising powers all over the country, "strong" in the sense of its being broad and large.

1560. Would not the existence of such powers, then, be a distinct interference with the rights of the State; certainly an added difficulty in the way of the State taking over the telephone service?—I should say not to a very large extent.

1561. If the different authorities controlled different exchanges, is it probable that they would refuse to make reciprocal inter-exchange arrangements with the neighbouring districts?—No, sir; I should imagine that a fair arrangement might be made; but, of course, in proportion as you increase the number of the powers that be, you increase the difficulties of the situation.

Sir *James Fergusson.*

1562. I do not think you have said much about the particular case of Leeds: Has the municipality of Leeds pronounced upon its own wishes in respect to the telephone?—No, sir, not at all, except to associate itself with the known and declared policy of the association of municipal corporations.

1563. Do you know whether the municipality of Leeds has considered the arrangement that was made between the City of Manchester and the company?—As a corporation, no.

1564. You could not say whether you think the City of Leeds would be favourable to such an arrangement as Manchester has made with the company?—I am not able to say definitely. We are considering certain matters with the Telephone Company at the present time, and the arrangement with Manchester will, no doubt, be taken into account before coming to a final decision.

1565. I hardly think, in your answers to the honourable and learned Member who was questioning you just now, you went all the way with him?—I do not know about his position, sir. I endeavoured to answer his questions very frankly.

1566. You accepted his questions with certain qualifications; in fact, as I understood you, you favoured the assumption of the charge of the telephones by municipalities rather in cases of necessity than by preference?—Yes; I have a descending scale, and I certainly only put the municipalities in to have this power on the conclusion that the one company alone should have imposed upon it the obligations I have suggested.

Mr. *Moulton.*

1567. Where that company failed to give the cheap and effective supply, then you thought the municipality ought to have the power?—That is so. Those are the conditions that I am referring to now.

Sir *James Fergusson.*

1568. Yes, that is quite right; you are acquainted with the terms of the Manchester settlement, are you?—No; I should hardly say that.

1569. As I am one of the Members for Manchester, perhaps you may take it from me?—Certainly, sir.

1570. I understand the principal terms are these, that the company agrees to lay twin wires as far as possible in tubes provided by the corporation, the subscription not to be increased without the consent of the corporation; every citizen to be entitled to the supply on payment of the subscription, and no monopoly to be conferred thereby. If some such arrangement as that could be made by every municipality, you would think that preferable to the municipality assuming the charge of the telephones themselves, would you not?—I should want to go a little further than that.

1571. You would want a little more than this?—Yes.

1572. What more would you wish?—I should specially want an arrangement with regard to maximum charges.

1573. Perhaps I forgot to say that the subscription was not to be increased without the consent of the corporation; did not I say that?—Yes, sir, you did say that; but I think, if I sufficiently understand the views of the people of Leeds, they would desire not only not an increase, but a reduction, and a large one.

1574. Provided a charge could be fixed that was considered fair, you would think such an arrangement as that preferable to the corporation assuming the charge of the telephone system themselves?—Yes, subject to the service being effective.

*Chairman.*

1575. You were asked by a Member of the Committee just now whether you thought it would be right that where the company failed to give an effective service then the corporation should be entitled to ask for and obtain a license?—Yes.

1576. If the failure to provide an effective service was due to the refusal of the corporation to allow underground wayleave powers to the company, do you think it would then be reasonable for them to come and ask for a license?—If the corporation played the part of the dog in the manger, I should think they could not be entitled to much consideration at the hands of the Postmaster General.

1577. That is to say, you think the corporations generally, before asking for a license, should give all the reasonable facilities to the company, which you in Leeds are proposing to give, and which the corporation in Manchester has already given, reasonable facilities for having the twin-wire system underground?—Yes, certainly. If I say that certain conditions and obligations should be imposed upon the company as a con-

*Chairman*—continued.

dition of their having no opposition, I should quite consider that it was an obligation of the corporation to afford all the facilities in their power so that those conditions might be complied with.

Mr. *Snape.*

1578. One of those conditions would be a reduction of charge, I understand?—Certainly.

*Chairman.*

1579. Apart from these obligations and restrictions, which could only be imposed by Act of Parliament, you still think that the corporation, before coming to the Postmaster General for a licence, ought to give all reasonable facilities to the company to give an effective service by either allowing them to put their wires underground or by offering to put the wires underground for them at their expense?—Yes, but that would only be one part of the case.

1580. That would only be one part of the case. Then with regard to the municipal licence, do not you consider that it would be a great disadvantage if the area of the licence was confined to the area of the borough, and was to exclude all the outside area in which the inhabitants lived?—Yes, sir; that is one of the disadvantages, clearly.

Mr. *Snape.*

1581. But you said, did you not, that it would be possible to have a reciprocal arrangement between the districts?—It would be possible, but I admit there are certain disadvantages; there are also certain advantages. My belief on the subject (a very humble expression of opinion, which is not worth much) is that, on the whole, the advantages outweigh the disadvantages.

*Chairman.*

1582. You were asked whether the underground wayleaves for the wires joining the exchanges were not the most important of all the underground wayleaves which might be acquired. You are aware, of course, that the wires joining the exchanges only apply to particular lines of streets joining two or three or more exchanges, according to the number in the particular area; and that the underground wayleaves for the other wires, the wires joining the exchanges to subscribers' houses, radiate in every direction?—That is so.

1583. And those, therefore, would be by far the most numerous cases, of course, of disturbance to the streets?—Yes, I think that is the case; it is entirely a question of degree.

1584. And, of course, you are aware that the granting of the licence to the corporation of itself

*Chairman*—continued.

would not enable the corporation to carry on the telephone business; they would still have to come before Parliament?—I understand that some doubt has been expressed upon that position, sir; if I may say so, my own view is that they would have to come to Parliament.

1585. They would have to come to Parliament, and the Bill would have to go before a Committee?—That is so.

1586. Where, of course, the company would have the right to oppose the proposals of the corporation; it is not merely the granting of the licence by the Postmaster General which would be necessary before the corporation could exercise their rights?—It would be impossible for a corporation to come to Parliament for anything which uses electricity in the least degree without having the opposition of the Telephone Company to meet.

Sir *James Fergusson.*

1587. Has not there been some difficulty in Leeds in respect to the telephones on account of the electric machinery in use there?—The electric tramways; yes, sir.

1588. That, in fact, was the earth connection difficulty, was it not?—Yes, the whole difficulty, as I have understood it, arose in consequence of the wires being single and not twin wires.

Sir *Charles Cameron.*

1589. In reply to the Postmaster General, I understood you to admit that you thought it would be reasonable that the corporation should grant every facility, such as has been given in Manchester to the company, before demanding a licence which would enable them to enter into competition. Now, I want you to tell us exactly what was your remit, and what were your instructions, as a delegate, from the Association of Municipal Corporations?—I have no instructions whatever.

1590. The resolution was to this effect, was it not: "That the corporation be recommended to refuse to give their consents under the Telegraph Act, 1892, to the exercise by the National Telephone Company of the powers of the Postmaster General under the Telegraph Acts"?—Yes.

1591. I am not at all challenging your opinion, for which I have every respect as an individual opinion; but should I be clear in assuming that the idea of the association was that it is better for the corporations to hold the power until they see themselves properly served, and that it is not good policy to lock the stable door after the horse has been stolen?—That is so.

## Mr. Willoughby Hyett Dickinson, called in; and Examined.

*Chairman.*

1592. I think you are Deputy Chairman of the London Council?—Yes.

1593. And you wish to state the opinion of the Council, or of a portion of the Council, with regard to the question of the telephone service in London, do you not?—Yes, sir. May I just,

*Chairman*—continued.

quite shortly, say what the Council has done in this matter?

1594. I think so?—It is some time ago since the attention of the Council was first called to this question. In 1892 the National Telephone Company brought in a Bill, which, I suppose, originated

*Chairman*—continued.

originated from the fact that it had been decided in a court of law that they were not a telegraph company entitled to exercise the powers which had been given to telegraph companies. That Private Bill proposed to give to the National Telephone Company those powers. The Bill was petitioned against by a large number of local authorities including the London County Council, and, as the Committee are aware, the Bill was not proceeded with; it was held over until 1893, and then it dropped because the Telegraph Bill of 1892 had passed. Then, during that summer, the matter came up on the Treasury Minute of the 23rd May, and the Telegraphs Bill (which was introduced in June) was read a second time on the 3rd June 1892, reported on the 16th June, and obtained the Royal Assent on the 28th June. That Bill the Council did its utmost to stop. Sir John Lubbock, on behalf of the Council, protested in the House of Commons, and Lord Hobhouse, on behalf of the Council, protested in the House of Lords; but it passed through with great rapidity and the Council's protest was of no avail at the time. We always understood at that time that competition would still exist between the companies. Then the Council was able to do no more for some time. The heads of agreement were signed on the 11th August 1892, and the then Government went out of power almost immediately afterwards.

1595. These facts are all before the Committee; therefore I think you must confine your evidence to the action of the County Council at this particular stage, and in no sense raise questions affecting either the policy or the validity of the agreement between the Post Office and the National Telephone Company?—I am attempting to follow you; I was attempting to do so then; I meant to explain what the Council had to go on at that time. Nothing had happened then; therefore the Council did nothing until 1893. In 1893 a resolution was passed by the Council: "That it be referred to the Highways Committee."

1596. Anything which affects the policy or the validity of the agreement up to the time of its becoming an active agreement (which it now is) cannot be considered by the Committee. Assuming the agreement to be a valid and subsisting agreement the Committee are prepared to hear recommendations with regard to the development or the improvement of the telephone system in the future?—I was only anxious to show that the Council was able to do nothing until last October, because it had not got the agreements before it. The Council asked the Postmaster General to allow it to send a deputation. You, sir, consented to receive the deputation after the agreements had been laid on the table; therefore the Council was unable to do anything until October of last year; then they had the agreements before them. Then the Committee that had this matter referred to them asked you to receive a deputation, and the deputation was received on the 4th February of this year. The shorthand notes of everything that took place at that deputation were sent to each member of the Council, and on the 12th February the Council had a report

*Chairman*—continued.

before it from the Committee with regard to this deputation. If I may just read a short portion of it I will do so. The Committee stated that: "Proceeding upon this reference we looked very carefully into the provisions of the agreement; and we soon came to the conclusion that if the agreement were carried out the interests of the people of London in the matter of telephone service would be to a great degree prejudiced by the power given under the agreement to the National Telephone Company, whose existing monopoly would be further strengthened. Moreover we did not find in the agreement any provision or arrangement for reduction of charges, a matter of grave importance to the business people of London. We therefore come to the conclusion that one of three courses should be taken, namely, (a) that severe restrictions should be placed upon the company, (b) that the State should take over the company's business; or (c) that the municipality, *i.e.* in London the Council, should do so"; and the recommendation was: "That the London Members of Parliament be requested to ask for the appointment of a Select Committee of the House of Commons to make full inquiry into the proposed agreement between the Postmaster General and the National Telephone Company, and the relation of such agreement to the powers and duties of municipal authorities in London and elsewhere. An amendment was moved to that to leave out the words relating to the relationship to the municipal authorities. That amendment was lost without a division. Then the matter was left to the Committee to proceed with its inquiries in reference to this Committee sitting, and after the election they brought up a further Report on the 26th March 1895, in which they said: "We reported on the 12th February last that after careful examination of the proposed agreement between the Post Office authorities and the National Telephone Company, we were of opinion that the interests of the people of London would be, to a great degree, prejudiced by the power to be given under the agreement to the company, whose existing monopoly would be further strengthened." Then they recommend, and the report proceeds: "We have therefore asked the deputy-chairman and the engineer to give evidence. We think it advisable that one or more of the experts who advised us previously to the interview between the Postmaster General and a deputation from the Council on 4th February last, should also give evidence before the Select Committee on behalf of the Council; and we recommend: That the Highways Committee be authorised to take all necessary steps for properly placing the Council's views before the Select Committee of the House of Commons on the Telephone Service; and that, subject to an estimate being submitted to the Council by the Finance Committee as required by the Statute, the Council do authorise the expenditure of a sum not exceeding 100*l.* in connection with the matter." That gave rise to a lengthy debate on that day, and an amendment was moved on the motion to adopt the recommendation of the committee: "Amendment moved by Sir J. B. Maple, seconded by Mr. Beresford Hope, that the recommendation

*Chairman*—continued.

be referred back to the committee. Amendment put to the vote, and, the Council having divided, there appeared: For the amendment, 42; against the amendment, 74." Therefore, under that order of the Council I appear on behalf of the Council. Now, the committee, ever since October last, has been giving their attention to the agreement; and, shortly stated, their opinion was that the operation of the agreements would very greatly strengthen the position of the Telephone Company; it would give it a practical monopoly over the whole kingdom, and give it advantages which the Post Office

*Chairman*—continued.

possess (rightly) at the present moment, but which we thought no private company ought to possess. I daresay I need not go into the question of the facilities that the agreements give to the companies with regard to the sending of messages, assistance given as to the sending telegrams and express messages and the institution of call rooms at post offices, and so forth, all of which, in our opinion, would really be placing the Telephone Company in the position of a partner in the Post Office, enjoying the monopoly of the Post Office to a great extent.

*Friday, 26th April* 1895.

MEMBERS PRESENT:

| Sir James Fergusson. | Mr. Solicitor General. |
| Sir Julian Goldsmid. | Lord Stanley. |

THE RIGHT HONOURABLE ARNOLD MORLEY, IN THE CHAIR.

Mr. WILLOUGHBY HYETT DICKINSON, re-called; and further Examined.

*Chairman.*

1597. YOU were stating the evidence on behalf of the London County Council; perhaps you will continue the statement you were making?—I think, Sir, I had arrived at the point where the Council took into consideration these agreements and referred them to the Highways Committee, the committee that deals with electric lighting and that kind of thing for London. They came to the conclusion that the effect of the agreements would be very materially to strengthen the position of the Telephone Company, in the first place, because they contemplated giving them practically similar facilities to those which the Post Office have at the present moment, giving them the opportunity of using the post offices as call-houses, the facilities of sending messages by express messengers and by letter and by telegram, and in all those ways which the Committee are aware of. Then, further, they contemplated handing over the powers of taking their wires along the public roads in the same way that the Post Office has those powers; and also they contemplated giving facilities to the Telephone Company to connect their exchanges by means of any subways which the Post Office should have, or should make for their use.

1598. I think you may take it that the Committee are fully alive to the changes introduced by the agreement, which is now an existing agreement, therefore it is hardly necessary to detail them; we have naturally the agreement before us, and are fully alive to the effect of it?—Yes, Sir, I quite appreciate that; I was taking it just shortly in order to get it in order. Of course in reference to that (taking the wires along the subways of the Post Office) we apprehend there is no veto whatever in the County Council; that that is a matter entirely between the Post Office and the Telephone Company; so that in that respect it is brought outside the provisions of the agreement which require the veto of the County Council. I only mention that because that is our reading of it.

*Chairman*—continued.

1599. I do not quite understand what you mean by taking the wires along the subways of the Post Office; there is no such power in the agreement as far as I am aware?—The Post Office under this agreement contemplated giving accommodation for the connection of exchanges, if I understand it.

1600. Yes; connecting exchanges?—That will be done by the Post Office at the instigation of the Telephone Company, entirely without any reference to the County Council. I mean the County Council has got its veto as regards placing the wires across and along roads and so forth; but this facility is a facility which no one but the Post Office could prevent. I thought a good deal was said about the veto of the County Council; that nothing under this agreement could be effected for the convenience of the Telephone Company unless it was approved of by the County Council under the Act.

1601. That is so with regard to exchange wires; that is quite true. You were speaking generally of the wires; it is confined to the exchange wires; the junction wires?—Yes, it is confined to those. Then the effect of the agreement would be, as far as we could learn, to materially increase the charges which would be made for conveying messages along trunk wires. I will just give you a few instances that we have got out from that agreement. Towns at distances varying from 20 to 25 miles will, under the agreement, pay 6*d.* per trunk message instead of 3*d.* as at present; towns between 40 and 50 miles will pay 1*s.* instead of 6*d.*; towns between 50 and 75 miles will pay 1*s.* instead of 9*d.*; towns between 80 and 100 miles will pay 1*s.* 6*d.* instead of 1*s.*; and towns between 120 and 125 miles will pay 2*s.* instead of 1*s.* 6*d.* As an example, a message sent from London to Eastbourne would under the present tariff pay 9*d.*; under the new arrangement it will be charged 1*s.* The same thing would occur with regard to Northampton.

1602. You are speaking of a conversation?—Yes;

*Chairman*—continued.

Yes; the trunk charges at the present moment; the system which enables persons to send telephone messages from London to various towns all over kingdom. The general tendency of the charges contemplated by this agreement is to increase those trunk charges within a distance of 200 miles, and I was giving actual instances which appeared from a comparison of this agreement with the actual tariff of charges. A person telephoning to Coventry from London now pays 1*s.*; under the new arrangement he will have to pay 1*s.* 6*d.*; and the same change will take place in messages from London to Leicester. A message from London to Nottingham, or to Wolverhampton, now costs 1*s.* 6*d.*; under the agreement it would cost 2*s.*; so that in respect of all the towns within 200 miles of London the charges under the agreement will either be as great as they are now, or else they will increase. Over 200 miles the charges are diminished, but we are more concerned with the towns within the 200 miles. Then there is also a provision in the agreement to which we feel that objection could reasonably be taken, namely, that in Clause 8, with regard to terminal charges. That clause practically contemplates that when a message is sent from the National Telephone Company's office, say, in London, to a telephone office of another company in another town, then it shall be possible for a terminal charge to be made for delivering the message in the other town. That applies in all cases, except the case in which the National Telephone Company is sending a message to a town where itself (the same company) receives the message; and so it seemed to us that the result of that clause would practically be to very much handicap any other company but the National Telephone Company. The very fact that in the case of a message sent from London to a town where it is received by the National Telephone Company, and delivered by the National Telephone Company there would be no terminal charge made, whereas in the case of a message sent by a competing body, supposing there was a competing authority in London, to that same town, there would be a terminal charge made with respect to that message, seemed to us to very materially affect the position of any companies or authorities which would be carrying on a telephone system anywhere else in England or in London, and that was a clause which the Council felt it ought to object to, and did object to, before you, Sir, when it came as a deputation.

1603. I am afraid I must again point out that these are objections to the agreement which is an existing agreement, and which the Committee is not inquiring into. If you have remedies to offer we shall be glad to hear them?—The only remedy, Sir, is that which has been suggested, namely, that competition should be put on an equal footing. I thought I might deal with the effect of the agreements.

1604. You are leading up, are you, to some substantive propositions in order to meet these objections which you are raising?—Yes, certainly. I was trying to show what the effect of the agreement is to my mind. The effect of the agreement in this particular instance is to give a

*Chairman*—continued.

certain "pull" to the Telephone Company over any other company that might be started, or over any other authority that might be carrying on the business unless that same advantage is given to the competing company.

1605. I think you may take it (of course I have no authority to speak as to the possible decision of the Government or of Parliament in a matter of that kind), that if licenses are given to other companies, the same facilities would be given to those companies as to the National Telephone Company?—I am very glad to hear that. That was a question which I addressed to you, Sir, you will remember, at the deputation, and it did not receive that answer. Of course with that assurance the position is materially changed. If that were not so, our view was that the agreements themselves would render competition impossible. That is what I wanted to point out.

1606. As I say, I have no authority to make any announcement on a subject of that sort, but I think you may take it that there would be equal treatment meted out to any companies who were licensed?—Then, to turn to the telephone system in London; as far as we have been able to learn the telephone system in London is certainly not good. The chairman of the company himself admitted that it was very bad at one time, and although I have no doubt, in certain instances, it is improved (the actual service) it is by no means a good service, and complaints are made very generally about it. We had a letter from the vestry clerk of Battersea the other day, stating the complaints that they found they had to make with regard to it.

1607. Will you mention what the complaint was that the vestry clerk of Battersea made?—He sent me a list of the times at which the service was wanting. I will hand you this document with pleasure if you like.

1608. I do not think it worth while reading all that document if you will just let me see it?—No. I will let you see it with pleasure (*handing in the document letter*). I daresay he would like to give evidence himself upon the subject. At any rate, the telephone service is not taken up in London to anything like the same extent that it is taken up in other parts of the world. We have had a good deal of information got together about the telephone system in other parts of the world, and I will just give you a very few figures to exemplify that. In London there is about 1 subscriber to 540 population; in Edinburgh there is 1 to 240; in Amsterdam there is 1 to 237; in Rotterdam there is 1 to 214; in Brussels there is 1 to 192; in Paris 1 to 187; in Rome 1 to 180; in Vienna 1 to 177; in Dresden 1 in 84; in Copenhagen 1 in 83; in Berlin 1 in 66; in Christiania 1 in 36; in Zurich 1 in 33; in Stockholm 1 in 22. So that whereas in Stockholm there is one subscriber to every 22 of the population, in London there is only one to every 540. London stands well ahead of all the principal towns in Europe in deficiency of telephonic accommodation.

1609. Do you think that is at all due to the fact that London has a far better telegraph and a far better postal service than any other town?—No,

*Chairman*—continued.

—No, I think it is due to the two facts I have mentioned; one that the telephone service in London is not good, and the other that it is so excessively expensive. That is one of the reasons which I can come to in a moment. The charges in London are, as the Committee are aware, 20*l.* per subscriber, or 17*l.* 10*s.* on a five years' agreement. We have had information got out, of what the charges are in other parts of Europe, and the evidence that will be given by Mr. Bennett, who has made this a special study, will save my going in very great detail into this matter, but I will give you just a few instances which tend at any rate to show to us that the charges in London are unnecessarily high. The charge in Paris is 16*l.*; the charge in Berlin is 7*l.* 10*s.*; the charges in Belgium vary between 5*l.* and 10*l.*; the charge in Gothenberg is 5*l.* 11*s.* 1*d.*; in Stockholm it is 4*l.* 8*s.* 11*d.*; in Copenhagen it is 8*l.* 6*s.* 8*d.*; in the Dutch towns it varies, but it is about 2*l.* 17*s.* 10*d.*; and in Switzerland there is a different system, but it works out at something under 4*l.* a year. Then, as the Committee are aware, in Manchester there was a competing company started, and that supplied telephonic accommodation at 5*l.* 7*s.*; and in Canada the charge varies, but it is about 4*l.* a year.

1610. I understand that Mr. Bennett is prepared with figures of this kind; but we have already these figures on the minutes, most of them?—I was not aware of it.

1611. I do not know that we have them in every case, but if Mr. Bennett is coming specially with reference to matters of this sort, had not we better leave these figures?—Yes, that is what I was going to say. I felt bound to give the figures which the Committee had got out independently of Mr. Bennett. Mr. Bennett goes in a great deal more detail into the subject, and gives most useful information; but these figures are those which led the Committee of the Council to conclude that the service in London was unnecessarily expensive.

Sir *Julian Goldsmid.*

1612. Did you compare the price of London with the price of New York?—We understand that in American towns, the telephones are very much more expensive; I believe they amount to 30*l.* in New York, I am not sure. In Chicago, and several of these American towns, there are very high prices indeed. But that, if I might submit, hardly affects the question of for how little it can be done. Then, in order to ascertain for how little it could be done, the Committee obtained reports first of all from its officer, then from a telephone engineer, Mr. Newland, and afterwards Mr. Bennett gave also an estimate. These gentlemen will hand in those estimates to the Committee, and will be prepared to be cross-examined upon them, if necessary; but I think it is quite sufficient, if I may say so, if I simply state the results of those reports.

*Chairman.*

1613. I think the Committee have come to the conclusion that with regard to the London County Council, as with regard to other bodies, they must confine the evidence to two witnesses; so perhaps you will take care as to that?—Yes, I am quite prepared to do that if I may just state the result of these reports to you. The result of the report of our own engineer was that you could supply a service to 10,000 subscribers in London at a capital expenditure of something under 400,000*l.*, which would necessitate an annual charge, including redemption of capital, of about 90,000*l.* (these are outside figures) which would be covered by an annual charge of 10*l.* a year. Mr. Newland's report was a capital expenditure of 350,000*l.*, requiring an annual charge of 75,898*l.*, which as you see would work out at less than 10*l.* a year for the 10,000 subscribers. And Mr. Bennett gave an annual charge including redemption and renewal depreciation and royalties of 76,793*l.*, which is about the same as Mr. Newland's, and would require a subscription of 8*l.* or 9*l.* a year. Those three reports, I may say, were got out quite independently of each other, and to our mind they corroborate each other in a remarkable way, showing that London could be telephoned now by a new system with 10,000 subscribers, and that a subscription of something under 10*l.* a year would be sufficient.

Sir *Julian Goldsmid.*

1614. Is that going over houses?—That includes everything, I believe. Our instructions were that those engineers should take everything into consideration and make it, not an estimate they thought it would amount to, but an estimate which could not be exceeded.

*Chairman.*

1615. What area was that to cover?—That was to cover the area of, I think, the County of London, not the outside part.

1616. That is to say a very much smaller area than the National Company now supply within their London district?—Oh, yes, at least within what is to be called the London district in the agreement.

1617. What is called the London district under the agreement?—That includes Kingston and all that.

1618. The 630 or 640 square miles?—Yes.

1619. Your jurisdiction does not extend quite so far as that?—No, it does not, I forget the exact number of square miles ours is, but it is not more than about a fifth or sixth of that. I may mention that as far as our investigations went the actual amount of telephone service in London is far in excess of anything outside. The Telephone Company could give you that. A very small fraction of the London work is done outside the County of London.

1620. Could you tell me whether those estimates took into account the 10 per cent. royalty to the Post Office?—Yes, they did. Having arrived at that point, that we thought London ought to be capable of being telephoned for a subscription of 10*l.* a year, we went into the question of how it is that it is not telephoned at so small a sum.

1621. I suppose you are aware that a large portion of London is telephoned for 10*l.* a year now; that is to say, private houses on a five years agreement get their telephone for 10*l.* a year?

*Chairman*— continued.

year ?— Of course, I am not so well up in this as the Telephone Company would be, but I was under the impression that that was only when the subscriber had an office as well.

1622. No, I think not ; we shall get that from the company ?—Yes.

1623. But, I believe, that is not so ?—Then the Committee investigated the accounts of the Telephone Company as far as they were able to obtain them, and they came to the conclusion that the reason, to a great extent, why those charges are so high is the very large capital of the company. On the 31st December 1894 it was 4,419,155*l.*, and we notice that the proportion of the gross revenue rentals of the company has very much changed of late years. Taking the National Telephone Company in 1889 the capital was 854,000*l.* approximately. At that time the gross rentals amounted to 40 per cent. of the capital, 40 per cent. of the capital expenditure, I should say, to be accurate. In 1893 the gross rentals were only 15 per cent. of the capital expenditure. The Committee are aware that the National Telephone Company and the United Telephone Company were united in 1889; and the same thing is noticeable with regard to the United Company. In the United Company in 1887 the rentals were 44 per cent. of the capital expenditure in London, and as the Committee, I have no doubt, are aware, the United Telephone Company was a Company formed for London, and only for London, and although they extended beyond London in later years, their London accounts were kept sufficiently accurate to enable us to say what the actual effect of their expenditure and receipts was in London. As I have said, the rentals in London were 44 per cent. of the capital expenditure with regard to London. Now that they are amalgamated the gross rental is only 15 per cent., so that the process in the last few years has been so to increase the capital that the gross rentals themselves form a very much smaller percentage of the capital. Further, we were able to compare the expenditure in a town like Christiania. There they only charge 4*l.* 8*s.* 11*d.* per annum, and yet their gross rentals amount to 26 per cent. of the capital. That seemed to us to be very remarkable.

1624. Are you aware that the Telephone Company of which you are speaking (the United) only did telephone business in London, but drew revenue from other parts of the country ?—I believe at first the United Telephone Company was purely a London Company, but afterwards they did draw revenue from other parts of the country. I notice, in 1884, there was an expenditure of 13,000*l.* in other parts than London. That is so. I thought I said so, that they did extend their operations ; but at the same time, in 1887, those figures that I have given are figures which refer to the Metropolitan district only. They are these : The gross revenue for the Metropolitan district was 100,899*l.*, and the total capital expenditure on the Metropolitan system was 228,180*l.*, which works out at the 44 per cent. that I gave. I mention that to point out that London is in a very much worse position now than it would have been if

*Chairman*—continued.

there had been no amalgamation at all ; and if the United Telephone Company had gone on working as it was working then for London, London might have expected some diminution in the charges, because they were in a position then to receive as gross rentals 44 per cent. of their capital expenditure ; now they are only in a position to receive 15 per cent. of their capital expenditure ; and the same remark applies to the profits of that company. In 1889, that is to say, the year before they amalgamated, the total profit of the company was 94,264*l.* That, on their nominal capital of 900,000*l.*, was 14 per cent. I am not aware exactly what percentage they paid in that year. I know that in 1887 they paid 13 per cent., and probably what they paid in 1890 was 14 or 15 per cent. Then if that company had gone on paying 14 per cent. there would have been some chance of a reduction of the charges ; but the process that took place was this, that this 900,000 shares of the United Telephone Company was taken over by the National Telephone Company, and they paid 1,484,375*l.* for it, so that it is now represented as a capital of 1,484,000*l.* paying a dividend of something under 5 per cent., whereas if it had gone on alone without that transaction it would have been 900,000*l.* paying a dividend of 15 per cent. That is the process, or the effect, of all these amalgamations. Instead of having a company doing a good business with a chance of a reduction of charges, you have got this enormous company paying only a dividend of something under 5 per cent., which is not likely to give any opportunity for a reduction of charges ; and that must be taken into consideration together with the fact that these original shares of the old company are still earning their 15 per cent. The 900,000*l.* was paid for by a larger capital value in shares of this new company. They now receive 5 per cent. ; but at the same time the individuals who own those shares must be receiving their 15 per cent. all the same, so that the result of the process of amalgamation of these companies (and the same thing holds good with other companies) has been what I have said, to so reduce the nominal rate of interest without reducing the amount of money that the shareholders receive, that there is a very small chance of any reduction taking place in the charges for telephonic service.

1625. May I put this to you : assuming these are facts (and I do not suggest the contrary) what inference do you draw from them. Upon this what are you going to propose as a remedy ? —May I give you one instance more ; then I will come to it. As I say, this is one instance of amalgamation. The most recent instance is the new company. The National Telephone Company, as far as we can understand, took over the New Telephone Company with comparatively very little capital expenditure on works, and they paid 120,000*l.* for 3,000 1*l.* founders' shares, and also 74,700*l.* for premium on other shares. All this goes to swell the 5 per cent. earning capital of the company, and so to render it almost impossible to reduce the charges for telephoning London unless something else is done. Then it seems to us that the only way to reduce those charges is to place the National Telephone Company

*Chairman*—continued.

pany again face to face with some kind of competition, and the effect of the agreements is, as we conclude, to do away with the possibility of competition.

1626. I understand you to mean that, whereas competition in the past has brought the National Company into a position which necessitates their making heavy charges, you would re-introduce competition in order to remedy it, and have more of the process which you have been describing?—Well, it depends upon what the position of the company will be in 1911. A thorough competition, an existing competition, and not a bought-up competition, would undoubtedly in 1911 result in this: that the Government would be able to take over the telephone system at a sum which would not be an exorbitant sum.

1627. Or rather, two telephone systems?—It need not take over two. There will be nothing to oblige the Government to take over two telephone systems in 1911 except the fact that the people in England will want telephone accommodation, and if telephone accommodation is existing in addition to the National Telephone Company's accommodation, then the Government will be in a very much better position than it will be if it finds itself face to face with only one concern giving telephonic communication in England. That really brings us to the position which I think I can say the Council takes up, namely, that if the National Telephone Company is to go on with the benefit of those agreements it ought to be understood that any municipality who were willing to do the work themselves, and could see their way to do it at no unreasonable expenditure, should have the permission of the Post Office to carry out a telephone system.

1628. Is that all you wish to say?—Yes.

Sir *James Fergusson.*

1629. You have referred to the terminal charges which you think are enhanced in case of a message passing between a company and a new licensee; do you think it would be fair to give the subscribers to a small exchange the benefit of the whole system of the National Telephone Company or any other large telephone company without such company having something for the free use of its system?—Of course I can see that that is a reason why the clause is put in. I was only stating the effect of it, which seemed to me to render competition impossible. Supposing there was a competing system, either municipal or otherwise, in London, it would render it almost impossible for that competitor in London to compete with regard to sending telephone messages to other towns in England, because we should be in London at very great disadvantage in that in almost all other towns the National Telephone Company are there. The National Telephone Company would make terminal charges on any message emanating from a competing system in London, whereas on its own it would make no terminal charges.

1630. But, supposing you to succeed in obtaining municipal licenses, in what way could the municipal exchange be placed in connection with the telephone system all over the country? Unless the sender of a message is to pay something for that great accommodation, why should the subscriber to a municipal exchange have the benefit of the established system all over the country without paying something for that privilege?—I do not know that I can argue the contrary. As I say, my observation was made more as to the effect of it. Of course, we object rather to the whole system of handing over this business to a private concern; that is the reason.

Sir *James Fergusson*—continued.

1631. I only want to get at what you suggest as fair. You say that the subscriber communicating with a foreign exchange is subject to a terminal payment. Well, I say, could you suggest that it would be fair that we should have that privilege without payment?—No, I can only suggest that it should be left to agreement.

1632. Would it not be the same thing as if the holder of a ticket on the Metropolitan Railway, wanting to travel to Birmingham, should expect to be carried free beyond the bounds of the Metropolitan Railway?—I can very well understand what your argument is with regard to that. It is perfectly reasonable naturally. The other company asks for some sort of payment.

1633. Can you maintain it as a fair objection to the agreement, or to the effect of the agreement, that a local subscriber having the benefit of a great system should pay something for it?—I do not think I can go beyond what I have said. I merely quoted that to show how it would affect any competition that might take place.

Mr. *Snape.*

1634. In the estimates that you have laid before us you are of opinion that a lower charge than that which at present is made could be made without loss if you had these powers. In the framing of those estimates, was the retention of the present area contemplated, or a restriction of the area?—I think I was right when I stated that we contemplated working in the county area alone.

1635. That is not so large an area as the existing area?—It is not so large as what they call the London area.

Sir *Julian Goldsmid.*

1636. You told us about a fifth?—I should think so; I can get the figures exactly.

Mr. *Snape.*

1637. Therefore if you made a lower charge you would not give the same facilities?—We should have to treat places like Kingston and Epsom, and those places, as if they were outside towns; that is what it would be.

1638. Practically it amounts to that; you would make a lower charge, but you would give less facilities?—Of course we should have to treat the other towns as if they were combined with a trunk line. We had figures (which, perhaps, I may give you if I can get them) which showed that a very large proportion, vastly the largest porportion, of the London telephone business is done within the county. The fraction that is done outside the county in the area which the Telephone Company map out as being their

Mr. *Snape*—continued.

London area is very small indeed, compared with the mass of telephone business done in the county of London.

1639. In the estimates you have told us you have taken into consideration the royalties to be paid to the Post Office?—Yes.

1640. Have you also taken into consideration the payment of way-leaves?—Yes, we gave instructions that the engineers should report to us what the whole new system, including way-leaves, and everything, would amount to.

1641. Is that for overhead wires, or underground?—Well, if I remember rightly, I think a portion of it was underground; but, of course, it is not only underground.

1642. Then in that case you would not have to pay way-leaves?—No, it is not only underground; I understand an underground system would be much more expensive, entirely an underground system.

1643. How is it that a company which started in Manchester could work at 5*l.*, and yet your most favourable estimates do not give a much less charge than 10*l.*?—I understand way-leaves is one very expensive matter. Then, of course, everything is more expensive in London, no doubt.

Sir *James Fergusson.*

1644. I do not know how you get at that 5*l.* at Manchester. I have just come from Manchester, and they told me they paid 10*l.*?—I said they did. The Mutual Company did charge; I did not say they do now.

Mr. *Snape.*

1645. If the result of this inquiry should be that the National Telephone Company is left in its present position, is it your opinion that it should have greater powers conferred upon it to make it more effective in the supply of telephonic communication?—No; because I think the more powers the National Telephone Company get the more expensive it will be to buy up in the end; in fact, that is what the chairman of the National Telephone Company himself stated in his evidence in 1892.

1646. Then if other municipal corporations desired (supposing the National Telephone Company continued in its present position) that it should have greater powers conferred upon it to make it a stronger company, you would differ from that view?—Personally, I should.

*Chairman.*

1647. You are aware, I suppose, that in 1911 there will be nothing to buy up: the life of the company ceases to exist?—Yes, sir; that is always what I should hope; but it is not what was contemplated at the time that Mr. Forbes was giving evidence with regard to the Act of 1892.

1648. Contemplated by Mr. Forbes?—By him. If I may, I will just read what he said. Mr. Lamb had said that he estimated it would be worth to anyone in 1911, a million.

1649. That, I think, is that the plant would be worth that?—No; this is what Mr. Forbes says——

1650. I do not think it is worth while reading that question?—You have put it to me, sir.

*Chairman*—continued.

1651. If you wish to read it, certainly do so?—He says: "Then as to the terrible thing, which caused me almost a sleepless night, that at the end of 19 years, which is our tenure now, about under 20, this enormous capital of ours is put down as worth a million. That startled me very much. Of course, if it is true, it is alarming, because we have not only to earn a reasonable dividend upon our capital in 19 years, but we have got to redeem it down to a million. But I think we may dispose of that by this, that at the end of that 19 years, if this business is carried out, I suppose in conjunction with the Post Office, with whom we desire to work most cordially and loyally, we shall have the best telephone system in the world, if money and skill can get it. Then I do not think that the Post Office or anybody else would take that over at a greatly depreciated cost. The element of going value would have to be considered, and not old iron." That is what I said was also my view, that if the National Telephone Company remains in possession with its present facilities and enlarged facilities, the Government will have to take them over at a very much enhanced cost.

1652. That is to say you agree with the view of the chairman of the National Telephone Company?—I agree that that is what would happen unless something is done.

Captain *Bagot.*

1653. You objected to terminal charges, did not you; supposing the municipality or the County Council had an exchange, terminal charges would be charged by the National Telephone Company; is not that so?—Yes; I think that would work out very disadvantageously to others.

1654. Would not the subscribers of the National Telephone Company, supposing that London had its own exchange, equally have to pay terminal charges to the London Exchange; the subscribers to the National Telephone Company, say at Birmingham, Manchester, or Liverpool?—No.

1655. They would not?—My view of the agreement would be that a message emanating from London, received at an office of the National Telephone Company, sent on to Birmingham, and delivered there by an office of the National Telephone Company, would not pay any terminal charge.

1656. No; but supposing London to have its own exchange, the message sent to Birmingham would be subject to the charges of the National Telephone Company for distribution inside their exchange; that would be so, would it not?—If they made any terminal charge; but they did not contemplate making any terminal charge. If I understand Clause 8 of the agreement they do not contemplate making any terminal charge for the delivery of a telephone message which has passed through nobody else's lines but their own.

1657. Supposing London had an exchange, and the message were passed over the private exchange belonging to London to the National Telephone Company?—Oh, yes, in that case. In that case there would be a terminal charge imposed for the delivery of the message.

1658. Sir James Fergusson pointed out that to expect those messages to be delivered free

over

Captain *Bagot*—continued.

over the National Telephone Company's system would be the same thing as if the holder of a ticket on the Metropolitan Railway wanting to travel to Birmingham should expect to be carried free beyond the bounds of the Metropolitan Railway?—Yes.

1659. On the other hand, would not all the National Telephone Company's messages sent in their own exchanges to London, or in towns which had a municipal exchange, have equally to pay for distribution inside that exchange in the same way?—Yes.

1660. Therefore it would be as broad as it is long. Possibly the National Telephone Company would rather gain, because a great many more messages probably would be sent to London, and much more business would be done by London messages with towns like Manchester or Birmingham than is done at present?—Yes; that is quite so.

1661. Therefore the loss would probably not be in the way suggested. As far as I undestand Sir James Fergusson, he contemplated that the terminal charges would balance each other, or that the result would be rather in favour of the National Telephone Company?—I think it might be well left to agreement.

1662. Exactly; it could probably be agreed upon without increasing terminal charges?—I should think so.

Mr. *Grant Lawson.*

1663. I think you will agree that the larger the area covered by a telephone exchange the better for the subscribers?—I think I agree with all the witnesses in saying that if the Post Office would take it over for the whole kingdom that would be the best arrangement.

1664. Then would you say that the larger the area covered by the exchange on which the subscriber was, the better for that subscriber?—He has more accommodation?—Certainly.

1665. Your desire is that the London County Council should have the telephones in London?—I am not at liberty to say that.

1666. That is your personal desire?—My personal opinion is that it would be advantageous if nothing is done to prevent this practical monopoly to have competition by the municipal authorities.

1667. And the County Council of London to have the area of the County of London?—That is so.

1668. You have had, I think, great difficulty in attempts already to extend your operations into other counties, have not you; not in telephones, but in other matters?—We have never attempted it.

1669. I do not mean in telephones; I mean in other matters?—In any matter.

1670. May I suggest water?—Well, that is a thing which is not by any means settled; it is before Parliament now at the present moment.

1671. Still, you have attempted to extend your benevolent rule into other counties?—I think I can say that in my own recollection we have never attempted to extend our rule into other counties. As far as my own memory goes I am not able to mention any instance where we have attempted to extend the *rule* of the Council into other counties.

Sir *Julian Goldsmid.*

1672. Except as to water?—The water is at the present moment before the House of Commons; and I could not admit it in that matter either.

Mr. *Grant Lawson.*

1673. Perhaps you will allow me to put it in this way: If you did attempt to extend your operations into other counties, you would anticipate that there would be objections?—I think, if we attempted compulsorily to extend our operations into other counties there would be objections; but we do extend our operations into other counties for certain purposes at their request; for instance, we deal with the sewage of West Ham, Tottenham, Wood Green, Willesden and places like that, by agreement. If you mean that we should not be able to extend our telephone service into other counties, I believe myself we should by agreement, although we should not attempt it by compulsion.

1674. You told us, did not you, that Richmond and places like that would have to be treated in a separate manner from your municipal exchange?—They certainly would unless we agreed with them to supply the service; but as I have said before, I have got the figures here as far as we could make them out. Within a four-mile radius from Charing Cross there were last year about 7,000 subscribers to the National Company; in a circle of between four and six-miles radius there are about 350; outside a six-miles radius there are about 350; so that 95 per cent. are within a six-miles radius from Charing Cross.

1675. Just one other point, that brings me to it: where the subscribers are more scattered the expense of supplying them with service is, of course, increased?—Well, I do not know enough about telephone engineering really to answer that; there are all sorts of things come into consideration. The way-leaves for instance, I should think, would be cheaper at a distance.

1676. The way-leaves might?—Still that is only my own opinion.

Sir *Julian Goldsmid.*

1677. You have been good enough to tell us sometimes that you represented the Council and sometimes that you represented yourself. May I ask you whether you represent yourself or whether you represent the Council when you say that you wish to have municipal competition in telephones?—I think there is nothing I have stated on examination in chief which would not be agreed to by the Council and in which I do not represent the Council; but I was asked just now a personal question, and as far as regards that I said I gave my own personal opinion.

1678. My question is extremely simple, could not you answer it: Do you represent the Council or yourself only when you say you are in favour of asking the Post Office for a municipal license?—Certainly, the Council has not come to that conclusion.

1679. Then you do not speak on behalf of the Council?—I think I do. There is nothing I have said that is inconsistent with the views of the Council, with, as I say, the exception of that one answer that I gave then.

1680. You are a man of such ability, I know, that you are quite able to appreciate the question and it is very simple. Then you do not represent

Sir *Julian Goldsmid*—continued.

represent the Council in that matter?—The Council has not stated its opinion to the extent of desiring to establish a competitive supply.

1681. There is another point: When you talk about having municipal competition in the hands of the London County Council, may I ask you whether the London County Council is the road authority for London?—No, it is not.

1682. Then would not the London County Council, not being the road authority, be obliged to go to the local authorities to get permission to take up the roads as well as to go to the owners of private houses to get way leaves?—If the London County Council became the telephone authority, it would have to do it under the powers of an Act of Parliament; and they would necessarily have to obtain such powers.

1683. Therefore they would obtain greater powers than the National Telephone Company possess under the Acts of Parliament under which it works, for the purpose of taking up the streets?—I should think Parliament would give them greater powers.

1684. Therefore you mean you would have to apply to Parliament for greater powers than the National Telephone Company possesses. Then the next point is this: If the Government decided to take over the telephones, supposing they were to grant to other municipalities municipal licenses, would it not be obvious that there would be much greater difficulty in arranging matters when they had 20 or 30 undertakings to negotiate with instead of only one?—I really do not quite understand the question.

1685. You are in favour of asking for a municipal license in order to have a municipal telephone area in London; that would make a second to the National Telephone Company?—That would.

1686. Glagow is in favour of doing the same thing according to the evidence we have had, that would make a third; and we were told there were several other towns having the same desire; let us roughly say there are 20 of them; then that would make 21 with the National Telephone Company, would it not?—Yes.

1687. Therefore there would be 21 schemes or areas of telephonic enterprise with which the Post Office would have to deal, is not that obvious?—That is so; they would have to grant licenses to them.

1688. Not only that, but suppose they wanted to buy them up and become the owner of the whole they would have to make 21 contracts instead of one, that is obvious?—Yes, and for that reason they would get them cheaper I should have thought.

1689. That is a matter of argument. I think I could show, if I wanted to argue the matter, that they would get them possibly dearer; but still, at the same time, I am merely asking whether, in your opinion, you would not concur with the view I have mentioned, that it is more serious for the Post Office to look forward to 21 negotiations than to one only?—That is not my view.

1690. That is not your view; you think they would be furthered and that it would make it easier if they had the larger number. Then we will go one step further: If you were satisfied that it would cost a good deal more to extend over a much larger area (five times as much I think you said, because you said the London municipal area was about a fifth of the total area supplied by the National Telephone Company) would not you think it reasonable that some difference of charge should be made between the London area and the larger area?—As I have said I do not think the London question need be complicated by this question of area; it is quite true they have drawn the line round a very large area (600 square miles) to work.

1691. You will go to another point, "to work." I am only on the area: Suppose you supplied an area of 50 miles it might be reasonable to charge one price; if you supplied 250 miles it might be reasonable to charge a higher price; might it not be so?—Certainly.

1692. Is not that the difference between the London municipal area and the area supplied by the National Telephone Company, the one being five times bigger than the other, according to your own statement?—If you mean that that is the reason why the charge is so high in London I should say it is clear that it is not the case because the actual work done outside is a mere decimal.

1693. We are promised figures about that by-and-by, therefore we shall be able to investigate that. I am merely asking whether it is not reasonable that there should be more or less a proportionate charge according to the area with which the subscribers could communicate. You first of all said you thought it would be reasonable; then you altered it according to the amount of work. Now is it not also a fact that there is no town anything approaching the area of London which can be compared with it. I believe Paris and New York are, perhaps, the two largest towns and the most comparable where the charge is very different from that which is made in London?—As we understand the area through which the Stockholm subscription entitles a man to communicate is a radius of 43 miles.

1694. It is not a radius of 43 miles; it is an area of 43 square miles?—No, I understand it is a radius.

1695. A radius of one mile; we have had the evidence?—Mr. Bennett will give that in very great detail I think I may say.

1696. It is quite wrong. Do you know the population of Stockholm?—Yes, I do; I think I gave it to you, 257,000, about.

1697. Do you happen to know the population of London?—Yes, four and a-quarter millions.

1698. How do you compare the two. You might as well compare West Ham with it, might you not?—Compare it in regard to what, highness of charge?

1699. Compare the municipal service. Are you aware what the rate of wages to telephone operators is in Stockholm?—I hope you will put that question to Mr. Bennett. We have put the question to him, and we understand the rate of wages does not vary very much from the rate of wages paid in London, not sufficiently to account for the enormous difference between the charges.

1700. I did not say it did account for it; I only

Sir *Julian Goldsmid*—continued.

only said: Are you aware what the rate of wages is?—I cannot give it to you.

1701. Well, I may inform you perhaps that it is not above two shillings. Then, when you talk about your municipal license, do you propose to include the city?—I do not think I can go into any proposition of the municipal license, because I am not authorised to say anything on that.

Sir *Charles Cameron.*

1702. I understand you are dissatisfied with present service of the National Telephone Company?—Certainly.

1703. In the opinion of the London County Council, which has consulted various engineers, does it appear that the telephone system in London, as worked by the National Telephone Company at present, is laid out to the best advantage with design, or that it has grown up in accordance with the demand of commercial exigencies?—It certainly has grown up. I should say it has not been so skilfully laid out as it might be now if a new system were laid out.

1704. Assuming that another system were to spring into existence, whether in the hands of a private company or in the hands of a municipality, and carefully designed to lay out London for telephonic purposes, do not you think that when the Government came to take over even the old iron, in the one case or the other, it would make a better bargain by taking the more recently and more skilfully laid out arrangement?—I should say, certainly, yes.

1705. And that precisely is what you meant when you said that competition would bring about in the end the better bargain for the Government?—That, in my opinion, would be the great advantage of competition, and the need for it.

1706. Sir Julian Goldsmid asked you whether the effect of having to buy up more than one company would not complicate the negotiation. Are you aware that when this agreement was entered into there was competition in the field, and that the buying up of more than one company was contemplated?—I have always read the agreement as if they contemplated two companies, at any rate.

1707. You are aware there are agreements with two companies?—That is so; yes.

1708. In connection with competition, I do not know whether the County Council, or whether any of your engineers, in their proposals to lay out London for telephonic purposes, contemplated doing it in parts and not as a whole, and having a series of exchanges and trunk lines between them, and working on precisely the same system as is worked on between the different towns in the provinces?—Yes, I believe that was in contemplation in the minds of the engineers.

1709. Now you are not an engineer, and I am not going to ask your opinion as to whether that would be a better or a worse system than the present one, but I take it that your view is that it is desirable to place no impediment in the way of the development of telephony on that basis?—Certainly.

Sir *Charles Cameron*—continued.

1710. And I presume that your opinion is that competition is the way to bring about the development of telephony?—That is my opinion, as long as the Government does not take it over.

1711. I presume it is your opinion, and so far, that that is the opinion of the County Council, which sent you here?—I think so, undoubtedly; I think I can say that.

1712. You have said, so long as the Government does not take it over, you are in favour of the Government taking over this matter?—Yes.

1713. And in favour of its being a Government monopoly?—Yes.

1714. Are you speaking for the County Council in that, or has the question come up before the County Council, as to the Government acquisition of the telephones?—No, I do not think the Council has decided on that one way or the other. At the beginning of my evidence on the first day, I put in the exact recommendations and resolutions of the Council, in order that there might be no mistake about that. It is in the evidence. If you will turn to page 87, you will see the recommendations about 10 or 12 lines down: "We therefore come to the conclusion that one of the three courses should be taken, namely, (*a*) that severe restrictions should be placed upon the company; (*b*) that the State should take over the company's business; or (*c*) that the municipality, *i.e.*, in London the Council, should do so"; and that was approved.

1715. That is a most distinct expression of opinion on the part of the London County Council in favour, in the first place, of restrictions which are impracticable; and that, being impracticable, it is an emphatic declaration by the London County Council in favour of the State assumption of the telephones in the first place, or failing that, the municipalisation of the telephones?—That is so.

1716. If under this agreement competition is provided for without any buying out; if competition without buying out has from the first been the policy of the Post Office, or, say, for very many years, the policy of the Post Office; do you prefer buying out or competition?—Immediate buying out do you mean?

1717. Yes, or immediate competition?—I should say immediate competition would be the proper course.

Mr. *Grant Lawson.*

1718. With a view to buying out later?—Yes.

Sir *Charles Cameron.*

1719. As to competition, do you happen to know anything about the history of the last telephone company that was bought up; the New Telephone Company?—I know the prospectus; I have it here.

1720. Now, just one other point about the buying up of the telephone companies; that is to say, about the assumption of the telephone business by the State. The position of the telephone and telegraph services in London is rather different from what it is elsewhere, in this

Sir *Charles Cameron*—continued.

this respect, that in London there is a huge telegraph service, and there was before the telephone business was started; is not that so?—That is so, and I think that is a consideration which ought to be borne in mind, because the telephone service, if at the present moment it is disadvantageously affecting the telegraph service in England, certainly will do so in London, to a great extent.

1721. In fact, if the telephone service is detrimental to the telegraph service anywhere it will be more detrimental to it in London than in any other part of the country?—I should say so.

1722. Is there any doubt on that subject in your mind?—There is no doubt in my mind that at present an enormous amount of telegraphic communication goes on within London, that will soon assume the shape of telephonic communication.

1723. To the detriment of telegraphic communication?—To the detriment of telegraphic communication.

1724. But did it not occur to you, or to the Council, that London might be exceptionally dealt with, and that it might be desirable for the Government to make an arrangement for the assumption of the telephone service in London without waiting until they took over the entire business throughout the country?—That is a new idea to me.

1725. It has never occurred to you?—No; at this moment I cannot say anything about that.

1726. You do not happen to know, roughly, what your engineers propose. You have told us that they estimated for an exchange of 10,000 subscribers?—That is so.

1727. And, I suppose, if you were carrying on that business you would ask subscribers who wished to become trunk line subscribers to make a deposit with you, as the telephone companies do, to put them on the other telephone exchanges as they may require?—That would be the case.

1728. The Postmaster General has led you to infer that if licenses are granted, the licenses will be treated equally; as a matter of principle they would require to be treated equally by the Post Office?—Yes.

1729. And if you could give your telephone service on an exchange for 10,000 persons at the low charge which would allow a subscriber to pay sixpence or threepence, or a shilling, as the case might be, to put on to any other exchange in the metropolitan area or in the kingdom, do not you think that you would get a lot of subscribers who would be very glad to make the 5*l.* payment and run the risk of paying when they wanted their messages taken?—I think the development of the telephonic system in London would be important.

1730. That has been the result, has it not, wherever there has been competition?—Certainly.

1731. Did your engineers, who gave you these estimates, suggest that they should stick to all the old arrangements of the National Telephone Company; that is to say, did they propose that they should use the same or improved instruments?—They would use absolutely the newest system, the newest exchanges, the new instruments, and twin wires.

1732. That is to say, they propose to give you a much better system?—Undoubtedly; except that I must say, of course, the Telephone Company is, in some instances, improving its system.

1733. But so far as the single-wire system extends it is necessarily bad?—Oh, yes.

1734. The single-wire system, I believe, extends over a considerable amount of the London area, does it not?—I cannot give you any information about that. It did. They have been doubling their system lately to a great extent.

1735. But you would give the subscribers the newest system of wiring; the newest transmitters. Do any of your engineers mention the time-meter system; to allow a man to pay a certain fundamental charge, and then pay so much for every five minutes he uses the instrument; do you know anything about that?—I do not think that it is mentioned in the estimates. As the Committee are not receiving the evidence of Mr. Binnie and Mr. Newland, might I hand in their reports? We are only too anxious that the Committee should have all this information before them.

1736. Can you give us the gist of them?—They are made up of a lot of figures.

1737. Mr. Bennett is coming?—Yes; but he did not prepare our engineer's report or Mr. Newland's; in fact, I believe all those three reports are based upon different systems of exchanges.

1738. Perhaps the Chairman might allow those reports to be handed in; we can discuss putting them in, provisionally?—I am not quite sure if these are the right ones; but if I may, I will send them to you afterwards.

1739. I do not exactly understand why you seem to think that terminal charges would operate against a competing company?—I think they would in London, because the National Telephone Company in London would be both, and in a great number of towns.

1740. Are you aware that a small company in Dundee, with a capital of 6,000*l.* smashed up the original company, or rather compelled the original company (which is now absorbed by the National) to come down on its knees and reduce its charges from 20*l.* to 5*l.*; and during the whole of its time paid 9 per cent., I think, and got bought up at last. What I ask you is this: If you had competition, take it in Birmingham, Manchester, Liverpool, and you had competition in London, would not the competition which existed in Birmingham, Manchester, and Liverpool compel each company to give the greatest facilities of inter-communication in order to attract subscribers?—Certainly. If in all the towns of the United Kingdom there was competition the terminal charges would not affect us; but in many towns, but as many towns might not think it necessary to have competition, the National Telephone Company having a London branch and a local branch, would have an advantage over London.

1741. When you speak of many towns not thinking it necessary to have competition, you mean

Sir *Charles Cameron*—continued.

mean municipal competition?—I mean *any* competition. If they would have it, it would get over the difficulty entirely.

1742. Of course I am quite aware that a great number of towns are not prepared for municipal competition, but provision is made in the agreement for private competition, is it not?—Yes.

1743. With the sanction of a vote of the Corporation?—Yes.

1744. Assuming that when the Post Office pursued a policy of encouraging competition, you are aware that a large number of licenses was applied for and granted?—That is so.

1745. Is it not reasonable to expect that the something that occurred in the past would occur again in the future, and that application would be made for licenses if the Post Office granted them?—I think it is reasonable.

1746. Would not that ensure a certain amount of competition, and if it did ensure the competition or if it brought about the competition, do not you think that that would do away with your objection as to the impediment of a terminal charge?—Certainly, if it was an actual competition, but not a bought-up competition, it would be right enough.

1747. We all assume that, under this agreement, and under the veto placed in the hands of municipal authorities, buying up ought not to be possible. You are aware that the agreement provides that no competition should be allowed to start except with the approval of the municipality?—Yes, I do know that.

1748. And that would only be granted or might only be granted, at all events, on the condition of a guarantee against buying up being given?—Yes.

1749. Would that prevent the difficulty?—It would.

Mr. *John Ellis.*

1750. Such questions as I ask you will be directed to giving you an opportunity of offering some little more definite evidence than you have given us with respect to your statement that the service is not good, and that complaints are made very generally. Now, as to this Committee, whose spokesman you are, may I ask if it received any evidence as the insufficiency or imperfection of the telephone system throughout the area?—No, the Committee has not received any evidence at all.

1751. Did it make it known that it would receive any complaints?—No, I spoke entirely generally, and I should like to restrict my observation to "generally." It is the general feeling that the telephone service was very inadequate, and still is inadequate, although I say it is improving.

1752. I am afraid in Parliamentary Committees we require something a little more definite. Can you lay before us any specific complaints that have come to your Committee with respect to the imperfection of the telephone service in London?—Well, I have lain that one before you.

1753. Very well then, I will deal with that in the first place. This is the complaint of the vestry clerk of the Parish of St. Mary, Battersea.

Mr. *John Ellis*—continued.

Have you made yourself master of this?—I read it through. If I may interrupt for one moment, I was not going to give any evidence upon this. I suggested to that gentleman that he should give evidence himself. I do not know whether he has applied to give evidence, but the Committee of the Council did not think it was their business to go in detail into this question. The Committee of the Council at that time were dealing with the agreements entirely.

1754. That is what I want to get at?—And the objection to the agreements; and we have not got any evidence, I at once say so. I merely made that general statement in the words of the chairman of the company itself; he said that the London service was very bad a very few years ago, and although it is getting better, it is still the subject of complaint.

1755. I want to confine myself at the moment to this complaint. Does not this apply really to a particular wire between two particular places, and defects therein, in September and October, 1894, and have you noticed that at the end of the complaint these words occur, that the lines are at the present time, namely, 3rd April 1895, working satisfactorily?—Yes.

1756. Then that is the end of that complaint?—That bears out what I say.

1757. A private wire that was. Have you noticed that that was a private wire?—No, I have not noticed that.

1758. Then you have not made yourself to that extent familiar with that complaint?—As I have said, I read it through.

1759. Then we have it clearly from you that coming before us as the representative of this Committee of the London County Council, you do not deem it necessary to put before this Committee any specific illustrations of the imperfection of the service in London. I only want to get at the facts, you know. That is so, is it?—Well, we have not done it.

1760. As a matter of fact, you do not come into the witness chair possessed with proofs of your statement that complaints are made very generally?—Certainly not.

Mr. *Solicitor General.*

1761. These resolutions that you have laid before the Committee are resolutions that were passed by the committee of the late County Council, are they not?—Both, please.

1762. Adopted; well, originally resolutions?—There were two meetings, one the old, the other the new.

1763. These ones that are referred to in your evidence under the sub-heads "a," "b," "c"?—That was the old Council.

1764. That was the old Council?—Yes. Then lower down the page, "26th March 1895," it was the new Council; the new Council had before it the considerations in view of the report of the former date.

1765. I did not follow that these were specifically before the County Council on the 26th March. I will read you what you said?—It is down here exactly: "We reported on the 12th February last that after careful examination of the proposed agreement between the Post Office authorities and the National Tele-

Mr. *Solicitor General*—continued.

phone Company, we were of opinion that the interests of the people of London would be, to a great degree, prejudiced by the power to be given under the agreement to the company, whose existing monopoly would be further strengthened."

1766. You do not specifically there allude to the recommendations, or rather to the strictures, which are included in "a," "b," and "c," strictures and recommendations?—The report of the 12th is mentioned, and it was freely dealt with in discussion. This matter was discussed at length and divided upon.

1767. I will tell you exactly what I want to get from you if I can, that is, whether those three "recommendations," I will call them, which appear under the heads "a," "b," and "c," were specifically brought before the meeting of the 26th March and specifically adopted. That is what I want to get. I do not gather that from the data you have given us; it may be so?—No, you would not gather that; but I am perfectly justified in saying that these considerations were in the minds of the Council and were discussed on the 26th March, and were the reason for the division which took place upon the 26th March.

1768. How had they got into the minds of the Council?—Because the recommendation was this: "We have, therefore, asked the deputy-chairman and the engineer to give evidence. We think it advisable that one or more of the experts who advised us previously to the interview between the Postmaster General and a deputation from the Council on the 4th February last, should also give evidence before the Select Committee on behalf of the Council; and we recommend: That the Highways Committee be authorised to take all necessary steps for properly placing the Council's views before the Select Committee of the House of Commons on the Telephone Service."

1769. Will you forgive my saying that I have already read all that; I want really to ascertain whether you can say, one way or the other, whether those three things, "a," "b," and "c," were specifically brought before the meeting of the 26th March?—Yes; I can say specifically "yes" to that.

1770. In form; the whole question turned on what the views of the Council were?—The debate turned on what the views of the Council were, and it was stated by the chairman of the Committee and myself that the views of the Council were to be gathered in the report first of all, which had been adopted on the 12th February, and also the statement which was made by myself before the Postmaster General on the 4th February, a copy of which had been circulated to every member.

1771. In some one of those ways the whole three, "a," "b," and "c," were brought before it?—I am sure the division turned upon the views mentioned in the former report.

1772. There is only one other question, that is, has he the empowering of the municipal authorities; have you considered the question at all as to the term. I mean, do you contemplate the permanent licensing of municipalities?—No; my own personal view is that the State should take it over.

1773. I apologise for interrupting you, but I understand also that the view you have expressed with regard to municipalities taking it over is your own view; is it your view, or is it the view of the Council?—It is impossible for me to say that the Council desire to enter into competition at this moment, because they have not decided to do so; but my own view has been that if no other course is taken to prevent the National Telephone Company getting such a valuable monopoly that then it would be advisable that the municipalities should have the power to compete; and, if I may say one thing further, at any rate it ought to be an understood thing that the National Telephone Company should be subject to the possibility of competition by any municipality who liked to take it up.

1774. I do not object to your adding that at all, but did not you, in answer to Sir Julian Goldsmid in an earlier portion of your examination, state that the view as expressed by you with regard to the granting of powers to municipalities was your personal view, and not the view of the Council?—You must take it to be so.

1775. I "must take it," you said so?—Yes.

1776. I was asking, just now, whether you had considered the question of the length of the term which should be granted to municipalities, or whether you contemplated a permanent grant to a municipality?—No; my own idea would be that if the municipality obtained powers to establish a telephonic communication system, that then whenever the State took it over for the whole country it should take it over from all municipalities, but that it should take it over at a reasonable price for the expenditure which the municipality had undertaken.

1777. That is rather departing from the point I wish to have your opinion upon. Then, subject to the State having power to purchase, did you contemplate a permanent, or rather I will put it in this way, you did not contemplate any limitation by a term of years in the case of a municipality?—I do not quite understand. Why "a term of years"?

1778. I am not arguing as to "why"—I am asking what your view was. Did you contemplate that the grant to a municipality should be for a term of years?—I should think the grant would be made for a term of years to municipalities.

1779. That is to say, you would treat the municipalities as you would any other body or company?—Certainly.

Sir *Charles Cameron.*

1780. And would you be prepared yourself to recommend to the London County Council as a condition of a license that it should be terminable at the same date as the present telephone license?—Yes; my own opinion would be that that would be possible and would be advisable.

*Chairman.*

1781. Can you say whether the estimates which you have mentioned took into account the

*Chairman*—continued.

necessity of a sinking fund to replace the capital expenditure within a term of years?—No; it would take into account the sinking fund within the ordinary 60 years—that is quite true.

1782. And it would materially alter the result of the estimate if there was a sinking fund to replace the capital within the term of 17 years—which is the term of the National Telephone Company?—Not if it were understood that the Government was going to take it over upon paying the cost price. If the municipality was to establish a telephonic communication it would spread the capital expenditure over the 60 years; then if the Government stepped in they must take that liability off the shoulders of the municipalities.

*Chairman*—continued.

1783. Although it might not be a system which the Government could utilise—it being a competing system with the National, and Government only requiring the one system?—I must correct myself. We did make the estimate upon a sinking fund of 25 years only, so that probably even then the London County Council might be quite willing to undertake that risk.

1784. You say the difference between 25 and 17 would not be very material?—Yes.

1785. Of course you are aware, at least I believe it is the case, that the London County Council, even if the licence was granted to them, would have to come to Parliament for statutory powers?—That is so.

Sir Edward H. Carbutt, Bart., called in; and Examined, as follows:

*Chairman.*

1786. I believe you are a member of the Council of the London Chamber of Commerce?—Yes, I am.

1787. You are also a member of the special committee appointed by the London Chamber to consider the telephone question?—I am

1788. And I believe you are Chairman of the Engineering and Allied Trades Sections of the Chamber?—I am.

1789. The Chamber has, I believe, passed certain resolutions relating to the telephone question?—They have.

1790. Perhaps you will hand in a copy of those resolutions; and I believe you have come here, shortly, to support on behalf of the Chamber the general propositions contained in those resolutions?—I have.

1791. Then will you make the statement which you have come prepared to make in support of them?—I may state that the London Chamber of Commerce consists of about 6,000 members, and at the present time our president is Sir Albert Rollit, but I wish to guard myself by saying that although Sir Albert Rollit happens to be a director of the Telephone Company he has taken no part whatever in the discussions that have taken place on this question; he distinctly stated that he would have nothing to do with it. Then I beg to state, sir, that the gentlemen who formed the committee to discuss this question consisted of Mr. Garcke, who is Chairman of the Electrical and Allied Trades sections of the Chamber; he is also the managing director of the Electric and General Investment Company, myself as Chairman of the Engineering section, Major Flood-Page as a director of the Edison and Swan United Electric Light Company, Major General Webber of the Chelsea Electric Light Company, and past president of the Institution of Electrical Engineers, Mr. Bennett of the New Telephone Company, Mr. Chambers, who is a gentleman of commerce and a vice-president of the Chamber, Mr. Henry Clarke, of the London County Council, and also in business in London, Mr. Crompton, the President of the Institution of Electrical Engineers, Mr. L. Gaine, the general manager of the National Telephone Company,

*Chairman*—continued.

and Mr. David Howard, who represents commerce as well as being a past chairman of the Council. Then, sir, I wish to guard myself by saying that although I am an engineer I have not come here to give any engineering evidence whatever. Of course that will be put before you by the experts. Then I wish to say that in the opinions that I express I do not wish to express any opinions of my own; I have come here merely as the mouthpiece of the committee. The committee, of course, took the agreement as practically settled, as having been accepted by the late Chancellor of the Exchequer and the present Chancellor of the Exchequer; but what my chamber wished me particularly to ask this Committee to do was this, to see that we should have properly controlled competition. The impression of the committee, as I understand it, is this, that telephony is in its infancy. If facilities are properly given a very large amount of our trade that is done in other ways will be conducted through the telephone. We believe that if the telephone company, perhaps, endeavoured to make it more known—that is, by granting licences for telephones in private houses, and by wiring hotels as they do now in Paris, where you order everything through the telephone; in that case the public would become so impressed with the necessity for the telephone that it would be much more largely used than it is at the present time. Then, sir, they wish me to state that they want varying rates for limited service. What they consider is this; of course for a rich firm or a rich man the question of what a telephone costs per annum does not amount to anything; it amounts to very little indeed on the amount of money he spends on business, and whether he pays 10*l.*, 20*l.*, or 50*l.*, the impression is that it does not affect them; but there are a large number of cases, they consider, where it would be advantageous if you could get smaller areas. Suppose you took the case of a residential district where people could not afford to keep servants to go out and do their errands, if they could get connected with the shopkeepers they could afford to pay something like 3*d.* a day or 1*s.* 6*d.* to 2*s.* a week for the use of the telephone.

*Chairman*—continued.

At the present time the tradesman has to send his cart round; the man waits for orders, and there is a large loss of time in that way.

1792. When you speak of varying rates for limited service, do you refer merely to limited areas?—Yes, the smaller areas; that is to say, what we want to encourage is that it shall be within the reach of the poorer classes of the people as well as of the rich. If one district is a residential district, or in another district there are certain manufacturers, and you could limit your area to that; we consider that would encourage the use of the telephone, that it would be a special benefit; and of course when you come to a place like London you find a large number of people who do not want the whole service of London, that is, the whole of the 650 square miles of area. I may say I have read all the evidence, therefore I do not wish to go over anything two or three times. You have it in evidence that as the number of telephonic subscribers increases so your expenses increase enormously.

1793. You are aware that the policy of the Department, as indicated by the agreement, has been to restrict the operations of the company within limited areas?—Yes.

1794. You want to go still further?—We want to go still further. We go so far as this: even taking the agricultural districts at the present time what you are endeavouring to do is to get collectivism on farms. Everybody there send their milk to a creamery or butter-making establishment in a neighbouring village. If near a village where there are 20 farms there were some easy means of putting up a telephone between the milk farms and connecting with the station a creamery company, it would pay the farmers and it would pay the company which started it. We believe you could start numerous small companies in agricultural districts, which would be of very great advantage in encouraging agriculture. Of course, I am well aware the difficulty would be to get an Act of Parliament for it, or to get powers; but what we would want you to do would be to apply for the powers that are being applied for in the Bill which was brought in last night for Light Railways by the President of the Board of Trade. That Bill we know something about in the Chamber of Commerce. What I understand as to that is that if a light railway is wanted in the district, and in the same way if a telephone is wanted in the district, you would apply to your district council or parish council, and having settled what you want you would go to the County Council for powers, and the County Council would then apply to the Board of Trade. Of course, if it became a question of the telephone, they would have to apply still further to the Postmaster General; because we consider that the Postmaster General must keep his hand on the question of competition; he could not allow 20 different companies in one district; but we think that competition is the best way of dealing with this; not only for the country, but for the general welfare of all the people. What we consider is that, of course, trade must be encouraged; and the only way to make trade go on is to give the greatest amount of facility for carrying on that trade, either by railways, by telephone, or by telegraph; and if the Postmaster General considers that the telephone is trenching on the telegraph revenue, all we say is that the trade of the country is sufficiently great to warrant him in encouraging the telephone system as against the telegraph; and, in that way, endeavouring to encourage the trade of the country.

*Chairman*—continued.

1795. Do you suggest that this should be done by different companies all over the country?—We even go so far as this; mentioning, again, the agricultural district: Suppose there was a creamery started (there are numerous creameries in all parts of the country), and farms connected with it; if the son of somebody in the district happened to be brought up as an electrical engineer, and liked to take the trouble to put the telephone up, he would put it up for about 100*l.*, and connect some 20 farms with this creamery. You would by that means increase telephony. You would also make it a benefit to inventors to find out something new, if there was anything to find out. At present the telephone is such a simple thing to put up for small areas that there would not be much to find out.

1796. When you speak of 100*l.* you have not gone into estimates and figures, have you?—No; what we say is that in a small area you can get a pair of telephones for a couple of sovereigns, and your post and wire do not cost you very much, I only mean a very small establishment indeed.

Sir *James Fergusson.*

1797. May I ask one question at this stage: Have you formed any idea whatever of what the cost would be of carrying the telephone to a circle of farms round the creamery?—No; I am only giving an estimate of one member of our Committee.

1798. What does he reckon it at?—He thinks about 100*l.*, but that is only his idea of it.

1799. For 20 farms?—Well, about 10 farms for 100*l.* We have not gone into any serious estimate; we consider that the great thing is to have competition all over; but I am guarding myself by saying that as regards London the opinion has been expressed that if it were possible for the Government to buy up London and to make a system of that; that is to say, if they could buy it up at a fair and reasonable price; then that is another question; we consider that London ought to be dealt with on a separate basis compared with the outside district.

*Chairman.*

1800. You think the Government should buy up the London system, and leave the National Telephone Company to supply the rest of the country?—That is to say, if you could arrange on reasonable terms with the National Telephone Company, because London is so great, and the amount of the exchange is so enormous that a very great difficulty as far as we understand is taking place in being able to get the exchanges carried on; that is to say, supposing the number of subscribers trebled in London, I fancy you would find very great difficulty in caarying on the exchange; therefore we think it would be much better, if it could be done reasonably, that it should be done by the Postmaster General. Then, sir (I do not know whether I

*Chairman*—continued

am giving my evidence in the proper way, what we want to do is to take it as shortly as we can), we consider that if you agree to competition, some standard regulations ought to be drawn up applicable to all towns the same as standard regulations by the Board of Trade for the electrical companies. It would be far better to have standard regulations which would be carried out applicable to all towns if possible.

1801. Do you suggest that those standard regulations should apply to the existing National Telephone Company?—You could not alter that at present for a good many of the things they have done, but in any future arrangement we consider it would be advisable both in the interest of the National Telephone Company and of the country, that some standard regulations should be drawn out.

1802. You are aware that the National Telephone Company have a licence which lasts for another 17 years, are you not?—Yes.

1803. A licence which is unrestricted; you would not impose regulations arbitrarily upon them?—No; but suppose they wanted to break new ground, could not you ask them if they would not accept the regulations for the new ground?

1804. Their licence covered the whole of the United Kingdom up to the coming into force of this agreement, and since that time it has been restricted to *areas;* so that there would be no question of opening new ground?—We wanted, in case you granted competition, that this should apply to all the new companies. Then what we also wanted to state was, that in granting licences, precautions should be taken not to neglect the unprofitable areas. We think that if the licence is granted to a company to put down a telephone system in a large district, they ought to be careful that the unprofitable area is not neglected. I might just say that we talked of putting in a large amount of evidence as regards excessive rates and things of that kind, but we think that that would be better put in by other people—it is so excessively difficult to judge of it ourselves. You cannot compare these things unless you know all the circumstances.

Mr. *John Ellis.*

1805. I should like to ask you a few questions on what you have just been saying: What did you mean by "unprofitable"?—Well, where it is not likely to pay.

1806. Then supposing a licensee has wires in an unprofitable area, he makes a loss there, I presume?—Yes.

1807. Then, if it is a commercial company, how would you provide against that loss? Would you allow it to recoup itself by higher charges in other areas?—It would have to take the good with the bad.

1808. That is to say, that the persons in area "A" would have to pay more than they need, so that the persons in area "B" might be supplied with telephonic communication?—Unless competition kept it down.

1809. I am asking; I want to get your view; do the Chamber of Commerce suggest what I have indicated, that persons in area "A," that being a profitable area, should pay more than is necessary to recoup the loss in area "B," which is an unprofitable area?—No, I do not quite agree with that.

Mr. *John Ellis*—continued.

1810. How would you raise the necessary revenue in the case of area "B"?—The price would be fixed by the competition between the two companies, and the company in considering its application would consider the question as to whether they would lose on one district as compared with the other district.

1811. You would make it a condition that the company should extend its service, even though it might not be financially profitable?—Yes. Well, that is a proposition.

1812. In the public interest?—In the public interest.

1813. Would you give any sort of subsidy or guarantee to the company?—No.

1814. How would you enable the company to recoup itself as a financial operation?—The company would take the question into consideration in starting, the same way as with a railway; you take certain districts: some parts of the district do not pay you, but other parts do; you take the whole thing and think you will make a profit out of it, and you run the risk.

1815. I am asking you for information, of course?—Certainly.

1816. Do you suggest that you would proceed exactly as the State does with railways and no further?—In what way? I do not understand.

1817. The State does not prescribe to railways what capital outlay they shall make in particular districts. Having once given them the powers, you are aware that it does not say: You shall put down a double line of railway; you shall put certain stations, certain signalling apparatus; it leaves all that to the railway company's own cognizance and control. Do I understand that you would leave all that within the Telephone Company's own cognizance and control?—What we propose is, that we should leave it for the Postmaster General. They would apply for a certain district, and he would have to see that both the unprofitable and the profitable area of that district would be supplied.

1818. Do you suggest that the Postmaster General should make it a condition of the licence that without regard to the profitable or unprofitable area, the telephonic facilities in all districts should be alike?—Yes.

1819. Would you put it at that?—I should put it at that; yes, I will say "yes" to that, otherwise you would be having people picking out just little bits.

1820. Then, supposing the company said to the State, or to the Postmaster General: We cannot carry on a commercial undertaking if you impose such a position upon us without some sort of State guarantee, how would you meet that?—They should have no State guarantee; we want private competition.

1821. As I understand (and I am really anxious to arrive at what is in your mind), you would impose upon a commercial undertaking extensions which it was known would be unprofitable?—Yes; in the same way as you impose conditions upon railways.

Mr. *John Ellis*—continued.

1822. You put it exactly in the same way as it is put as regards railways; no higher?—Yes, only it is a different question: you cannot tell a railway company to go into a certain district when they do not want to go there; but it is a very different question taking the telephone.

1823. Would you impose upon the company the condition of laying down wires and providing wires where they did not desire to?—If they took up a certain district I would; it is only in case they take up that district. What we wanted to guard against was this: we wanted to guard against a company taking up a certain district, and having got the authority of the Postmaster General for that district, they say: "We will only take the profitable part, and leave all the rest out." If the license is once granted, we desire that they shall not be allowed to take up the best portion, and leave the remainder.

1824. Would it meet your views if the same procedure were followed as under the Electric Lighting Act with regard to compulsory areas, that in a certain area a person shall have the right to receive certain services?—Yes.

1825. Is that what you mean?—That is what I expressed when I stated that we wanted standard regulations making.

Sir *Charles Cameron.*

1826. You have said that you did not contemplate any subsidising; but in connection with the system of agricultural telephones which you have referred to, and which I think you are the first witness to have referred to, do you see any reason why parish councils and county councils should not be empowered, if they thought fit, in the public interest, to subsidise telephonic exchanges?—The chamber of commerce did not draw any distinction between parish and county councils as compared with private companies.

1827. What I ask you is this: do you see any reason why parish councils or county councils should not be licensed to occupy with their telephone system, devised for the benefit of the area over which they rule, unoccupied areas; do you see any reason why they should not be authorised to receive a license for these unoccupied areas?—Well, I take up this ground: that I am giving the opinion of the chamber; and my chamber, in discussing the question of the municipalities and local boards, merged it all in private enterprise.

1828. That is quite true; I will take it on private enterprise, and say: Allow private enterprise to fill up the unoccupied gap in the counties; can you conceive any reason why the local authorities should not be empowered to make a grant in aid if they thought the enterprise beneficial to the district?—Well, personally I should not; but I cannot give the opinion of the chamber as to that.

1829. I suppose you had this brought up before you?—Yes, certainly; but we will not express an opinion upon it.

1830. We in this House know your rules, and I am sure the Committee value your opinion; you say you see no objection to that?—No. Personally I should not believe in the county council or the parish council providing money for it. Of course, the same question turns up on the light railways. Personally I should object to the county council or parish council providing money for these telephones or for the railways.

Sir *Charles Cameron*—continued.

1831. Subsidising the telephones or the railways?—Yes, that is my personal opinion, but I have no right to give my personal opinion. I guarded myself as to that.

1832. You have explained what you mean by varying rates for a limited service; you have explained that in small districts people with few servants might find it a great convenience to be put in telephonic communication with the neighbouring tradesmen?—Yes.

1833. I suppose that contemplated the establishment of a number of local exchanges rather than a concentration of all London in one central exchange?—Well, it was more as regards outside districts, but of course we contemplated it as regards London.

1834. You contemplated it as regards London, too?—I believe it has been tried by the company, and they have not succeeded in making it pay; still, the opinion of my committee was that it ought to be tried, and could be made to pay.

1835. Where was it tried?—I think you will find out that from the company; the company will give you that.

1836. As you have mentioned it, and it is the first I have ever heard of it, I should like you to give us some assistance upon it?—I was told it was tried in Kensington, but I am giving you that for what it is worth.

1837. You live in Kensington, do not you?—No.

1838. You do not know anything about the experiment personally?—No. The secretary of the chamber tells me it was tried in Kensington and in Croydon: I only say that was our idea. We understood it had been tried, but I have no doubt that other evidence will be forthcoming to show that it has been tried. I am very sorry I cannot give you the particulars.

1839. You have a resolution here about the trunk line tariffs?—We took that out. We came to the conclusion that we could not give evidence about it without knowing all the facts of the case.

1840. You have said that Sir Albert Rollit, the president of the chamber of commerce, had entirely kept out of it?—Entirely. At the first meeting which took place upon the subject he got up and said, "I am a member of that board, and I will have nothing whatever to do with it," and acted in the most honourable manner possible. I thought it better to put that in in evidence.

Sir *Julian Goldsmid.*

1841. You said there was a committee appointed, and you have given us the names; how many were present at this meeting when the resolutions were adopted?—They have been adopted twice or thrice, I believe.

1842. There were four or five present, were there not?—There were more than that.

1843. Six?—Well, I think the resolutions met with the general approval.

1844. About six members were present?—What I would say is, that they met with the general

Sir *Julian Goldsmid*—continued.

general approval of all the members, as I understand.

1845. But about six members were present: was not that so?—I could not say without having the minutes before me.

1846. Were these resolutions adopted by the Chamber of Commerce itself?—They were brought before the council, and were adopted by them, and the council then settled who should give evidence; and they thought that it was better, from my being a member of the executive council, that I should give evidence, on the understanding that nobody gave any evidence except what had been passed in these resolutions.

1847. Your main resolution was No. 3: "That properly controlled competition should be encouraged, providing that intercommunication between different systems covering the same area can be satisfactorily arranged, and subject to the Post Office authorities deciding, after due and adequate enquiry, that the public can be better and more economically served than by the existing arrangements." That is a very limited approval of competition, is it not?—Well I do not know; we put it in for what it is worth.

1848. I quite agree. Then, practically, you would leave the matter to the Post Office, according to this resolution?—No, I do not think we should leave everything to the Post Office.

1849. Subject to the Post Office authorities deciding after due examination?—Yes, we would leave all that, but not as to whether there should be competition or no competition. As I understand, that is what this Committee is sitting for; the main question; to ventilate what shall be done in the future.

1850. Then you talk next about the unprofitable areas, and you propose that a company shall be licensed to take unprofitable areas; that is, I suppose, because the National Telephone Company does not take them; is that so?—No, I do not think so.

1851. Does it, or does it not, take them, in the opinion of your Chamber?—I suppose they may have plenty of unprofitable areas; I have no doubt they have. All we wanted to guard against was, that in case a license was granted, the company to whom it was granted should not just supply the profitable area and leave out the unprofitable.

1852. The suggestion has been, not that new companies should be licensed, because we were cautioned what the result of that would be, amalgamation; but that municipalities should be licensed. Is it your opinion that municipalities will want to take unprofitable areas?—I must not give an opinion as to municipalities. We discussed the question, and we came to the conclusion that we should abide by the words as we have got them, that is competition.

1853. Unprofitable areas I was speaking of?—Well, I suppose it applies to both unprofitable and profitable.

1854. A municipality might be willing to take competition in a profitable but not in an unprofitable area?—Then it would rest with the Postmaster General,

1855. Therefore, the final determination would come again to the Postmaster General?—Certainly.

1856. Therefore, it is practically as I have said: the whole matter would be left, according to your opinion, to the views of the Postmaster General. The only other point is this: "That this Chamber, whilst favouring private enterprise, is of opinion that if greater development of the telephone service which the commercial community demands can be better secured by the State acquiring and working the whole system of telephones, then this Chamber would approve the adoption of such a course." That was the substance, was it not, of the general opinion of the members of the Chamber?—As put there, certainly.

1857. Therefore, all the rest will be subject to that; the State acquiring?—No; this was in reference to the agreement. The main thing is that No. 3. That is the main thing.

1858. The main thing in No. 3 is leaving it to the Postmaster General, is it not?—I think not.

Mr. *Grant Lawson.*

1859. Has the Chamber ever applied to the National Telephone Company on the subject of varying rates?—Well, that I could not say; not as far as I know.

1860. So far as you know, there has been no communication with them?—No. I asked the question whether it could not be applied to a certain district, and I was told it had been tried in Kensington and Croydon. I believe I got that from one of the officials of the company. I think I may state so much.

1861. So far as you know, the Chamber of Commerce has never impressed itself upon the National Telephone Company?—Nothing has been done until this meeting, or the number of meetings, which drew up these resolutions.

1862. Would not you say, to one understanding this sort of thing, that the area of the County of London was more profitable without the fringe of country round it for the telephone?—I should not like to give an opinion.

1863. Would not you sooner have money invested in a telephone exchange in the County of London than in the country around?—No doubt a small company for the fringe would pay better than one for all the telephone exchanges in London.

1864. If a telephone exchange covered the County of London and the fringe round it, do not you think the most profitable area would be that nearest the centre?—That is another question.

1865. I am afraid I put my question wrongly. I want to know which would be the most profitable area?—Where there is the most work.

1866. And that is in the centre?—In the centre.

1867. The centre being the most profitable, you would object to the County Council of London taking the profitable area (the centre) and leaving the fringe; I mean, your resolution No. 6 would object to that?—Certainly; but we should not express an opinion as to the County Council. What we say is that a company, or whoever takes it, should be bound to supply the unprofitable area as well as the profitable.

1868. I will put it in this way: You say any company?—If they apply for that area.

Mr. *Grant Lawson*—continued.

1869. If they applied to control the interior portion they should not leave the rest to somebody else?—That must rest with the Postmaster General.

1870. Your resolution would object to the Postmaster General granting that power?—No, what we contemplated was that the Postmaster General might give competition in small areas of London.

1871. Just one other point; you have mentioned the Light Railways Bill which was introduced last night?—Yes.

1872. By that Bill I daresay you have noticed that the county councils are to give power to make the light railway?—Certainly; but first of all there must be an application from the promoters to the district, and from the district to the County Council, and then from the County Council to the Board of Trade.

1873. Quite so; but the County Council is to be the local authority to whom the appeal finally, as far as the locality is concerned, is to be made?—Yes.

1874. If powers were given of that sort the London County Council would apply for themselves for this power?—Then it would rest with the Postmaster General and the Board of Trade. You see, it would go to the Board of Trade. The reason for this application is to do away with the expense of an Act of Parliament for smaller undertakings. As I say, I guarded myself in reference to London; I wanted to guard myself as to that. The London area, we consider, would want treating differently to outside districts; but what we wanted to do was this: Supposing some country district wanted to put up a telephone for a few farms, we did not want to put them to the expense of an Act of Parliament; and if by the same means as that which was applicable to the light railways they could get what was like a Provisional Order, they could carry that out.

1875. When you say that London wants treating differently to outside districts you refer, I suppose, to country districts, you do not mean the London district?—I mean the 630 square miles which is comprised in the present license.

1876. You would like that to remain?—What we consider is that that would want differently treating to the other; and it would be an open question whether it would pay the Government to buy it out-and-out, if they could arrange terms.

Mr. *Snape*.

1877. What precautions do you suggest the Postmaster General should take to prevent unprofitable areas being neglected?—I should not like to offer an opinion about that. You see as far as we understand, if a company came with a scheme before the Postmaster General, they would say where they were going to lay their lines, and he and his department would know better than anybody else what was the unprofitable area of that district.

1878. Then the general principle would have to be applied to the whole country; you could not make exceptional treatment of one district as compared with another in order to effect your object?—Certainly, that is what we consider.

Mr. *Snape*—continued.

1879. We have had it in evidence from the London County Council, that supposing it established a competing system of its own (it would have to come under that general principle) they could supply telephonic communication to 95 per cent. of the present subscribers to the National Telephone Company at 10*l.* a year; but presumbly they would have to largely increase that charge, possibly to the rate of 20*l.*, which is now charged by the National Telephone Company, if they supplied the other 5 per cent., is it your suggestion that they should be compelled to increase the charge to the whole of London in order to supply the unprofitable area which is constituted (so we understood) of about 5 per cent. of the district?—I do not quite follow you. My suggestion is that if a company comes to the Postmaster General and says, "we want powers over this district," he would apply the same thing, that is to say he would take good care that they agreed to supply the unprofitable district.

1880. I prefer to keep the concrete instance, because we have it before us just now?—I should not like to give an opinion then.

1881. The London County Council tell us they have estimates showing that they could supply at the rate of 10*l.* the telephonic service, within a radius which would comprise, say, 95 per cent. of the present subscribers to the National Telephone Company presumably (we had not the actual figures given to us); but that if they took in the other 5 per cent., which would be the unprofitable area, they would have to very largely increase the charge of 10*l.*: Is it your suggestion that the Postmaster Genaral should take precaution by insisting on the unprofitable area being supplied, even though it entailed a very large extra cost on the 95 per cent. who were within the profitable area; is that clear?—It is clear, but I would not like to give an opinion upon it.

1882. But you do give an opinion?—I must ask you to adopt my way of putting it.

1883. The whole thing hinges upon the precautions; but you cannot tell us what precautions you suggest?—Personally, I should be inclined to say in reply to your question, yes. You must make them supply the unprofitable area.

1884. You would make the 95 per cent. pay for the other five?—Yes; the same as with electric lighting if they go into certain districts that do not pay them.

1885. Have you any figures with reference to the continental trunk line to Paris?—Yes. We were going to put them in, but we thought it advisable not to do so, because the circumstances are so different that you can hardly compare the one with the other without having all the details; we therefore preferred their being put in by experts.

1886. Do you make this No. 7 recommendation about the trunk line tariffs?—We strike that out altogether, please.

1887. It is here?—No. 7 is struck out altogether.

1888. It is in the copy I have?—Yes, I am sorry for it.

1889. I suppose I must not ask you any question

Mr. *Snape*—continued.

question about it, but I may ask whether it is your opinion that the trunk line charges proposed are excessive?—I should not like to give an opinion.

Mr. *Solicitor General.*

1890. You have spoken of the varying rates for limited services. Do you contemplate in that recommendation in the same area different grades (if I may use the expression) of subscribers, namely, one man who is able to telephone to the distance of one mile, another man who is able to telephone to the distance of two miles?—That is what was contemplated.

1891. For instance, suppose we take a suburb like Balham. You contemplate one set of subscribers who are only able to telephone as far as the local butcher?—Yes.

1892. And another set who are able to telephone further?—That is what was contemplated on account of the cost. We thought it could be done so much more cheaply not having an exchange; not having to pay of course for all the other wires it would pay all the small people to put it in.

1893. I quite follow that. Did you consider at all the inconvenience which would arise in the administration of service under those conditions?—I suppose it was present to the mind of everybody.

1894. But it was present to your mind and you did not discuss it?—We did not discuss it.

1895. But you, of course, see that there would be very serious inconveniences?—Certainly.

1896. There is another point I want to ask you about, that is, your third resolution, in which you deal with competition: you thoroughly appreciate, I see there, the difficulty that would arise in case of competition as to inter-communication between different systems?—Yes.

1897. That was, of course, a difficulty that at once presented itself to you?—We have had it discussed over and over again.

1898. And you have never been able to solve it, I suppose?—I do not know, there are such varying elements on the committee.

1899. If you have solved it I should like to know how you have done it. Have you done it yourself? Have you solved the difficulty?—The difficulty of what, sir?

1900. The difficulty which you allude to here in your third resolution, the difficulty of "inter-communication between different systems covering the same area." Have you solved the difficulty, because if you have I shall ask you how you have done it?—No.

1901. You have not?—No.

1902. Do you know anybody who has?—Well, I do not quite follow you, if you will excuse me.

1903. I will read it to you again: "That properly controlled competition should be encouraged, providing that inter-communication between different systems covering the same area can be satisfactorily arranged." Can you satisfactorily arrange this?—It is that inter-communication can be arranged in case you want it?

1904. Quite so?—You do that, of course, in the same way as the telephone company does it now, by inter-communication.

Mr. *Solicitor General*—continued.

1905. Do not you see that by competition those difficulties would increase; you say so yourself in the resolution?—Certainly they would be increased, but they would be under the regulation of the Postmaster General.

1906. The difficulties would increase in accordance with the increase of competition?—Certainly.

1907. Have you considered this question with a view to solving it?—No, I do not think I have.

*Chairman.*

1908. There is a resolution here referring to unprofitable areas?—Yes.

1909. "That in granting licenses precautions should be taken to avoid the neglect of telephone service in relatively unprofitable areas"?—Yes.

1910. Are you aware of applications having been made to the National Telephone Company to provide telephones, and those applications being refused in consequence of the area not being profitable?—No, I cannot say I have.

1911. You have no knowledge of that?—No. It was only in reference to any new schemes that we put this in.

1912. Not with reference to the existing system?—We did not contemplate that it was to apply to the existing system. It was put in in case any new company was started and they came to you for a license. We considered that you, as the guardian of the public, should see that the unprofitable areas were not left entirely out in the cold.

1913. Would not that result in any new company that received a license from the Postmaster General being very seriously handicapped in its competition with the National Telephone Company?—Not more so than the National Telephone Company is handicapped, because they must have unprofitable areas.

1914. I understand you to suggest that any new company receiving a license should be compelled, in providing a service within a district, to give it to unprofitable areas as well as to profitable areas; would not that be a regulation which would handicap that company as against the National Telephone Company, which is under no such restriction?—Perhaps you do not quite follow me. What I mean is this: supposing you granted a license for a certain district it should not be in the power of the company, having got the license, to only put up the telephone in the profitable part and leave the unprofitable part without a supply.

1915. Quite so?—It would not be within your power (at least you would not have authority to make them do it, because they might decline to take the license) to say, "You must take this part too."

1916. Now the National Telephone Company has a license with no such obligation, has it not?—Yes.

1917. If the Postmaster General were to grant a license to a new company with an obligation of such an onerous kind as that, would not it put the company under a serious disability as compared with the National Telephone Company?—Yes; but

*Chairman*—continued.

but with a smaller capital, no doubt, the new company would be able to compete even with that disadvantage; at any rate it is for them to consider if they take that district.

1918. You think that the advantage they would derive from their smaller capital would compensate for the increased obligation put upon them?—That was our opinion.

*Chairman*—continued.

1919. I understand you do not come here with reference to the municipal question?—Not at all. We do not wish to give an opinion about it.

1920. You express no opinion as to whether the municipalities should be granted licenses or not?—No.

Major S. Flood-Page, called in; and Examined.

*Chairman.*

1921. You are a director of the Edison and Swan United Electric Light Company, Limited?—Yes.

1922. And a member of the Sub Special Committee of the London Chamber of Commerce?—Yes.

1923. And I understand you come to support the resolutions which have been passed by the committee with the approval of the council?—That is so, sir.

1924. Without going over the evidence which has been already given by Sir Edward Carbutt, would you desire to make any further statement in support of these resolutions?—Perhaps it might be interesting to the Committee if I were to state the origin of our committee, and how it is composed, because it is rather a peculiar committee.

1925. I think we have had that?—Then I would say this, sir, that the first resolution that we have here would govern the whole of the others if acted upon, and that, with the exception of the second, the other resolutions are alternative to the first. I will state the view as I understand it, and I do my utmost to represent the view of the committee. These resolutions, sir, are matters of many hours thrashing out, and may be considered to be very much resolutions of compromise; we had very varying views.

1926. Do I understand that there was a good deal of divergence of opinion among the members of the council and the committee?—Of the committee; not the members of the council, but of the committee. There were very divergent views and *this* is the result of a great deal of discussion that was going on for very many hours.

1927. May we take it that that applies to each of these resolutions?—I think with the exception of the last, on which Sir Edward Carbutt has said that we are not going to give any evidence, and the fourth, I think there was very little difference of opinion on the fourth, and there was no difference of opinion on the seventh; but we are not come to give any evidence on the seventh, sir. As to the others, they were all matter of hard thrashing out to arrive at these conclusions.

1928. Sir Edward Carbutt has given us generally the views of the committee with reference to these resolutions; perhaps you will supplement that evidence shortly in any particular point?—If you will take the first, sir, I think the governing principle that we feel is that everything should be done by the State who own this monopoly; that the telephone has

*Chairman*—continued.

developed most enormously in the last 16 years, quite in proportion to any other branch of electrical work in this country; in point of fact, if we compare the progress the telephone has made in this country and other countries, and then compare the progress which electric traction has made, the telephone is far ahead of electric traction. The same may be said of electric lighting. We are very much behind other countries in our application of electricity; we are behind, not only as compared with America, but as compared with very many parts of Europe; and we think, as a commercial community, that the telephone during the next 16 years (I only take that period because it happens to be the period of the agreement, sir) will increase immensely; and we think the commercial community demands an increase of telephone service. I should say that in the "commercial community" I should include trading, small traders, all traders; and our view was that if that could be better secured by the State doing the work, then, as commercial men, we should approve of the State acquiring the telephones. The second resolution I will not say anything at all about, sir. The third was a matter of very much controversy, and it seems to me to come to this: The country owns this monopoly; the Post Office represents the country in that monopoly, and it is due to the commercial community that before competition is approved, there should be a due and adequate inquiry, as our view of the justification of competition is that the service can be better and more economically done. If it cannot be done better or more economically, then I should think we should not be in favour of competition. We make that the governing commercial principle.

1929. Then I understand the committee, and with the committee the council, have not expressed a decided view in favour of competition, but their approval of competition would be subject to those two considerations?—That was a matter of great controversy. This resolution was worded over and over again, and altered, and that is the resolution, sir, as you have expressed it. We think that if the Post Office authorities come to the conclusion after due and adequate inquiry, whether local or otherwise, that the public can be better and more economically served by a properly controlled competition that shall guarantee proper and satisfactory intercommunication, then, sir, as I understand, we entirely should approve of such control of competition. If it cannot be obtained we leave it where

*Chairman*—continued.

where it is, as far as I understand, the view of the Committee.

1930. And I understand the Committee are so complimentary to the Post Office that they are willing to leave the decision of that question to the judgment of the Department?—I would venture to say, specially speaking to you, sir, it was not so much this as that you are the representatives of the country. If it had been the Board of Trade, with great deference, I think we should have said to the Board of Trade (it is a public Department and represents the entire country), here is a body which, rightly or wrongly, has got the monopoly and the experience of what ought to be made the handmaid of commerce and trade of the most important character, which already is, and ought to be very much more so. Then, I presume, it would hardly be a matter of conflict that if there is going to be competition it is a matter of very great importance that standard regulations for the guidance of local authorities should be drawn, so that, at any rate, having competition, you may have the same kind of system at work all over the country; and those standard regulations should be drawn by a Government Department for the guidance of local authorities; so that people coming into this business should not find that they had one set of conditions in one place and a varying set of conditions in another, but that there should be standard regulations for the guidance of all local authorities.

1931. Which would apply to new companies, and not to the existing National Company?—You see, sir, Clause 2 we have not discussed in any way. If you will have the kindness to look at our resolutions, you will see we state that it would be useless and a waste of time discussing that which Parliament generally and the Chancellor of the Exchequer representing each side have said was a binding agreement.

1932. You have assumed that it is an existing agreement?—We have said that it would be useless, and a waste of time, occupying ourselves at all with it.

1933. But you do not suggest, do you, that standard regulations should be arbitrarily imposed upon the National Telephone Company, which at present has a license which lasts 17 years, without any such limitations or restrictions?—No; we have nothing whatever to do with the National Telephone Company in our view. All these are alternative to the Government acquiring the telephones; and we are supposing that competition is possible under the terms of Resolution 3; and if competition is permitted, then that 4 should stand.

1934. Have you anything further to say in addition to what Sir Edward Carbutt has said?—As to No. 5 (this is done very much), it is a matter of notoriety that there are varying rates for limited services here in London now. The Telephone Company will probably give evidence, but I think there are something like ten or a dozen places in the neighbourhood of London now (Kensington and Croydon I know to be two) where you have a different rate for the local service as against the rate which enables you to speak all over London. We think if there is going to be a competition this may be very much

*Chairman*—continued.

extended. As a matter of fact, some people probably use the telephone a hundred times more than others who are on it, and we think it would be quite possible to have various rates for limited services.

1935. As I understand you, you suggest that if competition with the National Company is introduced the Company might extend the system to limited services?—That is a matter, I presume, for them; they are already doing it; it is a matter of common knowledge. I was going to say, that in nearly the whole of the south of London you can do that; I am not quite sure whether it extends to the whole. Then, sir, with reference to unprofitable areas, I am sorry not quite to agree with my friend Sir Edward Carbutt in the view he has put before you. We have already said we should not have interfered in this matter at all if it were not for the fact that we think the commercial and trading community requires a very much greater extension of the telephone system than it has now. The honourable Member, Mr. Ellis, referred to the Electric Lighting Act, and that was very much certainly in my mind when this was passed. There are a number of men connected with electric lighting who are on that Committee, and the thought in my mind (and I thought that it was understood by most of us) was this: supposing, for instance, that a license was granted to a municipality, it ought to be used, we think, for the benefit of all the ratepayers, not only merely the larger commercial houses, but for everybody in their town.

1936. Everybody who is willing to pay the amount?—We were looking further than even "willing to pay the amount." If I remember right, when the telegraphs were originally acquired, one of the inducements held out to the country was that the companies had neglected unprofitable areas, but that when the Government took them up everyone would be able to telegraph wherever they lived. As a matter of fact, we know that guarantees are required in many places. Now what it was wanted, as I understand, to guard against, was this: if a municipality or a county council, or a company, had an area given to them, such an area should be given to them that when they got it they should not be allowed to pick and choose and say, "We will give to this part of the town a good telephonic service, and will not give any to the other." Whether it is to be done, instead of by subscription, sir, by a large accession of call stations, as in Switzerland, Belgium, and many other places, I do not know; but what we felt (and to my mind clearly) when we were discussing it was that there were two questions, the one with reference to county districts. We think that in any future license granted the districts should be so carved out, if they are carved out, that everybody in that district should have the best telephonic accommodation that could be given.

1937. I understand you mean that in the area for which the license is granted there should be a uniform system of telephonic service supplied to every applicant at a uniform price?—Not quite that, sir. I do not see how it would work to put them on the same telephonic facilities;

*Chairman*—continued.

but whether it would be done by a call station near to them, or in some other way, just as everybody can send a halfpenny postcard or a penny letter, so everyone who pays part of the rate in any place, whether under a county council or a town, should have the opportunity of using that for which the rate is paid; but if it were confined to the absolutely wealthier commercial class there would be a large number of people who would not get the benefit of it. At present it may be more or less of a luxury; it is becoming rapidly a commercial necessity. A great distinction has been drawn, I notice, between gas and water and the supply of telephones. For the moment it is so, but in the future we contemplate that the use of the telephone will be as widely spread, and come to be regarded as as great a necessity, as gas; I will not say water; and we understood in making these arrangements it was desirable that it should not be that a certain number of people who are called upon to pay part of the rate, or part of the risk (whatever it was), should be excluded, but that facilities should be given to the poorer portion of the population, and to the agricultural portion of the population.

1938. Facilities given, not in the form of a telephone in each man's own house, but that they should have a call station within their reach?—Of course a telephone in our own houses is to us all a certain comfort and a certain nuisance. I am not sure whether I would not rather have a telephone next door to me, that I could always go to, than in my own house. "The same facility"; does not that mean to us all the same facility for being able to use that which we are called upon to pay for partly in the rates.

1939. The facility of that No. 3 Resolution you allude to, do you not?—Our suggestion is, and I agree with it, that when the license is granted it should not be allowed to drop. It does not come in here, and I have no authority for the Chamber of Commerce to say a word upon that; but I am quite sure, if I had thought of it at the time, I should have asked to do so. No one should be able to take a license and drop it. We have suffered in that way in electric lighting very much from a number of municipalities and others who took electric-lighting Provisional Orders, and then did not do anything for years. There should come in the future an obligation on anyone who takes a license to carry that license out. The honourable Member referred to electric lighting. In Table "A" you had a certain time; in Table "B" you had another certain time. I would compel, in the case of a future license, anybody who took out the license to carry out the work.

Mr. *Snape.*

1940. In the recommendation, No. 3, you speak of inter-communication, if competition is allowed, between the systems; do you mean between the new systems to which licenses should be granted, and those only?—Wherever the system covered the same area.

1941. Not only where new licenses might be granted, but existing licenses?—I do not think that question was absolutely considered, except so far that we considered we had nothing whatever to do with the existing agreement. We did not discuss anything that would be an interference with the National Telephone Company. You will see by Clause 2, that we were excluded from so doing; therefore I should say it would apply to new licenses.

1942. If you did not discuss it, I suppose you did not form any views as to how that inter-communication could be arranged?—Indeed, no, sir. Our object was to bring before the Committee, resolutions which could stand being fired at and examined into. We, in a body like ours, are not engineers, and we are not competent to say how that can be done; a more difficult question probably has hardly ever been set for engineers to solve, and we have had no experience of that and have not discussed it.

1943. What did you mean by "inter-communication"?—Practically very nearly the same facilities, being able to get at the trunk wires, being able to communicate.

1944. That is not an engineering question?—Being able to communicate one with another. If you are in one area, sir, and I am in another, and we pay to different places, I think there should be inter-communication, so that if I wished to speak to you I could.

1945. You have no suggestion to make as to how that can be accomplished?—No, none.

1946. It is not an engineering question; there is no engineering difficulty about it; it is a question of competing companies allowing each other to use their systems?—In my view, sir, being somewhat familiar with large exchanges, though not in England, I venture to think there is a good deal of engineering question involved.

1947. The purpose of my question was not any engineering difficulty, but the question of difficulties between two competing companies allowing each other to use their lines?—I think if you look at the end of our resolution you will see that we have hardly had the same view as yourself, because we say that this competition should be granted after due and adequate inquiry, that the public can be better and more economically served. In that surely the engineering question comes very materially in in our resolution, sir.

Sir *Charles Cameron.*

1948. You are well up in telephony, are you not?—No, sir; I have never had anything to do with it.

1949. You have mentioned these exchanges of Croydon and Kensington?—Yes.

1950. And you said there were seven or eight more?—So I am informed.

1951. You cannot give us any information beyond that?—No, I said I thought the telephone company would give evidence upon that; but it is a matter of common notoriety, I think I said.

Mr. H. MONTAGUE BATES, called in; and Examined.

*Chairman.*

1952. I BELIEVE you are the principal clerk to the Commissioners of Sewers of the City of London?—I am.

1953. How many years have you had experience of telephones?—Eleven years.

1954. In your capacity as principal clerk?—No, in my capacity in the office. I have only been principal clerk for the last month. I have been in the office for 20 years previously.

1955. And during eleven of those years you have had experience of the working of the telephones?—I have.

1956. Will you state to what extent?—Those telephones with which I have had experience are, one on the Exchange and three private wires to our depôts.

1957. Have you used them personally?—Yes.

1958. And what opinion do you wish to express with regard to the efficiency of the system?—From my experience I think the service is very inadequate. In the first place, when you wish to get into communication with a subscriber there is very often a great deal of delay. Then, again, in the second place, after waiting patiently for some time you are told that the line is engaged and that you must ring up again at some future time. My opinion is that that obligation to ring up again should rest with the exchange, as you very often do ring up again and then find the line still blocked. Besides this much annoyance is caused by being repeatedly rung up by mistake, by the line, I presume, getting crossed in some way; and then by errors in being put on to people that you do not wish to speak to.

1959. Is this evidence derived from your own experience?—Yes, this is evidence derived from my own experience, as representing the Commissioners of Sewers as telephone users through me.

1960. Have you complained to the company?—Yes, I have complained personally very often to the Exchange; but when the complaint gets a little strong, they being masters of the situation, you are cut off; you very seldom can finish the complaint; but of course one has always felt that it is not entirely the fault of the people at the Exchange; the opinion generally is that the system is fundamentally wrong and that the defects are caused to a great extent by reasons over which the Exchange people have no control.

1961. What are those reasons?—The reasons are these, that you cannot hear distinctly; sometimes you cannot hear at all; at other times there is a buzzing sound which drowns the voice of the person you are speaking to, and you are constantly cut off in the middle of a conversation.

1962. I understood you to say there were reasons over which the Exchange had no control?—I believe it is more the system than anything else that is at fault.

1963. You mean the single wire system?—Yes, the single wire system.

1964. Have you anything else to state with regard to the general question of efficiency?—As regards efficiency, no. I think I have detailed generally the complaints, and those complaints which I have made frequently are the experience of every acquaintance of mine who has used the telephone; and I could produce here, if the Committee would allow it, the evidence of a great number of people to that effect.

*Chairman*—continued.

1965. Then do you wish to make any further statement?—I should like to draw your attention as regards efficiency to Mr. Forbes' evidence, the chairman of the National Telephone Company.

1966. I think we have heard that already; we have had it before us to-day?—I think that shows that the single wire system is inefficient altogether; and then I should like to draw your attention to the Treasury Minute of 1892.

1967. That we have before us?—That seems to me to be evidence that the Government thought the single wire system was quite inefficient, and that they would not consent to any other system unless it was the twin wire or metallic circuit.

1968. Then you were going to say something about the cost?—I have compared the cost in London with the charges in other cities and towns, and it seems to me to be very high indeed.

1969. I think we have heard a great deal of evidence upon that point?—I am entirely in your hands.

1970. I think any repetition of figures we need not have?—At all events, I may say that the Commissioners of Sewers still have before them an application for their consent to a proposal made in 1893 to apply to the Postmaster General for a licence to establish a first-class double-wire telephone service at a maximum charge of 8*l.* per user per annum, and also to show the view the Commission had with regard to the price the telephone should be supplied at, they resolved to consent to certain tubes which had been laid by the City of London Electric Lighting Company being used for telephonic purposes on a guarantee being given that telephones with double wires, and all the latest improvements, will be supplied to the citizens at a cost not exceeding 8*l.* per annum. I may say that up to the present time the guarantee has not been forthcoming; but it shows what the feeling of the Commissioners of Sewers was as to price.

1971. May I ask who were the applicants for that?—The proposal for a double-wire system at 8*l.* per annum came from Mr. H. S. Foster, a Member of Parliament.

1972. You have heard nothing more of that proposal?—No, nothing since. It rests with the Commission now. That offer has been made; they have not accepted the offer.

1973. The Commission have made a certain proposal?—No, they have made no further proposal. The whole matter has been in abeyance pending negotiation with the City of London Electric Lighting Company for the use of the tubes, and that is still before them; therefore no further communication was required from Mr. Forster; he is waiting for some communication from the Commission. On the 19th of last March the

*Chairman*—continued.

Commissioners empowered the Streets Committee to give evidence on behalf of the Commission to this Committee, and subsequently, on the 26th March, the Streets Committee passed the following resolution: "That, in the opinion of this committee, the provision now made for the telephone service in the City of London is inadequate, and that telephones should be supplied at a rental not exceeding 10*l.* per annum." They came to that decision about the price by having compared the charges made in different cities and towns in the United Kingdom, and also charges for telephones in foreign countries, and they thought that if the telephones could be supplied at a rental of 10*l.* it would be a fair price.

1974. But it was not based upon any actual investigation or expert evidence?—None whatever; simply on statistics from other places and countries.

Sir *Charles Cameron.*

1975. Are you in favour of taking powers yourselves to work telephones?—The Commission have not expressed any opinion about that. Their only interest is to get efficient telephones as cheaply as possible for the people they represent.

1976. Have they expressed any opinion as to competition?—No, no opinion whatever.

1977. Then, what steps do they propose to take to get these telephones?—At the present time there are a series of tubes laid by the City of London Electric Lighting Company, which cannot be used without the consent of the Commissioners, who think that is a power they ought to retain, because they should get some *quid pro quo* for giving their consent, and they hope by that means to keep the price of telephones at a moderate amount.

1978. Then they contemplate that the National Telephone Company will take the use of these tubes, do they?—They do not know. We are negotiating with the City of London Electric Lighting Company; they are the people with whom we are negotiating.

1979. And do you know how the City of London Electric Lighting Company came to have those tubes?—Yes; they laid them while they were laying their tubes for electric lighting purposes, unknown to the Commissioners.

1980. You do not know what induced them to do that, do you?—Yes; I presume they ascertained by some means what was going to take place with regard to the future of telephones, and in anticipation of permission being granted by the Commissioners they entered into an agreement for leasing these tubes to the New Telephone Company. They laid them in anticipation of that agreement.

1981. Agreement with the National Telephone Company?—Yes; a lease to the New Telephone Company, and then to the National Telephone Company. They leased them to the New Telephone Company, who leased them to the National Telephone Company.

1982. They leased them to the New Telephone Company?—Yes.

1983. Would you require Parliamentary powers to grant permission for the use of these tubes, or have you the power?—Under the Telegraph Act of 1892, the local authority has power to grant to any company who has tubes for electric-lighting purposes power to use some of them for telephonic purposes.

Sir *Charles Cameron*—continued.

1984. Supposing that the New Telephone Company had not been bought up, was still in existence, and was fulfilling the terms with which it started, and supplying a good and very cheap telephonic service to London, and it gave you a *quid pro quo*, I suppose you would at once allow it to use these tubes, subject to the contract it had made with the electric-lighting company?—I cannot say that officially; I cannot say what the Commissioners would do, but I should think they would do it.

1985. That is their policy?—That is their idea; their only idea is to obtain a cheap and efficient service of telephones.

1986. That being their policy, we are talking of a hypothetical case that cannot arise; but upon the hypothetical case, if it had not been for the absorption, or the liquidation, of the new Telephone Company these tubes might have been utilised for the purpose of providing a good underground telephone service?—Not without the consent of the Commissioners.

1987. With the consent of the Commissioners, of course. We recognise at once that the local authority has the veto in all cases; but in pursuance of the policy you describe of the Commissioners of Sewers that is what would happen?—Many questions are involved before that consent could have been given; because, in the first place, the tubes were laid surreptitiously, without the knowledge of the Commissioners at all.

1988. Assuming all that?—I cannot say anything as to what the Commission would do, but I should say, hypothetically, that they would consent.

1989. You have told us the policy of the Commissioners?—Yes.

1990. In pursuance of that policy that is what would probably happen?—I should think so.

*Chairman.*

1991. You said the Commissioners could grant the use of these tubes for telephone wires; that is subject to the sanction of the Board of Trade, is it not, and also of the Postmaster General?—Certainly.

1992. And, of course, you express no opinion as to whether these tubes are laid in a suitable direction for telephone purposes?—No, none; none whatever.

1993. Or whether the tubes themselves are suitable?—None; not the slightest; that has never been before the Commissioners. The only question has been as to the terms on which they would allow the City of London Electric Lighting Company to let the Telephone Company use them.

Sir *Charles Cameron.*

1994. You say the only question is the terms upon which they would allow the Electric Lighting Company to use them. Have you got the terms?—The offer of the City of London Electric Lighting Company of the 22nd June 1894 was to pay to the Commissioners "10 per cent.

Sir *Charles Cameron*—continued.

cent. of any annual rental, so long as such may be received, for the use of any tubes for telephonic purposes, up to a sum of 10,000*l.* per annum, and 20 per cent. on any rental in excess of 10,000*l.*, provided the minimum amount to be received by the Commissioners is 1,000*l.* per annum."

1995. Was that a resolution by the Commissioners?—No; I will just refer to the exact proceedings. On the 25th of July 1893, the Commissioners "resolved to consent to certain tubes laid by the City of London Electric Lighting Company being used for telephonic purposes, on a guarantee being given that telephones with double wires and all the latest improvements will be supplied to the citizens at a cost not exceeding 8*l.* per annum." But this guarantee was not forthcoming. The proposed annual money payment emanated from the City of London Electric Lighting Company.

Sir *Charles Cameron*—continued.

Captain *Bagot.*

1996. Can you say in what year those tubes were laid by the Electric Lighting Company?—They were laid in 1891 and 1892, I think.

*Tuesday, 30th April* 1895.

MEMBERS PRESENT:

Mr. Benn.
Mr. John Ellis.
Sir James Fergusson.
Sir John Gorst.
Mr. Grant Lawson.
Mr. Arnold Morley.
Mr. Snape.
Mr. Solicitor General.

THE RIGHT HONOURABLE ARNOLD MORLEY, IN THE CHAIR.

Mr. GEORGE BERRIDGE, called in; and Examined.

*Chairman.*

1997. YOU are the Chairman of the Street Committee of the Commissioners of Sewers of the City of London?—I am.

1998. And I believe you are in business in London?—Yes.

1999. Have you had considerable experience of the telephone?—Upwards of 12 years I have had it in my premises.

2000. From the National Telephone Company?—From the National Telephone Company; yes.

2001. What has been the result of your experience with regard to the efficiency of the service?—Well, I think it is very inefficient. If we require to get on for any special purpose there is generally some delay; and very frequently when we do get on to the exchange we are told that the line is blocked. Notably within the last few days that has happened. Twice within 10 minutes on the same line I was told that it was engaged. Then very frequently we can hear other people speaking more clearly sometimes than the person we are supposed to be in communication with. Then we are frequently rung up when we are not required, for some reason or other. I suppose the lines are in contact, or something.

2002. When you say within the last few days, what do you mean?—Within the last few days we wished to get through to the same people for a special purpose, and within 10 minutes we rung up twice, and each time we were told the line was engaged; so we ultimately had to send a messenger.

2003. Would that mean more than that the person with whom you wished to communicate was engaged with somebody else?—No, that is not so; they were not engaged with somebody else; the line was engaged. I suppose they have only one line or two lines, from a particular exchange to the other exchange. It was only from Thames-street to Shoe-lane that we wished to "get on."

2004. How far is that in distance?—I suppose about three-quarters of a mile.

2005. Did you learn from the company what the difficulty was in getting what we call a junction wire?—No; we were merely told that the line was engaged.

*Chairman*—continued.

2006. Their line?—We were told that the line was engaged.

2007. Has that been your general experience?—Well, it very frequently happens, very frequently; and yesterday only, twice within an hour, we were rung up and not required. Whether that was due to the mistake of the operator, or whether the line was in contact, I cannot say.

2008. You have one telephone, have you?—One.

2009. What do you pay for that?—I paid 20*l.* a year until within the last year; then I got it on an agreement for five years at 17*l.* a year. I use it for business purposes only. If I had required it for my private house I should have had to pay an extra 12*l.* for a private one.

2010. If you had an additional wire?—If I had an additional wire they would charge me 12*l.* If I had a private wire, so that I could communicate with my private house, they would want 12*l.* a year extra.

2011. That is to say, they would have charged you 17*l.* for your business telephone, and given you a house telephone for 12*l.*?—I do not know. I should think probably they would have made a slight reduction, 15 per cent.; but it used to be 20*l.* and 12*l.*, making 32*l.* Of course, they would not put you a telephone on for private purposes unless you had one for business purposes as well.

2012. They give you one on payment of 12*l.* on a five years' agreement?—No, it is 17*l.* on a five years' agreement, and I suppose it would be 12*l.*, less 15 per cent., if I wanted it for my private house.

2013. Well, 10*l.*, say?—Probably.

2014. I believe the private house telephone which the company provide is independent of the district in which that telephone is?—Oh, yes.

2015. Where is your own private house?—Sydenham.

2016. So that if you had had a telephone in your

*Chairman*—continued.

your private house you would have had it for the 12*l.*, less 15 per cent.?—I suppose so.

2017. Which would have enabled you to communicate from Sydenham to your office in the City?—Yes.

2018. And with all other subscribers in this large area, 630 square miles?—Yes; but we are bound to have the two, the business and the private as well.

2019. I do not think that is so, but the company, of course, will state their arrangement about it?—Well, I must say I have never been told that I might have a private telephone for my private house at 12*l.* alone; I have always been told that it must be in addition to the business one, so that we would have had to pay 32*l.*

2020. What is your notion of the charges?—I think they are most excessive; we are paying the same price now as we did 12 years ago; we pay at the same rate now as we did 12 years ago, in spite of all the improvements; and the New Telephone Company, you know, agreed to supply for 13*l.* per year as against the National Telephone Company's 20*l.*

2021. They did not actually supply, did they?—No, because the National Telephone Company, in their wisdom, bought them up, as they have done generally with any opponents; no fair competition has ever gone on.

2022. I am told that the 10*l.* for the private house telephone is quite independent of the business telephone?—Well, I think that is something new. I never intended having it so. I did not obtain the particulars; but I know I was told 12 or 16 years ago what I am stating now.

2023. You are speaking of some 12 or 16 years ago: are you aware that the greater the number of subscribers the greater the cost to the company; that the company are therefore entitled to charge a higher rate?—I think the greater the number the less should be the cost. When a man increases his business he expects to get increased profit, and does so naturally.

2024. You have no experience of the technical difficulties of working the telephone, I suppose?—Oh, no; I am not an engineer.

2025. We shall hear all about that matter from the company themselves. You have spoken as a private telephone subscriber; have you any evidence to give on behalf of the Commissioners of Sewers?—No; only that the Commissioners of Sewers are very anxious to have a very good service, and that the user should have it at a reasonable rate. A resolution was passed in our committee to the effect that they thought 10*l.* would be a reasonable rate. That was in connection with allowing them to use the tubes surreptitiously laid by the Electric Lighting Company, which were then leased to the New Telephone Company, and subsequently transferred to the National.

2026. You are not aware yourself, I suppose, whether these tubes are suitable for telephone purposes?—That I cannot say. I suppose they have been laid with that idea by experts.

2027. Or whether the positions of the tubes and the direction of the tubes are suitable for exchange purposes?—That is not within my knowledge one way or the other.

*Chairman*—continued.

2028. Are the Commissioners of Sewers contemplating having a telephone system of their own, and asking for a licence?—I believe not; but they certainly think that they ought to have the right to ask for one, and that every municipality should have that right, for this reason: as they are the authorities who can give permission for the opening of the streets to lay the tubes, it is the only means they have of checking the extreme cost the company might charge; because they may, for that reason, make terms with them before allowing them to open the streets for the purpose of laying down the tubes.

2029. You have that power now?—We have that power now; and we think it absolutely essential that the power should be retained, and that Parliament should not take it away; we think that all municipalities should have that power.

2030. That is to say, that the veto of the local authority over the streets should be maintained to the full extent?—Undoubtedly.

2031. But you say you think they should have the right to have a licence if they ask for one?—My own personal opinion is that I would prefer the Government to take over the whole thing; still, I think municipalities should have the right under the circumstances.

2032. Would you contemplate with satisfaction the Commissioners of Sewers, that is to say, the Corporation of London, having a telephone licence for carrying on telephone business in the City, and the London County Council having a telephone licence for carrying on business outside the City?—In their own particular districts I see no reason why not.

2033. You do not think there would be difficulty and danger from competing systems in areas such as the City and outside the City of London?—No, because I suppose some arrangement would be come to, like arrangements are come to between great railway companies when they give a right of way over their lines. Of course, I am not an expert in that sort of thing; it is only a personal opinion.

2034. Have you any further statement to make with regard to these tubes which were laid by the Electric Lighting Company?—Communication is going on between the Commissioners of Sewers and the Electric Lighting Company as to the use of these tubes, and we are negotiating as to the terms upon which they should be used. The Commissioners think that some benefit should accrue to the users, and probably also to the taxpayer.

2035. But no arrangement has been come to with regard to them?—Not at present; negotiations are still pending.

2036. Is that with Mr. Foster?—No. Mr. Foster offered, if we could get the Post Office to give him a licence, to introduce a company which would give the users of the telephone a good service for 8*l.* per annum. Of course no decision could be come to in that respect while these other matters were pending.

Sir *James Fergusson.*

2037. I think the Commissioners have circulated a statement, have they not, of a scheme by which

Sir *James Fergusson*—continued.

which it was expected to give the service for a subscription fixed at 8*l.*; is not that so?—Oh, no.

2038. They have not circulated such a statement?—No, they have not, I am sure. I know Mr. Foster wrote a letter offering a scheme, and no decision has been come to upon that point.

*Chairman.*

2039. The Commissioners of Sewers are the road authority in the City, are they not?—They are.

2040. And have the control of the streets?—Yes, they have.

Sir *James Fergusson.*

2041. Have you any personal experience of a superior system of telephoning?—None at all.

2042. May it not be that an interruption in the line, say for 10 minutes, is incidental to any system?—Certainly; but in the case I am speaking of there was no interruption; they distinctly said the line was engaged, was in use practically.

2043. We probably mean the same thing?—Yes.

2044. It was occupied?—Occupied by some others, I suppose.

2045–8. Do not you think that would be incidental to any possible system in a crowded city?—It may be. Of course I have had experience of great interruptions; for instance, a few years ago, when we were without a telephone for a month or two in consequence of a snowstorm.

2049. That would be incidental to any overhead system?—Undoubtedly, yes.

Mr. *Snape.*

2050. Mr. Montague Bates told us that a guarantee had been given by the company that proposed to construct a system at a charge of 8*l.* per user per annum. You would have made arrangements with that company for that purpose, if that guarantee had been given; you would have given facilities?—No; Mr. Foster made that offer, but as we were then negotiating with the other company nothing was done; a mere formal reply was sent to him upon the subject.

2051. Mr. Bates says in his evidence it was because the guarantee was not given that you did not go on?—I think not. I took a great interest in the telephone question at the time, and I think if that had been the cause I should have remembered it. I think that must have been a little misunderstanding. Mr. Bates could not have quite understood the question. No guarantee was given because it was not asked for. Mr. Foster offered to start a company that would guarantee to telephone users a telephone service at 8*l.* per annum; but no guarantee was asked for because nothing further was done in the matter.

2052. Had the Commissioners reason to suppose the service could be supplied at 8*l.* per annum?—I should think there is no doubt about it, with a company starting on a fair basis, not having the capital watered as this has been.

Mr. *Benn.*

2053. You have told us as to your experience with regard to the telephone?—Yes.

2054. You have a good many friends in the City who also use the telephone?—Yes; their experience is much the same. On Friday Mr. Deputy Pym was here to give evidence; he is a member of the Court of Common Council and deputy alderman of the Ward of Queenhithe. He was so disgusted with the way it was used that he threw it up altogether, and requested the company to remove it, and then they made an unconditional offer to let him have it for 17*l.* instead of 20*l.* a year; and he considered that his business suffered very much from the way it was treated in getting imperfect messages.

2055. Can you tell the Committee anything about the circumstances of the New Telephone Company in this respect; I believe that within a very short time they secured a considerable number of subscribers?—They did; I was one among the number.

2056. You were one?—Yes.

2057. Then you were prepared to put up with the inconvenience of a rival system?—Yes; I felt quite confident that they would soon have the bulk of the subscribers; people would not pay 20*l.* a year for what they could get for 13*l.*

2058. I think in addition to the reduction in price, the New Telephone Company offered you a better system: the double-wire system?—Yes.

2059. That was one of the conditions?—It was.

2060. Do you consider it a grievance that this better system, a better system and a lower price, was cleared out of the way by amalgamation?—I think it was a great disadvantage.

2061. You regard it as a grievance?—Yes, rather.

2062. You know probably the proportion of business in London which may be described as local business?—Yes.

2063. And the proportion which may be described as trunk-wire business?—Just so.

2064. Supposing the City to join hands with the County Council, as they have done in this matter, and a system was devised quite independently of the trunk-wire system for the convenience of the local demands of London, do you think the citizens would be quite prepared to put up with the inconvenience of having two systems in order to secure a good local service at a lower price and a double-wire system?—Yes, I think there is no doubt about it. Of my own business 90 per cent. at least is within the area of the City.

2065. Then I may take it from you that while you recognise the advantages of the extension of the trunk-wire service system, you think London should not suffer with regard to its local service?—Certainly.

2066. In this matter the City have joined hands with the County Council in order to bring about this inquiry, have they not?—Yes.

2067. Can

Mr. *John Ellis.*

2067. Can you give us the population of the area over which you are the street authority?—Do you mean the sleeping population or the daily population; because the daily population, that is to say, people who come in to work, would be, I suppose, somewhere over 300,000 people?

2068. I will take both; I am anxious for information?—The sleeping population is just over 20,000, I think; that is how we are represented in the House of Commons; I think it is a most scandalous thing.

2069. Can you give the figure of the day population?—That is over 300,000; for instance, at my own places we have a large number of people at work, and at night there is nothing there but the cat.

2070. Can you give us any idea of the subscribers for the use of the telephone out of that population?—No, I cannot tell you that; but I should say the great bulk of them have businesses in the City.

2071. I do not know whether you quite follow my question: can you give me the number of subscribers out of that day population of 300,000?—I cannot tell you the number, of course.

2072. That is what I want?—I cannot tell you the numbers.

2073. Your body, the Commissioners of Sewers, have not informed themselves as to how many subscribers there are within their area; that is my question?—I believe not.

2074. Have you that figure given to you now in the paper which has just been handed to you?—No; this is just merely correcting my statement about the numbers. About 30,000 is the number of the night population, and 378,000 the day.

2075. Then have your Commissioners taken any steps to ascertain approximately the number of complaints, say within a month or a week, of imperfections in the service?—Well, I do not see how they could get them; they could only do it by inquiry of the National Telephone Company; and I do not suppose they keep a black book, out of which they would inform us, would they?—Scarcely.

2076. You have not invited them to do so?—No; I could bring you up any quantity of my friends.

2077. I want to get at the facts?—In my own experience, of people I communicate with, I could certainly bring you up 20 witnesses who would say as I say.

2078. And you think your colleagues would be in a similar position, that each of them could produce another 20 persons?—Possibly.

2079. You think those persons who, if we were inclined to call them, would come into this Committee Room with complaints of the telephone in your area might be numbered by scores, if not hundreds?—Yes, certainly.

2080. That is from your own personal experience?—My own personal experience.

2081. Therefore, I presume, that it being a matter of notoriety, your body have not thought it necessary to take any formal evidence, or invite any formal complaint upon the subject?—That is so.

Mr. *John Ellis*—continued.

2082. Would you wish us to infer that the service is getting worse, that it is standing still, or that it is improving?—It is not improving; I should say it is standing still.

2083. Then these complaints have not had the effect of in any way remedying the imperfection?—No. I do not say that the people have lodged the complaints; for instance, one frequently gets a memorandum, "been trying to get through to you on the telephone."

2084. Still, as a matter of ordinary experience, you know: If one has complaints of a railway service, traders send on complaints to the company; I presume these complaints have found their way to the telephone company in the same way?—I think very frequently you are apt to complain through the telephones at the time, and then you find yourself very quickly cut off.

2085. Do not people sit down and write a letter, and say, "I am paying so much per annum, and do not get value received for it"?—I am afraid they do not; oh, no.

2086. Do you mean to say that they go on paying?—I have written letters myself, but only very occasionally.

2087. Are they willing in the City of London to go on paying so much per annum for an instrument that is so defective?—I do not say the instrument is useless (there is no question about its value), but I say it is not so perfect as it should be; I should be very sorry to be without it.

2088. It is good, but it might be better?—Undoubtedly.

2089. Then I want to get one other answer from you: are you in agreement with the last witness, Mr. Bates, in his reply to Questions 1975 and 1976, when he said, "The Commissioners have not expressed any opinion about" taking powers to work the telephones or about competition?—Yes, I am quite in accord with his evidence.

*Chairman.*

2090. You made a statement on your own behalf about competition; you said you would approve of a new system at a cheaper rate being sanctioned in London?—Yes.

2091. For the City especially?—Yes, for the City.

2092. Do not you think it would lead to difficulties if some of the merchants in the City were on the National Telephone Company's system and some on the new system?—I think difficulties are only things to be surmounted. I think men connected with that sort of thing would soon find their way out of any difficulty that might arise from it.

2093. Still, you think there would be difficulties arising from half the merchants being on one system and half on the other, and unable to communicate one with the other except by arrangement between the two systems?—I think in some cases you would find them become subscribers to both. My idea is that some arrangement should be made by which they might have way-leave.

2094. Two subscriptions would not lead to economy, or a cheaper service?—Certainly not; it is not economy that is always the case; it is

*Chairman*—continued.

speed; it is of the utmost importance sometimes that you get your answers immediately.

2095. If you wished to communicate with a correspondent on the other system would not that lead to delay rather than speed, if you had to go through another exchange?—I do not see why it should; it is a mere case of switching on, which cannot take long.

2096. But you have no technical knowledge of the subject?—Oh, no; my theories may be altogether wrong; I am only speaking of what I think would be best for the users of the telephone.

2097. Would the Commissioners of Sewers in the City of London, if a licence were granted to the London County Council, be willing to give the London County Council control over their streets in the City?—I should say decidedly not; for my own part, I should say decidedly not.

2098. Therefore, the licence to the London County Council for carrying on telephone business, so far as the City was concerned, would not do away with the difficulty of way-leaves?—I should say not; no. I should not be certainly a consenting party to giving the London County Council any control over the streets of the City of London, but I should be very willing to see the Post Office take it in hand themselves; I think that is very much the best way out of the difficulty.

2099. I may take it that the City would be opposed to the London County Council having a telephone system which would extend over the City, so far as the way-leave question was concerned?—I do not think so; I am only speaking personally; I have no right to speak in the name of the Corporation on such a thing as that, but I do not think they are at all inclined to play the part of the dog in the manger; way-leaves they would not object to, I do not suppose.

2100. You think they would be prepared to grant way-leaves, but not the right to open the streets?—I cannot say; that is a question which we have not gone into.

Sir *James Fergusson.*

2101. The Chairman has asked you about competing systems as regards user; but have you considered whether the introduction of competing systems into the area of the City would not be very inconvenient, either from the mixture of wires or the taking up of the streets?—Yes, there is no doubt it would be inconvenient at the first going off. I take it that now new lines would have to go underground, and not overhead.

2102. Is it not the case that the streets of the City have already almost as many pipes under them as you could find room for?—Yes; but there is no reason why they could not go deeper. You see, the pipes that are laid now are pretty close to the surface.

2103. You think there is no insurmountable obstacle?—Oh, I should think not.

Mr. John Archibald Dow, called in; and examined.

*Chairman.*

2104. You are a Coal Master in Glasgow?—Yes, I am.

2105. You are also a partner in the Hamilton Colliery Company?—That is so.

2106. And a director of the Cambuslang Coal Company?—Yes.

2107. Have you had experience of the telephone service in Glasgow?—I have had nearly eleven years' experience of it.

2108. In connection with those businesses?—Quite so.

2109. Do you use the telephone yourself much?—Personally, I have used it constantly; in fact, I have almost lived on the telephone in business hours; we use it very much indeed.

2110. That would be from 10 o'clock in the morning, till what hour at night?—Five, six, or seven.

2111. Six, or seven at night. Now, during those 11 years, what has been your experience of the working of the system supplied by the National Telephone Company in Glasgow?—Take it year in and year out, I have found it a very good service. Of course, there are breakdowns and dislocations taking place now and again; I do not deny that; but I have always found the company very smart in doing the repairs and putting the damage right; but, taking it all over, through and through, it is a fairly good service. I do not suppose I could get a better from any other company. I do not look for it.

*Chairman*—continued.

2112. The area of the district over which the National in Glasgow has the control for telephone purposes at the present time is considerably larger than the city area of Glasgow? Yes, it is so.

2113. Do you consider that an advantage?—Well, it is an advantage to the like of us who have collieries away from Glasgow; perhaps 10 or 12 miles, outside the municipal boundaries altogether.

2114. Because it enables you to communicate directly without the interposing of another exchange between your offices and your collieries?—Exactly so.

2115. What is your opinion of the application from the Corporation for a licence to carry on telephone business within the area of the City?—I should not like to see the application granted, from this standpoint: that it would mean that we would require to join two exchanges; instead of a reduced rate, we might have to pay a double rental; we might have that pleasure; and there is this difficulty, too: seeing that our telephone connections are outside the boundaries altogether it would rather be against us, because we would have a restricted service inside the municipal boundary; and, for instance, if I wished to speak, Greenock, Paisley, or Hamilton, all these other boroughs

*Chairman*—continued.

boroughs and cities would require to apply for a licence to put up telephone circuits for themselves, and in speaking through those it would be one eternal nuisance for us it would be a retrograde step altogether; it is a cutting down instead of a building up. I would rather see it go into the hands of the Government altogether, because it is a backward movement in my opinion.

2116. Are you speaking generally of municipal licences?—I am only speaking about the telephone licence.

2117. But municipal telephones; you are applying that remark to municipal telephones only?—To municipal telephones only.

2118. Would you consider it retrograde?—I would.

2119. And in the event of difficulties in getting through to a correspondent, do you think the difficulty would be increased?—We would be knocked about like a shuttlecock. At present, if there is any complaint to make, I go to the head office at once, whereas, if I had three or four different exchanges to complain to when any wrong connection or fault took place I would really be shuttlecocked between them, the one most likely blaming the other.

2120. Whereas now you know it is the National Telephone Company if there is anything to complain of?—I can go right to the head office at once and complain, and get satisfaction.

2121. What is your price at Glasgow?—£10.

2122. What is your opinion with regard to the price, and the service which it offers?—I say we get good value for our money; still, all the same, if any reduction could be made, as a business man, I would welcome it, provided it was coupled with efficiency; I do not want cheapness and inefficiency, or a restricted service.

2123. But you consider the present system an efficient service under all the circumstances of the case?—On the whole I consider it an efficient service. I may say that we have about ten or twelve instruments, and we pay a rental of nearly a hundred pounds a year; fully that.

2124. Ten or twelve instruments in connection with your various collieries and businesses?—Yes.

2125. You are not a shareholder, I believe, or connected in any way with the Telephone Company?—Unfortunately I have no shares in the company.

Mr. *John Ellis.*

2126. I understand you come here as an individual user of the telephone?—Yes.

2127. You do not speak as a representative of any public body?—No.

2128. Do you think your evidence would be corroborated by any of your friends?—I have no doubt I could have brought a great many to corroborate that.

Mr. *Benn.*

2129. You come at the request of the National Telephone Company, do not you?—Exactly so.

2130. You have told us that your fear is that, if Glasgow secured a licence for its municipal

Mr. *Benn*—continued.

area, you might, being outside the municipal radius, have to pay an additional rate?—It looks very like it; unless there was some arrangement made.

2131. So to protect yourself against any such catastrophe, you are an opponent of the municipal licence?—That is about the position.

2132. But suppose the citizens within the area of Glasgow with a system of their own were able to get a local telephone service for half the 10*l.*, for 5*l.*, a similar price to that which obtains in other places, do not you think it is rather a hardship upon your friends in Glasgow that you should try to deprive them of such an opportunity?—I only look at it from one standpoint. I do not see that there is room for two companies just now in Glasgow. With the present company we are thoroughly satisfied; I am here to speak personally from my own experience.

2133. You speak as one of those outside the municipal ring?—Exactly.

2134. In the interest of those only?—Exactly.

2135. Now suppose a system existed in Glasgow under a municipal licence, and an arrangement were made whereby you would get continuous service, and the difficulties you apprehend were avoided, it appears to me your objection would disappear?—Well, of course, that remains to be tried; we can only speak from the experience we have had.

2136. True; but there is plenty of expert experience not only with regard to this country, but other countries?—I am not an expert on that point; I can only speak of experience with the National Telephone Company.

2137. You say you have been fairly well served, and your fear is that, if this arrangement were brought about of a municipal licence, you might have to pay double?—Yes.

2138. Your fear of having to pay double causes you to come here against the wishes of Glasgow?—Yes, that is so. Excuse me, "against the wishes of Glasgow." I do not know if you can put it in that way.

2139. Against the wishes of Glasgow as expressed through its representative body?—I do not know of any public meeting that has been called, or anything of that nature.

2140. No, but you know quite well that the Glasgow Corporation have had a telephone committee for a long time; and it was largely owing to the representations of that committee that this inquiry is being held; so that I may claim that the desire for a licence may be described as "the wish of Glasgow"?—It may be.

Mr. *Grant Lawson.*

2141. I only want to clear up one point; Mr. Benn asked you if you were outside the municipal boundary; I suppose your central office is inside?—Yes, it is in the centre of Glasgow.

2142. You merely wish to speak to your collieries outside?—Yes; and to subscribers perhaps over a trunk wire, at Greenock, at Paisley, at Aberdeen, and other places.

2143. I suppose the people of Glasgow have

Mr. *Grant Lawson*—continued.

to communicate with people outside Glasgow the same as yourself?—Oh yes, very often.

Mr. *Snape.*

2144. Would not the trunk-wire communication be accorded if other municipalities established systems of their own, would there not be reciprocal action between them?—I cannot speak as to that.

2145. Have you any reason to suppose they would prevent each other taking advantage of such things as inter-communication?—I really cannot say; that is a matter, of course, which would have to be arranged.

2146. You have expressed the opinion that this inter-communication would fail you if these municipalities had the licence granted to them; why should you think it would not continue?—Because instead of one company, as at present, we would have so many companies to deal with. If the municipality were granted the licence they would be confined to local areas only, and could not give the same facilities to subscribers who wished to connect with other centres, seeing they had no control over these centres; besides, if any subscriber in a local area wished to have a wire run to his work, which might be outside the local boundary, I fear the municipality could not supply this service, and he would have to fall back on the National Telephone Company with its present broad and general licence, to run this wire; that is to say, if the National Company was still in existence.

2147. But it has not been advocated that the Telephone Company should be put out of existence?—No, I do not say that.

2148. The inquiry rather tends to whether there should not be permission given for competition to municipalities; now, would it not be possible for such competition to exist, and inter-communication to be arranged between municipalities and the Telephone Company, even in these out of the way places to which you refer?—It is quite possible; but, then, there is a difficulty I see of having too many companies; it is cutting up the service instead of consolidating it; my difficulty is going through different exchanges. If I fail to get proper connection, who am I to blame.

2149. Is it your wish that the telephone system should continue in the hands of a company?—I would rather see the telephone nationalised than municipalised, because I do not want a restricted service.

2150. Can it be nationalised; is it your wish to strengthen this company and give to them a greater monopoly than they at present possess?—You could prevent monopoly by fixing a maximum rate.

Mr. *Snape*—continued.

2151. That would not prevent monopoly?—Not a monopoly; but it would prevent their having it too much in their own hands, or running away with the subscribers altogether by putting a maximum figure down; regulating it in that way.

Sir *James Fergusson.*

2152. How far are your collieries from the town?—The distances vary from 10 to 15 miles.

2153. And you have instruments at each colliery, besides at your office?—Exactly.

2154. Have you now and then to wait a little before you find the wires clear?—Occasionally we have to wait.

2155. How long; perhaps 10 minutes?—We very seldom have to wait 10 minutes; very often five. It is a busy wire. It depends upon what time of the day we are speaking to the collieries over the trunk wire.

2156. You have never been made very angry by delays over the trunk wires?—Occasionally; I have not the best of tempers.

2157. You never threw your instrument into the street, like Bailie Chisholm's friend?—No, I have not gone as far as that.

2158. But you think that the delays are not more than incidental to any system?—They are such as may happen to any company.

*Chairman.*

2159. I understand you use the telephone not only to communicate with your collieries, which are outside the municipal area, but for communication with other subscribers within the municipal area?—Yes, we do.

2160. And for communication over the trunk wires to neighbouring towns and to towns at a greater distance?—Yes.

2161. And that, therefore, you are interested as a municipal subscriber and as an extra-municipal subscriber, and also as a correspondent with different parts of the country over the trunk wires?—We are.

2162. What would you say about the system during the time you have had experience of it; has it been an improving system or the reverse, or has it been stationary?—I think they have made rapid improvement. I did not like when they started the new call system, but it is an improvement upon the old system.

2163. When was that introduced?—Perhaps a year or two ago, or not so long back as that.

2164. And you have noticed during that time a decided improvement?—A decided improvement.

Mr. Robert Kay, called in; and Examined.

*Chairman.*

2165. I believe you are Traffic Superintendent of the Glasgow Tramway and Omnibus Company?—I am.

2166. And that you come at the request of the Telephone Company to state your opinion of the service in Glasgow?—Quite so.

2167. And that you are unconnected with the

*Chairman*—continued.

Company in any way?—I am unconnected with the Telephone Company.

2168. Except as a user?—Simply as a user.

2169. During what time have you had experience of the working of the system?—The last six years.

2170. How many telephones are there on the system

*Chairman*—continued.

system of the company of which you are the traffic superintendent?—We have 15 exchange wires and 17 stable connections. In all we have about 200 miles of wire in and around Glasgow.

2171. That is to say 15 exchange wires with a telephone at the end of each, I suppose?—Yes.

2172. What proportion of those are inside the municipal area, and what proportion are outside?—I fancy 90 per cent. are inside, and about a tenth outside.

2173. What effect would a restriction of telephone area to the city limits have upon your telephone system?—It would cut us off altogether from communication with our district offices outside the city; we would have no communication with them at all; we have half-a-dozen cab offices outside the city; we would be entirely cut off from the district in which these offices are situated.

2174. Do you use the telephone merely for communicating with your own offices or stables, or to communicate with other subscribers throughout the area?—With other persons, our own people, and the general public, taking orders for cab and carriage hiring work all over the system.

2175. Does the Glasgow tramway and omnibus working extend over all Glasgow?—We are not a tramway company now; the Corporation took over the tramways last year; but we have offices outside Glasgow at Govan-road, Ibrox, Dumbreck, Minard-road, Crow-road, Scotstown; we have communication with these places to the centre of the city, and to our head offices.

2176. What is your opinion about the application of the Corporation for a telephone license?—I think the work has been well enough performed by the Telephone Company, and I do not see why the Corporation should take it in hand at all. Personally from our own experience as an omnibus and carriage hiring company it would not suit us at all, because we could not get into communication with our district offices.

2177. Do I understand you to express general satisfaction with the service?—We do.

2178. You have had occasional difficulties, I suppose, like others?—Undoubtedly; but we make it a point each morning to call up all our offices about 8 o'clock to find out if the wires are all right, and if they are defective we make a report at once; and we find that the telephone people are very correct, they send men at once if wires are out of order and put them in order again.

2179. You find them prompt?—Very prompt.

2180. Can you give us any instance of rapid communications that you have had in your business?—No, I could not give any special instances, but I know we have simply to call up the complaint office, let them know what we want, and within an hour or two we learn by private means that a mechanic has been there.

2181. And are you using the telephone most of the day?—I use it regularly from early morning until late at night.

Sir *James Fergusson.*

2182. Is there less swearing than there used to be about interruption?—We do not allow swearing at all.

2183. Fewer complaints?—Complaints are fewer; we feel it so in our own business. Whether we get more attention than others or not I cannot say, but we are very large subscribers and, as I have stated, our complaints are readily attended to.

Mr. *Benn.*

2184. You come at the request of the National Telephone Company?—I do, and of course our people are aware that I am here.

2185. And your Omnibus and Tramway Company have been at loggerheads with the Corporation of Glasgow for some time?—No, they took over the tramway lines on the 1st of July last year, and after that date we started omnibuses.

2186. Opposition omnibuses?—Well, I cannot say it is opposition; we started omnibuses.

2187. Well, running side by side with the trams?—Running side by side with the trams.

2188. What would you call that if it is not opposition?—I suppose we might call it the Corporation opposing us because we were in the field first.

2189. I see, that is a very nice way of putting it; I may take it you would be very glad to get your "knife" into the Corporation?—By no means.

2190. Not even by running these buses?—We do not wish to fight the Corporation by any means at all in the way you put it; we simply run our buses.

2191. To assist the Corporation?—To assist the people of Glasgow to get from one point of the town to the other along with the Corporation.

2192. Was not your object, if possible, to make the attempt to municipalize the tramways a failure?—Nay; we thought there was plenty of traffic on the streets for an omnibus service, therefore we put it on.

2193. I may take it you are not on very friendly terms with the Corporation?—Well, we are not bosom friends, certainly not.

2194. That is to say your company would be very glad to send you here to thwart the Corporation of Glasgow in any way?—I could not answer the question in that way; I am not here for that purpose at all.

2195. You have told us that in your opinion the granting of a municipal license to Glasgow would prevent you communicating with your stables, which are outside the area of Glasgow?—That would be so.

2196. But has it been present to your mind that the exercise of a telephone license by Glasgow might be carried out without any interference with your favourite telephone company?—If that could be done, if it could be so arranged, then there would be no difficulty.

2197. Nobody has ever suggested to the contrary?—Can it be done?

2198. Why not?—I can see some slight difficulties; I do not see how the National Telephone Company as one company and the Corporation

Mr. *Benn*—continued.

as another could work very harmoniously together.

2199. Let me put it in this way: You have a powerful Corporation accustomed to do their own works?—Yes, in many ways.

2200. They have control of the streets, and if they can organise a double wire system at considerably lower prices than those of the National Telephone Company to supply the citizens of Glasgow, without interfering with your National Telephone Company and the higher rate you prefer to pay, why should not it do so and go on side by side with the company?—If it went side by side, we, as a cab and carriage hiring company, would be compelled to come on to both systems, because we could not work a business so great as ours without; we could not afford to have the subscribers half-and-half, with a chance of getting only half their work.

2201. You say the present company supplies all your need to your satisfaction?—Yes.

2202. Very well, then; if you want additional facilities and an additional list of subscribers through, we will say, the Glasgow Corporation, you would not object to pay the additional subscription?—Yes, we would; it would be a double subscription, and it is unnecessary.

2203. But you get a double service?—But we do not require a double service.

2204. If other people want it, why should you come here and try to prevent it?—I have come to give you my opinion, and that is that it is not necessary, so far as our business is concerned.

2205. Then we must take it, so far as *your* business is concerned?—Quite so.

Mr. *John Ellis.*

2206. You come here, as I understand, not only with the permission of your Board, but at the request of your Board; is that so?—No, not "at the request."

2207. It is your individual suggestion?—I was asked to come by the telephone people, and our directors and management had no objection to my coming.

2208. I am anxious to ascertain whether your evidence is to be regarded as your individual evidence, or as the evidence of your company?—I should take it that it is to be regarded as the evidence of those who work the telephone in connection with the Glasgow Tramway Company, in addition to my own.

2209. Has it the authority of your Board, that is what I want to know?—It is not minuted in Board minutes; my appearance here is not mentioned.

2210. Then I presume we may take it that your evidence is given for what it is worth by a practical user of the telephone, and uncoloured by any differences of opinion there may have been between your company and the Corporation?—Undoubtedly so.

2211. You have frankly and freely come to tell us your own experience?—Yes, my own experience of the telephone in Glasgow.

2212. And you put aside from your mind entirely, do you, any differences of opinion there may have been?—That is so; I put entirely from my mind.

Mr. *Benn.*

2213. Of course, the question of price does not concern you; if your company has been paying 30*l.* a year, that does not enter into your calculation?—No, because our business is such that we are bound to pay for the telephone, no matter what it costs. It is our aim to get it as cheap as possible.

Mr. *John Ellis.*

2214. Then we get it clearly from you that so far as your opinion is concerned you do not want any increased service; any competitive service?—No, not a competitive service.

2215. And you do not desire any municipalisation?—No.

Mr. *Grant Lawson.*

2216. You said a moment ago that your business was such that you were bound to be on the telephone; you would also be bound to be on any telephone exchange, I suppose, established?—Certainly; if there was a second company started we would be bound to go on to it. That just means double the expense to us.

Mr. *Snape.*

2217. If a competitive system were established at a lower price, would not that have the effect of largely increasing the number of subscribers?—I have no doubt it would. If the subscription was lowered there would be more subscribers go on to the wires.

2218. Would it not be advantageous to your business to have a much larger number of the Glasgow population on the telephone than you have at present even if you had to subscribe to both systems?—That may be true; but I think there is a limit to subscribers; it can go too far; for instance, I do not think if a new company was started it would get the same number of subscribers as is on the present company. I do not know how many are on the present company.

2219. If you continued paying your 10*l.* with the same results as you have at present, and a competing system was established at 5*l.*, which trebled the number of subscribers, would not the treble communication that would be within the reach of your company by subscribing to both these companies be a very great advantage to your company?—It would be some advantage, certainly, but I really think there is a limit to the number of subscribers. I fail to see where, if you reduced the subscription to 5*l.*, you could get treble the number in the Glasgow area. Glasgow is a small place as compared with the City of London.

*Chairman.*

2220. One of the witnesses (I think it was a witness from Glasgow who advocated municipal telephones) expressed an opinion that municipal telephones under the Corporation, with the advantages which they had over the streets, would soon drive the National Telephone Company out of the field. Would you view that with satisfaction?—I would not.

2221. The municipal system being restricted necessarily to the burgh limits?—No, I would not like that to happen at all.

2222. Do you think that would be detrimental to the interests of Glasgow?—It would be.

Mr. JAMES PATERSON WALDIE, called in; and Examined.

*Chairman.*

2223. YOU are a Coal Merchant, I believe, in Edinburgh?—Yes.

2224. At 8, Belford Terrace?—That is my house, 8, Belford Terrace.

2225. That is your private house?—Yes.

2226. You are a partner in the firm of James Waldie and Sons?—Yes.

2227. Coal merchants and colliery owners?—Yes.

2228. You have a number of offices about Edinburgh, I believe?—That is so.

2229. How many?—We have eleven altogether in Edinbugh.

2230. And are they all connected by telephones?—All, either by private or Exchange lines.

2231. And are the private wires put up by the company, or by the Post Office?—By the company.

2232. How many lines in all have you?—We have fourteen private ones between offices, and eight on the Exchange.

2233. How long have you been subscribers to the National Telephone Company?—Since the Telephone Company started in Edinburgh.

2234. How many years ago, roughly, was that?—I think it is about 18 years ago.

2235. What rent do you pay the company now?—£142 a year.

2236. Do you use the telephone yourself, personally, largely?—Yes.

2237. What has been your experience of the work of the telephone system in Edinburgh?—Very satisfactory.

2238. I suppose there are occasional difficulties and breakdowns, as there must be in the telephone?—Yes, certainly.

*Chairman*—continued.

2239. Do you find complaints made fairly frequently?—Yes, we cannot complain of that at all.

2240. You have come, I believe, at the request of the company?—Yes, that is so.

2241. And you are not connected with them except as a subscriber?—That is all.

Mr. *John Ellis.*

2242. You come as an individual witness?—That is so.

2243. Do you think your evidence would be corroborated by any of your friends and persons whom you know in business?—Yes, I think so.

Mr. *Grant Lawson.*

2244. Are your collieries scattered all round Glasgow in different places?—We are only connected to one, by an Exchange line, that is at Tranent.

2245. That is under some other Corporation, is it so, some other local authority?—It is in the County of Haddington: it is 11 miles from Edinburgh altogether.

2246. And if there were a municipal telephone in Edinburgh and another in Haddingtonshire under another authority, you would have to be on both?—Yes, we should have to be on both, because two of the Exchange lines are in Leith as well; we would have to pay to Leith and Edinburgh and Haddington as well, to get the service we have now.

2247. Is that a prospect you view with satisfaction?—No, by no means.

Mr. ALEXANDER RIACH; called in; and examined.

*Chairman.*

2248. ARE you a Journalist, and the Editor of "The Edinburgh Evening Dispatch" newspaper?—Yes; "The Edinburgh Evening Dispatch" newspaper.

2249. Have you had considerable experience of the use of telephones in Edinburgh?—Yes, both of the telephones and the telegraph.

2250. We are dealing here with telephones, not telegraphs; will you state the result of your experience of the telephone system in Edinburgh and the district?—We find, in journalistic matters, that we get a very excellent service; in fact, it is so good in many cases that all our quick work is done by telephone; the written telegram in many cases is too slow; I mean in such things as results of cricket matches, results of elections, and things of that kind, where speed is necessary, we invariably resort to the telephone in preference to the telegraph.

2251. Would that be from the locality where the cricket match is played, or where the result of the election is announced to your office for newspaper purposes?—Within a distance, say, of an area of a hundred miles, or thereabouts; of course, chiefly locally: but, say in the case of the Forfarshire election, or any local elections, the results are invariably transmitted by telephone, and our experience is that we get the results in that way about half an hour before we get them by telegram.

*Chairman*—continued.

2252. Then your use of the telephone is by no means confined to the local area of the City of Edinburgh?—No, by no means; it extends to trunk lines.

2253. I do not know that the Corporation of Edinburgh have applied for a license; I believe they have not?—They have not.

2254. Would you view with approval or disapproval a license being granted for telephone purposes to the Corporation of Edinburgh?—Personally, I am very much in favour of nationalizing the telephone.

2255. You mean of its being taken over by the State?—Yes.

2256. That hardly answers my question, whether you would view with approval or disapproval a municipal license?—At first I was inclined rather to favour municipalisation, until I perceived

*Chairman*—continued.

perceived the difficulties of working through to various other municipalities; I concluded that it would be practically impossible to concentrate the control in any district; I mean, that the management should be concentrated in one centre to make the working anything like efficient, the same as it is in the telegraph department.

2257. That is to say, you consider the best system would be, that it should be in the hands of the State; that is, of the Post Office; but that if not in the hands of the Post Office, the local areas, at all events, should be in the hands of one administration, of one body?—One administration, or of one company for that matter, provided the company was national.

2258. You have also had experience of the working of the telephone in Portobello, I believe?—To my private house.

2259. For communications between your private house and the office in Edinburgh?—Yes.

2260. What has been your experience of the working of that portion of the system?—That it is fairly satisfactory, considering it is only a single wire; if it were on the metallic circuit system, it would undoubtedly be very much better. We look forward to the time when the service generally will be improved by the adoption of metallic circuits. What I mean is, that with the difficulties that the company have with the single wire system, we really cannot complain of it.

2261. But apart from the change from the single wire to a double wire system, has the service been improved?—Distinctly; it is improving every year very perceptibly.

2262. Has the company commenced to change the system from the single to the double wire system in Edinburgh?—Not in Edinburgh, that I am aware of.

2263. You are aware that they are bringing about the change in various parts of the country?—They are, I believe, but not to my own knowledge.

2264. Are complaints met fairly promptly? We have no occasion to complain very often. Our messages are very brief, as a rule; but they require to be very expeditiously sent. Whenever we have any complaints, they are always, so far as my knowledge goes, promptly attended to.

2265. You have come, I believe, at the request of the company?—Yes, although, when they asked me first, I said I would be against them: I told them I was in favour of nationalisation. I had always written in favour of nationalisation as opposed to municipalisation. I would prefer the control being entrusted to one authority.

2266. But you are not connected with the company in any way except as a subscriber?—Except as a subscriber.

2267. I will just ask you this question: I find Sir James Russell, at No. 959, was asked this question by a member of the Committee: "Is there any competition which, in your belief, would be more effective in securing a cheap and efficient service than that of a municipality;" and this is his reply: "I think not; it is quite fair to say, and my own private view is, that competition would not last long within the

*Chairman*—continued.

municipality; a municipality which is not going to make any profit must, I think, inevitably exterminate any competitor." Supposing that was the result of granting a license to the Corporation of Edinburgh; that is to say, that the National Company, and any other licensee of the Post Office, would be exterminated and driven out of the area; would you view that result with satisfaction, or not?—I think that the telephone is one of those things that would not do with competition. I should think that competition, in the case of the telephone (I mean the granting of two or three licenses in one locality) would be almost a national evil. The telephone, like the telegraph, can only be properly worked as one system. Naturally, if there were two licenses, subscribers would have to subscribe to both in order to get the advantages of both. We would consider that a great hardship. It would mean double payment for one thing, with a less efficient service.

2268. And it would mean, I suppose, great waste of capital?—Waste of everything; waste of material, waste of labour, waste of many things. Just on the same grounds that we advocated very strongly the nationalisation of the telegraph, so we should advocate the nationalisation of telephones.

2269. And if not nationalised, that they should be, at all events, under one administration?—Under one administration. Practically, I do not see how the different municipalities could arrange the matter, from our experience of the local friction at present between our neighbouring burghs.

Mr. *Grant Lawson.*

2270. Are you calling the attention of people through your paper to this opinion of yours about municipalisation?—I have written very little about municipalisation.

2271. Your present views are against municipalisation: are you putting these before your readers through your paper?—At first I was inclined to favour municipalisation, to force the hands of the Post Office, or of the Treasury, to nationalise, but after considering the difficulties, I cannot see how municipalisation would be effectual, even with a very wide area; certainly within the mere boundaries of a city like Edinburgh or Glasgow, I do not see how it could work at all.

2272. Have you written some articles in your paper giving that view to your readers?—I do not think I have written since the town council have taken it up.

Mr. *Benn.*

2273. Are you concerned in the price which is paid. May I ask you whether you are a proprietor of the paper?—I am not a partner; no, I am just editor; mine is purely a personal view.

2274. Other than the convenience of the service, you have no particular concern as to whether the yearly subscription is 10*l.* or 20*l.*?—Personally none, except as a private subscriber.

2275. For your private convenience?—Yes.

2276. You have told us you regard the telephone

Mr. *Benn*—continued.

phone as a very great boon, and of very great service?—Very great.

2277. A great advantage over the telegraph?—Yes.

2278. Do not you think it would be a very good thing if that boon could be extended to a class of people who are now prevented availing themselves of it owing to present prices?—I look forward to that in course of time; but it will take time before the price is reduced sufficiently to bring it within the compass of poor people.

2279. Under present circumstances, what do you think is likely to bring about a reduction of price?—Not munipalisation. I only look forward to nationalisation in order to reduce the price sufficiently to create a great increase in the number of subscribers.

2280. You are probably aware that many towns, abroad particularly, have provided themselves with a service at a great deal less than the price charged by the National Telephone Company?—May I ask if you mean the private circuits?

2281. I refer to the provisions for business people in towns such as obtain in Edinburgh?—I am not aware of any municipal telephones in this country.

2282. I will not ask you anything upon that; but I should like your opinion upon this point: Suppose the citizens of Edinburgh were quite prepared to put up with the inconvenience of a separate system for their own local service, and could secure thereby a cheaper service, do you think it is fair or reasonable that they should be prevented enjoying that privilege?—Of course, if the council resolves upon that, that is their affair. As a matter of fact, the subject has not been discussed among the people of Edinburgh; and to judge from the discussion that took place on the subject of electric lighting, I should doubt very much whether the poorer classes of ratepayers would view with satisfaction the municipalisation. Many of the poorer people looked upon the acquisition of the electric lighting by the corporation as rather a hardship; as being more in the nature of a luxury for which they ought not to pay.

2283. I will put this to you just as a journalist, apart from Edinburgh: If the majority of the citizens of any city were to decide to put up with the inconveniences which you have mentioned, do not you think that they should have the opportunity to do so?—Well, I look at it rather from the national point of view, and I think that it would rather hinder nationalisation and the accomplishment of the national idea.

2284. Why so, when the State have power to purchase at the termination of the licence; would it not be a great advantage to the State to have the pick of two systems. Suppose you have the single wire system, which is the system in Edinburgh mainly now, and you had side by side with that a municipal double wire system, which was more efficient and very much cheaper, would it not be a very great advantage to the State to have the pick of the two systems if they were proposing to select a system for that district?—According to my view, you are merely complicating the matter by creating a great number of additional vested interests, which would have to be bought over at the proper time.

2285. If the citizens considered it in their interest that it should exist, ought they not to be accorded the luxury?—I should think it would be unwise.

Mr. *John Ellis.*

2286. Do you think your fellow journalists would concur in your evidence?—I can only speak for our own office.

2287. You do not wish to carry your evidence outside that?—I cannot speak for any other journalist.

2288. Do you think the improvement in the service you have mentioned is due to complaints?—Well, I should fancy it is due to the desire of the company to give a better service. We complain when we have occasion, and we get our complaints attended to.

2289. Stimulated perhaps by complaints, if I may ask you that question?—That I cannot say. Personally we do not get many complaints from readers of the newspaper on the subject.

2290. Then I gather that your opinion of the public feeling in Edinburgh is clearly that a large majority of the ratepayers look upon the telephone as not a matter with which they are immediately concerned, and that they would object to the municipalisation of the instruments; is that so?—I would not presume to speak on behalf of what the feeling of the people would be, but I should think the larger proportion of the poorer ratepayers would be equally averse to taking over the telephones as they were to the electric lighting. As a matter of fact, the electric light is not extended to their districts, but they have to assume the responsibility of payment.

2291. No doubt, having regard to their present social wants and aptitudes, the telephone is not an instrument quite within their reach?—No, it is more of a luxury.

2292. And should be paid for, therefore, by those who desire it, they think?—I am of that opinion.

## Ex-Provost A. H. MONCUR, called in; and Examined.

*Chairman.*

2293. YOU are a merchant and power-loom manufacturer in Dundee, I believe?—I am.

2294. And you have been Provost of Dundee (you were for three years), and at the same time Deputy Chairman of the Harbour Trustees and Gas Commissioners, and other public bodies?—I have.

*Chairman*—continued.

2295. And you are a Justice of the Peace for the county of Forfar and the city of Dundee?—Yes.

2296. I need not ask whether you are well acquainted with all the commercial requirements of Dundee and the neighbourhood?—I should think so.

*Chairman*—continued.

2297. Have you been a subscriber of the National Telephone Company?—Yes, for 10 years.

2298. And have you had personal experience of the use of the telephone?—Certainly, constant.

2299. What is your general impression of the system which has been provided by the National Telephone Company?—In Dundee we have had, I consider, a very efficient service.

2300. Have you read Sir John Leng's evidence?—I have.

2301. Do you agree with that?—No, I cannot say I do.

2302. In what way do you disagree with it?—Well, I do not think the telephone system should be municipalised where there is an efficient service in such a city as Dundee at a moderate price, I think it should be allowed to go on without any separate undertaking.

2303. You were chairman, I believe, of the local telephone company previous to the amalgamation with the National?—Yes, while it existed.

2304. How could you compare the telephone service now with what existed when the competition took place in Dundee?—I should say it was better now for this reason, that the town was divided; part of the town (nearly the half) had one system and the other the national system; consequently if we wished to get connected with the whole town, we had to take an instrument from each company, which brought up the price, and after all the service was not so efficient as it is now.

2305. What was the name of the local company?—The Dundee and District Telephone Company, Limited.

2306. Then, although the competition in the case of Dundee brought down the price of the subscription to an individual company, the general effect of competition was to increase the price the subscriber had to pay?—Practically so.

2307. Because men in the larger businesses had to belong to both?—Yes.

2308. What are you paying now in Dundee?—£8. 10*s.* for the first, and if more instruments are taken 15 per cent. less.

2309. I believe, before competition, the price was still higher than it is now?—In which company.

2310. Of the local company?—The charge of the local company when it began was 10*l.*

2311. And what did the National charge when they first came there?—£20.

2312. Then competition brought the National down to 5*l.*?—To 5*l.*? yes, and we had to follow with 5*l.* 10*s.*; we had a royalty of 10*s.* to pay. For a considerable time the two systems were 5*l.* and 5*l.* 10*s.*

2313. So that a subscriber who wished to be in communication with all other subscribers had to pay 10*l.* 10*s.*?—£10. 10*s.* for a service not better, in fact, not so good, as we are getting now at 8*l.* 10*s.*

2314. Then what is the effect of your experience with regard to competition?—It is not in favour of competition, except in the way of bringing down the price for a time.

*Chairman*—continued.

2315. Do you use the telephone outside the area of Dundee much?—Not a great deal; but occasionally I do.

2316. We were told that the local company paid substantial dividends, notwithstanding the lower rates which they charged their subscribers?—Yes, to begin with, we paid about 9 per cent.; but the last dividend we paid was only 5 per cent., that is the last year of our existence, so that it was coming down.

2317. Were the company at the time, or just before the time, the amalgamation took place, contemplating the necessity of raising new capital?—Yes, they had just resolved to raise new capital, an addition of 5,000*l.*; we had 5,000*l.* first, and we resolved to raise other 5,000*l.*

2318. That is to say, to double the capital?—To double the capital, yes; but not much of it was raised.

2319. And did the National Company when they took over the local company reconstruct the system throughout Dundee?—I believe they did to a large extent.

2320. That is to say, in taking over the wires of the local company, had they to a very large extent to replace them by new wires?—Yes, I understand so.

2321. That would seem to indicate that the general system of the local company was not based upon a very permanent or satisfactory foundation?—Well, I believe not so permanent as the present system is; and then besides we had been in existence for four or five years, and the wires were getting pretty well done, some of them.

2322. What is your opinion with regard to the future of the telephone system?—I am decidedly of opinion it should be nationalised if it is to be changed at all.

2323. But in the event of the Government not seeing their way to take over the whole system, for some time at all events, what view would you take?—I should rather see it in the hands of a strong company like the National.

2324. I believe you come at the request of the company?—I do.

2325. Are you a shareholder?—No.

Mr. *John Ellis.*

2326. I gather that you, being an ex-provost of Dundee, and having fulfilled these public positions, are distinctly against the municipalisation?—Decidedly so.

Mr. *Benn.*

2327. The National bought your company up at 40 per cent. premium, I think, sir?—Thereabout.

2328. And at the final meeting the ex-provost congratulated the shareholders on receiving 9 per cent. for the whole of the period, and on getting back their capital with 40 per cent. bonus?—Yes, an average of 9 per cent.

2329. Now, before they made this bargain with the National Telephone Company, I believe they inserted some provisions for the protection of the citizens?—They did.

2330. That the citizens of Dundee should not pay more than a certain price?—That is so.

2331. Do

Mr. *Benn*—continued.

2331. Do you remember the price?—£10.

2332. Do you think that but for the existence of this company and this competition the citizens of Dundee would be so cheaply served with regard to telephones as they are at present?—I scarcely think so.

2333. Now, during the existence of your excellent company, is it not a fact that Dundee was the best telephoned city in the kingdom?—I could not say.

2334. Sir John Leng, I see, stated that it was; but you can answer this perhaps: the proportion of subscribers, anyway, was larger relatively than that of any other population in the kingdom?—I could not answer that either.

2335. Still, you have a very good opinion of the proceedings of your company, and the efficiency of them?—Yes, so far as it went.

2336. That is to say: suppose the telephone company had not stepped in and absorbed you, the citizens of Dundee were proud of their company, and quite prepared to go on with it?—They were prepared to go on with it certainly.

2337. They were prepared?—Yes.

2338. So that further than serving the interests of the National Telephone Company the interests of Dundee were not particularly served by the absorption?—I think it was improved by the absorption.

2339. You think so?—Very much.

2340. But there were no complaints of your service when you conducted it as the Dundee and District Company?—There was this complaint: that we could not get a thoroughly efficient service so long as two companies existed.

2341. The inconvenience of two companies?—The inconvenience of two companies side by side.

2342. Then may I ask you: supposing a city desired to secure the same benefits as regards service and price as those you enjoy in Dundee, do not you think the same method would be an excellent method to adopt?—Not certainly in Dundee.

2343. In any other town; you succeeded at Dundee in achieving a cheap service, and an efficient service, and that, I think, is largely owing to the existence of your Dundee and District Company; do not you think another town might try the same experiment with an equally satisfactory result?—I do not think a Municipality should try it.

2344. But you tried it and with a good result?—Not as a Municipality, but as a private company.

2345. As the Dundee and District Company?—Yes.

2346. A Municipality could do that, of course?—I suppose it could; but I would not be in favour of it.

2347. Still, there is no reason why it should not?—I think there is.

2348. No practical reason?—I think the ratepayers, for instance, would have good reason to object to pledging the rates for supplying telephones which they themselves have no practical interest in.

2349. Then your opinion is rather one of principle than of practice?—Both.

Mr. *Snape.*

2350. Do you think, after what you have said, that there would be no advantage in competition; you told the Committee a little time ago that?—Not as far as service is concerned, except as a means of bringing down the price if it was extravagant

2351. Was not the effect of the competition in Dundee to increase the number of subscribers from 30 to upwards of 1,000?—Oh, clearly.

2352. Originally; we have had that in evidence before us?—Yes.

2353. And after the amalgamation, instead of the increase being continued, the number of subscribers diminished?—Yes, that is easily accounted for: a great many small shopkeepers, when the price was reduced to 5*l.* or 5*l.* 10*s.*, took the telephone, but when it was raised again to 10*l.* they dropped it; but that did not mean a less efficient service, because really all large shopkeepers and merchants got the telephones, so that although the subscribers were reduced in number the service was practically as good.

2354. Is the advantage of the telephone in proportion to the number of subscribers?—Generally it is, I should say.

2355. Then the effect of the amalgamation was a distinct disadvantage to the community of Dundee by diminishing the number of the subscribers?—Well, it diminished the number of the subscribers certainly.

2356. And that was a disadvantage?—But it did not diminish the number of subscribers who really ought to be on the telephone.

2357. Then is it your opinion that only the well-to-do people should be on the telephone, and that the traders and small shopkeepers have no right to be on it?—It is quite an advantage they should be on it, but it is not so great an advantage that the small shopkeepers should be on.

2358. Do you think they are of that opinion?—I am sure I could not say.

2359. Do not you think they would think it quite as much an advantage to them as you would think it an advantage for you to be on the telephone?—I do not know, I am sure; I suppose it would be so.

2360. Would it not be a disadvantage to the customers of these traders and small shopkeepers that they could no longer communicate with them by telephone?—No doubt there was a certain disadvantage to some.

2361. And would it not be a disadvantage to the traders and shopkeepers that they would have no longer orders coming to them by telephone, and their business thus diminished?—No doubt it would be to a certain extent.

2362. Then the diminution in the number of subscribers which followed amalgamation (I think I have brought you to that point now) would be a distinct disadvantage to the community of Dundee?—Yes; but that was counterbalanced by this great advantage: that we were under one system, and did not require two systems to get connection with subscribers of the telephone in Dundee.

Sir *James Fergusson.*

2363. Could you tell us whether the low rate was remunerative to the local company, what you call the "D. and D. Company"?—Well, I hardly think it was. I do not think we could have continued to pay a dividend on 5*l.* 10*s.*

2364. Sir John Leng said the company made 9½ per cent.; was that made at the cheap rate?—Partly; partly at the dear rate, partly at the cheap rate.

2365. Partly at the cheap rate?—Yes. Then, besides, in making up our accounts, I rather think we allowed too little for depreciation, and I think if we had gone on we would not have been able at the 5*l.* 10*s.* to have paid anything at all; that is my opinion.

2366. How many years did it go on?—About five, I think.

2367. Did it always pay a dividend?—No, it did not pay a dividend the first year. The first year 10*s.* per share was added from revenue to the capital. Then in 1882 there was 10*s.* per share dividend; in 1883 9*s.* per share; and in 1884 5 per cent. per annum.

2368. What was the nominal value of the shares?—£5—4*l.* 10*s.* paid.

2369. Can you say whether, after the price was brought down to 5*l.* 10*s.*, they earned a dividend?—A dividend was paid at the rate of 5*l.* per cent. per annum for that year.

2370. But you do not think they put by enough for depreciation?—No, not enough. They only put 200*l.*, I think, to the reserve fund in the shape of depreciation, which I think, considering the kind of plant we had, was too little, and I think we would have come to see that by experience.

Sir *James Fergusson*—continued.

2371. Then is it your view that these low rates could only be maintained by putting a certain cost upon the ratepayers?—I would fear that.

*Chairman.*

2372. I understand the local company, the Dundee and District Company, was in existence before the National Company came to Dundee?—Oh, no; the National Company came first.

2373. Oh, the National Company came first?—Yes, and we tried to get them to reduce their rate all we could; and when we found that they would not, then we started this district company.

2374. And the result of the amalgamation was that the National Company was limited to 10*l.* a year?—They were limited to 10*l.* a year as the maximum price; they have come actually below that of their own accord.

2375. But the terms of the amalgamation were a maximum limit of 10*l.* a year?—£10 a year.

2376. Are you aware that at that time, with the exception of Edinburgh and Dundee, which are, of course, on a different footing, those being very much larger towns, every town in Scotland that had a telephone service was at 10*l.*?—I understood it was higher in some parts, but I could not state positively as to that.

2377. We shall get that from the company?—Yes.

Mr. James Crombie, called in; and Examined.

*Chairman.*

2378. I believe you are a Merchant and Shipowner in Aberdeen?—Yes.

2379. And that you have carried on business there for nearly 50 years?—I have.

2380. Have you been for a long time the agent in Aberdeen of Messrs. Langlands, the shipowners, of Glasgow?—Twenty-five years.

2381. And have you been manager for 12 years of the Aberdeen, Leith, and Moray Firth Shipping Company?—I have.

2382. During that time, or part of that time, have you been a subscriber to the National Telephone Company?—Yes, from its commencement almost.

2383. How many instruments have you?—Six, I think.

2384. Have you used the telephone yourself personally, and through your clerks and officials?—Very much personally.

2385. What is your experience of the system they provide in Aberdeen?—I think it is very good indeed.

2386. Have you during that time added to the number, because you have found them effective for the purposes of your business?—I have.

2387. Do you use the telephone locally in Aberdeen, or do you use for communications outside Aberdeen?—I use it all round; eight miles round about; in two or three cases.

2388. Eight miles outside Aberdeen?—Eight miles outside Aberdeen, and pretty frequently to Dundee.

*Chairman*—continued.

2389. I suppose you have experienced difficulties occasionally?—Now and again there has been some difficulty. I believe we should have a better and cheaper service if there were more facilities given to the company for getting wayleaves, and all the rest of it. The difficulties have always been very willingly redressed and promptly attended to whenever they were called attention to.

2390. By the National Telephone Company?—By the National Telephone Company.

2391. You speak of facilities with regard to wayleaves; have the company, to your knowledge, had difficulties with the Corporation?—No. They have had with owners and occupiers of property. I have tried to help to overcome them often. I know very well they have had great difficulties now and again.

2392. Would they be difficulties in connection with underground wayleaves for their junction wires?—I do not see that there should be any.

2393. But the difficulties you refer to are connected with these?—Connected with overhead work. The company is at the mercy of every person who refuses to allow them to go across, you see.

2394. The company, I believe, have introduced into Aberdeen the call wire system?—They have.

*Chairman*—continued.

2395. Has that been an improvement?—A great improvement; a vast improvement.

2396. You also have in Aberdeen, I believe, the advantage of being able to send telegrams to telegraph offices by telephone?—That is so; that is one of the greatest possible facilities.

2397. Is that a facility which the company have given?—They have to arrange it.

2398. It is done by arrangement with the post office?—By arrangement with the post office.

2399. But they have given it to the subscribers free of charge?—Free of charge; they have.

2400. What rate do you pay now in Aberdeen?—The general rate is 10*l.*; 8*l.* 10*s.*, and I dare say in case of a number of instruments there is a contract.

2401. It used to be higher, I think?—It was 15*l.*; I think Aberdeen was the first place in which it was brought down to 10*l.*

2402. Was that a voluntary action on the part of the company, or was it due to threatened competition?—Well, there was some threatened competition. I was taken into counsel, and I said I thought if they could bring it down to 10*l.* it would add very greatly to the number of subscribers, and stop anything in the shape of competition, which would be a simple confusion, and that was done.

2403. Then, you hold a very strong opinion against competing systems in the same area?—I think it would lead to absolute confusion.

2404. You are speaking as a user of the telephone, and not from any technical experience which you have had of the working of the two systems?—I can easily see what it would result in. I am speaking as a practical user of the telephone, and I cannot conceive, if there were two exchanges in Aberdeen, that there would be anything else than confusion.

2405. Have you read Mr. Treasurer Bisset's evidence given before this Committee?—Yes, I did read it.

2406. I understand from what you have said you differ from him?—I differ very much from him, and am very much astonished at his evidence; I think it must have been given from his inexperience of the telephone. It is most wonderful how very many mistakes are made, by people of intelligence even, in the working of the telephone. I might just perhaps give you one illustration: a gentleman of very large business experience and good intelligence came up to the Chamber of Commerce with a very grave complaint against the company. He had in an emergency endeavoured to get connection during the night. Some of his family were ill, and he could get no connection, and he made a very grave complaint; the result was an investigation, and it was found that he had tried to work during the night the same way as during the day, and, of course, in that way he could get no connection whatever. Although the rules were very definitely laid down, still he neglected them, and that was the result.

2407. It is hardly necessary to ask you, after your evidence with regard to competition, what your opinion would be of a municipal system in Aberdeen added to the National Company's system?—I think, as I have already said, that it would lead to confusion. I would certainly prefer nationalisation rather than municipalisation, if there is to be any change. I should have said that the rate in Aberdeen is 8*l.* 10*s.* now, the general rate.

2408. That is to say, it used to be 15*l.*; it was reduced to 10*l.*?—And then to 8*l.* 10*s.*

2409. And then to 8*l.* 10*s.*?—Yes.

2410. I believe you have come at the request of the National Telephone Company; but you are not connected with them, except as a subscriber?—Only as a subscriber. I daresay I volunteered. I was very anxious to try, in my own humble way, to defend them against the unfair aspersions that had been made against them, and that is the fair feeling with which I almost volunteered rather than wait to be asked.

Mr. *Snape.*

2411. In what way would the confusion arise (you say absolute confusion would arise) from the existence of two or more competing companies?—Because you would require to join both exchanges, and you could not get your messages conveyed otherwise.

2412. Are you aware that in Dundee, some time ago, there existed two competing companies?—Well, I heard there was very considerable confusion, and that is how I am speaking.

2413. If there was confusion, that would lead to a diminution in the number of subscribers, would it not?—Well, I do not know whether it would or not. Of course, if once individuals have got means of communicating by telephone they are not very willing to give it up, even if there are difficulties in the way.

2414. Would you expect, if there was this absolute confusion, that there would be a very large increase in the number of subscribers, the number going up from 30 to 1,000?—Well, the report I always heard from Dundee was that *one* exchange would be very vastly better, and the sooner they got it the better.

2415. You see we have had it in evidence that, confusion or non-confusion, it gave such satisfaction that, instead of there being only 30 subscribers, the number became a thousand; how, then, do you expect, or why do you form these anticipations, that the confusion would be so great and unsatisfactory?—I believe the telephone is one of the greatest facilities of the age, and I believe people will continue it, and that the number to take it will increase if they can get anything like facilities. I still maintain, however, that one exchange is preferable to two.

2416. Of that there is no question; but supposing there are two competing companies, and that the effect is to reduce the charge, is it not probable that it would be a greater advantage to the community to have the lower charge, attended by this inconvenience, than the high charge with one exchange?—I would rather have a fair amount of charge, with proper facilities and no confusion, than a lower rate. It is all very well to have a cheap rate if you have proper facilities and

Mr. *Snape*—continued.

and a good service, but otherwise I would certainly prefer to pay the higher rate.

2417. It would appear from the Dundee experience that a large number of people are against you, and that, notwithstanding the confusion which you say would exist, and the increased rate, the result of the competition there was a distinct advantage, and a desideratum by the public?—My own impression is, that even when the rate was raised in Dundee the increase was still more.

2418. No; we have had evidence to the contrary (the last witness corroborated it); that is to say, that the number of subscribers diminished when the rate was increased?—It may be so.

Mr. *Grant Lawson.*

2419. About that new company in Dundee, do you happen to know whether, when it was started, it was vigorously pushed?—I do not know from personal experience specially; I just heard the reports.

2420. You mentioned something as to a complaint to the Chamber of Commerce about the Telephone Company; did the Chamber of Commerce go into that complaint against the Telephone Company?—Well, they listened to it for the time being. I believe they were corrected ultimately, in regard to what was the cause of the complaint.

Mr. *Grant Lawson*—continued.

2421. Do they undertake to consider complaints of that description now, in the Chamber of Commerce?—They seem to do. I am not a member.

Mr. *John Ellis.*

2422. Your evidence is so diametrically opposed to Mr. Bisset's that I should like to ask you whether you think the people you meet in business in every-day life agree with you rather than with Mr. Bisset?—I am perfectly certain, without being egotistical, that the great majority agree with me.

2423. You are of opinion that the great majority of the telephone subscribers in Aberdeen would say that there is a fairly efficient service there?—Yes, I am quite certain of that.

2424. And would not concur with Mr. Bisset, that it is wholly inadequate and very bad indeed?—I respect Mr. Bisset very much, in many ways, but I cannot agree with him in those points at all.

2425. I suppose the merits of the telephone in Aberdeen have been a matter of public interest and discussion, have they?—They have.

2426. And you come here clearly to tell us that in your opinion most people agree with you?—That is so.

*Friday, 3rd May* 1895.

MEMBERS PRESENT:

Captain Bagot.
Mr. Baird.
Mr. Benn.
Sir Charles Cameron.
Mr. John Ellis.
Sir James Fergusson.
Sir Julian Goldsmid.
Mr. Grant Lawson.
Mr. Arnold Morley.
Mr. Solicitor General.
Lord Stanley.

THE RIGHT HONOURABLE ARNOLD MORLEY, IN THE CHAIR.

Mr. ANDREW DRYBURGH PROVAND (a Member of the House); Examined.

*Chairman.*

2427. You are Member for the Blackfriars and Hutcheson Town Division of Glasgow?—Yes.

2428. With reference to the two points upon which you are going to speak, if it is convenient to you, we will take the trunk wire charges first; that is the first point mentioned in your letter; will you give us the result of your examination of that question, the trunk wire charges in Scotland?—The trunk wire system in Scotland has been more fully developed and made more complete than in England. The National Telephone Company issue a table for Scotland which includes about 2,330 inter-town rates; it gives the tariff from one town to another.

2429. The National Telephone Company?—The National Telephone Company. This is a copy of it, taken out of their own directory, and I think perhaps it would be better to put it in.

2430. If you will hand it to me I will look at it (*the document is handed in*). Do you want to call attention to any special points in connection with it?—Yes. These are the rates charged at present, but under the agreement which the Post Office authorities have just entered into, these rates would be very much increased because the mileage scales of the National Company are less than those of the Post Office.

2431. You speak of the agreement which the Post Office has entered into with the National Telephone Company; I think you are a little wrong there, are not you? There is no reference in the agreement to the trunk wire charges?—You will find the rates the Post Office intend to charge stated in the Treasury Minute, Clause 14.

2432. But that is not in the agreement?—We have heard it stated many a time that the agreement is carrying out the Treasury Minute. If the Post Office do not intend to charge these rates, and you will say so, sir, that may make some difference in what I have to say; but the scope and effect of the agreement is before the Committee, and the scope and effect of this agreement is, that it will make the trunk wire charges in

*Chairman*—continued.

Scotland enormously higher than they are just now.

2433. Will you point out any clause in the agreement which bears out that statement?—It is not in the agreement I understand you to say?

2434. No?—Well, I will refer to the agreement; I will see.

2435. I think you may take it from me that there is nothing in the agreement which embodies those trunk wire charges; they were charges which were indicated in the Treasury Minute as a scale of charges which, of course, will be subject to revision; to Parliamentary control and Parliamentary decision, if the matter comes before Parliament; there is nothing in the agreement embodying them and making them compulsory in the future?—But, sir, you have yourself written to a correspondent who complained about them, saying that you will not make any change in these charges; I can read your own letter.

2436. No doubt those are the charges which the Department at the present time propose to charge?—I am only giving my evidence as to "the present time." If by-and-bye you reduce the charges, my evidence will go for nothing; but the charges are those made or intended to be made, and as to which you have yourself written to a correspondent stating that you would make no change in them.

2437. I only want to get it upon the evidence that there is nothing in the agreement that in any sense bears out that statement?—On the 18th October last year your secretary wrote to Messrs. D. M. Stevenson & Co., in Glasgow. I shall only read the last paragraph of the letter, because that is what applies to this. He says in that paragraph, "I am to add that he (*i.e.*, the "Postmaster General) is unable to hold out any "hope that the Government will in any case "depart from the system of charge for the use "of trunk lines which was adopted in the "Treasury Minute of the 23rd May 1892." That is the very document.

2438. That was a uniform system to be applied on a mileage scale?—Precisely; and, according to that mileage scale, the charges in future will

*Chairman*—continued.

be enormously higher than the National Telephone Company's charges in Scotland at the present time.

2439. We shall be glad to hear evidence upon that point if you choose to give it?—Very well. I have given the rates in the Treasury Minute; I have read your own statement that the Department will in no case depart from the charges of the Treasury Minute; and I can give you illustrations of how the charges will work.

2440. Will you let me look at that letter, please?—Yes (*handing in the same*).

2441. I think you said you were prepared to give evidence upon the increased charges?—Yes. I have therefore copied on one sheet of paper here the Post Office mileage scale and the National Telephone Company's mileage scale, and below a table showing how both scales will work out, and the rates. I will quote from the joint table, which will give the facts relating to both. Up to 20 miles the company and the Postmaster charge the same, but from 20 to 25 miles the Postmaster will charge twice as much as the National Company. From 25 to 40 miles the charge, again, will be the same, but from 40 to 50 miles the Postmaster will charge twice as much as the National Telephone Company. From 50 to 75 miles the Postmaster will charge one-third more than the Telephone Company. From 75 to 80 miles both charge the same. From 80 miles to 100 miles the Postmaster will charge 50 per cent. more than the company. From 100 to 120 miles they both charge the same. From 120 to 125 miles the Postmaster will charge one-third more than the company. From 125 miles to 150 miles again the charge is alike. From 150 to 160 miles the company, for the first time, charge more than the Postmaster.

Mr. *Solicitor General.*

2442. How much more?—One-fifth; 2*s.* 6*d.* against 2*s.*; but from 160 to 175 miles the charge will be the same; and from 200 miles upwards there will be on most distances, or on some distances, at least, a higher charge by the company than by the Postmaster. The reason for these varying rates is because the scales do not run in precisely the same way; but the increased charge made by the Postmaster over that of the company is not represented entirely by these differences of rates, because the company at present do not charge for their inter-town service as high as they might charge according to their scale. A very large number (I cannot say how many) of the 2,330 rates quoted in that table are charged at much less than would be payable if the company made the charges according to the table. I think, to save trouble, that the table should be put in also.

Mr. *Grant Lawson.*

2443. If they made the charge according to the maximum, you mean?—If the National Telephone Company charged according to their published mileage scale, their charges in a very very large number of the rates on the table would be higher than what the actual charge is.

Sir *Julian Goldsmid.*

2444. Those wires have been transferred, have they not?—I know nothing at all about that. I have taken out the different rates that are given in the table as near as I can. There are altogether 2,330; 349 of those are at 3*d.*; 683 at 6*d.*; 727 at 9*d.*; 414 at 1*s.*; 145 at 1*s.* 6*d.*; nine at 2*s.* 6*d.*; and three at 3*s.* According to the tables of the Telephone Company, the rates for all short distances are much cheaper just now than they will be by the Post Office scale; in many cases, as I have just shown, the Post Office will charge twice the current rates. On the other hand, when the rates become very high, the Postmaster's rate will be a trifle, but only a trifle, less than that of the company according to its scale.

*Chairman.*

2445. What do you call short distances; how do you limit short distances?—The company's rate up to 25 miles is 3*d.*, but the Postmaster's rate for 25 miles will be 6*d.*

2446. Under 20 miles they will always be the same?—The same; according to the scale which I read from the table.

2447. But I understood you to say just now that for short distances the Post Office charges will be always greater than those of the National Telephone Company?—No, not always, but very often.

2448. Very often; you mean there are cases?—Yes, not invariably, but very often that will be so. It will be seen from the figures I have read out that an enormous number of these rates come under a shilling. Out of the 2,330, there are really only about 150 of them that are over 1*s.* (the business is all done at the low rates), and there are really only 12 of them over 1*s.* 6*d.*; so that the advantage which the Post Office offer of a cheaper rate for a long distance is one for which we may say: Thank you for nothing, as we shall hardly ever use the long distance.

2449. How did you get the information with regard to the proportion of short and long distances?—I have not given any proportion; I have mentioned the number of rates at different prices.

2450. You stated just now that the number of conversations over short distances was infinitely greater (or I think you used some stronger expression) than the number of conversations over the short distances?—I think not; but the very figures I have read out prove it to be so. If out of 2,300 users there are only 150 of them who pay 1*s.* 6*d.* and upwards, it follows that the business done must be much greater at the low rates than at the high ones. In the table there are actually only 12 rates above 1*s.* 6*d.*

2451. Is not that because the trunk wire system has not yet been extended to the full extent it probably will be under the Post Office?—I shall explain the reason presently, but I do not see any early future at all for any large trunk business being done over long distances. I shall explain my reason for that when I come to the second part of the evidence.

Sir *James Fergusson.*

2452. Should you be surprised to hear that a Member of the House takes up the telephone at Manchester

Sir *James Fergusson*—continued.

Manchester every night for a conversation with his partner; are there many such cases?—I have made inquiry into what is done between Manchester and London, and I can only find one case (I have heard of one besides) of a merchant speaking over the trunk wire to Manchester; and he has to go to the company's office in London to do it. He could not do it from any office in London. I am telegraphing backwards and forwards to Manchester every day; my office is in Manchester. Some days I am sending three, four, or five telegrams, but I should never think of attempting to do business in Manchester by telephone.

2453. This gentleman does it from the House of Commons every night?—Well, I tried to speak through it last night only to the West End here, and instead of being able to hear the gentleman that I was trying to get through to I heard Sir Richard Webster, who was in the next box to me, trying to get through to someone in London.

2454. This gentleman's partner at Manchester told me last night that it was wonderfully clear. However, that is evidence?—Well, I could fill this room with witnesses who would give a very different account of it if the Committee were pleased to hear them; I know I have tried to do it and cannot; I know others that have tried it. I only know the one instance I speak of, and the gentleman goes to the National Telephone Company's office here, and speaks from there to his representative in Manchester. He does it one day a week only, and he does it by a pre-arranged signal at a particular hour. Every Thursday he goes to the Telephone Company's office in London to speak through to his managing man, who is waiting in Manchester, lying in ambush I might almost say, for the words to come over the wire.

*Chairman.*

2455. The company will be able to give us evidence as to the user of the long distance trunk wires, such as that from London to Manchester; but you are defending the rates now charged by the company for the trunk wire service as against the proposed rates of the Post Office?—Certainly.

2456. Are you aware that these rates that the company charge are for subscribers only, and that non-subscribers are charged double rates over the trunk wires?—The total business that the company will do with non-subscribers over trunk wires amounts to very little indeed.

2457. That may be the reason because they charge double; but are you aware of the fact that the company charge the non-subscriber double the amount?—They may do that.

2458. Whereas the Post Office charge both the subscriber and the non-subscriber equal rates?—Very well; the Post Office will never make anything at all out of charging non-subscribers another rate. I object, as a supporter of the telephone company, on behalf of all mercantile men, that we should be charged excessive rates in order that the Post Office may make a gift of the service too ther people, who are not entitled to it. If the Post Office intends to do so it is another of the gross injustices that they

*Chairman*—continued.

practise on the community. I want to give a few examples of how the rates will operate in Scotland. I take Ardrossan and Ayr, and Bo'ness and Dalray. Those four towns are distant respectively from Glasgow 31, 40, 26, and 23½ miles, and the present rate is 3*d.* to all these places; but the Post Office, according to their mileage scale, will charge 6*d.* for the trunk service; that is to say, these rates will be doubled. Then I will give an example or two of a higher rate. Leith is at present a 6*d.* distance from Glasgow, but the Post Office trunk charge will be a shilling, twice as much as is paid just now. Then, when we come to greater distances, the actual increase in the charge can also be shown. I take Carlisle and Arbroath as two examples. These are respectively 102 and 103 miles from Glasgow. The present trunk charge of the National Telephone Company is 1*s.*; but by the Post Office mileage rates the trunk charge will be 1*s.* 6*d.*, one-half more. From the particulars of the different rates which I have given, there must be an enormous number of messages at the low rates compared with what there are at the high rates; and, therefore, this increase of charge by the Post Office will fall very severely indeed upon those who have hitherto had the advantage in Scotland of these low-rated inter-town trunk facilities.

2459. Those figures you have selected and given the Committee as samples of other rates?—Samples; I have not analysed the whole 2,330. I took the distances from each other of the towns I have given from railway guides, but I might, if I had spent days over it, have picked out no doubt hundreds of them, because I believe the charges of the National Telephone Company, as a rule, are much within the rates they might charge under their scale. I suppose that the Post Office have statistics supplied to them by the National Telephone Company showing how many messages were sent at low rates and how many were sent at high rates; they certainly require such information before they buy the trunk wires over which these messages are passed; otherwise, if they have not that information, then they have not the data which they ought to have.

2460. That is going into past history, I think; that is a closed book?—I merely mention that they ought to have it. I inquired in the House, or some gentleman put the question. I remember reading it; and it turned out that they had not that information, at least they said they had not. I am sure that hundreds of cheap messages go over the trunks for one dear one. The Post Office were apprised of this by the National Telephone Company themselves before the agreement was made. I find that Mr. Forbes, the chairman of the National Telephone Company, drew attention to this very point when he was giving evidence before the Select Committee on the Telegraphs Bill in 1892.

2461. May I ask how this bears upon the question of the excessive charges proposed to be made by the Post Office?—I only point out, sir, that you were told by the chairman of the Telephone Company who sold you the Trunks that you intended, according to your scale, to charge the public twice as much as he charged.

 2462. I am

Sir *Julian Goldsmid.*

2462. We have had these quotations already?—I am sure you have never had this quotation, with all deference to you; it has never been alluded to here.

*Chairman.*

2463. We would sooner have your evidence than that of Mr. Forbes at present; he will come later on?—In Question 372 of the evidence taken in 1892, Mr. Forbes warns you that you are going to charge in certain areas twice as much as he charged; and he gives you examples of it. We do not want to be worse treated in Scotland than we have been if we can help it. I wrote to the Post Office some time ago about these excessive trunk charges, and the reply admitted that in certain cases the rates would be somewhat higher than at present, and in some cases somewhat lower; and I asked for a statement of those which would be higher and of those which would be lower. I have continued to ask for that statement down to the 27th of April; that was only a few days ago. Of course, the statement has never come to me, for a very sufficient reason, which I have no doubt will be present to the minds of the Committee; that is, that it could not be shown that any of them were lower at all, excepting when the rates rose above 2*s.*, and, as I have said, that is no concession whatever, to offer a cheaper rate at prices which bring no business at all as a consideration for charging twice as much as we pay at present for the shorter distances.

2464. I think you have stated that the charge is in no case lower on behalf of the company, except where it exceeds 2*s.*; are you aware that from Edinburgh to Aberdour the company's charge is 9*d.*, and that the proposed charge by the Post Office is 3*d.*?—Is it in the table; are you reading from the table?

2465. I am asking questions?—I could not answer that.

2466. Are you aware that from Edinburgh to Burntisland the charge of the company is 9*d.*, and the charge of the Post Office 3*d.*; that from Edinburgh to Cowdenbeath the charge of the company is 9*d.*, and of the Post Office 3*d.*; the same to Cupar, 9*d.* and 3*d.*; to Dunfermline (these are all from Edinburgh), 9*d.* and 3*d.*; Kirkcaldy, 9*d.* and 6*d.*; Perth, 1*s.* and 6*d.*; I mean, if those are facts (and I ask you to accept them from me), they are short distances, and entirely inconsistent with the statement you have just made?—I shall certainly accept these facts from you, sir; but why were these facts not given to me in reply to my numerous applications to the Post Office?

2467. The Committee is not here to answer questions put by a witness; any letter you write to the Post Office will, I am sure, be answered?—I hope the Committee will take it from me that I made these applications months ago, and I have been unable to get any reply to them.

2468. Was not your application for thousands of rates, which would necessarily have taken a very long time for the Department to prepare; and is it not a fact that you have been informed that it was impossible to give you that information within anything like a reasonable time; you

*Chairman*—continued.

yourself have spoken of thousands of trunk wire rates, and you were informed it was impossible for the Department to provide you with that information within the time in which you asked for it?—No, with deference, they never gave me that information at all. There is nothing whatever of what you say in these letters. I think the best way for me to simplify this is to put this correspondence which I have had with the Post Office into the evidence; that is the best way. Then the Committee can read in it a great deal more than I have been able to tell them. I think that is the best way of dealing with it. I may have to refer to one or two matters in it; still I would suggest that for the approval of the Committee (*the letters were handed in*). I would now, with the permission of the Committee, answer any question addressed to me on other matters, unless any gentleman has any more questions to ask in reference to the point we are dealing with now, the trunk charges in Scotland.

2469. Is that all the statement you wish to make with regard to that point?—Yes.

2470. Then I have one question to ask you: you referred to this letter from the Post Office in answer to a letter from Messrs. Stevenson, and you have stated that the answer was that the Post Office could not hold out "any hope that the Government will in any case depart from the system of charge for the use of the trunk lines"; did not that refer to an application from Messrs. Stevenson that they might be allowed to continue an arrangement which they had had with the National Telephone Company that they should pay an annual sum for the use of certain wires?—It could not refer to that, because it quotes the Treasury Minute. There is nothing whatever in the Treasury Minute about the annual sums payable for wires; nothing whatever.

2471. I have the correspondence here, and it refers to the arrangement which Messrs. Stevenson had with the company for an annual charge for the use of certain trunk lines?—Very well.

2472. Is not that the answer from the Department; the answer to the effect that the Department can hold out no hope: "The Postmaster General can hold out no hope that the Government will in any case depart from the system of charging for the use of trunk lines, which is a system of payment per conversation"?—Yes, but does it not mention the Treasury Minute? It says he will not reduce the charges in the Treasury Minute.

2473. No, it does not; it says nothing of the kind?—If you will give it me perhaps I can find it.

2474. It is the system of charge which was adopted in the Treasury Minute?—Precisely so. If the Postmaster General will tell us that he will allow such persons as Messrs. Stevenson & Co. to do their business at a cheaper rate than what the public are to do it at, then that will meet the point I have raised.

2475. The Postmaster General will consider any application that may be made, but he will treat Messrs. Stevenson exactly as he will treat any other member of the public?—That answers my query. Then they will have to pay in future the rate which is put down in the Treasury Minute instead of being able to carry on their business

*Chairman*—continued.

business over the main lines at 50*l.* a year, as they and many other firms have done with the National Telephone Company.

2476. Certainly; Messrs. Stevenson will have to pay what other members of the public have to pay, and as those are the rates which are given they will have to pay those rates; if the Department, either under the pressure of Parliament or other pressure, determined at any time to lower those rates Messrs. Stevenson, with the rest of the public, will get the benefit of the reduction?—I will just give the Committee the information I have had from Glasgow on this point. The principal shipping firms in Bo'ness, Grangemouth, Greenock, Ardrossan, Troon, Ayr, and other towns formerly had annual arrangements. These have probably all now expired or will expire, and these firms who formerly paid yearly rents now pay for single conversations; but on account of the much increased charge they make, of course, less frequent use of the wires. Messrs. Stevenson themselves told me, in the correspondence which the Postmaster General has in front of him, that if they, in future, use the telephone trunk wires to the extent they have done hitherto in the conduct of their business, the expense to them will be about 15 times what it has been up to the present time, and that is a very serious matter to business men. Contrast the position of a firm like that of Stevenson, who are coal shippers, and other firms who are in the iron industries in Glasgow, with the telephonic inter-town communication facilities which are given, say, in Belgium, where the rates are nothing like so high, and where the service is infinitely better. A merchant at his desk in a town in Belgium can make up all the details of a contract without leaving his desk by his ready and cheap inter-town facilities, whereas his competitors in the neighbourhood of Glasgow will now be charged a very high rate, an excessive rate I call it, for the same facilities, and (as I shall prove presently) for a service which is much inferior.

2477. Are you aware that in Belgium they have a uniform rate all over the country of trunk wire charges?—I understand so; the same as in Germany.

2478. Though for short distances the charge is considerably higher than it will be under the Post Office in Scotland?—Will the right honourable Gentleman state what is a "short distance" in Belgium? The ordinary annual subscription to a Telephone Exchange includes service to places 20 or 30 miles distant.

2479. The short and the long rates are the same; I should think that most of the distances in Belgium are short as compared with those of England and Scotland?—Over the Continent, with one or two exceptions, the inter-town rates are much lower than in this country; in some countries they are microscopic compared with what they are with us, and in Germany the rate is only 1*s.*, no matter what the distance is. You can telephone in Germany for 1*s.* a distance that it would cost you, according to the Post Office scale, in this country, I think, about 7*s.* or 8*s.* to telephone. If there are any more questions respecting Messrs. Stevenson I shall be happy to answer them.

Sir *Julian Goldsmid.*

2480. I think not?—Very well.

2481. Might not the other members of the Glasgow public, the public generally, say that that was a very strong undue preference which the National Telephone Company have given these 50 or 60 merchants you refer to?—I do not think so.

2482. Do not you think they might?—The National Telephone Company have no duty to the public at all; their duty is to themselves, to do what is best for themselves.

2483. That is a matter of opinion; but I am asking you this: As a member of the public at Glasgow, if the Messrs. Stevenson have a lower rate (and a very much lower rate) by an annual contract, do not you think I should have ground of complaint?—None whatever; the general public might as well complain of any merchant who sells at one set of terms for wholesale business, and another set of terms for retail business.

2484. You are aware of the law of undue preference with regard to railway companies and a great many people, are not you?—The laws which relate to railway companies are great mysteries.

2485. You are aware that there are cases constantly tried with regard to undue preference?—There are cases constantly coming before the Railway Commission, and the Railway Commission was appointed to meet a well-known hardship; but there would be no hardship in the present case at all.

2486. You do not consider that there is?—If there was there would be a Telephone Commission appointed to deal, for the public, with the matter you speak of, as the Railway Commission deals with the railways.

2487. That would not do, because the Post Office are taking over the trunk lines; therefore there could not be that, quite?—The Government do not take the companies over, and they would still be liable to be dealt with by such a Commission.

2488. I point out to you that railways are subject to a charge for undue preference before the Railway Commissioners, and I ask you whether, in this case, it would not appear to you that the National Telephone Company were giving an undue preference to a very small number of subscribers in Glasgow as against the rest of the Glasgow public?—No; and the position is not identical at all. The railway companies are all constituted under Acts of Parliament obtained in this House, and consequently liable to this House. The National Telephone Company had no Parliamentary rights of any kind whatever until they were given them—only a few days ago, I might say—by the present Postmaster General.

2489. That is a matter of argument?—Not at all; there is no "argument." I could quote the statements of the chairman of the Telephone Company himself, who has told Committees here that they had no Parliamentary rights whatever; they have got them now, but they had none before.

*Chairman.*

2490. I understand you to advocate that the Department (the Post Office) should enter into contracts with particular individuals allowing them a general use of trunk wires for an annual rental; are you in favour of that policy by a

*Chairman*—continued.

Government Department?—That might be done. The Government Department lets out telegraphic cables to the Press, and I have no doubt could let them out to others if they liked to hire them. Why not let telephone cables as well as telegraph cables?

2491. You would approve of the Government Department (the Post Office) entering into contracts with individuals, giving them special privileges with regard to trunk wires as compared with the general public and the charge imposed upon them?—There might be a very large number of questions that would arise out of that that we cannot go into; but, generally, I say this: that there is no justification whatever for this contract unless to benefit the public interest; and if this contract were not made with the Telephone Company for the benefit of the public interest, then it is a bad contract for the public, and ought not to have been entered into.

2492. That is hardly an answer to my question, which was a specific and definite question; my question was, whether you would approve of the Public Department having the right to enter into special contracts with individuals, giving them a preferential right over others?—I would give large users of inter-town telephone service the same privileges that the Post Office at the present moment give large users of the telegraph service.

2493. Would you approve of that same principle being applied to the telegraph service and the postal service; that is to say, that a man who sends a large number of telegrams over the public wires should do it at a cheaper rate than the general public, or that the man who sends a large number of letters through the Post Office should do it at a cheaper rate or for an annual sum which would be beneficial to him?—The case of letters is not identical; telegrams and telephones are more like each other, but even there there might be some differences to consider if the question was gone into. I can only repeat and confirm what I have said, that an agreement which takes away from the public facilities which they have just now, and is only going to give them facilities and terms far more onerous than those they at present enjoy, is a bad agreement, and one that ought not to have been entered into at all, because it is against the public interest.

2494. Are you aware that upon the Postmaster General there is a statutory obligation to treat every member of the public on exactly the same lines with the exception of the Press, where, when the telegraph system was taken over, special terms were given in order to meet the public necessities?—Well, special terms might be given when you take over the trunk wires in the same way.

2495. To individuals?—To individuals; to large users. I might have to consider the thing more at length, but I have stated my views on the subject. You gave facilities to the Press in connection with telegraph lines when they were taken over, and the principle would, as far as I can see, not be departed from if you gave facilities over the trunk wires to those who require a great deal of inter-town service.

*Chairman*—continued.

2496. Then now, perhaps, you will go to the second point, the connection of the trunk wires with local exchanges in Scotland?—Perhaps, before leaving that other point, sir, I may just say one thing: In the correspondence with the Post Office it was pointed out that one advantage the public would have under the new agreement was that telephone service would be given to different towns, inter-town telephone service, where there is no inter-town telephone service just now. Well, that is no advantage to the commercial centres in Scotland; and it is commercial men who are entitled to be considered in reference to this service; it is a business necessity, and we cannot in Glasgow, or in any other business city like that, compete with those we have to compete with unless we have a cheap and efficient service. The result of opening telephone service to outside localities will be one of two things: If it does not pay in some places then you must surcharge other localities where it does pay to meet the cost (which would be unfair to those localities), or it must be charged on the Treasury; that is to say, outlying localities would be furnished with telephone service at the cost of the taxpayer. That is not done with telegraph work. You will not run a telegraph line anywhere unless you have an undertaking from the neighbourhood to give sufficient business to meet the expenses, or you get some guarantee from those in the neighbourhood to make up the loss. Therefore, the advantage which is set out in the letter is no advantage whatever; on the contrary, it must operate either as a drawback to those who require it for mercantile purposes, or it must be done at the cost of the general taxpayer.

2497. Then do I understand that you are against the extension of the trunk wire system, and do you maintain that Glasgow will not benefit by having a trunk wire service which will put them in communication with Bristol, Cardiff, Liverpool, and other large towns in the country?—It was not these towns that were meant in the letter, and I do not mean these towns. I do not call these outlying towns at all. We have trunk service to these towns now. I am not sure that it is open from Glasgow to Liverpool, but it has been in course of construction from a time long before this agreement was entered into.

2498. Then you think the extension of the trunk wire system generally should be governed by the consideration of whether it is beneficial to Glasgow?—I think, in fairness to the public, the considerations which have governed the action of the Post Office in reference to telegraphs should govern their action in reference to telephones. It is idle to say to us in Glasgow, in Edinburgh, Leith, and Greenock, or any place where we must have the telephone as a commercial necessity, we have opened it to John O'Groat's, to Land's End, or to some other place, from which you will never earn as much money as would pay the cost of the operators' wages. It is the mercantile community that are entitled to be considered. If it was not for them you would have no telephone service at all.

2499. Now, shall we go to the second point; the action of the trunks on the local exchanges in

*Chairman*—continued.

in Scotland?—Very well, if you have any question to ask me, sir.

2500. No, we understood you wished to give a statement?—Very well, I will state the point briefly.

2501. I think the statement must be confined to these two points?—I do not think any member of the Committee will have reason to complain of any of my answers going outside the scope of the reference to this Committee, and what the Committee are pleased to hear from me. Although you have had evidence here already about the local service in Glasgow being bad, I may just say that my own experience of it is this: At intervals of every few weeks or every month or so, I stay at the Central Hotel in Glasgow. That has continued since 1886. The service over that time has certainly been bad; but when one uses the word "bad" or "good" in reference to a telephone service it must be understood as a relative term, because it never can be good in Glasgow so long as it is telephoned by a single wire system; therefore, when I say it is bad, I am merely uttering a truism, because it is impossible it can be good; it has been sometimes bad as a single wire, and sometimes it has been fair. They fitted a new switch-board in Glasgow, I think it is a year or two ago, and for some time after that it was absolutely impossible, I may say, to get through to anybody at all, in any time that any man could afford to give to the operation; and down to my last visit, which was only a little while ago, I found that the time taken to get through, and the number of persons you could get through to took so long, that I had to give up the attempt to get through. My plan now is to make a list of those I desire to speak to, and hand it to an assistant porter; he struggles with it for an hour, or an hour and a-half in the morning, and reports the results to me as I go in and out of the hotel. A single wire system never can be a good service; and I will quote the language of the Chairman of the National Telephone Company if the Committee desire that from me, distinctly saying so.

2502. No, I think we have heard that two or three times?—No, you have not.

2503. The Committee have?—Not what I was going to quote.

2504. I think it better we should hear that from the chairman himself?—If the Committee accept the statement I have made, which is a perfectly fair statement. It is the fault of the company: they have got a single wire service, and it is a bad one, because it is a single wire. If the Committee accept that of me I will not read it, but Mr. Forbes has repeatedly stated the fact I mention: that the service was bad, and that it was bad because it was a single wire, that there could be no good service whatever in any large area or large town like Glasgow unless it was a double wire system. If the Committee will take that, I will not give the quotations I intended to read to them. I would add this: Mr. Forbes has also said that we never will have a good service in large areas unless we have double wires. We never can have a good inter-town service there unless we have double wires, and I must quote Mr. Forbes, and

*Chairman*—continued.

also Mr. Wallace, on these two points, because it is impossible to have a double wire service unless a new telephone exchange is built in Glasgow, and this applies to every single telephone exchange. Mr. Wallace, who was a director of the New Telephone Company, told the Select Committee on the Telegraphs Bill in 1892 that, unless the cities had double wire exchanges, the Post Office would waste its million of money in providing double wire trunks; and that statement was confirmed by what Mr. Forbes himself told the very same Committee. Now I will read the quotations.

2505. I think we have had those quotations read?—I do not think it. It is Question 403. I may mention, sir, that I have not read every word of the evidence taken by the witnesses; I have read a great deal of it, but I am sure I shall not ask this Committee to listen to one word from me that has been said by any previous witness if I know it, and you certainly will not have any quotation that has been given before. At Question 403 of the evidence before the Select Committee in 1892 Mr. Wallace says that unless they can carry out a twin wire service in large towns the Post Office will waste their million of money. He also says that a local single wire system is of no use whatever for Government trunks which are double wires. In Question 401 he repeats the same words substantially; he says, "With twin trunk wires it is absolutely essential that the local companies should have a twin system locally." From that it follows that it is impossible that we can have an adequate inter-town service in Scotland unless our local exchanges are fitted with double wires. The question has been asked by you, sir, of more than one witness, if he was aware that the National Company were doubling their wires just now. With reference to what they are doing in London others may speak; in reference to the country and Manchester or Glasgow they are quite willing to double the wire from my office to their exchange, but they will charge me 2*l.* 10*s.* a year for doing it. I may have the double wire, but I must pay for it before I can have it. I must pay half as much for that as would fit a new wire altogether, instruments and everything included. The cost of re-constructing the exchange in Glasgow would come to a very large amount of money, and the cost of that would be (must be in fact) charged to the users of telephones. Under the agreement the Telephone Company are not restrained in any way whatever as to charge, as to supply of service, or in any way at all; they are as free to charge us 50*l.* a year as they are to charge us 10*l.*, and as they charge 2*l.* 10*s.* a year extra for a double wire they would have to raise their present exchange rates to give them a return upon any extra capital which they laid out in fitting a whole exchange. That brings me to the point of what we pay just now. We are charged 10*l.* a year in Glasgow, and you have had evidence already of what Glasgow is willing to construct an exchange for, and charge for it; that is to say, 5*l.* a year. Now, it is impossible that there can be any reduction of that charge by the National Telephone Company, on account

*Chairman*—continued.

of the enormous capitalization. Each exchange user in the United Kingdom is capitalized to the extent of 60*l.* by the National Telephone Company. I will give you the details of these figures if the Committee desire it; it is very easily done.

2506. Are you aware that, in Glasgow, the Royal Exchange is already fitted with a complete metallic circuit?—It may be as you say; I will take it from you, sir, but I have only telephoned from the Central to the Exchange. I gave up, a year or two ago, attempting to get through from the Central in Glasgow to any person on the Telephone Exchange at all. I have never spoken over a double wire in Glasgow. I am sure of that. I know perfectly well when I am speaking over a double wire, and over a single one; the difference is so great that any person of telephone experience can always know over what he is speaking. I was going to say the National Telephone Company's capitalization is 60*l.* per user, and it is made up in this way: Their capital is about four-and-a-half millions in round figures; they are going to sell to the Government about 400,000*l.*, or rather more, of trunk wires. That will leave them with a capitalization of say 4,200,000*l.* There are about 70,000 telephone users altogether, 60,000 exchange users, and 10,000 (about) private users (and the cost of the private exchange wires would average very much the same); the 70,000 users divided over the 4,200,000*l.* of capital (which will remain after they sell the trunks) gives a capital of 60*l.* for each user in Glasgow. Now you have it in evidence, and I repeat it, that Glasgow can have a double wire for a capitalization of 15*l.* per user, and supply the service for 5*l.* per user, the annual service, whereas the present company charges 10*l.* I show these facts to prove that it is impossible that under this agreement, which gives us no relief whatever in any way, Scotland altogether will not enjoy anything like the inter-town telephone facilities which we have just now, and that it will entail a continuation of a rate double what is reasonable for the local service.

2507. Is that the end of your statement?—Yes; if it pleases you, sir, I was going to speak of the effect of the terminal charges on the trunks. I have got some notes about it.

2508. As affecting the trunk wire charges?—Yes, how they will work. The trunk wire charges are shown on page 17 of Parliamentary Paper 267. That is in the agreement. The effect of these terminals will be this, that if the Municipality of Glasgow build an Exchange, unless Edinburgh and other towns with whom they might communicate also build municipal exchanges, they will have to pay to the National Telephone Company 3*d.* on every message which does not exceed 1*s.* 6*d.*; 4*d.* on any message which exceeds 1*s.* 6*d.*, but does not exceed 3*s.*; and 6*d.* on every message which exceeds 3*s.* Well, sir, that makes it impossible for any inter-town business to be done at all, or nearly impossible, between a solitary Municipal exchange and the other exchanges which are in Scotland at the present time. The effect of that would be that all the rates that I have mentioned under 1*s.* 6d., and these include out of 2,330 the whole number, except 12, would be charged 3*d.* extra. Well, on the 350 rates at 3*d.* each, it would make 100 per cent.

2509. That would only apply to cases where a subscriber to another system wanted to communicate with a subscriber to the National system; and then the charge is not obligatory; it is only a maximum charge; it is the maximum which the company could charge?—Yes. The table shows the maximum terminal charges which the National Telephone Company could make, and as the company is allowed by the agreement to charge them they are certain to do it; indeed they have already commenced. This charge of terminals was invented in order to prevent subscribers to an Exchange, competing with the existing ones, from being able to communicate with any other town, as the message would be surcharged when it passed through the delivering Exchange of the National Telephone Company.

2510. Do you suggest that there should be no terminal charges?—None whatever; no terminal charges, I mean.

2511. I asked you as to terminal charges?—No terminal charges whatever.

2512. Do you agree that where a private individual, who is not a subscriber, goes to a call-box of the National Telephone Company, he should have to pay if he wants to use the National Telephone service to communicate with a subscriber of the company?—We come again to who are entitled to be considered.

2513. Would you answer the question, please. Do you agree that a member of the public, who is not a subscriber, if he wants to use the National Telephone Company's service at a call-box, should pay for the use of the telephone service which the company provide?—Certainly not. I am not speaking about that at all.

2514. Will you answer the question; do you agree that he should have to pay?—Certainly he should have to pay.

2515. Then why should not a subscriber to a municipal service or to some other service also have to pay the National Telephone Company if he makes use of the service which the National Telephone Company provides?—I will give you one reason; but there are many reasons. In the first place, that man is not a subscriber to any telephone exchange at all (the one you are speaking about), and consequently he gives nothing to the State, but the trifling percentage upon an occasional message. I am speaking on behalf of those for whom telephone service is necessary, and without whose assistance we should have no telephones whatever. I am assuming that the business men of Glasgow came here and asked for a license, and erected a telephone exchange, and unless Edinburgh, Dundee, Aberdeen, and other towns in Scotland also did so they would be unable to get their two messages delivered in these cities unless they were surcharged with this threepence, fourpence or sixpence, as the case may be; and I say that for such service there should be no terminal charges. Terminals were expressly invented to prevent competition.

2516. I do not think we can go into the object with which terminals were sanctioned?—Sir James Fergusson, the late Postmaster General, asked that very question of Mr. Lamb; I will quote it

*Chairman*—continued.

it. (Question 350): "Then I will ask you this: Was the provision in Clause 8, sub-section 2, of the agreement, that is to say, regarding the exchange of messages from one company to another, introduced to meet the objection of the companies that a license to a new or local licensee would enable an exchange with a small capital to benefit by the great expenditure of a larger company;" and Mr. Lamb said, "That is so." That clearly proves what the object was why terminals were invented; and more than that, that they were invented then is quite clear, because there is nothing whatever about them in the Treasury Minute.

2517. I think you have not looked carefully into the Treasury Minute?—I have; but I will take it from you, sir, if you can show it me in the Treasury Minute. We will come back to the Treasury Minute, if you please.

2518. I think, if you will look at page 5 you will see that it is not so?—We will come back to that, please. In this question Sir James Fergusson (the Post Office at least, I should say) then thought that terminals should be charged against a company because it had a small capital.

2519. I do not agree to your interpretation. (Sir *James Fergusson.*) Nor do I?—It is stated here, as clearly as it can be. A company having a small capital could not build trunks for itself, and, consequently, it should not be allowed to use the trunks of any other company. But what were we doing when we were making this agreement? I say "we," because it is made for the public. We were handing over enormous privileges to the National Telephone Company which they did not possess before then. Those who made that agreement, therefore, should have seen that they were protecting the public. Does the Committee desire to know what those privileges were, because again I quote Mr. Lamb; he stated them himself.

*Chairman.*

2520. Then, I think we need not have them again; we have them fully before us?—It would make it so much clearer if I repeat them.

2521. We have them very fully before us?—He says here (Question 194 of the Evidence taken before the Parliamentary Committee in 1892), in reply to a question by Mr. Ellis (it is the last part of his reply I am quoting): "I think at first that the commission of 5 per cent. might be stated as 2,000*l.* per year; but it would enormously increase as the arrangement developed and matured. My money value of the concessions, therefore, might be stated as between 5,000*l.* and 6,000*l.* per year." Then Mr. Ellis asked him (the next question): "With an enormous prospective possible increase?" and Mr. Lamb said "Yes." Then further, in reply to Question 206 (in speaking of what the State was doing for the company) Mr. Ellis asked: "If the State decided to buy the telephone system, it would have to purchase back every concession it now makes, would it not?"—(*A.*) "Yes," he says, "in that sense undoubtedly." Now, in view of the concessions and rights conferred on the National Telephone Company the public interest should have been protected when this agreement

*Chairman*—continued.

was made, and if a municipality was to build an exchange it should have been stipulated, to all licensees not only the National Telephone Company, but every municipal licensee; and every other company who held a license should be compelled to carry the messages and deliver them, in fact, to interchange messages in every town. There should be no charge for terminals at all. It will be found to be very very oppressive, and, indeed, that fact is admitted by the Post Office themselves in the correspondence to which I have already had to allude, and I will just refer to what Mr. Lamb himself said to me in a letter on that subject. When writing to me on the 30th January last, he says: "The question of making a terminal charge in respect of communications between persons on different exchange systems is one which must rest a good deal with the Telephone Companies, who are left a wide discretion by the Treasury Minute, and by the "Heads of Arrangement." If the companies insist upon making the charge in respect of their system as against post office subscribers, the Postmaster General will no doubt have to make it in respect of the post office system as against the company's subscribers," and in reply to that I see that in the letter which I wrote to him I said: "Quite so; that is to say, against one increased charge the Postmaster will retaliate by making another, and telephone users will be mulcted." There are other reasons besides those I have given for showing that there should have been no terminal charge whatever. It makes a license granted to a municipality now only of partial value, even in a locality, and it makes it almost valueless to them in reference to inter-town communication. Why it affects the value of a license in a locality is because there are some persons in manufacturing and industrial business centres who would not go on a telephone exchange at all unless they could communicate freely with other places without extra charge. Consequently, to take the case of Glasgow, these would be compelled to stay on their present exchange or might do so rather than join a new municipal exchange, until at least other municipal exchanges had been opened in other towns with which they might interchange their business without any surcharge. Now, sir, I refer to the Minute about the inter-town charges, and the statement that the origin of terminals is to be found in the Treasury Minute.

2522. I wanted to correct the statement you made in the House of Commons, and before the Committee, that there was no reference to the terminal charges in the Treasury Minute. If you look at page 5, and to the note at the bottom which refers to paragraphs 13 and 14 of the Treasury Minute, you will see these words: "These charges are independent of the charges which the companies make on their own account for sending a telephone message"?—That does not refer to charges which the companies, in the event of competition, might have the right to charge. I have not the least doubt that in the mind of the company when this agreement was entered into they had some intention of making a charge of some kind; but the Post Office had nothing of the kind in their mind. Will the right honourable gentleman put the gentleman who

*Chairman*—continued.

wrote that here on the stand, and ask him if, when he put that note there, he understood that it referred to terminal charges to be made by-and-bye.

2523. I have already stated that the Committee are not sitting here to answer the questions of a witness?—I am merely saying that the mere language of this note shows it could not have anything to do with terminal charges which never were heard of until six or eight months afterwards. This note does not speak of a future charge at all, but of a charge they make at that time "on their own account, for sending a telephone message." Why the terminal is for delivering a telephone message. There is no allusion whatever to terminals in the note on page 5 of the Treasury Minute. It could not apply to terminals, although it may have been put in by the telephone company with an eye to something in the future.

Sir *James Fergusson.*

2524. You have challenged the propriety of the trunk line charges now laid down; was not one of the reasons in the Treasury Minute for the change of system proposed this: that the then system was causing great loss to the telegraph revenue, and that it was desirable that the public revenue should be protected by the trunk wires being taken into the hands of the State?—That was one of the reasons given by Mr. Lamb, but there were other reasons.

2525. I beg your pardon; the Treasury Minute I am speaking of, not Mr. Lamb; was not that one of the reasons given, quite outside the Treasury Minute?—Will you refer me to the paragraph?

2526. Paragraph 1, the second sentence: "It is impossible to continue the present system under which the telegraph revenue is seriously suffering;" and paragraph 3: "Unless trunk wires are in the hands of the State, a monopoly, injurious to the public interest, would inevitably ensue," and so on. Therefore, was it not contemplated that the trunk wires should be taken into the hands of the State, and a loss to the telegraph revenue thereby prevented?—Yes, that was one of the reasons, certainly.

2527. Then was it not directly contemplated that an adequate charge should be made to prevent the telegraph revenue suffering by the competition?—To which do you refer just now; are you referring to the tariff which is in the Treasury Minute at Clause 14.

2528. No; the question I asked you is this: You have challenged the propriety of the trunk line charges now laid down. Was not one of the reasons in the Treasury Minute for the change of system proposed this: that the then system was causing great loss to the telegraph revenue, and that it was desirable that the public revenue should be protected by the trunk wires being taken into the hands of the State?—The result will be, or the result may be, that the State will earn more money now than they did before, but it will be by punishing the telephone users. That is bad policy for the State.

2529. You agree, in reply to my question, that it was one of the objects contemplated, to

Sir *James Fergusson*—continued.

protect the telegraph revenue?—I agree it was an object to protect the telegraph revenue.

2530. Then in cases where a charge appeared to be too low as compared with the telegraph revenue, it would be consistent with the proposals laid before Parliament, that the price should be raised?—You may raise it; you have raised it in fact.

2531. That would be consistent with the scheme laid before Parliament, would it not?—The words they made use of are these: "For conversations on the trunk wires of the State the following charges will, it is thought, be equitable, while, at the same time, sufficient to secure a margin of profit." That was the basis, I presume, upon which the Post Office arrived at this scale. The Post Office can only justify this agreement by proving that it is in the public interest. If they are going to charge the public more for any service than the public pay just now, it is perfectly clear that the agreement is not in the public interest, but against it.

Mr. *Grant Lawson.*

2531*. I think you said about terminals that the imposition of terminals would render the system of municipal exchanges impossible?—Let us take a concrete case; take Glasgow.

2532. Would it make it impossible or difficult?—Difficult; but if you will permit me I will explain the exact effect in any one town.

2533. I will take your answer, that the imposition of terminals would render the system of municipal exchanges difficult?—It would be a hardship to Glasgow.

2534. It would make it very difficult to them?—It would be a hardship to them. There would be advantages on both sides. That is why I desire, if you will permit me, to take a concrete case; you will then understand how it will affect the whole question. If Glasgow were permitted to build a municipal exchange they would offer to their users the modern double wire service for their 5*l.* a year, but unless Edinburgh and Greenock and other places built municipal exchanges they would not be able to send inter-town messages as cheaply as the National Telephone Company. The Glasgow Exchange, you would see, would offer them facilities in one way; the National Telephone Company would offer them facilities in another; consequently it would depend largely upon what each particular user wanted, as regards whether he would feel it a hardship or not. Take an ordinary resident in Glasgow: he wants no inter-town wires and cares nothing for them; he would at once go on the municipal exchange. Take men like those I named some time ago, men who carry on business largely with the shipping ports, both on the east side and the west side of Scotland. I think they might say: "We will not join the municipal exchange although it is cheap and good, for we cannot get through to Leith, Bo'ness, Girvan, Troon, Ardrossan, and other towns unless our messages are surcharged." They might think proper to continue with the National Telephone Company, but on balance for one firm that would want inter-town communication (or one person) I may say 30 or 40, or perhaps 100, would want a first rate local service.

2535. The

Mr. *Grant Lawson*—continued.

2535. The commercial houses would not go to the municipal exchange, you think?—They might do it; but remember the number of houses that do the business about these districts; the shipping houses are not very large, numerically speaking; they are very unimportant as compared with the rest of the mercantile houses in Glasgow.

Mr. *Benn.*

2536. With reference to this difficulty which you have just explained with regard to terminals, suppose a mutual arrangement was made, say, between a municipal exchange at one end and the National Telephone Company at the other that interchange of terminals should be waived at either end, that difficulty would at once disappear?—Certainly; then there would be no terminal.

2537. Then take the case of London, if I may ask you about that; you know something about London?—Yes.

2538. Where the inter-town service only represents, probably, 5 per cent., or not 5 per cent., of the total number of messages, this terminal difficulty would be a very small difficulty?—I do not believe the number of persons in London who would use the telephone service contain amongst them anything like 5 per cent. who would care about an inter-town service. I should think that for 1 per cent. who wanted inter-town service 99 would be satisfied with a good local service.

2539. Then if the citizens of London or Glasgow were prepared to put up with this probable difficulty of terminal charges, do you think it should be urged as a reason against a license?—Certainly not; I am not urging it against granting a license at all; I am pointing it out to show the injustice of the treatment we are getting from the Post Office by the agreement made with the National Telephone Company.

2540. Then what did you mean just now by telling the Committee that, in view of these terminal charges, the granting of municipal licenses would be difficult?—Not the granting of them.

2541. Well, the working of them?—I have given you a concrete example.

2542. The point is this: I want to ask you how terminal charges, which in London would only affect probably 2 or 3 per cent. of those using the telephone, would be prohibitory to the exercise of a municipal license?—It would not be in the least prohibitory in London at all; it would not affect one person in a hundred. I should, perhaps, explain that Glasgow, Liverpool, and Manchester are cities which will always use far more inter-town service than London. London is an enormous residential city, where the bulk of the people want no inter-town communication whatever, except by means of the telegraph. There are parts of the country where the inter-town service is chiefly found: in Scotland, Glasgow, Edinburgh, Leith (the seaports of both cities), and in England, Liverpool, Hull, Manchester, and all the Yorkshire towns; there is also a large inter-town service in the Birmingham district, and perhaps some between

Mr. *Benn*—continued.

Newcastle and a few towns close to it, small places, but besides the four districts I have mentioned, inter-town service in this country must be very small indeed.

2543. Suppose the districts which do a very considerable inter-town business, in view of these charges which you consider unfair, still press for the exercise of their municipal rights—the exercise of a municipal telephone—why should you say that the thing is difficult; you gave the Committee the impression just now that it was almost impossible?—I did not intend to convey any such impression to them. Glasgow's representatives said here that they would be delighted to take a license and put up with any drawbacks connected with it.

Sir *Charles Cameron.*

2544. I want to ask one or two more questions about that point, but you have put it clearly. Your view, as I understand it, is that you are in favour of the municipalisation?—Certainly.

2545. And you think you would support the action of the Glasgow authorities in starting a telephone exchange if they got authority?—Certainly.

2546. You are aware that the Edinburgh people have applied for a license and that they also desire to put up an exchange similar to Glasgow?—Certainly. I am not sure that they have said they have applied for a license, but they have said they will apply, which amounts to the same thing.

*Chairman.*

2547. Edinburgh has not applied?—No; but they have said it is their intention to apply.

Sir *Charles Cameron.*

2548. If Edinburgh and Glasgow were to have municipal exchanges they could interchange inter-town telephone messages without charge?—Certainly; and they would do so.

2549. And if they did so probably the result would be that the National would agree with them for convenience to waive terminal charges?—I have no doubt whatever the National would in their own interest find themselves compelled to do so.

2550. And even if they did not, if Glasgow could supply a telephone service for 5*l.*, against the present 10*l.*, that would leave a balance of 5*l.* a year?—Undoubtedly.

2551. That would pay for a great many terminal charges in the course of the year?—There is an enormous percentage of the Glasgow users that would never pay a terminal because they never would use an inter-town trunk.

2552. And as a matter of fact there are very few of the users who send a couple of inter-town messages a week?—Very few; only shipping firms and firms doing business with other towns.

2553. So that as a matter of fact, although your opinion is against these terminal charges, and although you think in certain cases they may be prejudicial, you do not mean the Committee to infer that, in your opinion, they would constitute any real obstacle to the municipal

Sir *Charles Cameron*—continued.

license?—Certainly not. I desire to express, and to be understood as meaning, simply that the Government ought never to have made a bargain in which terminals were permitted at all; they are wrong in principle. They will affect a very small number indeed of telephone users.

Mr. WILLIAM HENRY PREECE, C.B., F.R.S., called in; and Examined.

*Chairman.*

2554. ARE you Engineer-in-Chief and Electrician to the General Post Office?—Yes.

2555. And I believe you brought over the first pair of practical telephones in 1877?—Yes; and I have devoted uninterrupted attention to the development of telephony ever since.

2556. I believe you are prepared to give us the result of your practical experience upon the question of telephony?—I am.

2557. Will you just very shortly describe the instruments which are necessary in order to make a complete telephone circuit?—Yes. First of all comes the Bell telephone receiver which everybody, of course, is acquainted with. There is very little difference indeed between the first instrument brought over in 1877 and the latest receiver as used now. This instrument sprang nearly perfect from Bell's, the inventor's, hands; and it remains to this day the simplest and the most delicate electrical instrument we possess. That, of course, is used to reproduce speech. The transmitter is that part of the instrument that converts the sound waves in the air (the waves that come out of my mouth) into electrical waves, and they are transmitted through the conductors. At the other end of the line they operate the Bell receiver. Well, this transmitter has passed through numerous phases, and it has not approached finality yet. Every day we are receiving suggestions and making improvements, and it has passed through various stages from the one introduced by Bell and improved by Edison. The microphone transmitter, of which Mr. Lamb gave evidence, was brought out in 1878, and is the one used still; and every day, as I said just now, modifications are being produced. Of course, these instruments have to be connected together by two wires forming a metallic circuit. These wires are best twisted about each other.

2558. You are describing the twin-wire system, so far as it has been developed?—Yes, the twin-wire system. It was false economy that introduced the use of the earth. The principal systems have been dependent upon one wire. The one wire makes a defective system; it leads to innumerable troubles; it causes imperfect working; and it really is the principal cause (as you have had plenty of evidence before you to show) of the great unpopularity of the telephone industry of this country.

2559. At first, I suppose the single-wire system was the general system, and the metallic circuit system has been the result of experience?—No; we commenced with metallic circuits in the Post Office; and it was the introducers of the telephone both in America and in England, who for economy used the single wire, and not, as they ought to have done, a double wire.

2560. I hope the Post Office considers economy?—We have used single wires in districts where there is no possible disturbance and where the distance is very short, and there economy comes in; but where efficiency is the rule we have always used the double circuit.

*Chairman*—continued.

2561. That is the twin-wire system, and that is the system that is being gradually introduced abroad and in England?—It is being introduced very rapidly in England, almost generally in the United States, and over the Continent very largely indeed.

2562. You have described the receiver and the transmitter and the wire making up the circuit; will you just shortly describe the switchboard which the Committee have had an opportunity of seeing?—Yes. The switchboard derives its name really from railway practice; it is a small apparatus which shunts or directs the currents that go along one circuit on to another circuit, terminating at the same office or exchange. Those members of the Committee who visited the Exchange yesterday have seen how rapid and how simple the operation is to transfer the currents from one circuit to another circuit. All the earlier switches were derived almost directly from telegraphic practice. The early switches were merely adaptations of switches that were used on telegraphs. In the early day, of telegraphs we used to switch one town on to another for telegraphic purposes. Now these switchboards have taken different forms. The members of the Committee yesterday saw in Lime-street that which is called the panel or upright form, in Gerrard-street a modification of this which is a table form. The one great advance or improvement that has been made in switchboards was the introduction of the multiple switch. The multiple switch is a switch which gives every operator in an exchange complete command over every subscriber to that exchange; so that if you had 10,000 subscribers centring at an exchange, every single operator would have under her control every one of these 10,000 subscribers; but the introduction of the multiple switch, while it has facilitated very much the working of the exchange, has brought with it certain troubles and difficulties of its own, one arising from the tremendous multiplicity of holes or "jacks," as they are called. The largest switch I believe in existence is one for 6,000 subscribers.

2563. Where is that?—There is one in Paris and there is one in New York. I am not quite sure that the Telephone Company here are not fixing one up; they have not got sufficient subscribers yet, but there is room for 6,000 subscribers. A switchboard for 10,000 subscribers means 500,000 jacks, and every one of these jacks involves some four or five joints, so that the fitting up of a switchboard for 10,000 subscribers

*Chairman*— continued.

subscribers means three or four million joints to be made in one room.

Sir *Charles Cameron.*

2564. Are all these under the control of one operator?—Yes, the whole of the 10,000 subscribers can be placed under the control of every single operator.

*Chairman.*

2565. Of course, the 10,000 subscribers would be divided up among a large number of operators?—Oh, of course.

2566. But by the multiple system, each operator would have the means of communicating with the "jack" belonging to each subscriber?—Yes; there would probably be 150 to 200 operators in the exchange; two or three have the charge of each section; and there are 50 sections; but each section is complete in itself for 10,000, so that 10,000 subscribers end or terminate on each section of this board.

2567. And although there may be 150 or 200 operators each operator is able to put the subscriber who comes to her section into communication with any other subscriber that comes into the exchange if that subscriber's wire happens to be free at the time?—If it happens to be free. That is the principle of the multiple board. The table form at once sweeps away half the number of jacks, so that on a 10,000 exchange, instead of having half-a-million jacks you would have only 250,000. I say "only 250,000" relatively; that is an enormous number; but in Chicago and one or two other places in America they are now trying what is called a divided board, which reduces the number of jacks to one-fifth instead of one-half; and this divided board is reported upon extremely favourably. It has been worked out principally in Chicago.

2568. That would run to 100,000 jacks instead of 500,000 jacks for 10,000 subscribers?—Yes, for 10,000; but in the working of switches we have not reached finality yet.

2569. Experiments are being carried on?—Experiments are being carried on in America, which is far ahead of us in the working of telephones. Experiments are being conducted there (especially at Chicago) to still further modify the form of switches.

2570. And I have no doubt the Department are watching the result of these experiments very carefully to get the advantage of them?—Yes. I visited America, as you know, in 1893, and continue in special correspondence with both the telephone and telegraph companies there, and am kept quite alive as to all the experiments going on.

2571. Would you shortly describe the operation when one subscriber wishes to come into communication with another?—The first operation is that of calling. Each subscriber must attract the attention of the exchange operator, and in turn the exchange operator must be able to call each local subscriber. This is done generally by either the falling or the rising of an indicator at the exchange; and in the subscriber's office or house it is done by the ringing of a bell. We have considerably modified this method in the Post Office, for we have introduced

*Chairman*—continued.

a system peculiar to the Post Office, and it is gaining a good deal of attention and a good deal of favour in the United States, and they are now commencing it there. Instead of relying on ringing bells we have introduced a system of permanent currents and visual signals; it is not dependent upon sound at all. There is a little indicator that moves, and this indicator gives different signals. I will tell you what in a moment; but I want first of all to call the attention of the Committee to another modification, that is known as the "Law" system of calling. On this system, which is introduced at Glasgow, and it is in work now at Glasgow (we have heard a good deal about it), there is a call wire, apart altogether from the talking wire which goes to every subscriber's house, and at the central station there is an operator who has always got a telephone on her head, attached to her ear, and a subscriber merely has to go to the talking wire and say "I want No. 30"; this is heard by the operator, and the operation of switching through is conducted.

2572. Supposing half-a-dozen subscribers make a similar communication at the same moment, how does an operator get over that difficulty?—That does happen at times, but somehow they succeed in differentiating one caller from another, and it settles itself. Of course at the first start it created difficulty, and there is no doubt that it is one of the causes of the trouble we have heard of from Glasgow.

Sir *Julian Goldsmid.*

2573. When was that introduced?—The "Law" system was introduced in America about 1879 or 1880. It was introduced partially in Manchester some three or four years ago, and in Glasgow I think about two years ago, or perhaps not quite so much as that.

2574. That accounts for certain of the disturbances we have heard about?—There is no doubt about it. I may tell you that experts on this question are very much at variance as to the relative merits of various systems of calling. Of course, as the representative of the Post Office I consider the Post Office system the best in the world.

2575. You were going to explain that to us?—I will directly; of course, I am subject to prejudice on that subject. At the same time I think the Law system deserves a great deal of attention, but it has not been received with favour in the United States.

2576. Personally you like the system which you are going to describe to us?—Personally I like the system which we have got at work in the Post Office, not because it is so simple to attract attention, but because it does two other things; one is that it gives automatically and instantaneously notice to the operator that the wire is engaged or disengaged, and that a conversation is over; as soon as ever a subscriber wants the central station, the subscriber simply lifts the telephone off the hook; that is the signal; there is no ringing at all; the operator answers at once, receives instructions, and can see whether the one is engaged or disengaged; if disengaged the subscriber is put through instantly; conversation commences;

Sir *Julian Goldsmid*—continued.

commences; when the conversation is over you have not to think about ringing off, or attend to any operation at all; the mere act of putting the telephone on the hook is an indication that the conversation is over. It works with great satisfaction to us. It has not met with much encouragement from others, because it involves the use of batteries, and the constant employment of batteries is thought to be very expensive. However, we in the Post Office find that the cost of batteries is so small that it is negligible. The objection raised against the batteries is, I think, a sentimental one.

2577. Of course, really, if the operator can see when the wire is being used and when it is not being used it is a great economy of time; there is no waiting?—Certainly; that is the real object of the introduction of this signal, to expedite the operation and save time. Well, sir, this system that I am describing to you informs the operator at once whether the line is engaged or disengaged, but in the American system and in the system that is used principally by the Telephone Company in England, and what you saw used, is what is called the busy test; the operator takes the plug and just touches a brass ring in front of the hole, and if the wire is engaged it gives a click in the telephone, which the operator knows at once to be the test or signal that the wire is occupied.

*Chairman.*

2578. That is to find out whether the subscriber that the first subscriber wants to be in communication with is engaged or not?—Yes.

Sir *Charles Cameron.*

2579. There is one point more, if you would complete your explanation. I do not understand how, in your system, you attract the attention of the subscriber with whom the first subscriber wishes to get into communication?—It is done by a small needle; this pen will indicate it. As a rule the operator at a switch-board has 50 of these indicators in front of her, and she attends to those 50 and none others.

2580. That is quite simple; but when A wishes to be put into communication with B, how do you call B's attention in his house?—Oh, that is done by a bell.

*Chairman.*

2581. But you first find out whether B's wire is engaged?—Yes, whether B's wire is engaged. There is the indicator, a needle, that in *that* position (*describing*) indicates "Engaged;" in *that* position it indicates "Disengaged;" and in *that* position it indicates that the conversation is finished; so that by these three positions you have these three signals automatically given.

2582. Then if you find out that B's wire is free you ring up B?—Yes; ring up B.

2583. And put the two into communication?—And put the two into communication. The busy test, that is so largely used in America, is now being replaced at San Francisco and at Chicago, and to some extent at Boston. They find that the system of testing takes up time; that is, testing for the click. I have explained, sir, the system of indicating the end of the conversation, and I think I have been through the whole of the operations on an exchange when a subscriber calls or is called, when he is put through.

*Chairman*—continued.

2584. Will you just describe the changes that have taken place with regard to the material of the conductors?—The conductors are now of copper, or sometimes of bronze, but at first iron was much used. Well, iron is inherently bad for telephony, and it is absolutely subversive of clear speech. There is some reaction between the current and the magnetism engendered in the iron that seems to absorb a good deal of the current or the energy that produces clear speech. The result is that when speaking through an iron wire the voice becomes blurred, and you lose those gentle intonations in the voice which distinguish one man's voice from another, so that through an iron wire you very soon lose that individuality which is almost essential to the clear working of the telephone.

Sir *Julian Goldsmid.*

2585. Is there a great quantity of iron wire still left in England in the different parts?—No, a very small quantity. I doubt whether there is any, except on our railway services. I do not think the Telephone Company, and I am quite sure that we, now, would never put up iron wire. There may be in some out-of-the-way places some iron circuits left, but they are very few.

2586. Most of them have been removed?—Certainly.

*Chairman.*

2587. With reference to the comparative merits of overhead and underground systems, will you give us the results of your experience?—Yes. Of course, the conductors placed overhead when they are few in number are cheap and effective, and when placed underground and still few in number, they are dear. I should like, sir, to be quite clear on this point, because I want to lead up to this; that there is advantage in having trunk wires overhead, and that there is no disadvantage in having local wires underground. The reason is this, that an underground wire, like a cable, retards the electric current; it checks the rate of flow of the electric current, just like the effect of iron; it absorbs those minute electrical waves that give the difference between one voice and another; it, in fact, chokes speech. It is not unlike speaking through a long speaking tube. When you speak through a long speaking tube the voice comes burring out at the end, and it is very difficult to distinguish the different words. Through a short tube nothing of the kind occurs; but where we have submarine cables, and where we have wires underground of any length, then it spoils this individual identification, and it impairs good working very much. This is due to an electrical quality which may almost be called friction, but it is a quality which we cannot entirely remove; we can only reduce it. It is called the capacity of a wire for retaining its charge of electricity. Its laws are thoroughly well known. We can measure the capacity of any wire, and we know how to reduce it, but we cannot remove it altogether. If we were to put the wires in all towns underground

*Chairman*—continued.

underground, and Glasgow, for instance, were put through to Plymouth through Carlisle, Leeds, Birmingham, Bristol, if all those places had underground wires on the trunk system the result would be that the sum of all these short lengths of underground wires would retard the current, blur the speech, and impair the trunk wire working. If you take any one of these places by itself, this effect is not sufficiently large to produce defective working; it is only when you sum them all up that you impair this mode of working.

2588. May we take it that generally speaking, for long distances, overhead is distinctly superior to underground?—Distinctly superior; and for that large system of trunk lines shown in yellow upon that map, which we are now putting up as fast as we can, it is absolutely essential it should be maintained overground.

Sir *Julian Goldsmid.*

2589. And there is an enormous difference in cost, is there not?—No, Sir; the difference is not serious at all; I am going to give you the prices presently.

*Chairman.*

2590. I believe the London-Paris telephone, which I imagine is one of the best long distance telephones in existence, is wholly overground, is it not?—It is wholly overground with the exception of the Channel, through the cable. In Paris the subscribers' wires are underground, and so are the subscribers' wires in London.

2591. But have the Department in London acted upon a different principle with regard to the Paris telephone in getting out of London to what they have with regard to telegraph wires?—They have.

2592. Because they felt sure that overhead was superior for that purpose?—Yes. We have overhead wires to the Stock Exchange, the Post Office and Cannon-street, and also overhead all the way to St. Margaret's, and from Calais to Paris they are overhead the whole way. I was going to add, Sir, that we are improving very rapidly this defect, or rather we are reducing it.

2593. The defect of what?—Of the capacity in underground wires that leads to this retardation; and a very striking, indeed a very great, advance has been made (it originated in America), that is, by the introduction of paper. Paper is now being introduced, instead of gutta-percha, to insulate the wire. The result is that it has reduced this disturbing element to quite one-fourth. Wires now coated with paper are certainly giving effects that are quite one-fourth the effect of the gutta-percha. Of course the result is this, that we can use four times the length of underground work with this paper cable than we can with the gutta-percha cable.

2594. With the same amount of resistance or disadvantage?—With the same amount of resistance, the same amount of disadvantage.

2595. And also a reduction in cost?—And also a reduction in cost. The reduction in cost is very considerable indeed. The price of underground work when covered with gutta-percha was practically prohibitive. The price of gutta-percha has been going up very much indeed. Instead of getting gutta-percha as we have for some years for about 10*l.* or 11*l.* a mile, we have now to pay 16*l.*, 17*l.*, or 18*l.* a mile, and the price is still going up; but this introduction of paper when applied to cables containing a great number of wires, brings the price of underground work so low, that the difference between that and overhead virtually disappears. It is still more costly because the pipes and the culverts and the conduits, and those other things, add considerably to the cost.

*Chairman*—continued.

Sir *James Fergusson.*

2596. Would you say what is the price per mile as compared with the figures you gave just now for the gutta-percha?—The price per mile per circuit, for a double circuit, on a line of 3-inch pipes filled with conductors for gutta-percha, is 55*l.* 12*s.*, and for paper 18*l.*

Sir *Julian Goldsmid.*

2597. And overhead?—Overhead would be about 16*l.*; 15*l.* or 16*l.*

Sir *Charles Cameron.*

2598. Per mile?—Per mile.

*Chairman.*

2599. When you say per circuit per mile, if there were several circuits in the same pipe, of course the expense would not be double or treble or increase proportionately to the number of circuits. You say per circuit per mile?—Yes, because that is a double wire.

2600. Suppose you put a large number of circuits in the same pipe, the increased cost would be comparatively small?—Yes, but I have taken a pipe full.

2601. You have taken a pipe full?—Yes, I have taken a 3-inch pipe filled with gutta-percha and a 3-inch pipe filled with paper. If you compared merely a circuit of gutta-percha with a circuit of paper the overhead comparison would be very different; then the overhead would be much cheaper. A 3-inch pipe with gutta-percha carries about 84 wires, a 3-inch pipe for lead-covered cable carries about 200.

Sir *Julian Goldsmid.*

2602. Carrying a great number is a great economy then?—Yes. It really comes to this, that while it is impossible to put underground work where you have six or eight or ten wires owing to the price, where you come to deal with 100 or 200 wires, then it may turn out that it is cheaper to go underground than overground.

*Chairman.*

2603. That would apply especially, I suppose, to junction wires where you may have a large number?—Yes.

2604. Have you had sufficient experience of the paper as an alternative to the gutta-percha to say what the length of the life of paper is comparatively speaking?—Yes; we have got now quite 10 years experience of the use of paper; it was adopted five years ago generally in the United States. Three years ago, when I was there, I went into it very thoroughly; and we have had experience of it ourselves now for

*Chairman*—continued.

about five years; we have used it exclusively for the trunk wires, and I have absolute confidence in its durability. It is a curious fact that there is not a single instance either in the United States or in France (where it is also largely used) of a failure of the paper cable. We all know how durable it is even in our libraries. Where paper can be kept dry, it does not decay. The whole secret of this paper for insulating purposes is the art of keeping it dry. It is placed in lead pipes; these lead pipes are hermetically closed, and water does not get in. If water did get in the paper would decay rapidly, and if water did get in, it would break down the circuit rapidly. But if water got in it would break all the wires down, and that would enable us at once to find out where the fault was; during one night the cable could be repaired, and we should be all right the next morning.

2605. It is as durable as gutta-percha?—More so, Sir. Paper if it can be kept dry will last for a thousand years, but gutta-percha has only a very limited period of life.

2606. Generally you have given us the result of your experience with regard to overhead and underground systems; is the overhead system equally applicable to the twin wire metallic circuit?—Equally.

2607. As to the single wire?—Yes, for a few wires.

2608. But apart from the number of wires an overhead arrangement is equally applicable to the twin wire as to the single wire?—Certainly.

2609. The Committee have heard that the department are taking over on the 1st July the trunk wire system of the Telephone Company; would you describe the general system of trunk wires and the action the department has taken since 1892 when the agreement was entered into by the department?—I will.

Sir *Julian Goldsmid.*

2610. Would you mind finishing the question of the single wire system and of the metallic circuit system before you go to that. Mr. Provand stated to us just now that the single wire system never could be satisfactory, and never could work well under any circumstances, and that is the reason why you must always have a double wire system; I should like to know your exact opinion as to that?—That expresses my view, Sir, almost exactly. I do not think it is possible to make any telephone system perfect unless it be a twin wire and metallic circuit. There has been plenty of evidence before the Committee to justify that conclusion, and that is my practical experience.

2611. And that is being done, is it not, throughout all the important towns of England?—I believe so. From my own personal knowledge I know it is done in Newcastle and in Hull; we have heard to-day that it has been introduced in Glasgow; they are under agreement with the Manchester Corporation to introduce it in Manchester, and as far as I know it is universal in London; at any rate they have been for a long time proceeding as fast as possible to duplicate all the wires, and the exchange you visited yesterday is entirely metallic circuit.

2612. But of necessity it would take a considerable time to duplicate?—Oh, yes, a very long time.

Sir *Julian Goldsmid*—continued.

2613. Consequently if complaints were made in localities of the single wire system it would probably be mainly because they have not had time there to put it in?—I should say so.

*Chairman.*

2614. Now with regard to the trunk wire system?—The trunk wire system, as far as it is erected now, is shown on that map by those yellow lines. Those yellow lines indicate the trunk wires as far as they are complete. By next Tuesday it will be possible to complete another line from Leeds to London, so that then we shall have from London right up to Glasgow what we call the backbone of the whole system. The trunk system itself was based on the idea that Leeds being the most central town in the country should be made the exchange for the trunk wire system, and all the trunk lines centre at Leeds.

2615. You are now describing what you call the "backbone system," which is the system provided by the department?—Yes.

2616. And which is quite independent of such trunk wires as the company had up to the time the agreement was entered into?—Yes, quite. I am speaking solely of the Post Office system.

Sir *James Fergusson.*

2617. That map is simply furnished by the telephone company?—That belongs to the telephone company; I only make use of it because it happens to be there.

2618. Are the lines shown in yellow there your lines or those of the telephone company?—Our lines; those in yellow, it mentions it at the top: Post Office trunk lines yellow; National Telephone Company's trunk lines red; junction lines black. Then all those lines are being constructed with very heavy copper quite up to date in everything, and I have every reason to believe that speaking through them will be as nearly perfect as it can be.

2619. When you say "very heavy" do you mean 80 lbs.?—The main backbone line is composed of copper that weighs 800 lbs. to the mile. That is heavier than any line has ever been constructed before; and subsidiary ones down to Plymouth and other places are built, some of 600 lbs. and some of 400 lbs.

2620. That is, as compared with 40 in exchanges, I suppose?—Forty lbs. in the underground work; but it compares rather with 150 and 200 lbs., which is usually used for pole lines.

Mr. *John Ellis.*

2621. I suppose those are being constructed out of the million sterling voted in 1892?—Yes.

*Chairman.*

2622. You have mentioned an independent system of trunk wires from London to Leeds, and in addition to that, I think, there is also a system which is well in hand between London and Bristol, taking Southampton and Portsmouth on its way?—Yes, Sir, it is shown on that map We are now constructing a subsidiary line from London through Basingstoke, to Salisbury, Southampton

*Chairman*—continued.

Southampton and Portsmouth on the one side, and to Bristol on the other; and then it will connect with the Plymouth and Exeter lines through Bristol, Southampton, and to Portsmouth. Then there is another one also to Ipswich and to Colchester, which we propose to extend to Lowestoft and Yarmouth. I may say we have already spoken from the end of the Hampstead-road tunnel from London to Belfast and to Dublin. Matters are not quite so perfect at Dublin as I should wish, there is something wrong there, I do not know what yet, but between London and Belfast the speaking is quite as perfect as it is between the City and Westminster.

2623. And, I believe, officers of the Department have spoken from Plymouth to Dublin?—We have spoken from Plymouth to Dublin through Leeds and Glasgow; from Plymouth through Bristol, Birmingham, Leeds, Glasgow, and back to Stranraer and Belfast.

Sir *Julian Goldsmid.*

2624. What distance would that be?—One thousand seven hundred miles.

*Chairman.*

2625. Is that a record performance, so far as you know?—It is a record performance, certainly, on this side of the Atlantic; I think they have exceeded it in America.

Sir *Julian Goldsmid.*

2626. It shows what can be done?—It shows what can be done, and I have every confidence myself that there will be no difficulty whatever in every principal town of this country speaking perfectly easily with every other town; and more than that, I do not at all agree with some evidence you have heard here this morning. My belief is that these wires will be enormously used, and that before another 12 months or two years we shall probably have to duplicate many of them.

Sir *Charles Cameron.*

2627. May I ask a question about the backbone system; on that map there is no yellow line between London and Birmingham; there is a large cut off there?—Yes.

*Chairman.*

2628. It is not finished yet, is it?—No; between Birmingham and London we have not yet decided what line to construct, because we do not know yet what trunk wires we shall take over from the company; the experts engaged are now surveying the whole of the country, and there is little doubt that we shall have a good trunk line between London, Birmingham, Warrington, and right up to Carlisle.

Sir *Charles Cameron.*

2629. You mean something much more modern and better than the present trunk wire?—Yes. What you see on that map is really what we have done up to the present. During the present year we shall continue carrying out the system, and one part of the system will be to complete the link between London, Birmingham, Warrington, and Liverpool.

*Chairman.*

2630. I think the Committee would like some figures indicating the growth of business; you have mentioned your own opinion that the trunk-wire system will be much more largely used; I believe you have some figures showing the increase of telephone business generally in the United States?—Yes; I visited the United States in 1893, and I made to you a report on the whole of the matter. I got together a vast mass of statistics, and I can give some figures showing the growth of telephony in the United States between that time and the time of my previous visit, that was in 1884. I visited there in 1877, in 1884, and in 1893. In 1884 the miles of wire were 115,000 (I will not give the units); in 1893 there were 440,000 miles, and on the first of this year they had increased to 577,000; so that in the 10 years since my first visit the wire has grown from 115,000 to 577,000 miles.

2631. That is the total number of miles of wires belonging to all the companies?—Belonging to all the companies; it is the total mileage of wire.

Sir *James Fergusson.*

2632. The telephone service in America is entirely in the hands of private companies, is it not?—Entirely. The miles of underground wire in 1884 were *nil;* there was absolutely not a mile of underground wire in the United States in 1884; in 1893 there were 91,000 miles of underground wire, and at the commencement of this year there were 148,000 miles of underground wire. The telephones in use were, in 1884, 325,000; now (in 1895) they are 582,000. These figures are taken from the returns of the Telephone Company. There they call the receiver one instrument and the transmitter another instrument, so that to draw a comparison between ourselves and the Telephone Company in America you must divide that by two; so that it means that there are 291,000 telephones in our meaning of the word in America. In 1884 there were 123,000 subscribers; in 1893 there were 232,000 subscribers; I have not got the number for now, but it must be virtually about 280,000 subscribers. Of course everything else has grown in the same ratio except exchanges. The staff employed has grown from 4,000 to 11,000; the talks from 215,000,000 to 670,000,000 per annum. The telephone exchanges, which were, in 1884, 1,325, are in 1895 only 1,439, so there has been only a growth of 114 exchanges in the 10 years; that is because they are centralising; the tendency there is rather to centre everything upon these few exchanges.

2633. That is to say, to increase the number of subscribers at each exchange?—To increase the number of subscribers at each.

Sir *Julian Goldsmid.*

2634. They find it is easier for communication, or more rapid?—I think it is more rapid. It is a question of efficiency of service. I can give an indication of one day's work, which is rather interesting, to show the enormous use that is made of the telephone. This is on one Saturday. It was indicated to me as a stormy Saturday. In Chicago Saturday is a great day for the Chicagoans to go on to the lake and into the forests,

Sir *Julian Goldsmid*—continued.

forests, and they make all kinds of appointments. There came a stormy Saturday, and on that day 153,807 calls were made and answered; 307,000 persons were placed in communication with each other. That is in one city in the States.

2635. How many exchanges are there at Chicago, do you know?—Fifteen. There are four new ones; there were 11 when I was there in 1884; they have now increased to 15.

*Chairman.*

2636. I believe in Chicago very many business houses have a considerable number of circuits?—Yes; one firm there has as many as six circuits; and most busy houses there have two. They find it necessary to have an incoming and an outgoing, a "double-track" telephone, as they call it. They use the telephone so much that they find it there an absolute necessity to have that "double track" for convenience.

2637. They would have six telephones side by side in the same office?—Side by side.

2638. Not like the Glasgow witnesses, some of whom we heard had 10 or 15 telephones connecting their different offices?—Oh, no; these are side by side; but two or three, I think, are to be found also in Glasgow and in Liverpool. It is no unusual thing for a very busy house to have two or three.

2639. Two or three telephones together?—Yes, but in Chicago there are as many as six. Of course, sir, we must remember this, that in Chicago climatic influences have considerable influence on the use of the telephone, the sudden changes. The habits of life and the peculiar way in which Americans transact their business lend themselves rather more to telephones than they do here.

Sir *Julian Goldsmid.*

2640. And fogs from the lake, I suppose, in America make a difference?—I do not know that there are fogs from the lake.

2641. There are tremendous fogs from the lakes?—I was not aware of it.

Mr. *Benn.*

2642. The superficial area of Chicago is very large, is it not?—It is very large indeed.

2643. Have you the figures?—No.

2644. It extends many miles one way?—Yes; I believe they have extended it solely to be able to say they have a greater area than Philadelphia; and Philadelphia extended their area in order to be able to say that they had a greater area than London.

2645. The 15 exchanges would be spread over a considerable distance, would they not?—As a matter of fact they are not extended over a considerable area. There are two or three small ones that are outside, at places called Wentworth and Pullman; one contains 75, the other 49, subscribers.

*Chairman.*

2646. You have some evidence, I think, with regard to the extension and development of the telephone business in Paris and in France?—Yes; on the 11th March I visited Paris, and I inspected the exchange there; I got all the information that I could collect, that might have been valuable to us, and I find there that a very considerable growth of business has taken place. In 1889 the business of the Telephone Company was transferred to the State; in 1880 there were 300 subscribers in Paris; in 1884 these amounted to 3,700; in 1889 there were 6,265 subscribers, and the subscription was 600 francs, or 24*l.* a year. At that time the service was transferred to the State. The business at once increased. The subscription was reduced from 600 francs to 400 francs; that is, from 24*l.* to 16*l.* In 1891 the 6,265 subscribers became 9,653. In 1894 (that is 31st December), there were 14,041 subscribers in Paris. In the same time in the provinces, the 11 companies and 29 State exchanges grew up to 257. There are 14,067 subscribers in the provinces; so that now the total number of subscribers under the State telephones in France is 28,108.

Mr. *Benn.*

2647. The number in Paris is one-half nearly?—It is almost exactly one-half in Paris.

*Chairman.*

2648. Do you know the terms upon which the State took over the system from the company?—I do not; I think Mr. Lamb does, and when he is called again, he will be able to give you the terms.

2649. What system of wires have they in Paris?—They are metallic circuits invariably.

2650. In Paris?—In Paris, and underground.

2651. And in the provinces?—In Paris there is a peculiarity that does not exist in any other place, that is, there are enormous underground sewers (they are subways), along which all these wires are carried; there is no excavation of the streets, no disturbance of the streets. Nearly the whole of Paris is served by this system.

2652. But the objections you have mentioned to the underground system equally apply to subways of that kind?—Exactly the same. In Paris they have followed the American practice of switch-boards; in fact they sent their officials over there to acquire a thorough knowledge of the system in the United States.

Sir *Julian Goldsmid.*

2653. The cost would be a little less, would it not, of putting them in the subways?—Yes.

*Chairman.*

2654. With regard to the operations at an exchange, as divided between the local and the junction and the trunk wire, would you describe the general operation?—The operations at an exchange are divided into three classes. The first is that which is local solely. That is the operation of putting a local subscriber through to another local subscriber. That is a simple operation very rapidly performed. Then the second system is putting a subscriber through to a subscriber in another part of the area through two exchanges and by means of the junction wires. The third system is to put a local subscriber through to a trunk subscriber; either through another exchange or directly from the central exchange. I have got copies of some curves here which I can give the Members of the Committee. (*The same was handed in*). That curve, sir, that I give

*Chairman*—continued.

I give you is what we call a 'load" curve. The object in giving it to the Committee is simply to show them how the work is spread over the different hours of the day. You will find that before nine o'clock in the morning there is little or nothing done; nobody thinks of telephoning.

2655. Where is this taken from, is it taken from London, or some other place in England?—I really did introduce it simply as an indication of what an exchange is; and I am bound to confess to the Committee that I am doing it without authority; I ought to have got the consent of the National Telephone Company; but it is one that I surreptitiously obtained when I visited Leeds the other day.

Sir *James Fergusson.*

2656. Is it one exchange?—It is one exchange. It so illustrates what I want to say that it really does not much matter whether it is taken from America or from Paris or from Leeds or anywhere else; it really is from Leeds. I think one of the days represented there was a Saturday; it is not a very busy day.

Mr. *Solicitor General.*

2657. Which is the Saturday?—It is January the 10th.

*Chairman.*

2658. January 9th and 10th, this diagram represents?—Yes; January 9th and 10th; I am not quite sure what days they were. It is a Wednesday and Thursday, not a Saturday. I only want it to illustrate the fact that the work is so unequally distributed over the different hours of the day. At eleven or half-past eleven in the morning and at three or four in the afternoon you will find there is always the maximum number of messages. It is exactly the same in the United States; and this curve which you see here would apply, I think, not only to every single exchange in this country, but to all countries where habits of luncheon hours and early dinners are prevalent as they are in America and with us.

2659. But that would apply, would it not, more particularly to commercial telephone centres?—It does; the telephone is almost entirely used by commercial men. The point here is that the whole work of the exchange is virtually centred in those few hours. In the early hours of the morning and at night there is virtually nothing done, although they must maintain the service.

2660. Is that the experience of the Post Office in the case of the Paris Telephone?—In the case of the Paris Telephone that is not quite the case, because the Paris telephone is used so much at night for press purposes, so that the use of the Paris telephone is spread over all the hours of the day.

2661. You were going to give us some evidence of the maximum number of three-minute conversations, I think?—When I was in the United States I took a great deal of pains to find out how many talks we could get through a circuit in a day. Of course, if you take one single hour we can get a great many talks, but if you were to take a day of 12 hours you would, perhaps, multiply in your mind the number of messages per hour for the 12 hours, and find that the number of messages on your trunk circuit

*Chairman*—continued.

was very few indeed. As a matter of fact, owing to business concentrating itself in these few hours, the result is that the number of messages that it is possible to send through a trunk wire is very small. Now, in the States, the maximum number of calls in that period is 80 on a local circuit, and 60 on a trunk circuit; the maximum number in a particular hour is, on a local circuit, 24, and on a trunk circuit, 18. Those figures I have taken as a standard to estimate the amount of work done, and to show how the work is done on our own circuits.

Sir *Charles Cameron.*

2662. Do not you think you would have a different curve on long inter-town circuits, say, between Glasgow, Edinburgh, and London, after post hours?—I think it is very likely. I think, taking it between London and Glasgow, the amount of business transacted will be so great that it cannot all be dealt with at the same time; subscribers will have to take their turn, and sometimes you may have to wait, on a busy trunk line, an hour before you can get your turn. Then it would alter the curve.

2663. The curve would vary?—It would vary through that; it would flatten it out.

*Chairman.*

2664. We have had some evidence given with regard to the increased expense consequent upon a larger number of subscribers; can you give us evidence, to begin with, with regard to the operations which are necessary in the exchange per call?—Yes, sir. The number of complete operations in an exchange (that is, what is done from the moment a subscriber calls to the moment he is in communication with his correspondent) for a local call involves three distinct complete operations; the operator is called; he tests; he answers and receives his instructions; he then tests to see if the correspondent's wire is clear or not, and he places his plug in communication and rings the subscriber and listens. If the subscriber answers he knows the two are in correspondence, and the whole thing is done. That involves three distinct complete operations, and the time that it takes to complete those operations depends almost entirely upon the skill and the experience and the handiness of the operator in the first instance; but a great deal more upon the attention of the subscriber. Half the troubles in telephone working are really due to the subscriber and not to the exchange operator. That is with the local call. Where there is an exchange intervene—(two exchanges)—and you have to use a junction wire the number of complete operations is six. Of course that means that there is a little more delay in getting through although you get through promptly because you are dealing with your own operators. Trunk working involves, also, when it is through one exchange, twelve complete operations, through two exchanges sixteen, and where you come to three exchanges it is still more; but the time occupied in the work at the exchanges, although the operations are more numerous, is less; they are done much more rapidly. The call system that I mentioned at first (the Law system) is used, and although

*Chairman*—continued.

on working the exchange there are 12 distinct operations, there is no reason why the time occupied should be more than that occupied in local working. I have somewhere or other an extract from a letter from the United States of America where it says: "We are now certainly showing that it is just as easy to trunk a message as it is to make direct connection."

2665. Is that partly due to the fact that in getting through an exchange on the trunk wire the operator is communicating with another skilled operator instead of very likely with an unskilled subscriber?—Yes.

Sir *Charles Cameron.*

2666. That letter is from an expert, is it?—Yes; it is from the manager of a telephone system in Chicago.

Sir *Julian Goldsmid.*

2667. There is one point I want explained; that is why so much depends upon the subscriber?—We have heard complaints here against the working of the telephone system in London, which are clearly due to the fact that the subscribers are engaged. The telephone company cannot help that. At the Post Office we often have complaints that they cannot get through to certain subscribers, the reason simply being that the subscribers do not attend to the calls: the fault is with the subscribers themselves. The telephone system is regarded in a totally different way here to what it is in the United States. Subscribers in England, it does not matter whether on the telephone company's exchange or on the Post Office exchange, will not associate themselves with the system. If anything goes wrong they grumble and growl, but do not do their best to assist the telephone company or the Post Office in having the work properly conducted. We have a technical term in telephoning work which we call "the lag of the customer"; it is one of the elements of delay which must be taken into consideration; and in forming an opinion of the relative perfection of telephone working, particularly when you compare America with England, you must remember that in America the subscribers all look upon themselves as part and parcel of the system, they do all they can to assist the telephone companies; whereas in England (I am speaking from my own experience more in the Post Office, I am afraid we do not get much help from subscribers.

2668. Is not there another point (you have so much experience of this that I should like your opinion), that is, that in a great many cases the subscriber does not answer because he is already engaged on his one telephone with somebody else, and consequently cannot begin a fresh conversation?—Certainly.

2669. And it may last some time?—Certainly; that is a very frequent thing.

Sir *James Fergusson.*

2670. Can it be avoided, with any conceivable system, that there should not be delays of five or ten minutes in getting "on" at the busy time of the day?—It is quite impossible. There must be delay, and it is because of the delay that busy houses have been forced to have two, three, and six circuits to conduct their business.

Sir *James Fergusson*—continued.

2671. If you were running the whole country yourself, you could not hope to avoid there being delays of that kind, could you?—Quite so; it would be absolutely impossible.

Sir *Julian Goldsmid.*

2672. Then is there not also a class of subscriber who shuts down his telephone every day, I believe at luncheon time; I have heard of them?—Yes. We had at the Post Office in Newcastle at one time a signal which was "Subscriber in" "Subscriber out." It was the same kind of an indicator I referred to before, like that (*describing*); when in *that* direction it was "Subscriber in"; when in *that* direction it was "Subscriber out." The subscriber simply had to turn a switch when he left the office, and the signal was made. We found very few that used it. It was practically valueless because they would not use it, and we abandoned it.

2673. And when the subscriber was out no attention was paid to the telephone?—That is very often the case.

*Chairman.*

2674. I understand that each operation you describe means the occupation of time?—Each operation means the occupation of time, and, of course, the time occupied grows with the number of subscribers to any exchange.

2675. But before coming to that, we have had a good deal of evidence on the subject of two competing systems in the same area. Those two competing systems would mean, would they not, an increased number of exchange connections?—Yes; between themselves.

2676. The subscribers of one system wanting to get into communication with subscribers of another system?—Certainly.

2677. Would not that mean increased delay?—It would mean increased delay, of course.

2678. And the efficiency of the business would necessarily be injured?—Yes. The point I am trying to lead up to here is that you must necessarily have a certain number of operations connected with each call; that those operations involve time, and the fewer the exchanges and the fewer the operations the better can the business be done and the greater the number of messages got through.

2679. I understand that in America they have been increasing the number of subscribers per exchange with a view to lessening the number of exchange operations?—No; the operation they are doing there is rather increasing the number of exchanges, decentralising.

2680. I think I understood you to say that the number of exchanges in America had hardly increased at all, notwithstanding the large number of subscribers on the telephone system?—Yes, I gave that in answer to a question about the curious fact that the number of exchanges in America had not increased; but I also mentioned (or I am afraid I did not mention, but I ought to have mentioned) that in Chicago they are finding now that the introduction of the multiple board has so increased the number of difficulties that they have found it necessary to introduce the divided board, and the divided board has also led to an increase in the number of

*Chairman*—continued.

of exchanges in Chicago by four. I mentioned that there were eleven in 1884, and there are fifteen now. The object of the additional exchanges has been to maintain the number of subscribers in their central exchange as low as it can be kept.

Sir *Charles Cameron.*

2681. To keep it low?—Yes; they do not want to make their central exchanges (their multiple board exchanges) very large. The largest in Chicago is only just over 4,000.

*Chairman.*

2682. Then with regard to daily calls per circuit?—The daily calls per circuit vary very much. The average per day over the whole of the United States in 1893 was 8·03; at Chicago in one exchange it reached as many as 24. The mean for the whole town in January was 13·6, while in July it was 12·3. At Buffalo the mean is 6. At Boston the average in 1884 was 5; it is now 12·6. In Berlin the average daily calls are 12; in Leeds, 10 (I mentioned that before, I think); in Paris, 5; in London, 8.

Sir *Julian Goldsmid.*

2683. As to Berlin, may I ask one question: Berlin is a single-wire system, is not it?—I cannot answer that exactly. They have some peculiar system there at work that I do not quite understand. I have not been there, and I am not quite sure that it is a single wire pure and simple. I fancy it is some combination; I do not understand it.

2684. You do not know whether it works well or not?—No, I do not.

*Chairman.*

2685. Now with regard to the number of the lines per operator, leading up to the question you are coming to?—The number of lines per operator varies also very much on different systems and at different places, but at a busy exchange of say 4,000 subscribers it ought not to average more than for local work, 50; for junction work, 10; and for trunk work, 5.

Sir *Julian Goldsmid.*

2686. As to the 50, I suppose you want an experienced operator?—No; the experienced operator is wanted for the trunk. The operator has to watch the whole of the proceedings going on on the trunk circuit; she cannot leave it for a moment. The result is that in some places an operator is able to attend to 10; in other places, I know of one where they are able to attend to only three, but a fair average for a busy trunk circuit is five, and I do not think a good trunk operator can attend to more than five busy circuits.

*Chairman.*

2687. Will you give the figures with regard to two or three towns—Buffalo, Boston, and New York?—A point I wanted to bring out was that the larger the exchange the greater the number of talks per subscriber and the fewer the subscribers per operator, and, therefore, the greater the cost of working. I have shown you all the different operations. I have shown you the number that an operator can attend to, and I have drawn out *this* table for three towns in the United States—first Buffalo: the talks per day for each subscriber are six; the customers per operator are 100; the number of subscribers 2,240. In Boston: the talks per day for each subscriber are 12·6; the customers per operator, 70; the number of subscribers, 3,545. In New York (Cortlandt-street): the talks per day for each subscriber, 15, the customers per operator, 50; the number of subscribers, 4,500. So that we have roughly this—the exchanges increase 2, 3, 4; the customers per operator diminish 100, 70, 50; and the talks per day for each subscriber increase 6, 12, 15.

Sir *Charles Cameron.*

2688. And the cost; what is that?—I have not got that.

Sir *Julian Goldsmid.*

2689. The cost increased, of course?—The cost increases, of course.

*Chairman.*

2690. It is very important in the element of cost to take the number of operators?—Yes; the number of operators is the standard or the basis of the cost.

2691. Can you give us the standard in these different places?—Yes. The tariff at Buffalo is not an annual subscription; it is what they call a toll rate, and at Buffalo there is an installation charge of 70 dollars, which covers the first 500 messages; after that they pay (I think it is) eight cents a message of five minutes. In Boston (3,545 subscribers) the rate is 160 dollars for the metallic circuit; that is 32*l.* In New York (4,500 subscribers) the subscription is 240 dollars; that is nearly 50*l.* a year.

2692. That is to say, the larger number of subscribers is followed by a larger subscription charged in those cases?—Yes; but I think the increase of the subscriptions, or the subscriptions themselves, depend upon local circumstances altogether apart from the size of the exchanges.

Mr. *Benn.*

2693. May I ask would it not, in New York for instance, seriously affect the charge, the heavy expense the company have been compelled to submit to (recently, for instance), to put wires under streets, and all such charges?—Yes.

2694. The communication in Buffalo is a simple matter compared with that of New York, is it not?—That is one matter, certainly.

2695. So that it would be a local circumstance rather than an increase in the number of subscribers that would affect it?—Local circumstances would affect the subscription, but not the rate at which the work has been done.

Sir *Charles Cameron.*

2696. In Boston they reduced the charge, did they not?—At Buffalo the initial charge was 70 dollars.

2697. And eight cents for five minutes?—I think it is eight cents. I cannot find the reference

Sir *Charles Cameron*—continued.

ence to it here; I give it, I think, somewhere else.

Sir *Julian Goldsmid.*

2698. In any case the cost to the company will be more the more subscribers there are, as you say?—Certainly.

*Chairman.*

2699. Because the larger number of subscribers means a larger number of conversations per subscriber, and therefore a smaller number of subscribers to each operator?—That is so.

2700. And no doubt the cost of the operators, the staff, is a very important element in the cost of the service?—It is almost the standard from which all calculations of working expenses should be made.

2701. Would not the same argument apply to the increased cost of the mechanical work, which would increase in consequence of the larger number of subscribers?—The cost of the mechanical work (that is, engineering and maintenance) will increase, *pro ratâ*, with the number of subscribers and the number of circuits; but this increased cost would not follow exactly the same rate of growth as the other one.

2702. Do you mean it would be a *pro ratâ* increase?—It would be a *pro ratâ* increase. Whatever is the annual maintenance charge for one subscriber will be doubled for the second subscriber at the same spot.

2703. You are referring to wires, perhaps?—I am referring to circuits outside the exchange.

2704. When you come to mechanical work inside the exchange, the switch boards, what do you say?—With the multiple board the cost inside of fitting-up the exchange with a multiple switch and all its accessories, increases as the square of the number of subscribers; for instance, supposing you had a multiple board for 2,000 subscribers, and you doubled the number to 4,000 subscribers, the cost of the switch and its accessories would not be twice as much, it would be four times as much; and when you come to 10,000 switches (the number I spoke of at first) it is this growth which renders these large multiple switches prohibitive.

2705. That is so, not only with regard to the cost of staff, but the mechanical work inside the exchange; the cost to the company increases far more rapidly than the increase in proportion to the number of subscribers?—Certainly.

Mr. *Benn.*

2706. Is that why they have given up the multiple board, in Chicago?—I think that must be one cause. It is not mentioned in their correspondence, but I think that must be one cause why they are seeking for other means so to dispense with the multiple board.

*Chairman.*

2707. Does that fact make a comparison between London and the charge for the service in London, and the service in a place like Stockholm or Christiania somewhat inappropriate?—I think it has to be taken into serious consideration in drawing comparisons.

2708. Have you anything further to say upon that?—Yes; I should like to mention this point

*Chairman*—continued.

(I think it is a very important one, and one which the Committee should bear carefully in mind), that whatever may be the annual rental, the working expenses must increase with the number of sub-cribers; and therefore the balance between revenue and working cost must diminish; so that if the rental is too low, and the subscribers too many, the working expenses will exceed the rental, and rates will have to be increased; in fact sir, that is a point that has already been raised on the Continent; in Germany and in Switzerland.

2709. You have mentioned engineering expenses; what are they on the average per subscriber?—The average engineering expenses per subscriber amount to 3*l.*

2710. They amount to about 3*l.*?—About 3*l.* per subscriber. Of course, we have other expensive points, rent, taxes, wayleaves, royalty, headquarter charges, office expenses, interest, depreciation, holidays, and sick allowance; and all these things have to be added.

Sir *James Fergusson.*

2711. The 3*l.* is only for materials?—The 3*l.* is only engineering expenses.

*Chairman.*

2712. 3*l.* per annum?—3*l.* per annum per subscriber.

2713. That does not, of course, take into account the initial cost of putting up the circuit?—No.

2714. It is merely the engineering?—Merely the engineering and maintenance charges.

2715. Have you figures with regard to the cost of construction?—I have got a rough estimate. I cannot give the actual cost of construction, because it differs in many places; but I can give you an estimate based on experience, and one that I am quite sure is not far off the mark. The fact that I have got with which to support it is derived from Paris. In Paris the government find that the cost of construction per subscriber for their exchanges is 44*l.* My estimate for an underground system, a 5,000 subscriber exchange, is for London 55*l.* per subscriber, and for the provinces, 45*l.*

Sir *Julian Goldsmid.*

2716. Then when Mr. Provand talked about "15*l.*" he was talking about what he did not understand?—I suppose somebody was talking about what he did not understand, and I think the witness who gave the evidence must have misread "15*l.*" for 45*l.* That is the only explanation I can make of it.

*Chairman.*

2717. I think you have got some evidence with regard to the system in other countries which you propose to put in?—Mr. Lamb undertook to put in a schedule of tariffs and other things in compliance with the wishes of members of the Committee, and he has prepared a schedule giving the information that they want for Austria, Belgium, France, Germany, Hungary, Italy, Norway, Sweden, Switzerland, and the United States. It gives (1) the name of the country; (2) the fact whether the telephone

is

*Chairman*—continued.

is in the hands of public bodies or private companies; (3) it describes the system in use, and I see in Germany it is put down "single" for Berlin, but I am not quite certain as I have said that that is quite right; (4) area—the area covered; (5) the number of subscribers; (6) the terms of subscription; (7) statistics of capital and profit; and (8), the trunk, were charges. *This* will be printed in the Minutes.

2718. If you hand it in we might have it printed by next time?—Yes. (*The Table was handed in.*)

2719. I believe you also propose to put in, if the Committee approve, extracts from a letter that has been received from the Director General of Telegraphs in Sweden with regard to the Swedish system?—Yes, sir; may I first of all point out something with respect to that schedule: Of course when members of the Committee have the schedule before them they will see it, but I should like, if you will allow me, just to point out the basis of the various tariffs.

2720. Certainly?—You will find this, that there are three distinct bases on which the tariffs are formed—the first is a fixed annual rental with unlimited service; secondly, a smaller annual rental with a limited service and tolls for extra talks; and lastly, the Buffalo system, as I described it to you, where they charge tolls for every talk; the system there is by toll and not by annual subscription.

Sir *James Fergusson.*

2721. In case there was a mistake made let me put this to you: You named eight cents for three minutes as the Buffalo price, is not that incredibly low, it is less than 4*d.*?—It is per talk, sir, a local talk; we should think it very high in England.

2722. Oh, would you?—Certainly.

Sir *Julian Goldsmid.*

2723. Then there was a 70 dollars initial charge?—Seventy dollars initial charge to cover the cost of the apparatus, but I want to mention this, that the second plan, that is an annual rental with limited service, is now being used in New York. It has been introduced in New York, and I have a letter here from the President of the Metropolitan Telephone and Telegraph Company in which he says: "You will, doubtless, be interested to know that we are introducing here, with considerable success, a system of charges, measured by the amount of use made by each individual subscriber. We, of course, have an initial minimum, after which the subscriber pays a fixed amount per message for each communication. This is substantially on the same lines as the Buffalo system of charges with which I am sure you are quite familiar. The new plan seems to take with the public, especially the small users. We are not attempting at present to enforce it upon those who make excessive use of the telephone, and when we do I expect there will be considerable opposition to it."

Mr. *Benn.*

2724. Buffalo is entirely an overhead system, I think?—I am not quite sure; it was when I was there in 1884.

2725. I was there in November?—Then you perhaps know.

2726. Yes?—There is one remarkable fact about Buffalo; that is that the number of calls per day has not increased between 1884 and now, and it is the lowest number in the States, which rather tends to show that the toll checks the desire of subscribers to ask unnecessary questions, and it brings them within the limits of business talks.

Sir *Julian Goldsmid.*

2727. So Buffalo does not do quite so much business as the other places per head?—No; they do not per head.

*Chairman.*

2728. Have you anything more to say with regard to that statement?—No; but I have got this letter, or extract from a letter dated the 29th March 1895. It is a letter from Mr. Storckenfeldt, the Director-General of Telegraphs in Sweden: "Dear sir: In consequence of your telegrams, I beg to give you the following information. The private telephone company in Stockholm has obtained the right to work telephones within a district of 70 kilometres radius from Stockholm, but may not extend their operations out of this circle. This concession does not, however, exclude the State likewise from working telephones within the same district. In consequence, a competition has arisen, which works in all ways unfavourably and which has also entailed the result, that the fees have been brought down far below the proper ones. The private company has repealed all fees, which were previously paid, for conversations between the different telephone lines of the company; that is to say, all the subscribers of the company now converse with each other within the whole district without paying any other fee than the yearly one. Even for Swedish circumstances the fees, which the company take, are quite unreasonable for free conversation within so large a district; as I have before mentioned, they have arisen from the company's fear of competition with the State. The State's telephone fees are 80 kronor in the larger towns and in the country, and 50 kronor in the smaller towns. The subscribers have the right to converse with each other within their own system, and also with the subscribers in the subsidiary systems in the immediate vicinity. For conversation with subscribers in other systems a separate fee is paid amounting to 15 ore up to 100 kilometres, 30 ore up to 250 kilometres, 50 ore up to 600 kilometres, 75 ore up to 900 kilometres, and 1 kronor for beyond the latter distance, all for three minutes. We are endeavouring to restrict the districts within which one may converse free. The fees for conversations are quite too cheap in Sweden. The working of the telephone lies in the hands of the State over the whole country, except within the district named around Stockholm. In this district the State has at present about 3,300 subscribers, and in the other part of the country about 18,000

*Chairman*—continued.

subscribers. When the State first commenced its telephonic operations it was suggested that the State should erect the long connection lines and work these, whilst private companies should work the telephone system in the towns. This appeared, however, on nearer study, to occasion so great difficulties that the State decided to work the whole. For the company in Stockholm the right was allowed to converse on the long lines of the State for separate additional fees, a concession which has occasioned much unpleasantness and will occasion still more. Our experience is, therefore, that if full national telephone operations are to be arranged, the State must own the whole system; that is to say, the long lines as well as the local systems."

Sir *James Fergusson.*

2729. Is it the case that, under the London streets, could be laid pipes sufficient to carry a competing system of telephones; is there space of elbow to provide underground pipes for a competing system of telephones?—Yes, sir, I think there is.

2730. You think there is?—I think there is, with the exception perhaps of Cheapside, that is to be avoided.

Mr. *Benn.*

2731. There is a pipe there, is not there, already?—Cheapside is all pipes, I think.

Sir *James Fergusson.*

2732. But I mean a special pipe that is not utilised at present?—Yes, there are some pipes.

2733. I suppose that a certain difficulty had already been found by the Post Office in making their lines, by reason of the number of pipes laid under the streets?—Yes; in Newgate-street and Cheapside we experienced great difficulty indeed.

2734. But still it would not be insurmountable?—No, not insurmountable.

2735. I am not sure whether you have answered this question or not. Do you anticipate a great development of telephonic communication when the agreement comes into full working order?—I do.

Sir *Julian Goldsmid.*

2736. You referred to other costs besides engineering costs; you referred to way-leaves. Would not a competing company especially in a great town like London, find enormous difficulty with regard to its way-leaves?—Oh, enormous.

2737. Has not there been already in London, and in some of the other towns (possibly Newcastle), very great difficulty on that subject?—Everywhere; and in our case we found it impossible to get way-leaves for the overhead line for the new trunk system from the Post Office to Finchley-road; we had to give it up. We are obliged to put a short length of underground wire between the General Post Office and King's Cross.

*Tuesday, 7th May* 1895.

MEMBERS PRESENT:

| | |
|---|---|
| Captain Bagot. | Mr. Arnold Morley. |
| Mr. Baird. | Mr. Moulton. |
| Mr. Benn. | Mr. Snape. |
| Mr. John Ellis. | Mr. Solicitor General. |
| Sir James Fergusson. | Lord Stanley. |
| Mr. Grant Lawson. | Mr. Tully. |

THE RIGHT HONOURABLE ARNOLD MORLEY, IN THE CHAIR.

Mr. WILLIAM HENRY PREECE, C.B., F.R.S., again called in; and further Examined.

*Chairman.*

2738. I UNDERSTAND there are two omissions you wish to fill in?—Yes, sir. I quite forgot to mention, when speaking of the switchboard, that in America, and in Europe also, attempts are being made to supplant manual labour at Exchanges by making automatic switches, so that a subscriber will be able to call up another subscriber by two or three motions of a switch in his office. I saw such a thing at work some years ago near Brussels, and I also saw one exhibited at Chicago; I believe the one near Brussels is still at work; but all these automatic switches are based on the erroneous assumption that the line is always in working order, that it is always disengaged, and that the subscriber is always present, and I fear those three fallacies will prevent its general adoption; and it can only be used on very small exchanges.

2739. You do not think it will be applicable to a large exchange, such as we have in London?—Not for large exchanges certainly, sir. The other point is, that I quite forgot also to mention that in America, instead of the visual signal that I explained to the Committee, they have introduced a little electric lamp. Whenever a subscriber lifts the telephone receiver off the hook a little lamp lights in front of the answering operator, and it remains alight until he has answered; it goes out while the talk is taking place, and the moment the conversation is finished the little lamp lights up again. The great advantage of these automatic signals is this: that it entirely puts a stop to those questions that irritate us very much, when the female voice comes in the middle of a conversation and asks us if we have finished, or, as they say in the States: "Are you through?" These automatic signals entirely put a stop to these questions. There is also one other thing, sir, I should mention.

2740. Before you leave the electric lamp, are you aware whether that has been successful in operation?—Oh, yes, it is very successful indeed, and it is introduced very generally in Chicago; it has also been introduced in Boston, and is gradually spreading throughout the States.

Sir *James Fergusson.*

2741. I suppose you would be the last man to say that it was impossible that a good automatic system might be invented?—The word "impossible," sir, does not exist in the vocabulary of an electrician; we believe everything to be possible; at the same time there are great difficulties to surmount.

*Chairman.*

2742. What happens if the current of electricity for the lamp ceases, or if the lamp itself gets out of order?—Then it is a fault that leads to a little trouble and delay.

2743. Can it be replaced temporarily by some other means?—I think not. It depends, of course, on examination and testing; just as in the present day our indicators require to be tested always, when operators come on duty.

2744. Does the electric lamp require an additional wire between the subscriber and the operator?—No; it is part and parcel of the speaking wire in connection with the plugs and cord at the station.

2745. Then there is no greater expense in the original outlay; but it does save the inconvenience of the voice and the calls?—Yes, that is so. There is one other return, sir, that I could not find the other day that I wish to put on the minutes. It is the population in various large towns in the States, and the number of subscribers compared with the number of inhabitants to each subscriber. It has been mentioned two or three times. It shows that in New York the number of inhabitants to each subscriber is 145, while it runs through various stages; in Detroit 48, and it goes down to Providence, where there are 44 inhabitants to each subscriber. (*The document was handed in*).

2746. And that, notwithstanding that the rates charged in America are very high?—That is so.

2747. How do you account for that fact, as compared with our experience here?—Because it is so essential to the transaction of business in the States.

2748. More so than in England?—More so; the habits of the people and the difficulties of

*Chairman*—continued.

locomotion, the temperature, the climatic influences there, render it almost essential to them to conduct their business indoors; and they use it very largely, indeed, for that purpose.

2749. That is supplementary, is it, to the schedule you put in which you described shortly before?—Yes, sir; but I put it in because a question was asked me. I have not had time to look through the report of the evidence that I gave; but I mentioned that I had such a return. I searched for it, and could not find it. Now I have found it, and so put it in.

2750. Does this schedule contain all the information which the department has been able to get up to the present time with regard to the system of telephones in the various countries referred to in the first column?—That is so.

2751. Then I think you also put in some extracts from correspondence which has taken place between the Post Office and the Director General of Telegraphs in Sweden?—Yes, sir; and that is printed.

2752. Then will you now continue the evidence you were giving; I think you stated the basis of the various tariffs in America and Europe?—Yes.

2753. Will you just repeat them?—I pointed out on the tariff that there were three systems: one based on a fixed annual rental, with unlimited service; the second, a smaller annual rental, with limited service, and tolls for extra talks; and, thirdly, tolls per talk, a system which we propose to introduce in the trunk services here, and that is the one in use at Buffalo. The second plan is now being tried in New York; and I read an extract from a letter implying that it was there received with great favour.

2754. I understand those systems of charging apply to local areas in various countries?—They apply to local areas. I should just like to mention this upon that toll system: I point out that in Buffalo the number of talks is only six, and the tendency of the tariff per talk is to reduce the number of conversations by stopping useless conversations.

2755. Do you think it unduly checks the use of the telephone?—No. I am rather an advocate for the toll system, limited as they have it in New York, that is with a small rental, and a small charge per talk, really in order to check the unnecessary use of the telephone. I am sure everybody who has a telephone must be perfectly aware of the fact that he is called up a great deal too frequently to be asked very trivial questions.

2756. I think you stated on the last occasion that the intelligent use of the telephone by the subscriber was a very important factor in a successful system?—Yes; they recognise this so much in the States that not only do they look after the education of the staff itself in the exchange, but they have inspectors who go round and educate their customers in the use of the telephone, and point out to them the various ways of using it. They encourage their subscribers as much as they possibly can to come to the exchanges and to see the working of the exchanges, so that the subscriber may be able

*Chairman*—continued.

to grasp the working of the whole system and become a part of it.

2757. Do you think there is need in this country for educational work of that kind?—Immense, sir. You have had plenty of evidence before you of the ignorance of the users of telephones in what goes on; and I think if some of those gentlemen who have appeared before you had received a little telephonic education they would have given different evidence.

2758. Then you attribute, to some extent at all events, the want of success in the working of the telephone in this country to that cause?—I do.

2759. Now, will you give the Committee your opinions upon the question of the municipalisation of the telephones?—Yes. I have five or six reasons that I should like to adduce before the Committee against the municipalisation of telephones. In the first place, I should like to point out that a fluctuating body like that of a town council is at a disadvantage in conducting what, to them, would be a growing, speculative, and competitive industry, which demands continuity of policy, uniformity of practice, and accumulation of experience to develope and to maintain in high efficiency. Secondly, high efficiency can only be maintained when the service pays. The active and determined opposition of an energetic company like the National Telephone Company, who could undercut prices in one part of their system to maintain their position in another part, certainly would prevent the possibility of local financial success.

2760. And would, at the same time, penalise the other parts where the price had to be unduly high to compensate for the loss in the particular locality?—Certainly. Again; financial failure and a call on the rates would speedily secure the opposition of the labouring and the employed class of the ratepayers who do not benefit by the use of the telephone, and who form the majority, and are, therefore, the masters of the situation. Fourth; high efficiency in telephony depends essentially on skilled labour and technical supervision. Small municipalities, isolated telephonically, cannot afford to pay high salaries to secure or retain the services of highly skilled technical men; nor have they the experience necessary to develope the technical education of the men they employ. They cannot compete in that respect with a widely developed and extensive service like that of the Post Office, where there is absolutely uniformity of practice, great means of development and of education, room for expansion, prospects of promotion, and ultimate retirement on pension.

2761. When you speak of the services of highly skilled technical men, you are not now referring to the operators at the exchange, are you?—Yes, sir, I am; I am referring to those in charge, rather; the supervisors.

2762. The supervisors?—Yes; they are gentlemen called managers, who necessarily must be, and are, technical men, and very highly so.

2763. And the electrical engineering staff?—The inspectors and the assistants to these managers are all engineering men who are highly trained. The fifth reason, sir, is that in all small

*Chairman*—continued.

small municipalities (I am dealing more with small municipalities than with large ones) not managed by these skilled men the service must deteriorate. There is no physical difficulty whatever in arranging for a local subscriber in one system to speak to a local subscriber in another system in the same town; but it is not likely that this can be done commercially, where there are different practices, probably ill-feeling, determined opposition, and certainly great rivalry. Moreover, if it were done it would lead to additional switch operations and financial checks, which mean additional delays in talking, necessary evils on a trunk system but insupportable on a local system. This is rather an important point, sir; and for the guidance of the Committee, I have had some diagrams drawn (*the diagrams were handed in*). I have taken the case of two towns marked "A" and "B," in each of which there is a post office where the trunk system terminates. At each post office there is a municipal exchange and also a National Telephone Company's exchange; and I have also added a local subscriber on the Post Office exchange. Now, on this diagram you can trace all the operations involved in speaking from one exchange to the other in the same area, or in speaking from one exchange in one area, to the other exchange in the other area through the trunk system, and I have drawn it particularly because I desire the Committee to see that where a local subscriber centres on the Post Office there must necessarily be removed the operations involved in passing through two exchanges.

2764. Perhaps you will just describe to the Committee the operations which have to be carried out in each case?—I gave that fully in the previous part of my evidence. I showed exactly what would have to be done, and I gave the number of operations. I showed, I think, that where one exchange spoke through a trunk to another exchange it might involve something like 24 operations; where there is one local exchange, the number of operations is three; where there is a mere junction, the number of operations is six, and where the talk is through one exchange the number is 12.

2765. One local exchange and a trunk?—Yes; and through one local exchange and two trunks there are 16 operations. I mentioned nothing about the time that these operations took, but I have a return showing the time occupied at one of the most perfect exchanges in New York, Cortlandt Street, where it appears that the extra time per exchange is over a minute; so that the insertion of any exchange in any one of these operations means an extra minute in the time occupied in the talk between a subscriber in one area and a subscriber in another area.

Mr. *Benn.*

2766. May I ask you whether this is not practically what takes place in London at the present time: for instance, suppose a subscriber in the East End wishes to communicate with another at Westminster, he has to be put through two or three exchanges in pretty much the same way?—It is so.

Mr. *Benn*—continued.

2767. It is so?—Yes

2768. So that what would happen here is not a greater complication than that which already exists in the London system?—Not much more.

*Chairman.*

2769. Does that conclude the reasons against municipalisation?—No, sir. I would wish further to point out that perfect trunk service can be obtained only with one uniform system, one *régime*, and one staff; that every additional system means enhanced expense, additional responsibilities, accumulated difficulties, and serious delays; and the centralisation of management in one central spot like London secures the knowledge and benefits of the wider experience; it encourages experiment and observation, and it furthers invention; it prevents repetition of errors; it checks the exercise of individual idiosyncrasies; it enforces technical education, and it tends to develop the industry; and those points, sir, are thoroughly, in my opinion, carried out by the Post Office system in England as well as by the American Bell Telephone Company in the United States, where they virtually have a monopoly.

2770. Those are arguments which you have directly addressed to the question of municipalisation?—They are what I address directly to the question of the municipalisation of telephones; and I should like to say, finally, on this point, sir, that the telephone itself is imperial in its character, and it is rapidly becoming international. More than that, local authorities who would find the difficulties I have enumerated in carrying out its conduct can, on their side, encourage the development of telephony very much by providing subways and conduits, and by facilitating way-leaves, and generally do much to conduct the business under proper control and regulation.

2771. Would most, if not all, of the reasons you have given against the municipalisation of the telephone apply equally forcibly to competition by private companies in the same area?—They would. There is one other reason, sir, I should like to give that I omitted.

2772. Certainly?—That is this: It must be obvious to the Committee that an agency already in existence with its plant, offices, and staff all ready can serve additional subscribers at less cost than a new agency which has everything to provide. The introduction of a second agency would necessarily involve additional managers and engineers, additional office accommodation, additional pipes for junction wires between London exchanges, and additional subscribers' wires in cases where the subscribers require to be on both exchanges; or if (as has been suggested in evidence) arrangements might be made for the two systems to work together, then additional wires to join these two systems and additional expenses for switching between the two systems. Indeed, sir, I am sorry to give you so many reasons, but there is one other I should like to mention.

Mr. *Benn.*

2773. Shall we call this No. 7?—Yes, please. It is this: that it is quite a fallacy to assume or

Mr. *Benn*—continued.

to imagine that in the event of competition only one side will run a low tariff and put down metallic circuits, or that all the new subscribers will flock to the newcomer, even though it be their own town council. The company in possession has 12 months' start, and it would adopt both measures, low tariff and metallic circuit, and many other things that are known in the art of financial self-defence; in fact, sir, I think there is not very much patriotism amongst ratepayers generally when the pocket is affected.

*Chairman.*

2774. What, in your opinion, would be the effect of competition, whether municipal or otherwise, upon the question of way-leaves?—The question of way-leaves is a very serious one indeed, and it is growing more and more serious every day. The Post Office is in this position: that it is subject to law and to the regulations of an Act of Parliament; but there are many concerns—telegraphists, bell-hangers, telegraph engineers, who are running up wires everywhere, and the streets of the City are being crossed without law. Over Cheapside, for instance, is one mass of wires, and I believe that $\frac{99}{100}$ths of those wires belong neither to the Telephone Company nor to any authorised body; certainly not to the Post Office. But in the country we have great difficulty; in fact, in London also. I mentioned that we failed to get way-leaves for an overground wire between the Post Office and King's Cross or St. Pancras to meet our new trunk system; we have been obliged to put our wires underground in consequence. Everywhere we are troubled with the difficulty of getting way-leave; owners of private property object because they find their property is being trespassed over; they are worried by linemen desiring to ascend the roofs of the houses and damaging the roofs; so that all over the country we are getting into trouble. I mentioned one case of the desire that local bodies have to force us underground, and I gave reasons why they should rather encourage us to go overground with the trunk system, although I mentioned that for local purposes we might go underground.

Mr. *Benn.*

2775. You rather favour underground for local purposes?—I do on a large scale; in fact, sir, there are two or three places where we really meet with great obstruction. The parish of Wandsworth has quite a crank on this particular subject; they not only try to force us underground, but they try to force the railway companies also, where they cross with bridges, to go underground. Sheffield is another place where they would have prevented our carrying the trunk wire into the Post Office if they could, in which case we should have isolated them from the trunk system.

*Chairman.*

2776. Has that difficulty been overcome?—No. We succeeded in getting private way-leaves into Sheffield; we dispensed with the local way-leave. Cambridge has the courage of its convictions, for it not only absolutely forbids us

*Chairman*—continued.

to go overground, but it pays the difference between overground and underground, in order that we should carry our wires underground to the post office there, whereas we shall be compelled to go overground for this trunk system; and if Cambridge does not give its consent, Cambridge will have to be left out of the trunk system. I mention this because I think town councils, and county councils particularly, can assist our operations very much indeed if they will facilitate the obtaining of way-leaves.

2777. One of the witnesses gave some evidence about the extension of the telephone in rural agricultural districts; have you any suggestion to make with regard to that?—Yes. Might I refer, before you go to that, sir, to New York?

2778. Certainly; yes?—I wish to refer to the underground system there because it was given in evidence here. We have also had evidence about the desire to put wires underground in the City of London. At New York there is a company which has established a subway throughout the whole of New York, and in this subway lets out space to the Telephone Companies; and by that means they have provided proper conduits all over New York for the use of the Telephone Companies; but having put these in the hands of a private company, this private company charges an exorbitant rent, and the New York subscribers have to pay 2*l.*, or an equal equivalent (eight or 10 dollars; I forget which) per head for the rental of the way-leaves.

Mr. *Benn.*

2779. That largely accounts for the New York tariff, does it not?—To a certain extent.

2780. Does not the same rule obtain through almost every stage of the enterprise?—In the States?

2781. Yes?—Very much so; but then we have had evidence here, sir, that the City of London authorities were rather encouraging the same thing in the City of London. We were told that the Electric Lighting Company wanted to charge the Telephone Company a rental of 10,000*l.* a year. Well, now, as there are only 4,000 subscribers in the City of London, that would mean 2*l.* 10*s.* per subscriber in the City of London if it were agreed to.

2782. That is in the City?—Yes.

*Chairman.*

2783. Now go on, please, with your statement?—You were asking, sir, about extensions to rural districts. These can be encouraged to a very large extent by county and district councils guaranteeing a sufficient income to meet the requirements of the Treasury; in fact, this is already done to a very large extent for telegraph offices. In some districts, in some parts of Wales particularly—in the mountains of Wales—there are several small offices opened under this guarantee given by a district council; but, curiously enough, sir, we have had some difficulty there in introducing the telephone. The rural people say: "We guaranteed for the telegraph; we did not guarantee for the telephone"; and in one particular place they would not have the telephone.

2784. They

*Chairman*—continued.

2784. They do not recognise that the telephone is a telegraph?—They did not then; they do now, because we have persuaded them to the contrary. It is working very well as a telephone now.

2785. Will you just give the number of telephones in use under the Post Office?—The present number of telephones in use in the Post Office is this: Exchange and call offices, 1,900; private wires, 3,000; public offices (post and telegraph) worked by telephone, 680; life-boat stations and coast-guard stations, 354; lighthouses, 39; lightships (two to each), 8; Government wires, 1,025; so that we have a total of 7,006 telephones at work in the post office system.

2786. We have heard a good deal about telephone and telegraph monopoly; would you give your reasons in support of your view that it should be maintained?—I, sir, advocate imperial monopoly in postal, telegraphic, and telephonic work, because it secures uniformity, undivided responsibility, popular supervision, and popular control. It was mentioned in evidence that Mr. Fawcett said: "The monopoly should be governmental, because it can be controlled and is directly amenable to public opinion"; and I think reason and experience point to "one area, one system"; it means not only the best efficiency but the greatest economy. The multiple systems, as I have already said, mean inconvenience, delay, and expense; the public suffer ultimately in swollen capital. The Americans all over their offices have printed this: "The mail is quick; the telegraph is quicker; the telephone is instantaneous, and you do not want to wait for an answer."

Mr. *Grant Lawson.*

2787. You were calling attention to the fact that if there were municipal telephones there would be increased rivalry and different systems; besides some of these systems might possibly not fit in with other rival systems of the country?—That would be the great danger, Sir. That is what I mean by the encouragement of private or individual idiosyncrasies; small men would be appointed, and in charge of these local exchanges, they would introduce their own fads, and we should find great difficulty in working harmoniously with a disconnected system.

2788. I suppose it would be possible that it would render it impossible for a subscriber on one exchange to communicate with a subscriber on another?—I doubt the practical impossibility; I question the commercial possibility. That is you cannot get two opposing concerns to work in harmony even under the pressure of the Government.

2789. You have told us, for instance, about the electric light system, with the little lamps showing when the conversation is over. If one municipality had that, and another had the female voice for showing when it was over, can you conceive a possible system of communication through those two systems?—It would be extremely difficult.

2790. Do you notice another objection to municipalisation, the difficulty (I do not think you drew attention to it as far as I remember) of the question of where to address your complaints?—That is a great difficulty also. There is also another great difficulty I ought to have mentioned, that is the innumerable number of lists at the different exchanges that would have to be kept.

Mr. *Grant Lawson*—continued.

2791. I notice you give in this diagram numbers, I suppose imaginary numbers, of the subscribers?—That is so.

2792. But you realise what the difficulty would be if there were three sets of numbers, one for the Post Office, one for the Municipal Telephone, and one for the National Telephone Company?—Yes, and those numbers would have to be kept by every post office in the country.

2793. Your own idea is, I gather, that it would be better that the whole system should be nationalised; you think that would be the best of everything?—Unquestionably.

2794. If the municipalities made it pay do not you think the Government would have some difficulty in getting it from the municipalities. Assuming for the moment that they did make it pay or that some of them made it pay?—After the reasons I have given I think it is rather difficult to assume that they could make it pay; and even if they did make it pay it would be extremely difficult for the Government to absorb it unless they were very complacent indeed.

2795. And if they did not make it pay you expect they would have trouble with the ratepayers?—Certainly.

Mr. *Tully.*

2796. You have described to us the improvements introduced in America for the automatic signal, the electric lamp; have any improvements like that been introduced in this country by the Telephone Company?—Not yet.

2797. You also told us that in America the companies there send round inspectors to instruct the people how to use the telephone intelligently?—In America they do.

2798. Has that been done by the National Telephone Company in this country?—I am not aware of that, sir; they can give you evidence upon that point.

2799. You also said that it would not be possible for a corporation to compete with the Telephone Company, because they would not have a trained staff the same as the trained staff that the Post Office possess?—That is so.

2800. The Post Office has a trained staff, and they started the telephone business themselves, and they allowed this company to beat them out?—But they have not; we hold our own.

2801. Have not the company beaten out the Post Office?—Only in a few isolated small cases, for instance, Plymouth; we went down there and established an exchange at the request of the Plymouth people, and after a little time the Telephone Company went down there; they used persuasive measures which induced our subscribers to go to the Telephone Company, and our exchange ceased at the end of five years.

Mr. *Tully*—continued.

2802. So that although it was possible for the company to beat out the trained staff of the Post Office, you think it would not be possible for the municipality to beat out the trained staff of the company?—But the Telephone Company have a trained staff, and a very well trained staff.

2803. But what was possible for the company you do not think would be possible for the municipality?—Except in course of years.

2804. You stated that this company with this large capital ("swollen capital," I think you called it) would be able to oust the corporations by reducing prices, and using this capital for the purpose of ousting the corporations?—I think if the Telephone Company have succeeded in ousting the Post Office, as you said just now, they certainly would succeed in doing the same thing with a municipal body.

2805. Yes, if the municipal body were as complacent as the Post Office appears to have been with this company?—But a municipal body is a very difficult body to move; they have got their committees and their councils, and they are subject, as a rule, to the supervision of the Local Government Board. They cannot spend money without the authority of the Local Government Board, which makes it very difficult for them to compete.

2806. Do not municipal bodies manage with great success large undertakings such as gas works, waterworks, and, in some cases, electric lighting and tramways?—But then those are businesses that are confined entirely to their own area, and which do not affect in the least degree what is done in another town.

2807. Do not corporations supply outside the corporation area, for instance, water and gas?—Yes; the Corporation of Manchester can supply its own water, and the Corporation of Leeds can supply its own water.

2808. And outside its municipal area?—Only when the municipal area is very small. It is only within their own district that they supply water and gas. Of course there are many places where they do supply outside their own area; but my answer to that is, that the telephone business is essentially national and imperial, and it is becoming international.

2809. But are not the Company in this agreement, in which they hand over the trunk lines to the Government confined to local areas?—They are confined to areas which are shown in those maps on the wall.

2810. What you call telephone areas?—Yes.

2811. They are not a national system, but they are confined to local areas; could not corporations also be confined to these areas if they got a license for a telephone area?—They are virtually areas within the meaning of the word "area"; of course they are much larger in many cases than the municipal areas, but still they are local areas.

2812. So that that objection that you make, that it is an imperial matter, would not apply as regards this company, which is confined, practically, to local areas?—That is so.

2813. In your seventh reason, I think you stated that the result of competition between a company and a municipality would be that the company, to preserve their present position, would reduce their charges, and would give metallic circuits?—That is so.

2814. Would not that be a benefit arising from competition in that particular area?—I do not follow that.

2815. Would not that be a benefit to the subscribers in that particular area, that the charges would be reduced, and that a metallic circuit would take the place of the existing system?—Yes, sir; but, as a rule, competition, while it produces a reduction in tariff for a time, does not, as a rule, produce a reduction of tariff in perpetuity.

2816. But where we have a monopoly at present, we have not that monopoly supplying the best system, or sending round inspectors to instruct the people or supplying automatic signalling, such as you have said exists in America?—Of course you will have evidence on this from the Telephone Company itself. My own impression is, that they are doing all they can to make their service as good as it can be made. I have had occasion to visit several of their exchanges, and I find they compare very favourably indeed with exchanges in the States.

2817. Supposing that the municipal body had the license for a telephone area, and that their system succeeded, as the municipality was not overweighted with a swollen capital, and had not to pay a dividend on swollen capital, would it not be better for the body which was going to take over those things that they should have the choice of taking the better system of the two?—That is a question of financial policy, I think, on which I cannot express an opinion.

2818. You have spoken against competition?—Very strongly.

2819. I ask you, would not that be one of the effects?—The whole tenor of my argument was from a post office point of view, as against municipalisation. I did not make any reference at all to the company, or to the bearing of the agreement to which you were referring just now.

2820. Just one other matter (it is a small point) with reference to what you mentioned about Wales; you said that in the rural districts the people object, where the local bodies guarantee a telegraph station, to getting a telephone service?—They objected to the use of the telephone instead of having a telegraph. It is simply an objection which is the result of ignorance. As soon as the advantages of the telephone were pointed out to them they withdrew their opposition.

2821. I have had a letter from a gentleman in Wexford complaining that there they have got a telephone service instead of a telegraph service, and they think that they have not been fairly treated?—That is the same complaint.

2822. Yes. Do you think they have no reason for that complaint?—None whatever, sir.

Mr. *Benn.*

2823. May I first of all ask you a few questions on your seven reasons against municipalisation. First of all you said that it was undesirable

Mr. *Benn*—continued.

undesirable that a municipality should own and conduct its own telephone, because a municipality was a fluctuating body?—I used that against competition, because it was given in evidence.

2824. I do not object to it at all. Parliament is a fluctuating body?—Not so fluctuating as a Town Council.

2825. Why not; one side goes in, the other goes out?—I think members of the Town Council are re-elected every third year; is it not so?

2826. Well, there is that difference, I admit?—Yes.

2827. But with the exception of that difference, it is pretty much the same, is it not?—I have not found it so.

2828. Then the fluctuation is a difference in degree?—A very great difference in degree.

2829. Then, admitting that Parliament fluctuates to some extent, do you think that that is anything against the control of the Post Office by Parliament?—The control of the Post Office is virtually by the public, that always exists.

2830. Does not that same answer apply to the affairs of the town? You may say that the affairs of the town are conducted by the citizens, who always exist?—To a certain extent that is certainly true; but, as a matter of fact (and on this point I have some experience of the operations of a Town Council), I find that this fluctuation is a very serious matter indeed in the proper conduct of a competitive business. I have the electric light business in my mind.

2831. Let us come to that: My point was that if Parliament, being a fluctuating body, could conduct an institution of which you are very properly proud, probably, in a smaller degree, a municipality might do something in the same way; but, to come to electric lighting, I will take a recent instance, with which you are probably familiar: The parish of St. Pancras, which is practically a municipality, has carried out, as you know, an electric lighting enterprise, and you have probably seen the first balance-sheet of that enterprise; now, may I take it that all the objections which you have urged with the force of your great experience, against the municipalisation of the telephone, would apply precisely to the electric lighting enterprise in such a district as St. Pancras?—It does to some extent, and to some extent it does not. Now, in the first place, as in my reply to the honourable Member on my left, I said, my great point is that, in dealing with the telephone matter, we are dealing with something that is Imperial, and may be international. In the electric lighting business we are dealing with something that is absolutely and wholly local. I do not raise any objection at all to the management of any of these great industries by large bodies. For instance, take such places as Manchester, Nottingham, Bristol; they have already experience with large industries, and they form small and strong committees; they maintain a kind of continuity of policy by re-electing the same chairman; but when you come to small corporations, they start with very large committees, they are constantly changing, and the result is that you find sometimes that they cannot agree upon the system to be used; sometimes they cannot agree upon the man whom they employ to conduct the service, and it is incessant trouble and squabble. In St. Pancras you have an instance of a very fairly successful municipal undertaking.

2832. Your answer is very important, because, if I understand it, you tell the Committee that the objections which you have urged against municipalisation are not intended to apply to large towns like London, Bristol, or Glasgow?—Not as regards those industries we are talking about, but as regards the telephone industry, of which we have been speaking, they equally apply to all towns; that is, dealing with the Imperial character of telephony.

2833. Then, on the Imperial point, I may say at once, we are all agreed that it would be most desirable that your Imperial idea should be carried out, but we have got to deal with 17 years of difficulty, until 1911; that is rather the point?—Yes.

2834. I want to ask you this: what is the difference between a municipality being permitted to undertake such an enterprise as electric lighting; we are now on the point of the fluctuating body rather?—Yes, I quite follow you.

2835. Such an enterprise as electric lighting and a telephonic system; what is the difference?—Well, I pointed out that a town council was at a great disadvantage, because they failed in acquiring that continuity of policy that is essential to maintain any industry in proper working order.

2836. The same applies to electric lighting as to the telephonic system?—It does.

2837. So that would you extend your objection to all those enterprises which are carried on (I think I may say) with such success in Glasgow?—I think there is a limit.

2838. May we take it that you are an enemy to municipalisation in any form?—Oh, no, sir.

2839. Will you tell us how far you would allow the municipality to go?—I am sorry you have led me rather to introduce even electric lighting into the matter, because I wished it to be confined almost to telephony, and my principal reason is the one you admitted just now, that is its imperial and international character. But I should be very sorry to imply that, as a rule, corporations, and especially large corporations, cannot conduct industries, for we know that they do.

2840. That leads me rather to your second point. You say: "We know that they do." You favoured the Committee with a list of very striking foreign examples of what can be done by municipalities. We have also had some very striking and encouraging examples in this country. In view of those examples what would be your opinion. May I just cite a case?—Yes.

2841. Take the effect which was produced on the telephone system of Dundee by the enterprise; not of the municipality, but of a number of citizens joining together, and starting a company in order to provide a more efficient service at a lower price; would you think that was an

Mr. *Benn*—continued.

enterprise which was outside the range and power of the municipality?—That was done by a few active, energetic——

2842. Citizens?—Inhabitants, who formed a company, scarcely a municipality.

2843. There is no reason why the municipality should not do the same?—There is no reason whatever why they should not do the same as that which was done at Dundee.

2844. Then, on your third point, you told the Committee that the result might be a loss to the municipality, and that that would set the poorer ratepayers against the enterprise, that the poorer ratepayers not sharing in the benefits of the system would be opposed to the payment of rates to support a system which could not exist on its merits?—That is what I said.

2845. Would not that be rectified by the representative system. Could not the poorer ratepayers, who are in a majority, easily put an end to any such waste of the ratepayers' money? —That is what I say they can do.

2846. Then, that reason rather disappears; it is a question for the ratepayers themselves; they have their remedy?—Just so.

2847. You pleaded an injustice to the poorer ratepayers?—No, sir; what I said was that as soon as ever a system commences to fail financially, the ratepayers will turn out their representatives who have started this badly paying business.

2848. That may be so, and the ratepayers would have to suffer?—Of course they would.

2849. Then in that respect you were acting rather as the guardian of the municipal interests? —I was.

2850. You have told us that it would be impossible to carry out a system of this kind without the advantage of highly-skilled officers who would be well paid and probably have the prospect of a pension; is it not a fact that in telephonic business much the same system obtains as that which is in vogue in electric lighting; that a standard of excellence is attained at headquarters, and that other men, not equally skilful, can avail themselves readily of certain appliances, and that it would be necessary to have in every municipality such an expert as yourself? —That is so to a very great extent, but it has this great disadvantage, that when men require promotion or advancement, they are promoted from one constituency to another, and they do not carry away with them the experience that they gain in one place to apply it to another where there may be a totally different system. Now, with telephony the same does not apply, because in a large system like that of the telephone company in America or the National Telephone Company here, promotion is obtained by advancement in the same business, not in a different business.

2851. But suppose a municipality decided to found a telephone system for itself, would it not for the foundation of the system engage the services of some well-known expert and after the system had been planned out and laid down, would not the subsequent operations be a matter which could be carried on by an electrician?—Certainly.

Mr. *Benn*—continued.

2852. Then that rather disposes of your theory that every municipality must have costly and highly-trained men?—No; you must have a resident well-trained man, and you must pay him well. Small corporations cannot well afford to pay high salaries.

2853. Then your sixth reason was, I think, that an existing agency can obviously supply subscribers at a lower rate than a competitor; they have the existing apparatus and probably some years start, I think you said, of the rest?—That is so, sir.

2854. But suppose they will not do it?—It is difficult to imagine that they would not; they could be forced to do it.

2855. But how? Suppose they will not; suppose they say: "We are in a position in this town, we have the monopoly, the Postmaster General will not grant anybody else a licence, the municipality or anybody else, neither a company nor a municipality," what is the remedy for that?—The Postmaster General does not decline to give a licence to anybody.

2156. Let us face the fact. The Postmaster General has declined to give a licence to the leading town of the kingdom, the town most competent to undertake such an enterprise for itself, that is Glasgow?—I do not think, sir, that is so. I do not think he has declined.

2857. The Postmaster General will tell you if you ask him. I will take it that as the Postmaster General is silent, it is so?—No.

2858. I can quote from the evidence, but it is known to the whole Committee that Glasgow has been refused a licence?—I deny that.

*Chairman.*

2859. Is it not the fact that if the National Telephone Company acted unreasonably to the citizens of Glasgow, the Postmaster General has perfect power to start an exchange of his own to meet the needs of Glasgow, which Mr. Benn suggests might not be met by the National Telephone Company?—Certainly, sir; that is the very reply I was just going to make to Mr. Benn; the Postmaster General holds that power in his hands.

Mr. *Benn.*

2860. I am quite aware of that. The Postmaster General, if he thinks well, can step in and enter into competition with the National Telephone Company, which is a very unlikely thing, seeing the partnership which is about to exist, or does exist, between the Post Office and the National Telephone Company. I want to bring you back to this point: Suppose the municipality, the citizens of Glasgow, think they can do better than either the Post Office or the National Telephone Company, are you aware that they have applied for that opportunity, and that that opportunity has been denied to them? —That I do not accept.

2861. I may say I am rather surprised you do not know, but still there is the fact. I want to bring you back to this point: Suppose the company in possession declines to charge the lower rate, which you think they ought to charge, being already in possession of the appliances, do you know of any other remedy than competition?

Mr. *Benn*—continued.

tion?—I think the remedy the Postmaster General mentioned this very moment is the most powerful weapon he can hold to bring them to reason. If the ratepayers of Glasgow were to submit a petition to the Postmaster General to start an opposing exchange, and supported that by reasons which were sufficiently valid to the Postmaster General, he could start an exchange and bring them to reason.

2862. The enterprise of the citizens is to be filtered through the judgment of the Postmaster General?—There is no very strong evidence before this Committee at present that even the idea of the municipality in Glasgow is very generally supported by the Glasgow people.

2863. That, of course, is a question that I will not pursue, but I want to ask you this: you are aware, I think, that the policy of the Post Office a few years ago was free trade in telephones?—I have heard it said in this room, sir.

2864. You are aware that there is a distinct change of policy, which has not been either the outcome of Parliamentary action or countenanced by Parliament?—I suppose you refer to the agreement.

2865. I refer to the fact that municipalities have a difficulty in obtaining a license for themselves?—Yes.

2866. I want you to tell the Committee whether you know of any way by which a municipality can get a telephone service at a reasonable price other than by competition, except, of course, the intervention of the Postmaster General?—I do not know any other way.

2867. Now, on that point I should like, if I may, just to ask you (I am sorry to trouble you at such length, but you are an important witness) whether you are familiar with the attempt which was made in London by the New Telephone Company to provide a better service at a lower price?—No; I was not in my present position at that time, and I know little or nothing of what took place.

2868. You are probably aware that the price was less than that which is at present charged by the National Telephone Company?—I believe it was less, but I do not remember the facts; I did not pay the slightest heed to them at the time.

2869. Do you know anything about the electrical engineers who furnished the particulars to the New Telephone Company?—Not much; no.

2870. Would you regard the figures which were produced by that company as affecting any guide to this Committee?—I could not father them.

2871. I will just ask you this: I see that in the prospectus of that company (I ask you this because you gave us some very valuable information last week as to the cost per subscriber) it says, "Hitherto the number of subscribers to the telephone in Great Britain and Ireland has been small. For example, in the United States of America, with a population of 62½ millions, there are said to be 245,000 subscribers; at this rate there should be in the United Kingdom about 145,000 subscribers, instead of about 50,000. In Berlin, where the population is 1½ million, there are upwards of 17,000 subscribers, and at this rate the number in London should be

Mr. *Benn*—continued.

increased from about 8,800 to over 50,000." Is that your idea of what we shall attain in London eventually?—I have never given it a moment's consideration.

2872. Do you think 8,800 is a reasonable number for London?—It is very near that now.

2873. Do you think it is a reasonable number?—Certainly.

2874. I do not think you understand me?—No, I do not.

2875. Do you think the citizens of London ought to pay for a telephone service which is limited, say, to 10,000 subscribers?—I see no reason why it should not exceed 20,000.

2876. I am very glad you think that. It says here, "It is estimated that 750,000*l.* should suffice for these purposes, and on this basis the net revenue of the company should be sufficient to show divisible profits equal, at a moderate calculation, to 12 per cent. per annum on the capital, while the additional facilities of the Telegraphs Act, 1892, may be expected to open up new sources of revenue, and thus increase the profits of the company." Considering the source of these figures, considering the fact that a number of the directors of the National Telephone Company are on the board of directors, would you consider that that is a safe version of the financial position?—I could not possibly express an opinion on a prospectus like that, which is in words that I have never seen, and do not know who drew it up.

2877. But you have put in certain figures telling us that the subscribers of London could not be provided for at less, I think, than 55*l.* a subscriber?—That is my estimate.

2878. I ask you how you regard these figures as a reply to the evidence which you gave?—If they do not agree with my figures I should say they must be very wrong.

2879. Then that remark, I should suppose, would apply to such eminent experts as appear on the board of directors here; they all must be very wrong?—Certainly.

2880. May I take it from you then that the New Telephone Company could not carry out the proposals of this prospectus?—If their figures do not agree with mine they could not.

2881. Then I am afraid I must ask you what has been done in some other countries; I will take you from the prospectus to a few particulars of what other municipalities enjoy. You gave us, I think, some particulars from Sweden?—I put in a schedule respecting Sweden that Mr. Lamb promised to give the Committee.

2882. But you gave us, I think, a very interesting letter at the close of your evidence?—I simply put it in; I am not prepared to support it.

2883. Oh, but it is part of your evidence. I want to know whether you repudiate it or support it?—I will not repudiate it or support it. I have simply put it in, and have not even studied it.

2884. Will you look at it with me. I am afraid the Committee are in much the same position as yourself. This letter comes from Mr. Storckenfeldt, the Director General of Telegraphs in Sweden. He says, "The private

Mr. *Benn*—continued.

telephone company in Stockholm has obtained the right to work telephones within a district of 70 kilometres radius from Stockholm, but may not extend their operations out of this circle." Then I will take you down the letter a little; it is unnecessary to trouble the Committee with the whole of it. It says "the private company;" have you got that portion; it is about one-third down the letter?—Yes, I see it.

2885. "The private company has repealed all fees, which were previously paid, for conversations between the different telephone lines of the company; that is to say, all the subscribers of the company now converse with each other within the whole district without paying any other fee than the yearly one. Even for Swedish circumstances the fees, which the company take, are quite unreasonable for free conversation within so large a district; as I have before mentioned, they have arisen from the company's fear of competition with the State. The States' telephone fees are" (I have turned this into English money. I think you may take my figures) 4*l.* 8*s.* "in the larger towns (that is an annual subscription), and 2*l.* 14*s.*" in the smaller towns. The subscribers have the right to converse with each other within their own system, and also with the subscribers in the subsidiary systems in the immediate vicinity. For conversations with subscribers in other systems a separate fee is paid amounting to 2*d.* "up to 100 kilometres," 4*d.* "up to 250 kilometres," 6¾*d.* "up to 600 kilometres," 10*d.* "up to 900 kilometres," and 1*s.* 1½*d.* "for beyond the latter distance, all for three minutes. We are endeavouring to restrict the districts within which one may converse free." Do you notice that?—I do.

2886. That comes from a gentleman who is anxious to save the telegraph service of his country; do not you think so; he is Director General of the telegraphs?—And telephones.

2887. Yes, but he looks at it rather from the telegraph point of view?—I do not know why he should; the telephone system in Sweden is very extensive.

2888. Well, we will see: "The working of the telephone lies in the hands of the State over the whole country, except within the district named around Stockholm. In this district the State has, at present, about 3,300 subscribers, and in the other part of the country about 18,000 subscribers." I do not think I need trouble you with the rest of the letter, but my point in asking you to look at it is this: that competition in the city of Stockholm has largely benefited the telephone users in that district (particularly with regard to price), and is an advantage which might probably be obtained in like manner by certain cities in this country?—If they chose to take the loss consequent upon starting.

2889. Yes, but as to the loss. You know that Stockholm is a city of about 250,000 inhabitants?—That is so.

2890. The General Company in Stockholm have 8,334 subscribers; that is nearly as many as they are in London. I think you may take that from me?—That is given in evidence.

2891. The State exchange, 2,440; and the Bell Company, 800. So that in Stockholm, with a population of a quarter of a million, there are 11,000 subscribers. Now, had the same ratio obtained in London, London, with its population of 5,600,000, would possess 255,000 telephones?—That is so.

2892. Are you in a position to tell the Committee that this enterprise of Stockholm, either on the part of the General Company, the State Exchange, or the Bell Company, has resulted in a loss?—No, sir; I have no information but the letter before you.

2893. This is not a letter, sir. You gave us very ample information from some other places?—Yes, but not Stockholm.

2894. Both as regards the number of subscribers and, I think, the profits paid?—I do not think so. I think I have rather carefully confined my evidence to the technical part of the business, and not the financial.

2895. Well, I read the rates just now from the letter which appears in your evidence, and I think I may ask you whether it is not a fact that these rates cover free and unlimited communication with any State subscriber within Stockholm and 43 miles radius?—It says so in the letter.

2896. It says so in the letter?—Yes.

2897. Now, in view of these figures, may I ask you whether you adhere to your judgment that a municipality, taking up this matter, is not likely to secure some advantages for its citizens?—If the municipality is willing to incur the loss, there can be no doubt that they would, by giving cheap service, increase the number of subscribers.

2898. Can you give the Committee any examples from those towns which you have cited, the tariff of which is so very much lower than anything we have in this country, where the municipalities have suffered loss, or where the ratepayers have been called on to make up the balance?—I could not.

2899. Then your fear is quite in the future, it is not based upon any figures?—It is based on the seven or eight reasons I mentioned.

2900. We have figures before the Committee?—But you have only figures at present from Stockholm.

2901. You have favoured us with a number of others?—No, sir, I do not think so.

2902. I can give you others?—I have given no financial figures at all.

2903. You gave us, I think, the number of subcribers and the tariffs which obtain in the various towns, did you not?—I did, but nothing as regards the financial success or failure.

2904. But you have given a very important opinion to this effect, that if a municipality undertakes this matter and charges less prices, it must result in a loss to the ratepayers and lead to a sort of municipal rebellion?—Certainly.

2905. Can you give us any instance of such a case?—No; no municipality has started yet.

2906. Now, this question with regard to London is, I think, a very important one. In your opinion, is the overhead system, which at present exists, likely to continue, or is it desirable that it should be continued?—I think that the overhead system will continue in those parts of the metropolis, and of all great towns, where a few wires are required; but where you come to main

Mr. *Benn*—continued.

main arteries, where the wires must grow to probably from 50 to a hundred, and so on, the opinion I expressed was, that it was better to go underground.

2907. Do not you think it would be a matter of necessity in the course of a few years that all the present overhead carrying existing in the densely populated parts of London must disappear underground?—Yes, I think so.

2908. As in New York?—Yes.

2909. If that be so, do not you think it would be a great advantage to the Postmaster General when he came to acquire the system in 1911 (as we hope that he will) if London set to work in order to organise, so far as London is concerned, a complete underground system which would take the place, I may say, of the objectionable; I should like to say the abominable overhead system which at present exists?—There can be no doubt about it.

2910. No doubt about the advantage?—No.

2911. And do not you recognise that the municipality doing that work itself in conjunction with the other local authorities would have an enormous advantage in providing under its streets the necessary conduit pipes and subways for the wires?—I tried to lay down very strongly indeed that I believed the local authorities could assist the development of the business very much by constructing these subways.

2912. And the most effective way to assist would be to undertake such work themselves, would it not?—Yes, but not telephone work.

2913. Suppose the municipality organised a uniform system of putting in their own wires, would it not be a great advantage when the Postmaster General came to acquire the telephones in 1911, that he should have such a system ready at hand to substitute for that of the National Telephone Company?—It would be very much better for the Postmaster General to have his own wires in the subways.

2914. That is really no answer to my question?—I will go so far as this: it would certainly be an advantage to the Postmaster General in 1911 to have transferred to him a good underground system.

2915. The advantage which the municipality would have in arranging such a system for itself would be very greatly increased, do not you think, owing to the fact that the municipality owns a very large number of public buildings, fire-brigade stations, and places of that kind, which could be used for connections and exchanges and other purposes?—There is an advantage in that, certainly. It depends upon their position.

2916. Precisely; but in London do not you think the possession of those facilites really means that half the problem of a municipal service is solved?—The problem of a municipal service is certainly more easily solved in London than in any other district.

2917. I am very much obliged to you for that answer. Now, only one or two more questions: Looking at the position in 1911, I want you to tell the Committee how you think the Post Office would be able to disentangle itself from this partnership with the National Telephone

Mr. *Benn*—continued.

Company?—It ceases, if I understand the agreement aright, whatever the connection may be; you call it partnership, but whatever it may be; it ceases in 1911.

2918. Oh, yes; but the telephonic communication would not cease?—No.

2919. The Post Office would then be face to face with whatever system had been set up by the National Telephone Company?—Unless Parliament in the meantime forced both the Post Office and the National Telephone Company to make other arrangements.

2920. Yes; we are all looking towards that particular millenium, but that is not here yet. I want you to face the position as it exists at present, because there is no such proposal before Parliament; I wish there were. Would not the Post Office practically be in the hands of the National Telephone Company?—Certatnly not.

2921. What would the Post Office do; set up another system?—Well, it is almost impossible to predicate what will occur in 1911.

2922. But we have to face that?—Not yet.

2923. Yes, indeed we have; it is our duty to inquire the effect of this agreement and the effect upon the ratepayers of the country?—Of course, the diagram that I place in your hands shows you that there is a possibility that before 1911 the trunk service in this country will be a very extensive one indeed; and the experience in America tends to make one believe that the trunk service is going to exceed the local service. If that be the case in 1911 the Post Office telephone service will exceed in extent and importance the service of the Telephone Company.

2924. Yes, I quite appreciate that with regard to the trunk service. I believe it is a great benefit to the country that that should be in the hands of the Post Office, but I want to bring you back to the local needs of London; I want to know what the Post Office is going to do in 1911?—I am happy to say I shall not be there.

2925. But we have got you here, and your opinion is worth a great deal to us?—I do not like to express an opinion; all these questions you are directing to me are really questions upon policy with which I am not familiar and on which I cannot express any definite opinion.

2926. You gave us six reasons, and every reason involved some grave matter of policy; you started this question of policy, if you will forgive me for saying so?—It is very difficult to answer any question as to what will take place in 1911.

2927. I want to ask you this, because this is purely technical: In 1911 will not the position of the Post Office be practically this, that it must either pay the price which is asked for this plant (obsolete or otherwise) by the National Telephone Company, or set up a system of its own?—It must be either one or the other; at least not necessarily to pay the telephone company their price, but to set up a system of its own.

2928. I say either one or the other?—Either one or the other.

2929. Now,

Mr. *Benn*—continued.

2929. Now, would it not be of very great advantage, when 1911 comes, if an efficient municipal service were at the disposal of the Post Office in competition with the National Telephone Company; would it not considerably affect the price asked by the National Telephone Company?—It might.

2930. It might?—Yes.

2931. And may I ask you this: Considering the enormous development of the telephone, and particularly the interesting development of late years in America, which I had the pleasure of witnessing for myself, do not you think that the advantage of a municipality commencing at this period, now that the patents have expired, with such local conveniences as I have indicated, the advantage of a municipality in establishing a system, would be enormous?—Well, I have given my reasons against it, and I must stick to my own reasons

2932. I am not speaking about this question of policy, which we have agreed to avoid, but a purely technical question; for instance, if you were putting down a plan for London, you would sweep away, probably, or you would ignore, three parts of the system which at present obtains, or at present is used by the National Telephone Company?—You must not forget this, Sir, that the telephone company, at the present moment, are entirely renovating the whole of their system, and they can construct just as good a system, perhaps a better one, than the County Council, for the simple reason that they start with experience that you have not got.

2933. Still, experience can be had for money; I will not press that question further, excepting to ask you this: Take the present position of the National Telephone Company in the City with what you call their multiple boards, you have told the Committee that an increase of subscribers, on that system, means a great increase of expense; that as the subscribers grow the expense increases?—Yes, that is so.

2934. Now, suppose the municipality of London said, Well, we will not have this multiple board system, we will send over an expert to Chicago; we will, as it were, put London on the divided board system; we will avoid these other difficulties, and thus we can provide 25,000 people in London with this great convenience at a much lower price; that would be a reasonable proposition, would it not?—But the telephone company could do the same.

2935. But they have not done the same; they have completed their exchange; they are at present building an Exchange in Gerrard-street?—Yes. I do not know whether you went to the Avenue Exchange, the Lime-street Exchange; I think you did.

2936. I went to both; I went to the Lime-street and to the Gerrard-street?—You saw at Lime-street a multiple board of the latest design supplied by the Western Electric Company, the great manufacturers in the States. At the time that was supplied that was a multiple switch-board up to date; but telephone experience is growing every day.

Mr. *Benn*—continued.

2937. Yes, just so?—At the next exchange that they are fitting up, which is Gerrard-street, you find they have taken advantage of experience, and they are there putting a Table exchange where they sweep away half the number of jacks. Next year they may open a new exchange in some other part of London, and it is open for them to place there the divided board system.

2938. You told the Committee (and it is a very important point, because the Postmaster General has insisted upon it) that the multiplication of subscribers increases the expense, and you explained to the Committee that the reason for that was the enormous multiplication of these jacks as the subscribers increased?—No.

2939. I thought so?—I mentioned that as a cause of increase in prime cost, not in the expenditure.

2940. Yes, one element in cost?—One element in cost in the capital expenditure, but it does not affect the increased cost of working, for that arises from the increased number of calls due to the increased number of subscribers, and the fewer number of subscribers' lines that the operators can attend to; but that has nothing to do with the multiple board.

2941. The multiplication of jacks involves the extra service?—No, it involves extra prime cost; it affects the capital cost.

2942. The greater the number of jacks the operator has to attend to the greater the number of attachments?—No; whatever system of board is used the number of jacks that the operator has to attend to depends upon the number of subscribers and the work done.

2943. Just so?—Now one operator can attend to 50 subscribers, but if your exchange increases fron 5,000 to 10,000, and the number of calls per day increases from 8 to 15, then each operator instead of being able to attend to 50 will only be able to attend to 35 or 40. It is there where the increased working expenditure comes from.

2944. Now is it not a fact that the present system in Chicago has reduced what I may describe as the jack difficulty to one-fifth?—It has.

2945. Does not that very largely dispose of your contention that this multiplication of subscribers means an enormous multiplication of cost?—No; only in the first capital cost.

2946. Just so; we are dealing for the moment with the capital cost?—What I said was this: that with a multiple board the capital cost increased as the square of the numbers of subscribers.

2947. Precisely?—That is the effect of the board itself. Where you come to the Table board half that is swept away; where you come to the divided board you come to one-fifth; it is a mere flea-bite practically in the total expenditure involved in establishing an exchange system. The greater part of the money is expended in constructing the outside lines.

2948. This is my last question. You gave some information with regard to the continental system. Can you tell us whether it is a fact that in Rome where there is competition the charges

Mr. *Benn*—continued.

charges are less than at Milan, Turin, Venice, and Genoa, where there is no competition?—I have no information on that point.

Mr. *John Ellis.*

2949. Have you a copy of your evidence before you?—Yes.

2950. Will you kindly refer to Question 2614. I want to ask you a few questions about this trunk-wire business. Can you give us the date up to which that map to which you refer is made up?—It was up to last week; it is not up to yesterday.

2951. Up to the end of April, I may take it?—It wants a yellow line from Leeds direct to London.

2952. In that respect it is imperfect?—In that respect it is imperfect.

2953. In other respects we may take it as perfect up to the end of April, say?—Yes.

2954. What is the amount of the million sterling which was voted in 1892 by the House which has been absorbed up to the end of April, say, in the construction of these lines?—It was given in Mr. Lamb's evidence; I think it was 374,000*l.*

2955. Then there is 600,000*l.* still remaining to be spent?—That is so, I believe.

2956. Are you proceeding at the same rate now as you have been doing the last 12 months, not faster?—We are proceeding to complete the scheme as fast as we can.

2957. How long will that 600,000*l.* last, do you suppose?—It will complete the scheme.

2958. I am aware of that, but within what date will you have the scheme complete; that is how I should put it?—We did hope to open it on 1st July, but I do not think at present it will be open until, perhaps, September.

2959. By the autumn of this year, I understand, the million sterling will be gone?—If the Postmaster General says so, it is so. I have not handling of the money, I spend it.

2960. Then orders have been issued by the head of the Department to spend the money, so far as you are aware?—No; my authority does not much exceed the 374,000*l.*

2961. The work you have in hand will not take more than 400,000?—Somewhere about that, perhaps 450,000*l.*

2962. The apportionment and spending of the remainder lies with the head of the Department?—Yes.

2963. Passing from that, then, can you give us any instance of the municipalisation of the telephone?—Not one.

2964. Nowhere?—Not one.

2965. Then there is no experience?—I cannot recall to mind a single instance.

2966. Then there is no experience either as to profit or loss?—No.

Mr. *Solicitor General.*

2967. You have mentioned the case of Plymouth?—Yes, sir.

2968. Will you just tell me what has happened there with regard to competing companies?—The Post Office established a small exchange at Plymouth; something like 30 or 40 subscribers. It was put there at the request of the Plymouth

Mr. *Solicitor General*—continued.

people themselves. They entered into an agreement with the Post Office for five years; the exchange was opened; it worked very well indeed; but the telephone company was jealous of our starting in such a district, and, aided and abetted by one or two very active men in Plymouth, the telephone company went down there and started an opposition exchange. They went to all our subscribers and gave them telephones for nothing, and told them they might have them for nothing until their agreement with the Post Office expired. When the agreement with the Post Office expired they all gave up their telephones to us, and they continued to work on the telephone companys exchange.

2969. That was the mode in which the competition was conducted?—That was the mode; and, of course, the Post Office is forbidden by the Treasury to compete, or to tout, or to do any of those processes that active competitors know how to indulge in.

2970. In fact, you found yourselves with your hands tied in that matter of competition; is that so?—That is so.

2971. With rivals who were not subject to any such restriction; is that so?—That is so.

2972. And who resorted to means that were forbidden to you?—That is so.

Lord *Stanley.*

2973. In your opinion, is the National Telephone Company doing its best in London to renovate its system as quickly as it can?—I believe so.

2974. In your opinion, are they employing the best materials, and doing the work in a way of which you approve?—Entirely.

2975. Then if, in the year 1911, the Post Office took over the system, you would be perfectly satisfied it would have a first-rate system with first-class materials and telephones, as far as you can see up to date?—That is if they continue to do what they are doing now.

2976. That is to say, if they continue to do what they are doing now?—Yes.

2977. Are you of opinion that the agreement now existing has in any way tended to act disadvantageously to the users of telephones in the metropolis?—I think quite the contrary.

Mr. *Tully.*

2978. Can you tell me what is the price at Plymouth now, as compared with what it was before the competition?—I think it is 10*l.* a year.

Lord *Stanley.*

2979. Mr. Benn, I think, mentioned something about fire offices and municipal buidings being used as exchanges; would not that be possible to be done at the present moment with advantage?—With the consent of the County Council, I should have thought so.

2980. Has the County Council been asked for that consent?—That is a question for the National Telephone Company.

2981. Have the County Council put forward any actual scheme for telephone work in London?—Only before the Committee.

2982. Do

Mr. *Snape.*

2982. Do you know the Liverpool exchange?—Yes.

2983. Is that on the same principle as the London one?—I think it is rather of an earlier date.

2984. An earlier date?—Yes; I think it is about four years old, if I remember rightly.

2985. Have they not adopted the latest improvements in Liverpool?—I could not answer that question. It is certainly two years since I visited the place. But you will have the telephone company here to give evidence

2986. The reason I ask is this: I had not an opportunity of seeing the London one, but I have seen the Liverpool one; perhaps this may help to the point to which I wish to get; they have provided in Liverpool for over 6,000 subscribers?—Yes. The board of the Liverpool Exchange is, I believe, a multiple board, and it is four years old.

2987. But is it not a larger board than any of the London boards?—I could not answer that question.

2988. I think I can tell you this, and perhaps this will help me to get what I want; if they have provided for over 6,000 subscribers, as they have done, and spent 3,500*l.* (I think), is there a board in London so large as that?—The board at Lime-street is constructed either for 5,000 or for 6,000.

2989. Then they are about the same in London and in Liverpool; the increase in the cost of working these boards, you tell us, is in geometrical progression to the number of subscribers?—Of a multiple board.

2990. Of a multiple board?—Yes.

2991. They add, I think, a board for every 200 subscribers?—A multiple board is divided into sections, and each section provides for 200 subscribers, so that if you take your multiple board, supposing it is 10,000, and you divide it by 200, you have the number of sections: 50.

2992. And an income of 10*l.* per user per annum from each of these subscribers (supposing the board were fully equipped) would give an additional revenue of 20,000*l.* to the company who worked that board?—Yes.

2993. Can you tell us what would be the extra cost of putting down this board to accommodate 200 extra subscribers?—I could not give it you off-hand.

2994. Are you aware that it requires three or four operators to work an additional 200 subscribers?—It would require four operators.

2995. And would the cost of connecting up by the wires be very considerable with the other system for these 200 additional subscribers?—As I gave it in my evidence in chief, that would be *pro ratâ* with the number of subscribers.

2996. In what way would the cost be involved; would it be by wires?—In wires, in fitting up apparatus in subscribers' premises, in wires along the streets or over the houses, as the case may be.

2997. The capital cost of that would not be considerable, would it?—It is the larger portion.

2998. The actual working cost would only be

Mr. *Snape*—continued.

the wages of those four operators, who are girls, I suppose, chiefly?—Yes, but then there are additional operators required for working the junction lines that might be involved, and there is clerical labour as well in the exchange, so that the additional four operators would simply be the four operators required to attend to the section during the busy hours. You have to provide for the early duty and the late duty; you have to provide for sickness and for holidays. The number of days of absence through sickness is a very considerable item. So that if you take all these points it is much more than the mere four additional operators that 200 subscribers would involve.

2999. But of the additional 2,000*l.*, which I think you estimated as the income at 10*l.* per user, is not a large proportion additional revenue, which the company would receive?—Yes.

3000. Can you give us what the proportion would be?—I cannot give you the exact figures, but my impression is that the whole thing runs *pro ratâ.* If the ratio between revenue and working expenses is so much for 10,000 subscribers, it will be precisely the same *pro ratâ* for 200 subscribers.

3001. Would it be possible to put it into figures for us at a future meeting of the Committee?—I think you will be able to get the exact figures from the National Telephone Company when they come.

3002. When they come before us?—Yes.

3003. Is there any engineering difficulty in effecting intercommunication between two competing systems?—No engineering difficulty whatever.

3004. Then, the witness from Scotland, who told us that there was, though he professed to speak with great knowledge, was speaking of something he did not know?—I do not think he quite understood the question. He had in his mind not engineering difficulties, but some other difficulties.

3005. I was really asking him about other difficulties, and he interposed with the remark that there were engineering difficulties?—No, there are none.

3006. However, would there be any difficulties so far as you know, between competing companies agreeing to reciprocal action so as to effect intercommunication between their subscribers?—I cannot conceive competing companies entering into any such arrangement.

3007. Just before passing from the exchange, I ought to have asked you another question when speaking about that. You told us, in answer to Mr. Benn, that there were great improvements being made as the result of the experience of those exchanges?—Yes.

3008. Will not a possible effect of those improvements be to lessen this increased cost which we have been told increases at such a terrible rate?—The tendency is rather to cheapen.

3009. I suppose it is not beyond the bounds of possibility that there ought to be even an automatic arrangement by which communications could be effected without operations?—I mentioned that this morning.

3010. And in that case it would be a very considerable

Mr. *Snape*—continued.

considerable cheapening?—If automatic contrivances were practicable and possible it certainly would tend very much to reduce the cost of working.

3011. And you think it is not without the bounds of possibility that such automatic plans are possible; you think science may compass it?—It has been tried, and I have seen it in operation.

3012. Then with experience it may be effectively tried?—No doubt.

3013. Now, supposing a company was established without the watered stock, which we are told the National Telephone Company has, would not the supply be very greatly cheapened in cost to the users?—If you stated entirely a fresh system, you mean?

3014. Yes. In a reply to Lord Stanley, you said just now there would be no advantage to London from establishing a municipal system; you must make that exception to your answer that at least there would be the advantage of cheapening the supply. They would start with an unwatered stock in London?—They would start certainly with that advantage on their side; they would not have to pay interest on such a large capital.

3015. Then you qualify that answer which you made to Lord Stanley when you said there was no advantage?—I did not take Lord Stanley's question to imply that at all.

3016. Then you admit there would be that great advantage. I do not wish to press it. What I want to get at is this: would there be an advantage to the user if the London County Council started a company with unwatered stock?—I think that stands to reason, sir.

3017. You have said that the overhead wires would be defective, if from no other cause, even with a metallic circuit because of the large addition to the number of such wires, impossible is perhaps the better word?—They would be impossible if their numbers were too great.

3018. And underground wires would ultimately have to be adopted in large centres of population?—Yes.

3019. It is only in such centres that municipalities, I assume, if they adopted competing systems, would establish them?—That would be so.

3020. Do you anticipate that there will be such a large increase in the use of the telephone, that before 1911 (before the expiration of the agreement) this alteration may have to be made of the abolition of overhead wires and the substitution of underground?—I think that that alteration has commenced already. In Manchester we have an instance where they are all going underground.

3021. I have not had the advantage of seeing your evidence of Friday, and was not present; but in a glance I have made at a portion of it I see you speak of very great difficulties encountered in some parts of London through the multiplicity of wires underground?—Yes, underground. I mentioned the fact that through Cheapside there was such a large accumulation of pipes that we could not lay any more down.

Mr. *Snape*—continued.

3022. Great difficulties were experienced, you said?—Yes.

3023. Will not those difficulties be largely increased when this result is brought about of the substitution of the underground for the overhead wires; that is to say, you will have a much larger number of wires underground, and your difficulties will be greatly increased?—I have tried to induce the Committee to see that the proper function of corporations and councils is to put down subways to provide for this large accession of wires.

3024. What I wanted to ask you was whether you did not think street subways should be provided, so that men could walk along them without taking up the streets to repair these telephone connections?—That is what they are doing in New York and Philadelphia. In New York and Philadelphia (in each place) there are 180 miles of subways constructed for this purpose.

*Chairman.*

3025. By the municipality?—By the municipality; at least, it is by a company in New York; I think it is the municipality in Philadelphia.

3026. By the company under the authority of the municipality in New York?—Yes.

Mr. *Snape.*

3027. Do you think that if these street subways are to be provided, municipalities will very readily allow private companies to have the right of constructing such subways and the control of them?—I think municipal bodies would retain the right in their own hands, and they ought to, to construct the subways.

3028. Would it not be an advantage, also, as they have the right of the subways, to put the cable wires there?—Of course it would.

3029. Then would not that be an argument in favour of municipalising the telephone?—It is perfectly distinct from the question of municipalising the telephone.

3030. You rather declined to answer a question Mr. Ben put as to the effect of the agreement which expires in 1911; but you have admitted that either the State would have to take over the wires and the plant of the existing company, or else would have to establish a different system; that, I think, you admitted?—Yes.

3031. If it established a different system, would not great delay occur in creating subways where they did not exist, in putting down the plant and making the communication?—It is a thing that must be done gradually, and it must be commenced in plenty of time.

3032. Long before 1911?—Long beforehand.

3033. Then the State, long before 1911, would either have to enter into negotiations with the National Telephone Company, to see whether it was possible to take over their plant, or start a system of their own?—Certainly.

3034. How long would it be before 1911 that you think such a negotiation would have to be entered upon?—Three or four years.

3035. There are 17 years to elapse; would not it be as well if such negotiation was entered upon at once, with a view of the State taking the

Mr. *Snape*—continued.

telephone over immediately?—The sooner the better, sir.

3036. If there were a cheapened service, either by the establishment of a competing company (a municipal company), or by the State taking it over, would not it give much greater facilities for the use of the telephone by the public?—If what?

3037. If a cheapened service would result from a municipal company, or the State, taking over the telephonic supply, would not that be advantage to the public?—Certainly.

3038. Has a loss resulted to the department by the use of the telephone being substituted for the use of the telegraph?—There has been a loss.

3039. If such a cheapened service were to be given, there would be a greater loss to the telegraph service, would not there?—There might be.

3040. As I gather, you are opposed to the municipalisation of telephones. Is one of the reasons that you fear there would be an additional loss to the telegraph service?—No; I simply argued against the municipalisation of the telephone system in restricted areas. I do not admit that there is much loss in a restricted area.

3041. You do not object to it on that ground; but assuming, in fact, it has been admitted, that a greater loss would result to the postal department by the increased substitution of telephony for telegraphy by a cheapened service; is not that also an additional and very strong argument why the State should supply a cheapened service, and prevent loss to itself by taking over the service?—It is so.

3042. I think this is the last question I shall have to put. In glancing over the small portion of your evidence that I was able to see, I notice there is a letter from Sweden, towards the end of the evidence (it is printed in the minutes), and in that letter it is stated that though trunk lines are being substituted, or rather, have been adopted by the State in that country, much unpleasantness has been occasioned, and more will be occasioned, by the fact that the State has not also the communications between the subscribers and those trunk lines: do you remember that statement in the letter?—Yes.

3043. Do you think that that will be the effect in this country?—I have not given it any consideration, sir.

3044. You have not given it any consideration?—No, I have not read this letter really; I merely put it in.

3045. Is it not an important matter to consider, because I understand the postal department is taking over or establishing trunk lines, and if the result of that establishing trunk lines is to create difficulties such as they have experienced in Sweden, and to lead them to anticipate more difficulties, it is important that the Department should see where it is going to, is it not?—In which part of that letter is that statement that you refer to?

3046. Question 2728, the last part of the letter. I will read the portion to which I refer: "Our experience is, therefore, that if full national telephone operations are to be arranged, the State must own the whole system, that is to say, the long lines as well as the local systems." The paragraph begins at page 154 with this: "For the company in Stockholm the right was allowed to converse on the long lines of the State for separate additional fees, a concession which has occasioned much unpleasantness, and will occasion still more. Our experience is, therefore, that if full national telephone operations are to be arranged, the State must own the whole system: that is to say, the long lines as well as the local systems." Are you of opinion that that would be the effect of the State taking over the trunk lines here?—I do not anticipate unpleasantness or difficulties. In my evidence this morning I have pointed out that if the State worked the whole all these points would disappear.

3047. That leads me to put one other question; that is, that you are of opinion, on that ground also, that even trunk lines are not everything that the public wants, and that the State ought to take the whole system over?—That is my view.

Mr. *Tully.*

3048. Lord Stanley asked you about things the company are doing in London: could you tell us whether in Glasgow the company are renovating their plant and laying down lines?—I have not been to Glasgow recently, but it was stated in evidence that they were, at any rate, commencing to put up a twin-wire system there.

3049. Supposing they have not done so, is there anything in this agreement that can compel them to do so?—There is nothing in the agreement to compel them to do anything.

Mr. *Moulton.*

3050. You believe that the right solution of the matter is for the State to take over the telephone service, and thus get the whole of the telegraphy of the country into its hands?—The purport of my evidence this morning has been to support that.

3051. Now just put that out of your mind, and suppose, for the purposes of the question I am asking you, that that is impossible: you have seen the agreement between the Telephone Companies and the Post Office?—I have seen it.

3052. We know that there is no restriction as to rates, and no penalty if the service is not efficient?—There was nothing of the kind in their license.

3053. I quite understand. Therefore, the only way in which the public can be protected with regard to this is under the clause which reserves to the Post Office the right of giving competing licenses?—Or competing itself.

3054. Or competing itself?—That is so.

3055. Now, I have unfortunately not heard your evidence, but you can tell me whether you think that competition is a practicable thing in telephony?—My evidence this morning has been to show that it is an impracticable thing.

3056. Therefore, the position of the public under the present agreements you view to be one without any defence?—No, I do not go so far as that.

3057. Well,

Mr. *Moulton*—continued.

3057. Well, what defence is there, supposing the companies, or the company, charges unreasonable rates or gives an inefficient service?—The power which every municipality has to petition the Postmaster General to open a competing exchange.

3058. That would be by competition?—By the competition of the Post Office.

3059. Then, I understand you to consider that competition by the Post Office is practicable?—I do.

3060. Therefore, the difficulty with regard to competition is not the impracticability of the thing itself, but that you think the municipalities are not the proper persons?—That is so.

3061. May I take it then that you see no impracticability in effective competition, provided the Post Office is the competing party?—That is so.

3062. I want for the moment to compare the position of the Post Office as a competing party with that of the municipality; in a competing service there is a liability to loss; at all events, at the commencement, is there not?—Yes.

3063. And there is also a need of considerable outlay before you can begin competition at all?—And delay and time.

3064. Do not you think that the Post Office would be rather difficult to move in favour of any particular town since it would involve outlay on that particular town and possible loss?—I think there would be difficulties if it were taken piece-meal as you suggest; but those difficulties would disappear if it were decided that the Post Office was to absorb the whole of the telephone interest of the country.

3065. I am not talking about taking it over; that I am putting out of the question for the moment, that is a question of policy which my questions do not refer to; I am talking about the remedy of the Post Office competing; you would not suggest that it should not begin to compete at all until it competed in every town, would you?—Well, if the reasons justified competition in one town, they would justify competition in every town.

3066. I do not follow you quite there; supposing that at Bradford the service was dear and inefficient, and that at Leeds it was better, do you mean that the Post Office ought not to interfere on behalf of Bradford until Leeds got equally bad?—But the systems, the tariffs, and the mode of working by the Telephone Company are the same all over the United Kingdom.

3067. Not the tariffs, are they?—Very nearly now.

3068. Is that so?—Oh, yes.

3069. The cost when the number of subscribers is small is very much less than when it is large, is it not?—*Pro rata*, no.

3070. Is it not?—Rather the reverse.

3071. The cost per subscriber is larger, the smaller the number of subscribers?—The cost per subscriber; the capital expenditure is larger for small exchanges than for large ones.

3072. I am talking about the tariff; I am talking about the cost of working coupled with the interest on capital; is that greater for few subscribers or for many subscribers?—The cost of working grows with the number of subscribers.

3073. That is what I thought; therefore in London the cost per subscriber is considerably more than it would be at Bradford?—Undoubtedly.

3074. And do you say the charge in Bradford is the same as in London?—I say nearly.

3075. Is it substantially the same?—No; the charge in London is greatly in excess of the charges in the provinces.

3076. That is what I thought; I do not doubt your statement?—Excuse me; I have been thinking you dealt with prime cost and not working expenses.

3077. I am taking the working expenses?—We are at loggerheads, or rather, we are not at one upon that.

3078. Supposing then that Bradford is charged too much or has an inefficient service, is it your idea that the Post Office should decline to interfere until other towns are equally bad?—The tariff of the Telephone Company for Manchester, Liverpool, Blackburn, Leeds, Bradford, Dundee, Edinburgh, Birmingham, Dublin, Belfast, and all great towns is on a five years' agreement; first connection, 10 guineas, second and additional connections, 8*l.* 10*s.*

3079. You are not quite giving me your attention to my question; it may be that Bradford is the same as Leeds, but I will take some town where it is not the same; is it your opinion that the Post Office should decline to interfere until the complaints are general in all towns?—Yes.

3080. If that be so and a town be badly treated, then there will be very little hope of getting the Post Office to come in and compete, will not there?—I said at first that this Telephone Company is a large single company worked on a uniform basis with a uniform tariff in the provinces and general uniformity of practice everywhere.

3081. You must take the question I am putting to you; supposing that one town is badly treated, you say the Post Office ought not to step in until all towns are badly treated?—But you commenced by pointing out that there was no power in this agreement to enforce a reduction of toll, or to improve working.

3082. Yes?—On those two points I say that their mode of working all over the country is the same, and that their tariff all over the country is virtually the same.

3083. There is nothing to ensure that it shall be so in the agreement, is there?—No.

3084. Now assume that there is a town in which the charge is too high, or that the service is inefficient; I understand you to say that the Post Office ought not to interfere until all towns are like that?—No, not generally interfere.

3085. Ought it to interfere in that town?—I will not admit the premises; I do not admit that in the tariff, or in the cost of working, there can be any difference between one town and another.

3086. You must just assume this (there is nothing in the agreement to provide for it); I

Mr. *Moulton*—continued.

am talking of a case in which a town is badly served; I want to know what your idea is of what the Post Office should do; should it interfere?—If you wish me to assume that in one particular town the service is badly done, and that the tariff is very high, then I should say the Postmaster General, if he received a petition from the townspeople to open an exchange there, would be justified in doing it.

3087. Your idea that the right way to meet that condition of things is that the Postmaster General should set up a competing exchange?—Yes.

3088. Now I want you to compare the question of the Post Office doing it with the Municipality doing it; the Post Office would have to face the possibility of loss, and the certainty of capital outlay for the benefit of that town alone?—Yes.

3089. You have a good deal to do with the public offices and you know their policy, I believe it would be exceedingly difficult to induce the Post Office to do that for one town, when it was not doing it for others?—It is only one town that we have to consider.

3090. Yes, that one town is badly treated?—If the unanimous wish of the town were that the Postmaster General should open an exchange there, the Postmaster General, I take it, would not have much difficulty in persuading the Treasury to give him authority to open an exchange there, even though there might be a loss.

3091. That is the kindest word with regard to the Treasury that I have heard from an official for a long time?—I am only giving you my opinion; that could be done.

*Chairman.*

3092. Especially if the local authority gave a guarantee in the interest of the inhabitants?—Especially if the town gave a guarantee.

Mr. *Moulton.*

3093. Now take the case of a Municipality; the Municipality would have a much more direct interest in the local excellence of the service?—I do not think that the Municipality would find the ratepayers so complacent as the Treasury.

3094. Would you kindly answer the question: Would not the Municipality have a more direct interest in the local excellence of the service?—No; because the telephone service being Imperial in its character, the telephone service in one town has a great influence and effect on the telephone service of any other town.

3095. Do you really say that the Municipality would not have a stronger local interest in the excellence of the service?—Scarcely.

3095*. Not a stronger local interest than the Post Office?—I think not.

3096. Do you seriously think that?—I seriously think that the Post Office has to regard the interest of all the towns its serves.

3097. I quite agree; but I am talking about a direct local interest; do you really think that it would not have a stronger local interest than the Post Office?—As I said this morning the telephone service is not a local business; it is a national business.

3098. I pass from that; the number of calls

Mr. *Moulton*—continued.

in a town is many times the number of calls from that town to another, is it not?—No, indeed.

3099. Not as a rule?—As a rule in England it is, because the trunk system has not been established; but when the trunk system is established, then I suspect we shall find our experience will be that of the States.

3100. Do you think the calls from town to town which are paid for, will be ever anything more than a fraction of the calls within towns which are paid for?—I am sufficiently sanguine to believe that they will exceed.

3101. At present I may take it that they do not exceed?—They do not.

3102. With regard to this inter-town telephony: you have given some reasons why the Municipality could not, in your opinion, do it satisfactorily; of these, the only technical reasons are the fact that you want skilled persons to supervise, and the complication arising from competition; is not that so, just look at your seven reasons?—Those are practically the principal technical reasons.

3103. The other reasons I will not ask you any questions about?—Telephony is done on the Continent in large towns as well as in small towns, is it not?—Yes.

3104. And in many cases there are one or two companies in the same town?—I think in Sweden only; Rome has been mentioned but I cannot speak of Rome.

3105. Do you suggest that the expenditure in getting sufficiently good technical men in those cases is large?—It is.

3106. The tariff is low?—Yes.

3107. And, as a rule, profits are made?—We do not know that.

3108. Well, so far as published balance-sheets go, they are?—We have only had information about Stockholm.

3109. Have you made any inquiries elsewhere?—No.

3110. Have you ever made any inquiries which showed that they were working at a loss?—No.

3111. If those towns can bear the expense of this technical staff, our English towns are, as a rule, not poorer are they?—No.

3112. Now next as to education: the complication would be the same, whether the Post Office took the competition on its shoulders or whether the Municipality took it on its shoulders?—The difference is, of course, that with the Post Office the local subscribers are in direct communication with the Post Office, and they have a more rapid command of the trunk system, and would be under a great advantage over a competing system.

3113. But they would be equally in connection with the Post Office whether they belonged to the municipal exchange or whether they belonged to the National Telephone Exchange?—Yes; but they would have one whole set of operations swept away which would enable their business to be done more expeditiously than the business of the local exchange.

3114. I do not quite see the difference between the complication, whether it is the Post Office which is the competing party or the Municipality; perhaps

Mr. *Moulton*—continued.

perhaps you will tell me what it is?—You will see from the diagram I have handed in, there are two post offices in connection with each other; centring on the Post Office we have two exchanges, one municipal, the other that of the National Company; also a local subscriber attached direct to the Post Office. Now the other subscribers which are indicated, M. 32 and N. 796, just taking two subscribers, in order to get to the Post Office, and the telephone they have to pass through their exchanges M. 1 and N. 1, whereas a post office subscriber is in direct communication with the Post Office.

3115. But Mr. Preece, that is assuming that the Post Office is its own exchange?—Yes, it is.

3116. But you will have to have as many exchanges if you have post office telephony as you have at the present moment?—But that only affects London probably, it is not so elsewhere.

3117. Do you mean to say then that you will have only one exchange in a town, and that a post office?—As a rule.

3118. Then this objection to the municipal system is equally an objection to the National Telephone system?—From that point of view, certainly.

3119. From that point of view; therefore this diagram only relates to the imperial solution by the Post Office taking up the telephony?—No, it answers your question: what advantage is there in a subscriber being attached to the Post Office as compared with a municipal exchange.

3120. Do you suggest that if the Post Office chose to compete in a town it would have only one exchange, and that an exchange at the Post Office?—You named Bradford; in Bradford there would be certainly only one exchange.

3121. How many exchanges has the National Telephone Company there?—Only one.

3122. Then that is a small instance; take one of the larger towns?—Take any one, Liverpool.

3123. Take Manchester, for instance?—Take Manchester.

3124. Is there only one exchange there?—There are two, I know; they are running one as a mutual. They may have small exchanges in the districts outside, but as a rule, there is only one exchange.

3125. The advantage that you refer to would only occur if the post office were the single exchange in the town?—It would occur under any circumstances; because it would sweep away under any circumstances one set of operations that is the set of operations over a junction wire between the municipal exchange or post office.

3126. But that would only be where the Post Office was the only exchange?—Yes.

3127. And it would only refer to trunk service?—Principally to trunk service.

3128. Entirely?—But it would also refer to a post office exchange if the Post Office had its own exchange with its thousands of subscribers.

3129. What I mean is this, the difference would only occur in trunk service?—No; we are assuming that the Post Office has an exchange of its own, and that it has a number of subscribers on that exchange.

Mr. *Moulton*—continued.

3130. We are comparing that with the case of a municipality having one of its own; the only difference would be in trunk wire?—You are quite right.

3131. You think that supposing the National Telephone Company does do the best that it can, putting aside the imperialising of the whole, one company is better than competition; but I am looking for a moment at the security that it will do it; you have told us that the working cost is lessened if the numbers are lessened; now, supposing you raise the price of the service, that has a tendency to lessen the number of subscribers, has it not?—Yes.

3132. Therefore raising the price operates favourably to the company in two ways; they get more per subscriber, and the cost per subscriber is lessened, is not that so?—That is so.

3133. So that there is a special temptation in this business to have high tariffs, is not there; I do not say that the National Telephone Company yields to it; I am not attacking the Company, I am sure, in any way, but there is a special temptation; one ought to be, as it were, a little on one's guard to see that there is protection where there is such temptation; as we know there is no clause which requires them to give an effective service at a reasonable price; you have told me the only check is competition; now in your opinion, is it not likely that the municipal competition would be easier to call in, in a case of failure to do their duty, than the Post Office competition?—From the purely local point of view perhaps; but then we cannot look at it from the purely local point of view, for you must regard the whole of the telephone business.

3134. You think the final remedy, the complete remedy, of imperializing, is the better?—And the only remedy.

3135. Perhaps we shall agree; you do not think that the local competition of the Post Office would be an effectual remedy?—I do not like it, sir.

*Chairman.*

3136. That is to say you do not like competition under any circumstances?—I do not like competition under any circumstances at all.

3137. Mr. Moulton asked you whether, with regard to the trunk-wire service, the Post Office would not be in a superior position to a municipality?—Certainly it would.

3138. It would with regard to the trunk-wire system?—It would with regard to the trunk-wire system.

3139. Would it not also be in a superior position as to competition, with regard to telegrams being sent by telephone, express messages and express letters being sent?—Yes, and all those facilities the Post Office gives.

3140. They would have that advantage over the municipality, if they were called in to compete?—Distinctly. As I have said, one whole set of operations involving time is swept away.

Mr. *Moulton.*

3141. Only in the case where it is the one exchange?—No, in the case that the Postmaster General

Mr. *Moulton*—continued.

General has named, the transmission of messages, and local service of all sorts.

3142. You would not have any advantage provided the exchange was not at a post office, would you?—The advantage is that when a subscriber is in direct communication with the Post Office he gets his wants attended to at once.

3143. That is if the exchange is at a post office?—If the exchange is at a post office.

3144. If the exchange is not at a post office then there is no such advantage?—That is the point.

*Chairman.*

3145. But if the Post Office entered into competition the exchange would always be at a post office?—Of course.

3146. Therefore the advantage would always arise?—The advantage would always arise.

3147. If the company had two, four, or five exchanges in the town, and the Post Office had two, four, or five exchanges in its competition with the company, in each case, whether it was one, two, four or five, there would be the saving of one distinct junction-wire brought into operation, in the case of the Post Office, as compared with the municipal telephone?—Certainly.

Mr. *Moulton.*

3148. Surely you do not mean that, Mr. Preece?—I do.

*Chairman.*

3149. With regard to the trunk-wire business, and all the special advantages which under the agreement are given the public, that would be so, would it not?—Yes.

3150. Then you were asked whether there were any penalties under the agreement if the company failed to give an effective service at a reasonable rate. Is the position of the company with regard to that matter precisely the same under the agreement as it was under the original licence, which practically still exists?—Precisely so.

3151. Extending over the next 17 years?—Precisely so; I have answered that point several times.

3152. You said, in answer to a question, that, in your opinion, there was no loss on the telegraph in restricted areas; do you apply that to smaller areas than London?—To the smaller areas than we have in London, for we have in London a very large local business of our own.

3153. Which has—you have reason to believe—been affected by the telephone business?—I believe so.

Mr. *Moulton.*

3154. Can you give us at all the proportion between trunk-wire messages and inter-mural messages, at the present moment in this country—one or two per cent. I suppose it would be?—I cannot give you any answer to that, sir; the business has never started really—we do not know, therefore, but we have the experience of the States; I took a great deal of trouble to find out, when in the States, the ratio between the trunk business and other business there; it is very large indeed.

*Chairman.*

3155. Have you any figures with regard to the proportion?—I mention it in my American report. In Chicago it was 50 per cent.

3156. 50 per cent. of the whole business?—50 per cent. of the whole business was trunk business in Chicago.

Mr. *Moulton.*

3157. What does "trunk business" mean?—I was going to say we must qualify the "trunk business" there, because they include in the trunk business the business between exchanges as well as long distances.

Mr. *Benn.*

3158. That includes business done in any part of Chicago?—Yes; it is a very large area.

Mr. *Moulton.*

3159. Anything, I believe, that goes through more than one exchange is called "trunk" with them?—Yes, it is; there is this fact also, they have had to triplicate and quadruple their trunk lines owing to the growth of the business; the business between New York and Chicago is enormous.

3160. Of course if the business which passes through more than one exchange is called "trunk," that is not the sense in which you have used the words "trunk line business" with regard to England?—No; I qualify that.

*Chairman.*

3161. I understand you have expectations that the trunk wire business in this country will very largely increase, when the trunk system is in operation?—There is not the slightest doubt about the matter at all.

3162. We have experience of that now between Manchester and Liverpool, and towns of that kind?—Yes, we have experience of that now.

3163. You have stated that, in your opinion, State control would be better than municipal control in this matter, with regard to the telephone; is that due to the fact that you believe there is greater security for continuity in the control of a great public department as compared with the various municipalities throughout the country?—That is so, as well as the influence of public opinion and the supervision of the public; I am one of those who believe that the efficiency of our Post Office is entirely due to the watchful eye of the public over our proceedings.

3164. And has there been in the Post Office with regard to the telephone and with regard to the telegraph a practically continuous policy?—That is my great argument, sir.

3165. Then you were asked to compare the electric light system with the telephone system; as a matter of fact, has the Board of Trade refused

*Chairman*—continued.

refused to grant two licenses over the same area with regard to electric lighting?—It has.

3166. Or rather, has that been the policy of the Board of Trade?—It is not general; they have granted in London two licenses over the same area, but I cannot recall to mind any case where they have done so in the provinces.

Mr. *Moulton.*

3167. They have always given the preference to the municipality, have not they?—Yes, because the Government has not entered into that business.

3168. But they always have as a matter of fact given the preference to the municipality?—I believe they have.

*Chairman.*

3169. And the Government, as you say, have not entered into competition at all in the matter of the electric light?—No.

3170. And no existing licensee has the right over the whole country as the National Telephone Company have, and as they have had for so many years?—Certainly not.

3171. Have you seen the two estimates put forward by the London County Council as to the expense of a London system?—Yes, sir.

3172. One by, I think, Mr. Binnie, the chief engineer to the London County Council, which I rather gather is an estimate of a system which is mainly, if not entirely, overhead; and in which he says, "It will be seen from the details that a general rental of 10*l.* should be quite sufficient to leave a balance on the right side." That, I believe, takes no account of the royalty to the Post Office, which would consequently have to be added if it was admitted as an item?—Yes.

3173. Have you examined that?—Yes, I have looked at it; I have not thoroughly criticised it, but I have examined it, and while I think the estimates themselves are very fair, I think they have rather under-estimated; with the natural desire, of course, of those who drew up the estimates to make them look as rosy as possible for the London County Council, they have omitted one or two things that I think are rather important. For instance, in Mr. Binnie's estimate there must be a very small allowance for junction wires. If the allowance for junction wires is a fair allowance, then the sum per subscriber is much too small. Mr. Binnie makes out the total expenditure per subscriber to be 36*l.*, that is overhead; I make it 45*l.* for London, and I believe I could substantiate my estimate pretty well. I think the difference arises from the fact that they have not allowed sufficient for junctions; I do not know what allowance they have made. My experience is, that you must allow a maximum number of junction wires between exchanges, and you must allow one-fifth the number of subscribers as a maximum. If, for instance, there are 500 subscribers centering on an exchange you must have a hundred junctions as a maximum. That is the case in Chicago.

3174. Between that exchange and the central exchange?—And the central exchange; I do not think there is enough allowance there; and, again, in the working expenses I am not quite sure that they have made a sufficient allowance for clerks; their working expenses are rather low.

*Chairman*—continued.

3175. But, speaking generally, the 10*l.* which I understand to be the annual rental estimated, is sufficient, and these two calculations, you think, are fair in the figures they have given, but rather under than above the amount you would put?—That is my view, sir.

3176. Of course the London County Council would have all the difficulties which the company have with regard to underground wayleaves; they have no control of the streets?—They have no control of the streets.

Mr. *Moulton.*

3177. Do you expect to put many wires under the streets, other than wires between exchanges?—Under the agreement do you mean?

3178. No; I mean, do you expect that in a telephone system a large portion of the wires to the exchanges would be underground?—Yes; all main arteries. I have mentioned, I believe, that when the number of wires exceed 50 they ought to go underground.

3179. They ought to be taken together to some spot, and then underground from that spot to the exchange?—That is my view.

3180. Having not only exchanges, but what you may call collecting points?—Collecting points.

3181. You would not, of course, take the individual house wires under the ground, but from collecting points?—From collecting points where they radiate away in eights, tens, and twelves; then they would all centre at one spot, where they would go in fifties and hundreds to the exchanges; when they go to fifties and hundreds it is much better to put them underground.

*Chairman.*

3182. That is to say, they would be taken underground to some point from which they would be taken up to the top of a house and distributed over the district?—Yes.

Mr. *Snape.*

3183. Is there any limit to the size of the exchanges?—Yes, sir.

3184. What is the limit?—They find that 5,000 in America exceeds the manageable limit, and the tendency in America is to centralise. I mentioned it in describing what was done in Chicago, where they are opening fresh exchanges in order to avoid the necessity of having these very large exchanges.

3185. What is the largest existing exchange of which you have any knowledge?—I think the largest is in Berlin, but I am not quite sure of the numbers; the largest in the States is that one at Chicago, and that is 5,000; the one in Paris is a large one, and that is nearly 6,000.

3186. As I named to you, there is one in Liverpool which provides, or is intended to provide, for over 6,000 persons?—Yes; but there are only 3,500 subscribers there at present.

Mr. R. E. Crompton, called in; and Examined.

*Chairman.*

3187. I believe you are the president of the Institute of Electrical Engineers?—I am, sir.

3188. And that you appear on their behalf to express certain views with regard to the telephone question?—Yes.

3189. Have you had any experience of the use of the telephone yourself?—As a user, not as an expert in telephone practice.

3190. Would you state the views of the institution with regard to the question which is before the Committee?—Yes; I have had conversation with a large number of our members, and there has been a pretty general agreement in their opinions that the views of the association ought to be put forward before this Committee.

3191. Will you state what those views are?—The general views are that the effect of the monopoly which has existed up to the present time has been to entirely deaden the interest that the electrical profession in England have taken in telephony; in fact, have deadened it to such an extent that we practically have no members who know anything about telephony; out of 2,032 members of the Electrical Engineers there are only 45 members who are put down as telephone men; of these 31 are in the employment of the National Telephone Company; 10 of them hold situations out of England; and there are only four men in England who are independent, who call themselves telephone engineers.

3192. I think, without exception, every witness who has come before the Committee has advocated the taking over of the whole telephone system by the State; would not that have a still more deadening influence upon the association which you represent?—I think it might; but I do not think things could be worse than they are at present from that point of view.

3193. You mean it is very bad now, and would be very bad then?—It would be very bad then. I am here, of course, to speak on behalf of limited competition, believing that that would encourage the spread of telephone knowledge over a much larger area than it is spread over at present.

3194. You would, therefore, oppose the State taking over the telephone system as a whole?—From that point of view I would.

3195. But from other points of view, would you?—No, I would not. From the point of view of the convenience to the telephone user, I think it would be a very great thing that the State should take it over; but I think, probably, that the balance of advantage would be in favour of the State taking it over after more was known of the subject; that is to say, after that period of competition which I suggest a great stimulus would be given to invention, and a great many improvements would be introduced which do not now exist; in fact, that the progress of the telephone would be somewhat correlative to that of the electric light, which is a free and open industry, and which has made the most gigantic strides in consequence.

*Chairman*—continued.

3196. Would it not compare more with the telegraph service, where there is no such competition?—I think you may say that the telegraph service approached very nearly a crystallised condition of perfection some years ago; there is very little further improvement possible in it; telephony is very far from that. I think we are only on the borders of what may be done in the way of transmitted speech. Probably the great invention that we are all looking forward to would be telephony without wires, and that is a thing which is greatly discouraged by the present condition of things. Very few men are in a position to make experiments on a matter of that kind which requires wires to enable you to do it, the use and control of wires.

3197. Have you had a meeting of the association to consider this matter?—We have had more than one meeting of the committee appointed by the council.

3198. Of a committee appointed by the council?—Yes.

3199. Has the council itself considered the question at a meeting?—Yes; when a committee was appointed, and there have been two meetings of that committee.

3200. I mean has the decision or recommendation of that committee been considered by the council?—No; there has not been a council meeting since; there will be a council meeting on Thursday.

3201. I do not suppose you suggest that the views you are putting forward are the views of the whole body of the institution?—They are the views of the committee, and they are known to me to be the views of a large number of members.

3202. Is Lord Kelvin an officer of the institution?—Yes, a past president.

3203. Does he share the views that you have expressed?—I have not communicated with him. I may say that the joint inventor of the telephone (Professor Hughes) shares my views very strongly, the inventor of the microphone, which is a transmitter really.

3204. In favour of competition?—In favour of competition from the point of view of encouraging invention; encouraging development.

3205. Not from the point of view of providing the best and most effective system for the public?—Well, the two things are not in opposition. I think that in order to get the best and most efficient system for the public you require further invention and further development, and that it will be best attained by limited competition. After telephony arrives at what I may call a crystallised condition, as is the case with telegraphy, the competition perhaps might cease, and the whole thing pass into the hands of the State.

3206. Of course you are aware that the telephone in England has gone through a period of, perhaps I ought not to call it limited competition, but unlimited competition, which has resulted, from causes which are fairly known to everyone, in the amalgamation of all the competitions in one

*Chairman*—continued.

one system?—The patent question alone entirely prevented competition; as long as the patent lasted there was really no competition.

3207. But we know there were competing systems in various towns, and in every case they have been absorbed into the National system?—That I cannot speak to from personal knowledge.

3208. And you do not speak from personal knowledge on the question of competition and the effect it has had upon the service supplied to the public?—I speak from personal knowledge of matters of exactly the same class. I know what the effect of it has been on the development of electric lighting; it has lowered prices and improved the quality of the article.

3209. But the users of one system of electric light do not want to be in communication with the users of another system of electric lighting; they are independent of one another, are not they?—I think you must divide this subject rather into two heads: communication without the trunk lines and communication through the trunk lines, and I think our great want is simplification of communication without the trunk lines. We shall afterwards use the trunk lines very largely, I have no doubt, between certain large centres, but I think that what England lacks so much, and in what she compares so unfavourably with other countries, is the absolute want of the telephone amongst the poorer classes in villages and towns. Sweden has been so much mentioned because it is probably the country that is most ahead in telephone matters. There you find a very much poorer class dealt with and patronising the telephone than is the case in this country.

3210. You think the simplification of communication would be brought about by competition in the same area?—I think so. I think the whole world would be educated to a cheap service. They would be accustomed to a cheap service and they would demand it everywhere.

3211. But cheapness and simplification of communication are hardly the same thing?—As regards the trunk lines that is the case, but I think in the small local exchanges, such as I have before my mind at the present moment, they can be put up very cheaply indeed, and still give a sufficiently good service for local requirements.

3212. How do you get over the difficulty, if you have in the same area two competing systems, of half the subscribers being on one and half on the other; how do you get over the difficulty of communication between the subscribers on the two different systems?—That I cannot speak to. Mr. Preece has already spoken to that. I do not see any real difficulty in it from an engineering point of view, but, as I have said, I am not an expert on telephone matters sufficient to bear cross-examination on that point, but I am certainly engineer enough to say that there ought to be no difficulty. Really, what I am speaking to is the state of telephony all over England. I may say that I am an educator of young men for the electric profession. I have a very large number of pupils in electric lighting and electric transmission of power. Telephony

*Chairman*—continued.

is a branch of electrical engineering which they all wish to learn, but in which there is absolutely no opening at present, consequently they do not learn it. I know, and see, that the electric light and electric power schemes have been very greatly furthered by these young men going down into the country and getting together local capital, and starting local affairs; and I believe exactly the same course would rule with telephone exchanges; the intelligent young men of the country side would get together small exchanges, and small exchanges would be fostered all over the country if they had a chance.

3213. There is the opening into the ranks of the National Telephone Company's staff?—Yes, but it is not an opening for an ambitious young man who wishes to rise to be his own master, at all events to begin with.

3214. What you would advocate would be young men starting telephone systems about the country wherever they could get sufficient capital to support them?—Yes; I think there would be a great increase of business from that cause, and great credit to telephony.

3215. You think it would tend to simplification in local areas, but not in trunk lines?—Not trunk lines; they would have nothing to do with trunk lines; it would be simply starting small exchanges.

Mr. *John Ellis.*

3216. I understand you think the telephone system, as it at present exists, is very imperfect?—I think it is imperfect in this country as compared with other countries that I know.

3217. I gather that you desire what you call limited competition in order that there may be great improvements?—Yes.

3218. That invention may be stimulated?—That invention may be stimulated, yes.

3219. Then may I ask you, do you come before us as a telephone expert at all?—No, decidedly not; I come before you simply as president of the institution, speaking on behalf of the members, to get greater facilities for working telephones in this country than there are at present.

3220. Then your evidence rests upon the analogy you desire to draw between the telephone and electrical power?—The rest of our electrical education.

Mr. *Tully.*

3221. You said that competition was more effective than the present state of things (monopoly) in encouraging invention?—Yes.

3222. You said also that young men would learn all about telephony and would start systems of their own all over the country if there were competition?—Yes.

3223. If these young men started those systems, how would they get powers to run the wires here and there through the country?—Well, the district or the parish councils can give them powers and get them facilities.

3224. It would make them subject to the local authorities?—The district councils, or the parish councils, as the case may be.

3225. You

Lord *Stanley.*

3225. You have said that you represent the Society of Electrical Engineers?—Yes.

3226. May I ask how many there are in that society?—2,032.

3227. Two thousand and thirty-two; and out of this number how many do you say are now interested in telephony?—There are 45 of the members whose names are put down as connected with telephony, 31 of these are in the employment of the National Telephone Company, 10 of them are abroad, and four of them are independent.

3228. And you look upon those as the only competent men to deal with telephony in England?—They are the only men who have taken up telephony as a training, so far as we know.

3229. You were asked the question whether you thought that it would be advantageous for the State to take over the telephone, and I gathered from you that you thought it would be to the advantage of members of your society who wish to serve in telephony, but at the same time you did not think it would be advantageous to those who were users?—I qualified my answer by saying that I thought probably the happiest course that could happen would be that during the next few years competition should develop telephony to a much greater extent than at present; and that taking over by the State should not take place until the science was more crystallised than it is at present; and I think during that time we should, with a more free use of the telephone, certainly have a very large number of young men trained who are not trained at present.

3230. And those young men, you think, would go about into different districts and create small exchanges?—Exactly as they have done with the electric light and power transmission.

3231. Take electric lighting, say, for instance, in London; there is no great competition between electric lighting companies in London, is there?—No, there is not in London; but I was speaking of districts all over England, where telephones exist to such a very small extent as at present; I say that the spread of electric lighting and power stations has been greatly due to the initiative of young men who wanted work.

3232. May I ask what chance you think a young man starting in a small district would have against a powerful telephone company?—It would not be against a telephone company at all; he would have no competitors, he would fill a want. Take the case of a village which has no telephone and wishes to have the people in the village connected; they might commence with 20 or 30 subscribers. That can be done very cheaply and with a very small capital. Leave can be obtained from the parish council (wayleaves), and the exchange started. The later development would be to connect that with a trunk line.

3233. Have you any reason to suppose that at the present moment the National Telephone Company would be indisposed to grant such an exchange where there was a sufficient number of subscribers to make it worth while?—My reason for supposing they would not do it would be that the 10*l.* prices would be too high.

Lord *Stanley*—continued.

3234. The 10*l.* prices that they charge?—The 10*l.* price they charge would be too high.

3235. You think then that a young man, starting an exchange on his own account, would be able to do it cheaper than the National Telephone Company would be able to do it?—I think he would be able to provide it at prices similar to those which are found to exist in foreign countries; I see no reason why English people should not do their work as cheaply as foreigners; we find that in everything else we can compete with them; why should not we compete with them in telephone work; it is monstrous to suppose that we cannot do our work as cheaply as the work can be done in Sweden; we can, certainly, with the electric light, and I do not see why we could not put up a telephone exchange as cheaply.

3236. You must remember that if you had a small exchange created by, so to speak, a local man, that exchange would only have the advantage of intercourse among its own members; it would have none of the advantage that the National Telephone Company would be able to give in the way of communication through the trunk wires with other subscribers in other towns?—I think if such local exchanges were formed they would, as it were, pass an examination, that is to say, an exchange could be approved of by the Post Office authorities as being fit to be admitted on to the trunk lines, and then they could get connection with the trunk lines on just the same terms as the National Telephone Company could.

3237. On the same terms, but on no better terms as regards the subscribers?—The terms which the National Telephone Company paid for the use of the trunk lines, the local exchanges would also pay for use of the trunk lines in the same way, and at the same rate.

3238. You think it would be decidedly an advantage to the users of the telephone to have a series of small local exchanges, even although not connected up with each other through the trunk lines?—Certainly, it would be a great advantage to the users of those districts.

3239. Take any place on that map on the wall. We will take a place I know best, Huyton. In that district of Huyton do you think it would be more advantageous that a local man should come to Huyton and establish a local exchange at Huyton than that we should be in the hands of the National Telephone Company with communication with all the other places, including Liverpool?—I believe there are a large class of people who are prepared to pay the smaller sum of 4*l.* a year for intercommunication among themselves, and who do not want to be connected with the whole of the rest of England, and I think the class of people would be sufficient to encourage a large number of small local exchanges.

3240. Can you give the Committee any idea of the number of subscribers you would require in any particular small district to enable anybody to erect an exchange at the 4*l.* you mention?—No, I cannot.

3241. But

Mr. *Snape.*

3241. But local exchanges did exist before any trunk line communication was made, was it not so?—Yes.

3242. I presume the people found it to their advantage to establish local exchanges, even when they had no trunk lines, for inter-communication in their own locality?—Yes; the local exchanges must always come before the trunk lines; they always have done.

3243. I will not proceed with that. You have told us that the progress of the development of telephones was arrested, and the interesting science connected with it deadened in consequence of the monopoly by the National Telephone Company?—Yes.

3244. Is it your opinion that if that monopoly was taken over by the State the interest would be deadened in like manner?—I do not think quite so much.

3245. In less degree?—Judging by the papers read before our institution, there have been far more papers on the telegraph than on telephones.

3246. Is not the telegraph a monopoly of the State?—Yes.

3247. And has not there been far greater progress made in telegraph science since the State took over the control of the telegraphs than was made previously?—Yes, but I think the case is very much as I have stated as regards what would be the best thing in the case of telephones, that is to say in the case of telegraphs there was a limited competition which went on during the early period, and during that early period a great many of the inventions were brought forward. To take one, for instance, Professor Hughes' Type-printing Telegraph: Professor Hughes has told me that that invention would never have been able to be taken up at all if there had been no competition.

3248. My question was whether there has not been far greater progress since the State took over the supply of telegraph facilities than before?—I cannot speak with certainty upon that point; you may be perfectly right.

3249. You are an electrical engineer?—Yes. I mean to say opinions are very divided upon that point; we differentiate ourselves very much nowadays, and I think the number of people who are trained in telegraph matters is small now, comparatively, out of the whole bulk of electrical engineers.

3250. Are not the electrical engineers in the employ of the Post Office Department amongst the foremost scientific men of the age?—Yes.

3251. Does that look as if the taking over of the control of the telegraphs had prevented the progress of and deadened the interest in telegraph science?—I think there are a great many members of our profession who think it has done so; I will not say a majority, but a great many people think it has. Probably the interest being deadened proceeds from two causes: one is that it is crystallised; it has got to a point at which there is not much further improvement possible. That may be one cause of the deadened interest. The other is that naturally the Post Office servants are not so outspoken, and do not say so much about what is going on; there are not so many discussions on matters of detail in that matter as in other electrical matters which are burning questions of the day.

Mr. *Snape*—continued.

3252. But you afford us no facts to prove that it is crystallised, no example; on the contrary, the facts seem to be against you, the facts showing that the progress has been more rapid since the State took over that department?—You said so.

3253. I am asking you the question?—I do not think there is any strong opinion of that kind; I do not think anyone will say that the progress has been more rapid since; it may have been.

3254. I ask you the question, because if the interest has not been deadened, and progress not arrested in telegraphy, what reason have you to suppose that such a result would follow if the State took over the control of the telephones?—I cannot say anything more than I have said; it is a mere matter of opinion.

3255. Supposing the choice had to be made between the supply being continued by the National Telephone Company or taken over by the State, which do you think would be the better course?—I think, on the whole, the better course would be that it should be taken over by the State.

*Chairman.*

3256. You are acquainted with the Delani multiplex telegraph instrument, are you not?—I know it by name.

3257. Are you aware that although there is competition in the United States, that recent invention has not been adopted, whereas it has been adopted in this country, where there is no competition, and where the whole system is under the control of the State?—I am under the impression that competition in the States is a very peculiar competition, quite sufficient to account for anything of that kind; it is practical monopoly.

3258. You do not consider it competition?—No, it is not a real competition.

3259. Your suggestions with regard to local areas do not seem to me to point to competition; you are suggesting rather that these young men should go down into districts where there is no telephone system at the present time?—I look on limited competition as a means of spreading telephony all over the country. I see that telephony is spreading very slowly at present, partly on account of high prices. I think that competition would lower the prices, and that it would lead to educating the public in the use of the telephone. It is perfectly true that the users of the telephone are not educated in England as in other countries. In other countries the telephone is a necessity; here it is considered a luxury; and I think it is rather humiliating to an Englishman (at all events, to an English electrical engineer) to find that other countries look upon us as in the dark ages as regards telephony.

3260. And you attribute that backward interest in England to the absence of competition?—The thing has been in two hands only, or practically in the hands of one company.

3261. In those countries that you compare with England, I think, as a rule, there is no competition?—I think there is competition, sir.

*Chairman*—continued.

3262. What cases do you refer to?—There has been a very fierce competition in Sweden; the result is that it is the most go-ahead country in telephonic matters.

3263. Is it fair to compare Sweden, with its small population and its small towns, with a place like England. If you take the United States, there is no competition; if you take France, no competition; if you take Belgium, no competition?—I do not see where the unfairness comes in. I do not see where the difficulties are decreased by the poorness of Sweden.

3264. I suppose you would admit that the rate of wages has something to say to that; is it not a fact that the rate of wages is very much lower in Sweden than in this country?—Wages are lower; but when it comes to the cost of producing electrical energy we have to compare the cost here with that of Sweden, and we are able to compete with them. Whether our wages are lower or not, we manage to make them go further than they do.

3265. I am not speaking of the cost of electrical energy, but of the salaries of engineers; and, with regard to every class of staff in Sweden, is it not a known fact that the wages there are very much lower than in this country, and that that forms a very substantial portion of the cost?—I only spoke of electrical energy and the cost of producing electrical energy. The wages of superintendents form a very large part of the cost. Sweden has a very large advantage in cost as compared with us here, and it does not appear to show in their accounts. Although they pay lower wages, they pay a larger number of men.

*Chairman*—continued.

3266. You have mentioned that the deadening of interest is due to the absence of competition. Can you explain why it is that there is no competition in the manufacture of telephone apparatus where there is no difficulty put in the way of competing manufacturers?—Well, the patent has only been out a comparatively short time. The greatest users of telephone apparatus are the National Telephone Company. I think they import, or at all events, manufacture, practically in one factory nearly all they require, and small manufacturers of telephone apparatus hardly exist in England.

3267. Still I suppose the National Telephone Company would be open to an offer if they could get one at a reduced price, would not they?—As a matter of fact they do not give their orders to manufacturers.

3268. Do they get any offers; is there any competition by manufacturers?—There are no manufacturers.

3269. That is to say, the interest in manufacturing the apparatus is deadened in the same way, although there is no difficulty put in the way of competition?—Yes, it is so, sir.

Professor Silvanus P. Thompson, D.Sc., f.r.s., called in; and Examined.

*Chairman.*

3270. I believe you have been a member of the Institution of Electrical Engineers for a period of 15 years?—About 15 years.

3271. And have acted on the Council since 1886?—Yes.

3272. I believe you have acted as adviser to various companies in telephonic matters?—Yes, since 1881, I have.

3273. Do you come generally to support the evidence given by Mr. Crompton?—Yes; I, in general, agree with the evidence offered by Mr. Crompton.

3274. If there are any further points you would like to make will you state them?—I think I should like to emphasise the view derived from conversation with other members of the Institution of Electrical Engineers. There is a general view amongst our body that there ought to be no monopoly in the telephone business unless it were a monopoly directly responsible to the public, through Parliament; that is to say, we regard any monopoly in the telephone business as to be deplored if it were not the actual taking over of the thing by the Government itself.

3275. On whose behalf do you put forward that view. Do you speak in the interest of the public as telephone users, or in the interest of the profession of which you are a member?—I was rather echoing the views I know my fellow members to entertain.

3276. But in whose interest; in the interest of telephone users, because you think competition would bring about a more effective service, or

*Chairman*—continued.

in the interest of the profession of which you are a member, which you think would be benefited?—In both, I think; certainly in the interest of the public; because a monopoly that is not in the interest of the public is clearly a thing the public ought to be relieved of.

3277. That is assuming that this is a monopoly which is not in the interest of the public?—A monopoly that is not responsible to the public cannot be in the interest of the public.

3278. That depends upon how it is exercised, does it not?—Yes, but when anything goes wrong, if it is not responsible to the public, the public cannot set it right.

3279. I understand you, generally, to mean that you think competition would bring about a more effective service for the public?—A limited competition I think would bring about a more effective service for the public; and if there is not to be the limited competition, if there is to be a monopoly, that monopoly should be one that is a responsible monopoly; that is to say, in the hands of the Government, and not held through the hands of any third party.

3280. Then, admitting that the company have a licence which lasts for 17 more years, you think there should be competition; that other licences should be granted?—Yes, certainly, unless the Government buys up that licence or get hold of it in some way, which would be better.

3281. You think that would be the best solution of all, do you?—Most certainly.

3282. That they should take it all over?—Yes,

*Chairman*—continued.

Yes, whether we are ready for that at the present moment, or whether we should allow it to be further developed in sparsely populated districts, is another question; but, eventually, I think, there can be no question that they should take it all over.

3283. Are there any other points upon which you wish to speak?—I would emphasise the view that Mr. Crompton put before the Committee as to the effect that the absence of competition has had upon the training of young men. I have had a good deal to do with the training of young men for electrical engineers; I suppose in the last 10 or 12 years I have had something like 4,000 young men coming to attend my classes at one time or another; of these very few have gone into the telephone service, and very few have come to me and to my evening classes who have been in the telephone service; it is a matter which has forced itself upon me from time to time, that the education of the young telephonic engineer is not being conducted in this country upon really scientific lines; that is to say, there does not appear to be much encouragement in that branch of the profession. Parents come to consult me about placing their sons, and ask me whether they would do well to article them to such-and-such a firm, or they ask me whether they should put them to college for a couple of years. We talk over the careers that are open before the young men. Very seldom does it occur that I am asked whether the telephone offers a career to a young man; I sometimes suggest it myself, but it is very seldom asked about; they ask me about patent agencies; they ask me about submarine telegraphs; they ask me about electric lighting and power; but the particular branch of the electrical profession relating to telephones I am hardly ever asked about.

3284. You do not suggest, of course, that the future policy of the Government or of Parliament with regard to the development of the telephone should be adapted in order to open careers to these young men?—Not expressly for the purpose; it would have that effect, I imagine.

3285. You do think the policy should be decided upon with that view, that is to say, to open careers for the young men of whom you speak?—It is a minor point, surely, in shaping the policy of the Government.

3286. But it is not the governing consideration?—Oh no.

3287. Is there any other point on which you wish to say anything. A memorandum has just been placed in my hand. I do not know whether you are aware that in Germany, where it is a monopoly, the number of subscribers on the telephone system is the largest of any country in the world?—Is that so?

3288. Except the United States. Great Britain (where I do not admit that it is a monopoly, but where it is in the hands of one company) is the next largest, namely, 69,000?—The largest actual number, but is that the largest in proportion to the population?

3289. The largest number of subscribers?—But surely Switzerland stands much above England in the proportion of subscribers to population.

*Chairman*—continued.

3290. That would be so, no doubt, but the actual numbers are the largest. In Switzerland, I think, is also a monopoly, it is under the State?—I believe it is.

3291. That would hardly apply as an argument in favour of competition. Is there any other point you would like to mention?—Nothing, except that I think one thing that has tended in the past to deaden the interest in invention, and to deaden also the interest in telephone as a career, has been the repressive measures exerted in times past, when the patents were still holding out, by the holders of those patents, against anybody else doing anything whatever in telephony in this country. That cannot but have had a very bad effect upon the progress and development of that branch of the industry.

3292. Of course, that does not apply to the present time, the patents having ceased?—That does not apply at the present time, but I think that is one reason.

3293. In the past?—Yes.

Mr. *Snape.*

3294. You say that parents never ask you about a career for their sons in connection with the telephone?—No.

3295. But they do about submarine telegraphs. Do they ask you about inland telegraphs?—Very seldom.

3296. That is a monopoly of the State which you think is a monopoly to be advocated, and one which is for the public good?—No, no; please understand me; if by reason of the requirements of the public service and the engineering conditions involved, and the necessity for long inter-communication from town to town, it comes about that a monopoly is, in the interests of the public, the best thing, then I say that monopoly ought to be a monopoly by the State, and by the State alone, and not by any third party not directly responsible to the public.

3297. Do you know that in 1911 the present monopoly will cease by effluxion of time?—Unless another agreement is made before the efflux of it.

3298. Then the State will probably take over the whole system, if not before?—I presume so; it is to be hoped so.

3299. Do you think there will be any economy by delaying the taking over of the telephonic system until 1911, and not taking it over at present?—I doubt it.

3300. Do you think that much of the apparatus and many of the means of communication of the present company, if continued until 1911, would have to be taken over by the State even then?—Some of it undoubtedly would: it would be of very much less value then.

3301. You think it would be almost, if not quite, as economical to take the system over now without waiting until 1911?—That depends entirely upon the price you are going to pay for it. If you are going to pay for inflated capital there is no question of economy.

3302. I asked you that question, and you said there was no question of economy in delaying the taking over?—You asked me about the

Mr. *Snape*—continued.

appliances; if you are going to take over the appliances for what they are worth, I should say take them over now, certainly.

Lord *Stanley.*

3303. Do you concur in the opinion of the last witness as to the desirability of small local exchanges?—I think they are most desirable in the interests of the public.

3304. You look at it in the interests of the men who want to be trained as telephone men and not in the interests of the public?—I look at it in the interests of both for that matter.

3305. Do you think that the young men who formed these local exchanges would be able to stand long in opposition to a big company like the National Telephone Company who might run an opposition to them?—It would carry out the policy of destroying any competitor by running him out.

3306. I did not ask you that. Take any town where, at the present moment, there is no local exchange. Assume that a young man went down there and opened an exchange, and that the National Telephone Company came down there, connected themselves with that town, and opened an exchange of their own; do you think the first exchange would have any chance with the big company?—I think not; if the young man was merely financing it on his own footing. If he was doing it as the agent of a local authority I think he would be in a very different position.

3307. That is rather different. You, then, would rather be in favour of each local authority taking it up and having a local exchange?—I think so; I would certainly allow it.

3308. You would not look upon it in the light of a private enterprise in each locality?—I would not prevent private enterprise; but I would encourage private enterprise as backed by the local bodies.

3309. Then you would not wish the local bodies to stand in the way of the National Telephone Company coming into their locality if they wished to do so and (if you liked to put it so) underselling any other exchange?—Underselling any other exchange would be an enormous advantage from the users' point of view, provided it was not an intermediate step to raising the price after having destroyed the existing supply.

3310. How would you prevent that?—By your agreement with the telephone company. If you make as a condition of the user of the trunk lines the condition that prices shall not be first cut down and then raised, you can do it. I do not know what the policy of the Post Office is on that point.

Mr. *Tully.*

3311. You think this monopoly cramps the intellect of the country in the matter of invention, and also in the matter of young men adopting telephony as a career?—It is putting it rather strongly to say that it cramps the intellect. It is perfectly notorious that when you have only one buyer there is not much inducement to invent anything to sell to him.

3312. With regard to these young men that we have heard about, who are to go about the villages starting telephone systems, if they had to compete with the National Telephone Company, would they not start clear; whereas the National Telephone Company has to pay interest on a watered stock of three and a quarter millions?—The presumption is that they could start much more cheaply.

3313. You would not approve of a monopoly, such as exists in the case of this company, a company that we are told here to-day goes down to Plymouth under the Postmaster General's licence, and gives subscribers telephones for nothing in order to wipe out the Postmaster General's own system?—I cannot understand how the Post Office could give a licence which would allow the licensee to interfere with their own business there. It seems to me perfectly monstrous that the Government should give something with one hand that would enable it to be competed against on the other.

Mr. *Moulton.*

3314. If I remember rightly, you were the adviser of the London and Globe Telephone Company?—Yes, I was.

3315. Which tried to set up a competing system during the period of the patents?—Yes.

3316. And who were beaten on the subject of the patents, and were obliged to give the system up?—We were beaten on the Bell patent; we won on the Edison patent.

3317. The receiver patent. Now, at that time, did you carefully go into the question as to whether competition was practicable?—Yes; the board of that company had a great mass of figures before them, and there were many discussions.

3318. And I believe the technical question was practically in your hands, was it not?—We thought so.

3319. I mean on your hands, personally?—Not entirely.

3320. To a great extent you were the actual technical adviser?—I was the technical adviser on all matters connected with the patent rights, and, to some extent, upon the construction, but not entirely.

3321. You did, at that time, convince yourself that competition was practicable?—Yes.

3322. And have you seen any reason to alter that opinion?—No; I think competition is still practicable.

3323. And I believe even at that date you proposed to do it at a lower rate for London?—Yes, we did; and we had some other ideas that never were properly developed. We had the idea (which I believe to be a valuable one) of developing in the City of London a number of local exchanges, in this sense: they were not to be actually limited to one locality, but they were to be exchanges limited to a certain class of users.

3324. To what you may call groups, as opposed to local exchanges?—For instance, we hoped to have had a Mincing-lane exchange.

3325. Call it a tea dealers' exchange, to describe it?—Yes, exactly so; a tea dealers' exchange. We intended to have had another for lawyers. These would, in actual point of area, have

Mr. *Moulton*—continued.

have overlapped, but we believed it would tend greatly to the simplification of system if we had them grouped in that way, and I believe it would be quite possible that even such overlapping exchanges, overlapping in area, might be worked by different owners, and yet the service be entirely satisfactory.

3326. In fact, you thought the right way to group might be to group according to probable frequency of communication; that is the people who wanted to talk most to one another would, as far as possible, be put on a single exchange?—Yes, that was the idea.

3327. That would correspond very nearly, would it not, to the case of a competing exchange, inasmuch as the areas would not be local, but would overlap?—Yes.

3328. And if there were, for instance, in Manchester, two companies serving the whole of Manchester, their various exchange areas would overlap in a similar manner?—Yes, they would.

3329. Do you think there would be any more difficulty in working two such companies than there would have been in working that system which you believe would have been a success?—No, I think not; and certainly no more difficulty than in working between Manchester and Liverpool.

3330. In fact, if I may put it so, except for the length of the wires, distance has no existence for the purpose of the exchange?—Except for the length and cost of the wires, and, of course, questions connected with maintenance, there is no difference

3331. Supposing these two sheets of paper to represent two exchange areas, there is no more difficulty in making a complete inter-communication side by side like that (*describing*) than when they overlap like that (*describing*)?—I see none.

3332. You believe, do you not, that telephony is of very great importance to society?—I do.

3333. And that it is not developed nearly as much yet as it might be, and as it probably will be?—Certainly not; it is not developed.

3334. I think you believe—perhaps I am quoting you—that it is a social agent of great importance, the use of which still has to grow very much?—Yes.

3335. Now, do you think it important that the service should be both reasonable and efficient?—Yes, of course.

3336. And do you think it is a satisfactory state of things that there should be no security that the company that has it in its hands should give an efficient and a reasonably cheap service. Do you think it is satisfactory that there should be no provision that that should be done?—You tell me that it is so, but I should not have believed it if you had not told me so.

3337. Supposing you were told that the only means of doing it was by threatening competition, still do you think that by means of judiciously used competition you could, if I might put it so, keep them up to the mark?—Oh yes; nothing is more certain that that.

3338. Now, just let us consider. Suppose they are minded (I hope they will not understand that I am suggesting they are minded) to behave badly, let us see what would be the most effective competition; it ought to have a strong local interest, ought it not?—Yes.

3339. It ought to have the command of money for the purpose of laying down a system?—Yes.

3340. And it ought to have a certain amount of patience in order to get over the initial stage?—Yes.

3341. Now, supposing that a town is being treated badly, in your opinion would not the municipality be a body which would have all those three qualities: strong local interest, command of money at reasonable rates, and patience. I ought to have added a fourth, that is, direct responsibility to the public. Do not you think the municipality would be a body whose competition might reasonably be expected to be the most efficient?—I think so; it would be the best.

3342. Therefore, if you are going to make competition your security, you think that, in case of failure of duty on the part of the National Telephone Company, the municipality would be the most formidable competitor?—Certainly.

Mr. *Solicitor General.*

3343. This case quoted by my honourable friend Mr. Moulton seems to be familiar to you and to him; what was this case?—The London and Globe Telegraph Company. It was a private company, started, I think, in 1881, which had the intention of setting up, and did set up, in the City of London, a rival exchange to that of the then United Telephone Company. They were owners of certain patents, notably of the Hunnings transmittor. They intended to supply telephones at a cheaper rate, and they also had the intention of arranging their exchanges in the way I have described.

3344. Now, what was the action about?—The action was an action for infringement.

3345. It did not turn upon any question of the practicability of working?—No; there was a double writ brought against them, which was tried before Mr. Justice Fry.

3346. But it turned on the patents?—Yes, it turned on the patents simply.

3347. Not on the working?—Not at all.

3348. You, as I understand, were the technical adviser as to certain patent rights?—Yes.

3349. As a matter of fact, I do not understand that this company had any practical experience at any time, or that it ever worked?—Yes, indeed it did.

3350. I beg your pardon; I should not have assumed that it did not?—They had an exchange in Coleman-street, which, I believe, was the beginning of the present National Telephone Company's exchange in Coleman-street.

3351. You used the phrase "intended to supply"?—Yes. They did not carry out their intention of making the exchanges, as I described.

3352. You used the words "intended to supply" about those local exchanges as to which I wish to ask you; they did, in fact, you say, start the business?—Yes, they did.

Mr. *Solicitor General*—continued.

3353. Did you advise them at all in connecnection with the business?—Yes, from time to time.

3354. What was your position?—Consulting electrical engineer.

3355. Then, you did not enter at all into any economic questions in connection with the company?—No, they were very seldom put before me.

3356. I think you expressed an opinion just now; you said that, in your opinion, competition was practicable?—Yes.

3357. The basis of that opinion, I think, was this idea with regard to areas, which should appeal more to classes of the community than to any particular locality?—Yes, that was an instance of the way in which areas might overlap geographically, while the interests served might be different, yet they might be put into intercommunication.

3358. I do not know that it is material that we should inquire; but you say, for instance, that there was to be one exchange for lawyers?—Yes, it was to be in the immediate neighbourhood of the Temple. The idea was that barristers and solicitors might be put into ready communication more readily than by going through a general exchange.

3359. That idea never was carried out, was it?—No, that never was carried out.

3360. So that you have no practical experience of the lawyers overlapping the tea dealers, as was suggested, as to whether it would work or not?—No.

3361. My honourable friend has asked you, I think I am right in saying that he put to you a series of considerations which occurred to his mind, as to the local interests, and the public money, and patience, and so on; had those considerations presented themselves to your mind before?—I do not know that they had at that time.

3362. At what time?—The time when the London and Globe Telephone Company was formed.

3363. I mean, had they suggested themselves to your mind before the honourable Member suggested them to you?—Certainly; for years I have had suggestions before me.

3364. Have you any experience of any municipality that does carry on a telephone business?—I do not think any municipality in this country does carry on a telephone business.

3365. Then you have no experience of one?—No.

3366. Do you, then, put the supply of telephonic communication upon the same basis as that upon which you put the supply of water and gas?—I see no reason why it should not be put on the same basis, always provided that the Post Office provides, first of all, the trunk lines or inter-communication.

3367. But you think every working man should have his telephone, and his water, and his gas?—Should have access to the telephone, should be able to put a penny in the slot, or something of that kind, and deliver his message.

3368. Do you really mean to suggest that, in your experience, the working classes use the telephone at all?—Not yet.

Mr. *Solicitor General*—continued.

3369. Then the opinion you have given to us is given upon the basis that you think they will use it?—I think they will.

3370. Will you tell me for what purposes?—To call a doctor, for example.

3371. Supposing the working man is in good health, how will he use it?—I can suggest some ways in which he may use it.

Lord *Stanley.*

3372. Will he pay 4*l.*?—No. He will not pay 10*l.*, or even 4*l*, in many cases; under a toll system he will pay.

Mr. *Solicitor General.*

3373. During the time when the working man is happily in good health, and his family also in good health, how will he use it?—It will depend on the industry in which he is engaged. I can imagine a market gardener using it.

3374. When I used the term "working man" I was not thinking of a market gardener?—He is a working man.

3375. I daresay he is, but when I was speaking of the working man I was thinking of an artizan?—The occasions are very few on which he would wish to use it.

*Chairman.*

3376. You say the London and Globe Company did not put into operation this system by which special interests were to be consulted and put into communication?—No, they never got so far.

3377. Has it been done in any country, so far as you are aware?—I really cannot tell you.

3378. So far as you know it has not been?—The nearest thing to it is, I think, in the United States, where there are what you may call domestic exchanges.

3379. What would they be?—Private houses throughout the whole district are nearly all connected with an exchange, and the getting in of provisions, the ordering of the whole of the things is done through the telephone.

3380. Would not that be due to the fact that the exchange happens to be located in a district which is filled with private houses, and not due to its being confined to any special interests?—It is an incident of that system.

3381. An incident of the locality?—It has not been laid down with a view to supplying one class only.

3382. So far as you know, that system has never been adopted anywhere?—No, I do not know that it has.

3383. I believe the London and Globe did not propose to provide a cheaper system than the United Telephone Company?—They certainly did at first.

3384. I see this is a report of that company; Mr. Eldred was the chairman, was he not?—Mr. Eldred was the manager, the chairman was Mr. Stewart Pixley.

3385. You believe it was intended to give the service at a cheaper rate than it was then being provided

*Chairman*—continued.

provided at?—Yes, we discussed that very often.

3386. What was the fate of the London and Globe Company?—It was eventually absorbed by the United Telephone Company.

3387. Then it is hardly a good argument for competition?—Possibly not.

Mr. *Moulton.*

3388. It could not get the requisite instruments, was not that it?—Yes, it could not get the requisite instruments; the instruments that it had were ordered to be given up.

*Chairman.*

3389. It met with the fate which has always followed competition up to now, that is, that it was absorbed by the National Telephone Company?—Yes, it was overweighted.

3390. Then I understand it has been suggested by Mr. Moulton that that would not follow the granting of municipal licenses, because they could hardly be swallowed up by the voracious National Telephone Company?—That is so.

3391. Are you aware that municipalities have not asked for telephone licenses except in the case of Glasgow, and I think one other large town. The London County Council has not asked itself for a license, and none of the municipalities have asked, except the two I refer to?—It is a very few years (I think, not more than 18 months), since the patent expired; they would be hardly likely to ask before.

3392. Still, you would not suggest that we should force licenses upon municipalities that do not require them?—"Force licenses" upon them, certainly not; but you should give them every facility for getting them when they apply.

Lord *Stanley.*

3393. You were talking about groups of lawyers, groups of tea merchants, and so on; would it have been possible in that system for the lawyer to speak to his tea merchant, and for the tea merchant to speak to his lawyer?—Certainly; there would have been inter-communication between one local exchange and another local exchange, just as at present, only the work in the local exchange would have been better arranged by grouping the clients, not according to where they happened to be, but according to what their business was.

Mr. *Snape.*

3394. If two competing companies existed in these overlapping areas, would that work well?—It depends on the conditions on which they hold the license; if they only held the license on condition that they should add access to the trunk lines, the thing would be perfectly simple. I see no more difficulty in allowing the exchange in Coleman-street to communicate with an exchange in the Temple (each belonging to a different system) through the Government trunk lines, than in allowing the exchange in Liverpool to communicate with the one in Manchester.

3395. That is to say, you would stipulate that they should allow it?—Surely.

3396. In a case where the company has already its license, how would you deal with that?—It is hardly for me to dictate the grounds upon which it should be done. I do not know the conditions under which the license was granted.

Lord *Stanley.*

3397. Each exchange would have the books of their customers; you would therefore have to have all the books with the numbers of your customers, and you would have to have those of every competing exchange?—I think it would be possible to simplify the system.

3398. How would you propose to simplify it?—In the same way as the "Post Office Directory" includes the names of a great many people who have no particular business in the Directory.

3399. You mean to say that supposing the Globe Company had been now in existence, and the National Telephone Company had a list of the subscribers of the Globe Company, they could make easy communication between the two. You would have had to have had the list of the National Telephone Company, and the National Telephone Company would have had to have had that of the Globe. Each of the companies would have to have not only the names of their own subscribers, but of the competing company's subscribers?—Yes, you would have had to have separate lists instead of one single one. There is not necessarily more printing involved.

Mr. *Moulton.*

3400. You now have to have the names of all the subscribers in your book, do you not?—Yes.

3401. You would have had to have the names of all the subscribers then?—Yes.

*Tuesday*, 14*th May* 1895.

MEMBERS PRESENT:

| | |
|---|---|
| Mr. Baird. | Mr. Grant Lawson. |
| Mr. Benn. | Mr. Arnold Morley. |
| Sir Charles Cameron. | Mr. Snape. |
| Mr. John Ellis. | Mr. Solicitor General |
| Sir James Fergusson. | Lord Stanley. |
| Sir John Gorst. | Mr. Tully. |

THE RIGHT HONOURABLE ARNOLD MORLEY, IN THE CHAIR.

Major-General C. E. WEBBER, C.B., R.E., is called in; and Examined.

Sir *Charles Cameron.*

3402. You are a Major General in the Royal Engineers?—I am, sir.

3403. And a C.B.?—Yes.

3404. You were at one time Divisional Engineer of the Postal Telegraphs?—I was.

3405. How long did you hold that office?—Nine years.

3406. You had charge of the telegraph service in the Egyptian War?—Yes.

3407. And since your retirement from active service you have been the managing director of the Bell and Edison United Telephone Company?—Not since my retirement, but during a period of six months' leave after the Zulu War.

3408. At the present moment you are connected with electrical undertakings?—Yes, I am consulting engineer both to telegraphs and to telephones.

3409. When did your connection with telephony commence?—In the years 1878 and 1879 I saw the early telephones that were brought to this country, and experimented with them on postal telegraph lines when I had the opportunity.

3410. I forget the date you gave of your connection with the Bell and Edison Company?—That was in the year 1880.

3411. You are well acquainted with the history of the telephone industry in the United Kingdom and on the Continent since that date?—I am.

3412. In 1884 I think you had some special intervention in connection with telephone matters?—In 1884 I read a paper before the Society of Arts, the object of which was to show how cheap telephony might be brought into existence in the United Kingdom, on which occasion you, sir, were in the chair.

3413. And afterwards (in 1885) you were appointed technical adviser to the New Telephone Company, were you not?—The New Telephone Company was one of those that came out with the view of competing with the National Telephone Company, and Professor Silvanus Thompson was one of the directors, and I was asked to become the technical adviser of that company, which I was until they went into liquidation or ceased to work under an injunction brought against them by the National Telephone Company.

Sir *Charles Cameron*—continued.

3414. The purport of your paper in 1884 was directed against the bad effects, if I remember rightly, of the monopoly, the injurious effects in this country on the development of telephonic science, and the service which would properly and adequately meet the requirements of the public?—Yes. One of the objects of the paper was to show that, in my opinion, the telephones of the country were in the hands of those who had not done justice to the marvellous invention which they had purchased, and to show that its extension, both as regards extent, efficiency, and cost, had not reached a point which in the five years it should have reached.

3415. I think we may take it at once that you are in favour of Government monopoly, if there is to be a monopoly?—Not altogether, sir, if you will allow me to limit it and state my reasons.

3416. Will you just explain your views upon that point?—I think that the Post Office are unquestionably right in regarding the telephone service of this country as the handmaid of the services for which they are responsible, and for which the public has paid so large an amount; but my view of the possible extension of the use of the telephone to this country makes me think it may get beyond the reach of even such a great department as that of the Post Office. I think, sir, that the Post Office are right in securing what may be called the arteries of the system, and I think, probably they are right in believing that they can manage better than anyone else what may be called that part of the system which is essentially used for commercial purposes; but what I should like to call the capillaries of the system means an extension over this country of a network of wires and stations which is far beyond, I believe, the conception of anybody at this present time; and as regards that great system of capillaries, which I firmly believe might come into existence in this country in the future, I do think that it is beyond the powers of

Sir *Charles Cameron*—continued.

of even so great a department as the Post Office; and I think that, perhaps, it might be wise (of course it is a matter entirely of arrangement) for them to leave that entirely in the hands of private enterprise.

3417. But, of course, you recognise the necessity of safeguarding the financial interests of the Post Office?—I can see no difficulty in the system of royalties by various scales preventing loss to the telegraph service.

3418. Now, you have told us something of the effects of the monopoly. Have you anything to add upon that particular point with regard to the development, say, of telephony?—Well, sir, I think there were two forces acting since the year 1880 to prevent the development of telephony. One was the natural caution of the Post Office ever since Mr. Justice Stephens' judgment of 1880, in preventing by every means in their power the extension of the telephone, so far as they feared it would compete with their telegraph system. Anyone who reads the whole of the history of those years will recognise that the Post Office measures were all in that direction, and rightly so in the eyes of most people, from the point of view of revenue; but the other force that was causing the retardation of the extension of telephony was certainly the existence of a monopoly which had two forms; one was the possession of those wonderful patents, the power of preventing anybody else using them, and the fact that every sub-company was really the creature of the head company who owned those patents, and, therefore, the policy of that head company permeated the operations of the minor sub-companies and prevented anything like that extension which would have come into existence if they had been competing companies. As regards the efficiency of the service provided by the monopolists, I think so much has been said and so much has been admitted, both in the Press and by Mr. Forbes himself in this chair, that it is not necessary for me to go into the matter. If anyone wishes to read the letters of the late Duke of Marlborough on the subject of that efficiency, which appeared in 1882, I have put them together for that purpose. If the Committee would like to see them, they cannot help seeing that that inefficiency was more than realised by one of those few men who had entered into and grasped the subject fully.

3419. You have printed copies of the Duke of Marlborough's; will you please gives us copies of them?—Yes (*the same were handed in*).

Mr. *Grant Lawson.*

3420. The Duke of Marlborough was then starting an opposition company, was he not?—Yes.

Sir *Charles Cameron.*

3421. Before we go further, let me put this to you: Mr. Lamb gave us a sketch of the Post Office policy under various Postmasters General generally. When I examined him he did not give us a very full account, as I thought, of Mr. Raikes' policy; I asked him to supply the deficiency, and Mr. Lamb was good enough to give me a cutting of a question that was addressed to Mr. Raikes in the House of Commons on the 5th June 1889, which has a considerable bearing on this, and I got an extract from a speech of his which I have shown you before, dated 29th March 1889. Will you please first read the extract and then the speech, and give the references?—This is an extract, sir, from "The Times" of the 29th March 1889.

3422. In Committee of Supply, I think?—In Committee of Supply: "As to the telephonic system, the Courts had declared it to be a part of the Government monopoly in telegraphs. His predecessor (Mr. Fawcett) unfortunately stated in public that steps would not be taken by the Government to enforce the rights which that judgment gave them, and a state of things had thereby been created which required very careful handling so far as the Department was concerned. The patents, however, were likely to lapse very soon, and when they had run out that would be the time to make arrangements, which he trusted would differ in almost every respect from existing arrangements. With regard to telephones being put into post offices, that was subsidiary to the larger question. In some parts of England the telephonic system was under the control of the Government absolutely, and there it was, of course, comparatively easy to make arrangements such as had been indicated. So long as the telephone companies continued to ply their trade, it was not desirable, he thought, that the Government should commit itself to arrangements which might seem in any way to recognise or establish a vested interest, which he for one could not admit existed. The grievance of the public in this matter ought, no doubt, to be removed as soon as possible, and it should be done upon terms satisfactory to all parties."

3423. In that he expressly declines to recognise any vested interest; now, will you please read this, which is a question put by Mr. Chamberlain, and Mr. Raikes' reply, and give the date?—This is extracted from "The Times" of the 5th June 1889, under the heading "The Telephone Companies":—"Mr. R. Chamberlain asked the Postmaster General whether his attention had been called to the tactics by which the financial group now commanding the telephone system of the Kingdom had met his refusal to grant a licence to the Amalgamated Company originally projected; whether his attention had been directed to the amount of capital to be created under the new scheme, and to the high charges to the public that would have to be maintained in consequence, and to the proportionately enhanced price that would be demanded should the nation ever decide to purchase; and whether, under these circumstances, he will at once avail himself of the right reserved under the agreement with the telephone companies, and 'establish, extend, maintain, and work' a telephone system such as would gradually bring the advantages of this invention within reach of the masses of the people. He wished to explain that the clerks had omitted a vigorous adjective which he had inserted before the word 'capital.' What he wished to call attention to was that this capital was not represented by any estate in the form of plant, buildings, wires, or instruments. It was a paper capital and not a real capital. Mr. Raikes said: "In reply to the hon. Member, I have to state that I am aware of

Sir *Charles Cameron*—continued.

the proceedings of the telephone companies, and that the whole questions of the telephonic service of the country is engaging my serious attention. I am not at all sorry that this question has been asked, as it may serve to direct public attention to a matter of extreme gravity, with regard to which, expressions of public opinion may materially strengthen my department in protecting the public interest."

3424. Mr. Raikes, in these extracts, pointed out that the patents were about to expire, and that that was rather a time for a change of policy; that was in 1889, I think; would you please mention the various efforts to compete which occurred about that time when the patents lapsed, or before that time, if you have any information upon the subject?—The effort which I have mentioned to compete was that of the New Telephone Company.

3425. That is before the Manchester Company?—There were several companies that came into existence that were either the actual children of or were absorbed by the United Telephone Company.

3426. If you would like to say anything about these companies before going on to the New Telephone Company, do; if not, please go on to the "New"?—I do not think that the history of each of those companies is worth going over unless the information could be obtained from those who know more about it than I do; that is to say, the details of it; but when we come to the year 1890, as soon as the patent rights expired, efforts were made, particularly by the formation of an association for the protection of telephone subscribers, to bring about competition with the view of extending the efficiency and cheapening the service, particularly in London. In 1891 there was a correspondence in the papers in which the late Duke of Marlborough warmly joined; and in February, 1892, a company called the "Pioneer Telephone Company" was brought out with the object of securing certain agreements and raising capital for a projected company which was then foreshadowed, and called the "New Telephone Company." The Pioneer Company was brought out, I may say, by the Electric and General Investment Company, which was its parent.

3427. Was the Duke of Marlborough connected with that?—He was.

3428. Did that company approach you, or were you officially connected with that company at all?—No; the only thing I had to do with it was that the Duke of Marlborough asked me to advise him as to the best mode of telephoning the City of London. It had been a subject which I had gone into in the year 1880 for Mr. Gardner Hubbard, the father-in-law of Professor Bell, who was in London; and at that time I laid out London for over one hundred exchanges. But the most difficult problem was the telephoning of the City, particularly as, by the year 1890, it was evident that the great mass of overhead wires ought to come down.

3429. You have brought us down to 1890, when you were approached by the Duke of Marlborough to plan out a system of telephoning the City of London?—In 1891.

3430. In 1891; now, before we go further, what was your idea as to the engineering arrangements of the present system; have they been definitely devised, or have they grown up as demanded, without regard to engineering considerations?—Yes, and to a most lamentable extent. So much was I impressed in 1880 with the necessity of laying out London for the future, and the certainty of irretrievable mischief to the telephones of London if it was not done, that I was led to draw up the plan which I have mentioned. I can only say that ever since then the telephones of London have been extended in what might be called a haphazard manner.

3431. Now will you please give the Committee an indication of the general principles on which you propose to lay out telephonic exchanges?—Might I begin by saying how I would not do it?

3432. Certainly; then let us know how you would. How would you not do it?—When I had put up an exchange, I should certainly endeavour to keep that exchange to the service of the area within which it was established. What really has always been the process of extending telephony in London has been this: A telephone exchange has been established, and then everyone within reach, or what would be called within reach, by wire, has been connected. The consequence is that you have a distorted spider's web round that exchange; and those distortions once carried out, that is to say, wires some a quarter of a mile, some two miles, others three miles, all stretched out in directions to reach the customers that might happen to be within reach, producing a system which in the end must mean confusion. I do not know that I can describe it better than that.

3433. Before you go farther, the result of that system is that you have a huge number of subscribers brought together, most of whom have no desire to communicate with one another, at the same point, and difficulty and delay and confusion?—That is an additional objection, or rather an additional instance of how the confusion that exists has been brought about; in other words, there is no selection of the clientéle of the exchange, and I think that has already been spoken to in evidence before the Committee; that is to say that one class of people may wish to be in communication with one another, and another class may wish to join an exchange with which their own friends are connected, and up to the present time the effort in London has been to bring everybody within the 630 square miles which the National Telephone Company boasts it covers into communication with one another under a uniform tariff.

3434. Then would you please explain, in the first place, just the principles on which you would proceed; you have told us what you would not do?—Shall I begin with the City?

3435. Yes.—The City was the most difficult problem, and it is the heart of London.

3436. Do you happen to have the plan?—I am afraid I came here not knowing I was going to be examined, and did not bring the plan. It is a very large plan.

3437. You have no objection to put it in?—Not the least.

3438. Is it a plan made in 1891?—That was made in 1891, yes; I think I could describe in a few

Sir *Charles Cameron*—continued.

few words sufficient for the Committee to understand, if I might begin with the City.

3439. Certainly, begin with the City; begin as you find most convenient?—I pointed out to the Duke of Marlborough that to place wires underground in the City of London was probably one of the most difficult operations in the world. I knew as much, I think, of the underside of the surface of the streets of the City as the engineer himself. I told him that one great central exchange for the City was simply an impossibility within the confines of the City, because it was impossible to lay down radiating from one centre in such streets a sufficient number of tubes to carry the circuits which would probably be required.

3440. In order to meet that difficulty, and these circumstances, what did you propose?—I proposed to him to establish eight telephone exchanges situated at points in the periphery of the City, and when he suggested that eight points were not as good as one, I explained to him that it made no difference if there were eight exchanges at eight points in the City in place of eight exchanges in eight rooms in one house. He saw the force of the argument, and he asked the City of London Electric Lighting Company (of which I was then the engineer), in laying down their system of mains for distributing electric light, to put in tubes which they might call their spare tubes, or whatever else they might be used for, but, at any rate, to put in tubes in the same trenches in sufficient quantity to meet a possible future demand in the event of the Commissioners of Sewers approving of their spare tubes being used in that way. I may say he entered into similar agreements with all the electric lighting companies in London for the use of any spare space they might have available in their systems.

3441. Now, we have been told by several witnesses that this electric lighting company surreptitiously laid down tubes. The matter has been described to us as something that was done in an underhand and unjustifiable manner. Will you please let us have your version of the matter?—There was nothing whatever surreptitious in it, for I imagine the streets of London were never disturbed in the same way as they were during the winter of 1891 and 1892. There were miles of the streets of London then under the condition of excavation. Anyone going or coming could have seen the number of tubes that were being put in, and, moreover, a return of what that number was, was weekly, if not daily, sent in, not only to the engineer of the Commissioners, but also to Mr. Preece, of the General Post Office. I do not think there was anything surreptitious in that.

3442. I do not think the Post Office has complained of anything surreptitious, but witnesses and other bodies have spoken of it ("surreptitious," I think, is the word used), and you tell us that everything was done in the most open manner, and reported upon as done to the engineering authorities?—Of course the City of London authorities did not know, or could not say that these tubes were destined for the use of the telephone, but they were laid down as spare tubes, and the Duke of Marlborough, wishing to

Sir *Charles Cameron*—continued.

have power to use these, if permission could be obtained, secured that power for the Pioneer Company, which I have already referred to.

3443. He obtained a power?—Yes; from the Lighting Company.

3444. From the Lighting Company, subject to whatever rights any local authorities might have in the matter?—Quite so.

Lord *Stanley.*

3445. Were these extra tubes laid down only because of the agreement between the Duke of Marlborough and the Electric Lighting Company. Would they have been laid down if there had not been that request made by the Duke of Marlborough?—There was no agreement at the time the greater part of these tubes were laid down.

3446. We will leave out the question of agreement. Without the request of the Duke of Marlborough, would those extra tubes have been laid down. Without the understanding that apparently existed between the Duke of Marlborough and the Electric Lighting Company were these laid down?—Allow me to answer that question in this way: I was a very strong advocate when once the streets of the City were taken up for putting down all the tubes that could be got in. I know all about a company in New York that Mr. Preece has referred to, and I knew quite well that it was absolutely necessary once you did this work to get all you could in, as it never could be done again; therefore if my advice had been taken these tubes would have been laid down without any suggestion of the Duke of Marlborough, but there is no doubt he was very strong on the question of telephony at that time, and that he had in his mind the idea that they might be used for telephone purposes.

3447. And the directors of the Pioneer Company or the directors of the Electric Lighting Company did not act simply upon your advice, that they should put down as many tubes as they could at once, but they acted in consequence, as I understand, of a suggestion from the Duke of Marlborough?—I think that is the way to put it.

3448. The Duke of Marlborough was chairman of both companies, was not he?—He was not chairman of the Electric Lighting.

3449. He was a director of one and chairman of the other?—Yes.

*Chairman.*

3450. The authority to lay down the tubes was an authority given to lay down electric lighting tubes, was it not?—Quite so, under that Act.

3451. And confined to electric lighting purposes?—Yes.

3452. They had no authority to lay tubes for any other purpose than electric lighting?—No, they had no authority to destine them for telephones at that time.

3453. Therefore, so far as these tubes were laid and intended to be used for the purpose of telephony, it was outside their legal powers and without authority from the Commissioners of Sewers who had control over the streets?—Yes,

*Chairman*—continued.

so far as they were destined for telephone purposes.

Sir *Charles Cameron.*

3454. There was nothing illegal or improbable in thinking that the consent of the Commissioners of Sewers would have been subsequently obtained to the use of those tubes that were not required for lighting purposes for the purposes of telephony, and getting rid of overhead wires and improving the telephone service?—I have not followed the correspondence since between the Lighting Company and the Commissioners of Sewers, but it seems to me to be entirely in the interests of the City that these extra tubes should have been laid down once and for all.

3455. In any case, you had no reason to believe, and the Duke of Marlborough evidently had no reason to believe, that it would be impossible to get the City authorities to consent to the use of the tubes?—None; and I might add that the Lighting Company did not bind themselves entirely to give those tubes to anyone; in fact, a good many of them have been since used by the Lighting Company; they were simply a very large quantity of spare tubes laid down on a certain system to be useful for that purpose, if required.

3456. And that system, to a certain extent, designed so as to lend itself to the purposes of telephony, if required?—Yes.

3457. Further on that point. You are aware that the Commissioners of Sewers have had negotiation with other telephone companies regarding permission to use those tubes for the purposes of telephony. It was mentioned in evidence?—I daresay.

3458. You do not know it?—No, I think Mr. Somebody's name was mentioned as in negotiation.

*Chairman.*

3459. Mr. Harry Foster's name was mentioned?—Yes.

Sir *Charles Cameron.*

3460. It does not matter anything about the person, but if they have since then entertained the project of granting permission for the use of those spare tubes for telephonic purposes, it rather bears out the expectation of the Duke of Marlborough that they might have been induced to give that permission earlier?—I never thought that they would not be willing to give it on terms.

Mr. *Benn.*

3461. On this point of the tubes, may we take it that with the use of these tubes, or such tubes, your scheme for eight exchanges for the City could have been carried out?—Certainly.

3462. Without the abomination of overhead wires?—Yes. Every overhead wire in the City, except those that were in back streets, and the single wires connecting the individual subscriber, would have been brought underground.

3463. And there is no reason to-day why that should not be done, if these tubes were available?—None.

Sir *Charles Cameron.*

3464. I think it might be well here to take this: You have got a great deal of information about the costs of underground wiring, I believe?—Yes.

3465. In the first place, how many wires would your tubes have contained?—The length is 147 miles of 2½-inch tubing, and they are capable of holding 12,500 miles of twin wire conductors, and the whole of the tubes, as given in the annual reports of the City of London Electric Lighting Company (the published reports) is that which I estimated, namely, 69,000*l.*, or a little over 69,000*l.*

3466. Am I right in saying that the City of London Electric Lighting Company went to the expense of this 69,000*l.* for spare tubing largely in view of the proposal of the Duke of Marlborough to utilise these tubes for telephonic purposes, if permission could be obtained of the authorities?—I think I have said yes to that already.

3467. I wish to make it perfectly clear?—The cost of the twin wires would be 80,850*l.*, when drawn into these tubes, giving a total of 149,850*l.*, or 1,020*l.* per mile. Each twin conductor will then cost, when laid, 12*l.* per mile. This is actual work. It is not guess-work in any way. The underground conductor of each subscriber, assuming that the average would be 0·446 of a mile, will incur a capital outlay of 5*l.* 8*s.* 6d., if you have 28,000 subscribers, for which this system of tubing within the City is capable of making provision.

Mr. *Benn.*

3468. Twenty-eight thousand in the City only?—Twenty-eight thousand in the City only.

3469. That is to say, the square mile of the City?—Yes; within the square mile of the City you could provide for 28,000 subscribers, including a very ample service of trunk lines.

Sir *Charles Cameron.*

3470. Will you repeat the capital per subscriber?—The capital outlay would be 5*l.* 8*s.* 6*d.* I add to that for overhead work (to continue each conductor overhead into the subscriber's office) the sum of 1*l.* 14*s.*; the equipment and fitting up of the subscriber's stations, 4*l.* 10*s.*; the share of the cost of the exchange, 2*l.* 10*s.*; making a capital outlay (that is cost price, and without engineering profits or general charges) of 14*l.* 2*s.* 6*d.* per subscriber in the City of London.

3471. Do you happen to know what has been given as the cost elsewhere?—£16. 16*s.* in Glasgow, and 55*l.* Mr. Preece gives in London.

3472. Your figure is 14*l.* 2*s.* 6*d.*?—The difference between us cannot be entirely attributed to engineering profits, general charges, and so forth, but there is a very considerable difference between his estimate and my figures, which are founded upon facts. Now, might I go on about these eight exchanges?

3473. Yes?—These eight exchanges, each of which would have 3,000 and odd subscribers for the City itself, would be capable of serving subscribers outside the periphery of the City to a distance of three-quarters of a mile. I should estimate

Sir *Charles Cameron*—continued.

estimate on the north and about half-a-mile on the south of the river, so that there is the nucleus of a system in existence which ought to serve 50,000 subscribers, taking the area outside the city of, as described. I say the "nucleus" because the tubes outside which would be laid much more easily than they could be laid inside in the streets of the city have not yet been laid, but they could be at the same price.

3474. And that without any increasing difficulty of working which is entailed by crowding everything into one monstrous switch-board?—Well, that is a question which Mr. Preece has described to you, but I think he has omitted one or two points and exaggerated one or two others. I do not regard there being any difference between what I have said before, having 28,000 subscribers in eight rooms in one house and having them in eight exchanges at different parts of the city; in other words the difficulty of numbers in an exchange is subject to other laws besides those mentioned by him. It is a question entirely of the sub division of the demand by having a difference of tariff, what might be called original tariff.

3475. Just to make the thing clear, will you please look at that map on the wall representing Lancashire and West Yorks, and let us consider how that is worked. You have Liverpool, Manchester, Bootle, Bradford, Burnley, Preston, Leeds, Sheffield, and a number of other towns; if those towns were all closed up together it would give you something very like London, would it not?—Yes, if you could squeeze them all up you would have something like London.

3476. And if London was broken up into bits and spread out in that way you would have what exists on the map?—Yes, something like it.

3477. And if you had London spread out as is the case with the different centres on the map you would have something very like what you propose?—Yes.

3478. Will you please tell us how it is worked: Supposing a man in Liverpool wishes to subscribe to the system of Liverpool he simply has the Liverpool list, does he not?—Yes.

3479. If he wants to communicate with Sheffield, Leeds, Blackburn, Burnley, Preston, Manchester, or Salford, he pays a toll?—Or he pays a larger subscription as they do in Berlin.

3480. He pays a larger subscription as they do in Berlin, or as they do in this country all over the provinces, he pays the toll?—Yes, he pays either a toll by message, or by talk, or a larger subscription.

3481. But as a matter of fact the arrangement that is adopted by the Telephone Company, certainly in Scotland, and I have no doubt over this area, is that there is an exchange which for a subscription serves a certain small area and which serves an area as wide as trunk lines can carry it purely on the toll system. So that if you had London subdivided in the same way and brought together and made one big London, you could quite well work it without any change in the acknowledged system of telephony, and the understood system of telephony by small charges for limited service and tolls for any expansion of the service desired?—Yes, particularly if London had been laid out originally for such a system of working.

3482. And if your proposal had been adopted, it could have been worked quite well on that system?—I have not the least doubt of it.

3483. And a person in a given district, having his business chiefly concentrated in that district, would under your system have paid a small subscription to a local exchange, and under one arrangement or other, either by tolls or modified subscriptions (but I take it by tolls because it is an understood arrangement), he would have been able to communicate wherever he wished?—Yes.

3484. And without any more inconvenience than under the present system?—Certainly, and with very increased convenience to the work of the exchanges.

3485. With very increased convenience to the work of the exchanges and at a very much reduced price?—Certainly, because his standing charge would be a minimum charge. I might also say there is no reason why in addition to the toll system there should not be a time-meter system.

3486. I merely wish to make clear the toll system because the toll system exists?—Yes.

3487. But there are other methods which could be adopted; will you explain, for instance, the time-meter system?—There is no time-meter system at the present moment. Invention has not reached such an extent as to complete or perfect such a thing, but there have been various suggestions, and if invention was as strong as it might be made by competition, or if the demand was as great, I have not the slightest doubt that Mons. Mercadier, of Paris, would long ago have produced a time-meter which would resemble any other ampère hour-meter, and would register the time during which the telephone was in use, which could be taken down monthly and charged for just in the same way as your gas is charged for.

3488. We were told by Mr. Preece the other day that at Buffalo they pay a certain amount, or charge, I think, 70 dollars, and so much a conversation after that?—Yes.

3489. That conversation could be registered either by booking it at the time, as is done here, or by an automatic register?—Yes, or by an automatic register, either by talks or by time.

3490. I believe a difficulty has been raised as to the trouble that would be inflicted on the Post Office in connection with the adoption of any such system; would any additional trouble be necessarily inflicted?—Do you mean as regards the tariffs?

3491. No, not as regards the tariffs. The tariffs are laid down, but I understand it has been objected that if there were two or three companies working in a town, the Post Office would require to have a number of different lists, and have an immense lot of extra work entailed upon them?—But for the amalgamation between the National Company and the New Company the Post Office would have had to have worked with two Companies in London. It says in the prospectus of the New Company that the National Company "has entered into an

Sir *Charles Cameron*—continued.

an agreement with this Company by which it is provided, among other things, that the subscribers on the one system shall be able to communicate with those on the other system." There was an evident intention of having two systems in London when that was written.

3492. But you are aware that the agreement between the telephone companies, and the Post Office contemplates that and makes provision for terminal charges?—Yes.

3493. But the point that I wished to bring out was this: The Post Office at the present moment, and whether there were two or 10 companies in one district, would be given, not a list of names which it would have to look up, but a number in the place to which the message was being sent; is not that so?—Yes. I do not think that Mr. Preece was quite impartial in what he said on that subject. I do not know whether I can waste the time of the Committee by looking it up now, but in describing the inconvenience he said that, amongst other inconveniences, there would be, if the Post Office was connected, firstly, with systems under the control of different undertakers at each end of the trunk line, and, secondly, if they were connected with several systems, or more than one system, in the same area at one end of the trunk line, and he described one of those inconveniences as having to be in the possession of a large number of lists. Now, the Post Office need have nothing to do with the lists of the undertakers of the various telephone areas. They will simply have to put a trunk wire through from one system to another system. It will be the owners of the exchange system who will be responsible to their subscribers for numbers and lists, and so forth, and for the identification of individuals. and I do not see that would cause the least inconvenience to the Post Office. As a telegraph engineer, I quite realise the inconveniences of having to communicate with a large number of superintendents instead of, as Mr. Preece described, with one central superintendent in London (that goes without saying); but that it is an insuperable difficulty, or one which a great department like the Post Office cannot overcome (considering the enormous number of authorities with which they now do communicate, the railways who maintain their wires, and so forth). I extremely doubt; in fact, I am quite certain they could overcome it.

3494. In order that the Committee may thoroughly understand the present system, let me ask you this: I forgot to ask you one or two details in connection with the working of the toll system. On messages, we will say, transmitted by a Glasgow subscriber to Edinburgh, Greenock, or wherever it might be, you are aware that any persons subscribing to an exchange can become a trunk-line subscriber on depositing 1*l.*, I think, with the telephone company?—I believe that is the system in the case you have mentioned; in fact I know it is, because I use it.

3495. And the trunk-line subscribers have the right to speak through anywhere where the telephone can carry him on payment of certain tolls which are charged against him and booked by the telephone company?—Yes.

3496. The toll is charged against him, and an account is sent in at the end of the month, and they have got the security of his deposit to ensure the payment of their charges?—Yes.

3497. That is exactly what would occur, I presume, with trunk messages?—I think the Post Office requires always to be paid in advance for everything it does?—Their stamp system is very easily managed.

3498. There would be no more difficulty in working that than the Press Association arrangements where prepayment is not made with every message. You do not know that?—No, I do not like to make a forecast even of how the Post Office is going to work this enormous trunk-line system which they are destined to work; I think it is one of the greatest responsibilities in connection with the telephony of the future.

3499. Well, they are going to work it, and the question of whether there is or is not competition will not interfere with the difficulties of the task they have already undertaken?—I do not think their difficulties will be increased by multiplying the undertakers with whom they have to deal.

3500. And at the present moment trunk-line charges are booked and charged against deposits?—Yes.

3501. And that is a system that could work very well with the Post Office under an arrangement made with the telephone companies, who would be the collectors of and pay the tolls to the Post Office?—Yes.

3502. There is no difficulty about it?—No.

3503. You have told us about the provision that was made, and generally about your system; that you are against concentration, in favour of limited service and cheaper service and tolls; you have told us a number of advantages of the system; are there any others you would wish to bring out before we part from that?—I think one of the great advantages of having what you may call original tariffs is that you will immediately find that telephony will reach a class (and a class of work) which in this country it has never touched, even if it has got as far as the fringe of it.

3504. Are you referring to agricultural work?—Not only to agricultural but to domestic, to small tradespeople and so forth.

3505. I think we had better hold over that until a later portion of your examination. Now you have shown us how the understanding arrived at with the Duke of Marlborough led to the laying down of tubes with an intention that they should be used for telephone purposes?—Yes.

3506. The new company was launched, was it not, largely on the strength of an agreement entered into with a large number of telephone users?—I should rather say that the Pioneer Company was launched because under the conditions of the Pioneer Company nothing was foreshadowed to indicate that practically (I do not like to use a strong word, but I may be permitted to use it) faith was going to be broken not only with the public, but with those thousand and odd subscribers who were ready to come in under the twelve-guinea tariff that was promised.

3507. I will ask you to put in the prospectus of that company, but if you will please read those portions of it which are not purely matters of capital, but which are germain to any agreement

Sir *Charles Cameron*—continued.

ment the projectors may have entered into with telephone users?—The Pioneer Company was formed for the purpose of providing necessary capital for the New Telephone Company; I do not think they made any more promises.

3508. There is no reference made to an agreement?—Not in that one, and it was too late to make a reference to the agreement when the new one came out.

3509. An agreement did exist; will you please tell us what you know about that agreement. In the first place I will ask you this: there were a certain number of dissatisfied users who formed themselves into an association?—For the protection of telephone subscribers.

3510. For the protection of telephone subscribers; can you give me the date; you will see the date on the agreement?—The association, I think, was formed early in 1891; it became prominent; it canvassed freely in the City during the year 1891.

3511. It was registered as a limited liability company so as to give it a sort of status?—I believe so.

3512. And it made an agreement with the Duke of Marlborough's company; whether the Pioneer or the New Company I do not know, but you have got the agreement before you?—Yes, there was an agreement between the New Telephone Company and the Telephone Subscribers' Protection Association. I may say that the New Telephone Company was really in existence previously; it had been since 1885; it was resuscitated; and the agreement that was entered into between it and the Protection Association was as early as April 1892, which was shortly after the Pioneer Company came out.

3513. It is revealed as an existing contract in that prospectus?—Yes.

3514. Is the prospectus you are quoting from that of the Pioneer or that of the New?—The New.

3515. You have got a contract revealed as an existing contract in that prospectus with the New Telephone Company; would you please read us the contract?—This is a newspaper cutting, and the description says the "agreement runs as follows."

3516. Yes, it was signed by Mr. Haig, who was the secretary, I believe?—Yes, it is signed by three gentlemen. That cutting gives the whole position of affairs in December, 1892. At that time the New Company had come out (the Duke of Marlborough having in the interval died), and had practically been handed over body and soul to the National Company.

3517. And the telephone users felt themselves "sold"?—Aggrieved, yes.

3518. One of the secretaries of the company, Mr. Haig, and Mr. Hastie and Mr. Jackson published a letter in the "Times" giving the terms of the agreement?—Yes.

3519. If you will give us the agreement it will be subject to correction if there is anything inaccurate in it. I want the Committee to hear it?—"An agreement made the 25th day of April 1892 between the Association for the Protection of Telephone Subscribers (Limited), hereinafter called the 'Association,' of the one part, and the New Telephone Company (Limited), hereinafter called the 'Company,' of

Sir *Charles Cameron*—continued.

the other part. Whereas the company has been incorporated to carry on the business of a telephone company, and is about to establish a system of telephonic communication in the metropolis; and whereas the company is desirous of obtaining the assistance of the association in procuring subscribers to the company's system aforesaid; and whereas the association has decided to give such assistance upon the terms set out in this agreement: Now these presents witness and declare as follows:—(1) When and so soon as the company, *i.e.*, the New Telephone Company, shall have established its system aforesaid, and shall be in a position to supply telephones in connection with that system, the association shall, upon the request in writing of the company, use its best endeavours to procure as many persons as possible to allow the New Telephone Company's telephone to be put up at the expense of the company, and such persons shall have, at the expiration of a given time, the option of becoming subscribers of the company's system aforesaid, and upon the footing that each subscriber shall undertake to pay to the company a sum not exceeding 12*l.* 12*s.* per annum for the use of the telephone supplied to him, and of the privileges incident to subscription to such system upon agreements for a period of one, two, or three years, at the option of the subscribers, such subscribers as aforesaid to number not less than 1,000."

3520. Do you happen to know at that time what the cost was?—The National was certainly not under 20*l.*

3521. And then how does it go on?—"In consideration thereof, the company shall, when and so soon as the association shall have secured such 1,000 subscribers, forthwith supply at the expense of the company to every member of the association only who shall require the same, directly or through the association, within three months thereafter by notice in writing to the company, a proper and efficient telephone connected with the system of the company, such telephone to be deemed a loan, and every such member of the association shall be entitled to the privileges of using such telephones and of exercising all the privileges incident to subscription to the system up to the expiration of the year's subscription of such member to the National Telephone Company (Limited); that is to say, for the year current when such telephone is put up by the company or for three months, whichever period shall be the longer, and every such member of the association shall be at liberty to terminate this arrangement at the end of the said year current or at the end of three months, as aforesaid, without any payment whatever," and so on.

3522. We will explain that; the meaning of that was that the New Company would give a greatly reduced service, that it would put its wires in on approval, that it would make no charge while the subscription to the old company was going on?—Yes.

3523. So that to all those subscribers who were at the time subscribers to the National Telephone Company, until they were free from the other telephone company, it really cost nothing?—That was the object of it.

 3524. Their

Sir *Charles Cameron*—continued.

3524. Their second telephone would cost them nothing, and they could then go on to the New Telephone Company on advantageous terms?—Yes.

3525. That was a very advantageous offer, was it not, to telephone users?—Twelve guineas.

3526. Yes, and I say it was a very advantageous offer to telephone users?—Well, one of the great features of the New Company was that they promised a twin-wire system at once.

3527. But, independently of that, they promised a better service than the old company; they said: "We will put up our instruments in your house on approval. We will not charge you anything so long as your old subscription is going on, and if you do not like us at the end, you can kick us out"?—I call those very good tactics for a competition; natural tactics.

3528. I am not talking of "a competitor," it was a capital thing for the telephone user, was it not?—It was a capital feature of the telephone in London, because the new system would have come into existence; but it never has done so.

3529. What I wished to bring out was that these gentlemen who signed and became members of the Protection Association made a bargain, which was of great value to themselves?—Unquestionably.

3530. What I wished to ask you was this: Was that bargain ever fulfilled?—I should like to say, not to my knowledge; but I feel quite certain that it never was.

3531. But, as a matter of fact, does not the letter go on to complain that the company was swallowed up through the advance of the monopolist company, and that the 1,700 people were left in the lurch?—They were left in the lurch entirely.

3532. By the opposition company, whom they were created to compete with, giving them such terms as induced them to allow themselves to be bought up?—I think what has happened in the last two years is clear evidence of it.

3533. Now, will you explain to us what did occur. When you were in the matter you understood that there was to be *bonâ fide* competition?—Entirely. Until the prospectus of the new company appeared I had not the remotest idea what was going to be done.

3534. And when it did appear it gave you an idea?—It did; it gave me a very considerable shock to think that anything could have been perpetrated of the kind.

3535. In what way did the prospectus lead you to suspect the intended amalgamation?—That printed correspondence which I have handed in explains that.

3536. A committee is always more ready to receive correspondence than to read it, therefore will you just give us briefly an explanation of it?—The best way, in the fewest words, and to save time, is to point to the constitution of the board of directors.

3537. The board of directors were, to a large extent, the same, were they?—Half are the names of those whom I heard had been retained to be the directors of the New Telephone Company, and, if the prospectus had come out with those only, no one would have ever thought anything about it. They thought that the policy which had been enunciated up to that date was to be continuous, but when the prospectus came out with four gentlemen's names who were directors of the National Telephone Company, I think there was but one conclusion to be drawn from it, particularly as the National Telephone Company had taken up a very considerable portion of the capital.

3538. The National Telephone Company had taken up a very considerable portion of the capital, and that was announced in the issue, was it?—Yes; 244,000*l.* of the capital was taken up by the National Telephone Company.

3539. Had the National Company any "say" in the Pioneer Company?—I cannot tell you. I do not know what happened behind the scenes.

3540. But it did not, ostensibly at all events, come to the front?—No.

3541. And the Duke of Marlborough's plea with which he went to the public was that he was going to bring in competition?—Yes; those letters are the strongest evidence of that.

3542. Will you quote some portions of the correspondence to show his position at that time?—I am afraid I did not come down with all my newspaper extracts.

3543. Have you any letters marked?—Those letters I have handed in are his letters, written apparently with the intention of excusing himself for what he had done. The previous letters of 1894 were those in which he forecast what was to come.

3544. I shall not pursue the matter about the Duke of Marlborough's letters, but we have got the fact that there was an agreement made to give a very advantageous bargain to a very large number of telephone users, and that that bargain came to naught. Now, would you please tell us, briefly, so far as you know them, the circumstances that led to the promise coming to naught, and how the obligation was got rid of. You have told us that the National Company subscribed largely to the new company?—Yes; of course, I can only speak as one of the public.

3545. Yes, that is quite right; but the result was, at all events, that the new company went into liquidation, was it not?—I do not know that I can say even that; I have heard that.

3546. We can get that from the National Company?—Yes.

3547. But, at all events, these promises of improved telephonic service, so far as you know, have never been implemental?—That is so.

3548. Now, you know something about the Manchester Company?—I was asked in 1890 to go to Manchester to inspect the overhead wires of the Mutual Telephone Company, which was then brought out in Manchester, and their system, particularly with reference to what might be called a little boycotting that was going on, it is very easy to do that with overhead wires, running wires, so that one shall interfere with the other, apparently accidentally; I went down to see how far either company was injuring the other, having been asked to do so by the Mutual Telephone Company. Then I became aware of the conditions of their position, their capital being one hundred thousand pounds (100,000*l.*), and that they had called up and spent

Sir *Charles Cameron*—continued.

spent about 36,000*l.* in establishing a system in Manchester for which they charged rates to non-shareholders of 6*l.*, and 5*l.* to shareholders; and there were about 2,500 users of that system, as against, I think, about 2,800 users of the National system.

3549. In fact the thing was pretty equally divided?—Yes, about 2,500 and 2,800 were the figures; the National charged 10*l.* a year.

3550. Had it come down in its charge?—I think it had to come down to reach the 10*l.*; but at the time I was examining the system those were the rates of subscription.

3551. The Mutual was entirely a twin-wire system, was it not?—Entirely.

3552. Was the National?—I believe not; but I do not like to answer that as a matter of fact.

3553. As a matter of fact, do not you know that the "Mutual" was got up to provide the twin-wire?—Yes, but when you ask me as to an absolute fact, I do not like to answer unless I know. You can get an absolutely accurate answer on that from the National Company.

3554. As a matter of fact, the Mutual was twin-wire and quite a recent invention?—Yes.

3555. The price was 5*l.* for a shareholder and 6*l.* for a non-shareholder?—Yes.

3556. Did you ever see any of the users of that line?—No; I was not placed in communication with them.

3557. Did not you happen to hear of any complaints as to difficulties in getting on to other places?—No.

3558. Do you happen to know anything about the Newcastle system?—Only from my acquaintance with what the Post Office has done, which is perhaps more intimate than that of the general reader; I know what has been done there from reading the evidence besides.

3559. You know there is competition there?—Yes.

3560. But you have never heard of any complaints of difficulties brought about by competition?—Never; on the contrary: on that very question on which I have taken the trouble to inquire, the contrary has been the case. Those subscribers who wish to join an exchange—whichever exchange it may be—join the one which their business relations are mostly in communication with.

3561. Do you find the Newcastle people on the Post Office exchange complain that they are shut off from anything because they are not on the National?—I would rather not answer that question.

3562. Have you heard?—No, I have not; I cannot give you any information as to complaints.

3563. When you were in Manchester did you happen to make any inquiries as to that?—Yes. There I heard of the complaints of the National subscribers which had led up to the establishment, or largely led up to the establishment, of the "Mutual" with twin-wire and improved system to meet the defects of the existing system.

3564. Did you hear of complaints on the part of "Mutual" subscribers as to their being debarred from communication with others?—No, none; nor had I the opportunity of inquiring.

3565. You did not inquire?—No.

3566. Now can you tell us what became of the

Sir *Charles Cameron*—continued.

"Mutual,"—by the way did the "Mutual" pay its way, do you know anything about its finances?—No.

3567. It was ultimately bought up, was it?—Yes, it was a transaction of which I had no personal knowledge.

3568. But it became transferred?—It became transferred and I understand is now being worked in Manchester as a separate system.

3569. Are you aware as to whether the subscribers still enjoy the privileges of cheap subscription?—No; I cannot answer that question; I am not in a position to answer that.

Sir *James Fergusson.*

3570. Do you say the "Mutual" is now being worked in Manchester as a separate system?—I understand it is so; that the two net works are not made into one. The company will be able to tell you what steps they have taken towards making them into one.

Sir *Charles Cameron.*

3571. Now we will come to your proposals with regard to rural telephony; you have spoken about the benefit of cheap urban telephony for the small user, such as petty tradesmen, and so on?—Yes.

3572. And you claim that this system of limited service and tolls would enable such a cheap system to be given in towns as would bring telephony perfectly within the range of all these petty users, is not that so?—Yes, sir; I am a member of the Committee which had to deal with the question of light railways, and I had to deal with a very large area of purely agricultural districts, and even when the question of light railways, as being an assistant to agriculture was first mooted, it struck me that the telephone almost should take precedence of it.

3573. That is in the country you are speaking of?—In purely agricultural districts; and with that view I took a sample county, a purely agricultural district and made an estimate of what the cost would be to establish call offices at every hamlet and village in that county, connecting them with the market towns, and, of course, at the market towns the natural consequence would be connecting the exchange offices with the postal telegraph offices. But this was more with a view of meeting a want such as I have suggested. I have taken great pains to inquire amongst people of the farming class, the agricultural salesman class, the rural tradesman, and the persons who are the backbone of agricultural life. The idea has been new to them of being able to speak from village to village, it has never, perhaps, in most cases, been even suggested before; I have taken great pains to go into the incidents of their daily life, to see whether it would be worth while to pay, say, twopence for a conversation from their own village to the market town, or from their village to the next village; and the circumstances which occur to anyone living in the country, under which such assistance might be of use, are very many.

3574. Will you please just mention a few of those instances?—The village tradesman very often

Sir *Charles Cameron*—continued.

often wants to be saved going into the market town for his small purchases. The small village shopkeeper could very often sell direct to the villager on better terms if he could communicate with the supplier in the market town. The farmer would often not move produce, especially of a perishable kind, to the market if he could speak to the salesman, and ascertain the condition of things either that morning or anticipate it the day before. The question of the services of stallions and bulls all over the country is a rather difficult one, because they are frequently being moved without the knowledge of the necessity of the movement, and to be able to speak for 2*d.* to the person whose name is on the list, or whoever it may be, is a very great convenience. The migration of labour from one farm to another is a matter as to which it would be worth while for a man from time to time to pay 2*d.* to be able to speak to his bailiff about, and so on. I think anyone who lives in the country, and goes into the daily wants of farmers, as I have to do, can realise the large number of uses to which this could be put; and when the calculation comes out, which I have made, I think it strikes one as being feasible.

3575. Now will you please tell us what you estimate would be the cost of establishing these rural telephones?—I have taken, as I have said, one county in which there would be 29 exchanges.

Mr. *Grant Lawson.*

3576. May I ask what county?—Suffolk. There would be 29 exchanges and 450 call stations in villages and hamlets. The mileage of pole line (I assume that the Post Office where they have a pole line would be glad to let the way-leave on those lines) that would have to be erected would be 1,008, and the mileage of wires, including trunk wires between the exchanges, would be 4,031. Then I have taken a figure for the interest on capital, sinking fund, renewal funds, daily maintenance, and so forth—the capital cost of the system, which is 49,305*l.*, and all the outgoings would be 12,881*l.*, and if the charge was 2*d.* for every talk (within the county, say) you would earn that. If the talks brought in a gross revenue of, say, 2*s.* (it is 1*s.* 11*d.* really) a day, that would be 12 talks on an average.

*Chairman.*

3577. Per subscriber?—Twelve talks on an average at 2*d.*

Sir *Charles Cameron.*

3578. On the Exchange?—On the Exchange. Then I might remark, sir, as regards these figures, they are very much below the rates on which either the Post Office or the Telephone Company would calculate the cost of construction.

3579. How is that; why? Will you explain why you venture upon taking a lower cost?—Well, I have (perhaps wrongly, but I think fairly) assumed that this would be undertaken by the County Council—that is to say, that if they could borrow 50,000*l.* and it could be shown to them that it would be a real advantage to agriculture,

Sir *Charles Cameron*—continued.

and if there was no charge on the rates it would be worth their while to establish such a system. I considered they would have to pay nothing for wayleaves, and that the wire and insulators would be of the like kind which I have used and which are well known on the Continent and used for telephones very largely in Switzerland; I call it permanent military telegraph material; it is very strong, very permanent, and for all such purposes would last as long as the much heavier and more solidly constructed lines of the Post Office. The Post Office necessarily have a sample of construction which they properly do not depart from.

3580. Can you give the charge per mile for the construction?—£30 per mile of pole with one wire, and 5*l.* per mile for each wire in addition, but I distinctly wish it to be understood that I do not provide in this case for a metallic return.

3581. In fact, there is no necessity for that in this rough work?—I cannot agree with Mr. Preece's evidence given before the Committee that no system of telephone is worth anything (I do not remember his exact words, but to that effect) without the twin-wire or the metallic circuit. There are a large number of miles of wires in Berlin and in the larger towns in Germany where there is no twin-wire; they never think of it.

3582. At all events it would give something to the rural districts which would be as good as, until very recently, has been provided for towns?—Yes, better. Take Norway: groups of farmers there have provided themselves with lines and exchanges at their own expense, and it comes to far less than I have put down here.

3583. Have you got the actual figures?—No, I have not, I worked the cost out approximately, and it comes to something very small; I could hardly credit it. Their poles cost them nothing, for one thing. In a county like Suffolk there is plenty of timber grown on the spot. The Post Office very rightly use creosoted imported timber for their poles, not only for the sake of uniformity but for other well-known reasons. There is the difficulty of getting the large Scotch fir. I believe any county council would get sufficient poles for such a line as this at 8*s.* and 9*s.* a-piece.

3584. Without going into details as to material and so on, that is a very strong argument, is it not, for giving licences to county councils?—That is my view. One hundred and twenty county councils are in existence; they are not represented, and I think if they were really roused to the possibilities of this being an assistance to their constituencies, I do believe that some of them would embark in it, and find it would be a very great advantage to them, and the cost not fall on the ratepayers if my calculations approach correctness.

3585. You do not wish to shove this down the throat of any county council?—No.

3586. But if one or two county councils who are not served at present with any telephone system chose to take up this, you think they should get the licences and be encouraged to do so?—I do.

3587. You

Sir *Charles Cameron*—continued.

3587. You are in favour, I presume (in fact you have told us so), of competition in towns, and I suppose you have no objection, have you, to that competition being placed in the hands of town councils as well as county councils?—Not the least. From what I have seen of local authorities, both in connection with telegraph experience and electric light experience, they are perfectly competent to get the very best assistance and to pay for it and to use it for such purposes.

3588. You are frequently in Glasgow; you see what the municipality has in hand there?—Yes.

3589. Do you see any reason why they should not manage a telephone exchange?—I know a good deal about tramways, as I daresay you know, sir, and in the way in which they manage their tramways they prove their skill.

3590. You know also a good deal about electrical tramways?—Something.

3591. And you possibly have heard that both in Edinburgh and Glasgow projects for electrical tramways have been opposed by the telephone companies on the ground that they would interfere with telephony?—Or produce induction. That is an electrical question.

3592. It is not the electrical question, but a practical question, that telephone system being in the hands of another company or another corporation to that which possesses the electric light system, the water system, the tramway system may lead to practical difficulties and clashings of interests. Are you not aware that there has been such?—No, I can quite well understand one reason why Glasgow wants to work its telephones, because it will be such an immense assistance to them that they will work them in conjunction with other things they undertake.

3593. It struck me that you rather underrated the convenience to the farmer of the system of rural telephones that you sketched out. It would, as a matter of fact, put every farmer who was on it in communication when the postal trunk lines are put on, with all the rest of the kingdom?—Unquestionably. The answer of course is: But you are not going to put up a twin wire system. My answer is: You would put twin wires up in any case in which it was desirable to communicate outside the county system; there is no difficulty.

3594. In every case would it not be perfectly easy for the Post Office to repeat the message?—Certainly; it would be a feeder to the postal wires, unquestionably.

3595. And there could be no difficulty in having such a trunk wire charge as would pay for repetition at the junction of the single wire?—None whatever.

3596. Repetition is a constant feature in telegraph work, is it not?—Most of our telegrams are written on perhaps four to eight pieces of paper before they reach us.

3597. And with the ideas under which the telegraph department acquired the trunk lines, sending out telephone messages, letters by express messenger, and so on—in fact, working the Post Office and telephone system together it would bring your rural subscribers within touch, of the whole kingdom, would it not?—I firmly believe that the Post Office policy of recouping themselves by charges is an excellent one, and I do not think that they need lose.

3598. Did you in your calculations take any account for the postal royalty?—No, I did not do that on purpose, because after the attitude the Government has assumed in referring to light railways in the Queen's Speech, I presume that for the first four or five years they would not impose any royalty on an undertaking which was partly in the interest of agriculture.

3599. Even if they did, you say that 12 conversations per exchange would only make a difference of 10 per cent., is it not so?—It would make 10 to 20 per cent. they might have to pay.

3600. To pay the royalty would only require two or three more messages?—That is all. I might say as to the administration of a county and all the police and road work, that I have spoken to more than one of the chief constables and surveyors on the subject of the assistance that such a system would give them, and the saving in the operations of the county council, and they quite allow that the figure I have put (I think I have not mentioned it to you) of 360*l.* a year is not an excessive figure for the county council to pay for these facilities; I have not put that in as against the 12,000*l.*

3601. Do you wish to make any remarks about the objections that have been raised to systems on the property of different undertakers being connected with a trunk line system?—I think it was Mr. Clare who said that he did not see how the telephone system of the country would work if systems under different companies or authorities were at each end of one trunk line. That was his first objection. Well, it is hard to understand why it should have suggested itself to him as a difficulty. It is quite true that the authority over the exchange system at each end of a trunk line would probably have to be dealt with locally by the local post office and not by corresponding with the Post Office in London; but in the case of a telephone system belonging to the Manchester Corporation and a telephone system belonging to the Liverpool Corporation, I do not see what difficulty there can be to the Post Office, who own the trunk lines, in adjusting the communication between those two. There need be no squabbling over it. Then again he spoke of having two systems of exchange over one area. Well, sir, an immense deal has been made of that; in fact, it seems to me to be the key of a large amount of the evidence which has been given up to now. It is quite possible, in my view, that it might be an advantage to have more than one telephone exchange within the same area. If there was anything like the multiplicity of subscribers that this invention ought to have brought into existence, these (what I might say again are) capillaries of the system, would require more exchanges. Small exchanges in the future will, we hope, deal with the daily wants of the people living in those areas. The people for whom naturally the long-distance speaking is required, are quite in a minority; they are not the majority who will use the telephone in the future, and the fact of there being a second exchange in

Sir *Charles Cameron*—continued.

the same area may actually, as I say, be a convenience; that is to say, the persons who use the one exchange will use it for their social and domestic daily work, and if they want to get outside that area the Post Office will readily give them the same facilities that they will give to the other exchange system that is occupying the same area. And suppose there is a want of intercommunication. Let us assume, sir, that what was intended in 1892, when the New Telephone Company's prospectus was issued, was that there should be two great systems in London. Let us assume that that had been carried out: those two companies foreshadowed that they would work harmoniously and put their subscribers through to one another, and as to the complication that has been described it is very doubtful whether it would exist. For instance, if I was on "A" system, and I wanted to speak to a subscriber on "B" system, I should know, as a matter of course, that it would cause a definite and certain delay. We are told that in Stockholm they do not mind two hours' delay; that they have to put down their names on a list to get through to certain people. It shows that if that admirable system that exists in the States of instructing your subscribers was carried out here you would find they would soon understand the delay when they required to speak to somebody on the other system.

3602. Is it not rather an argument against the efficiency of the present system that such a very simple expedient, and such a very obvious expedient, advocated by a gentleman of such very high authority as Mr. Preece, has never been adopted by the existing companies with a view of facilitating the operation or working of the telephones?—I only say that I do not think telephony has ever had a chance in the United Kingdom. That is my only answer to that; it has been blighted from the very beginning in every way. One instance does not occur to me in which it has received, not only from its promoters but its users, the encouragement you might expect in any industry of the kind.

3603. Is the result that it is very much less developed in this country than in any other?—The public do not know anything about it; it is only to them a nuisance as a rule.

3604. You think London is especially badly off in that way?—Especially it is a much more difficult problem to tackle; and I should like to see it tackled by the one body I believe capable of tackling it, that is, the Post Office. If they began now, and the country gave them four years to do it, I think we should probably have the most admirable system in the world in London.

3605. You think, and I think there is a great deal in your view, that London stands on a different basis to the rest of the country, that there is an amount of capital invested on telegraphs in London that is not to be found elsewhere, and that it is even doubly and trebly important to protect the telegraphs in London against competition from the telephone system without, of course, interfering with the efficiency of the telephone system?—Yes.

3606. Do you think London should be differently treated to the rest of the country, and that there, if anywhere, the State should at once

Sir *Charles Cameron*—continued.

intervene and buy up?—My only hope that the telephone in this country will reach the position that it ought to have reached, and of its recovering from the depression and blight it has been under, is that the Post Office will this year or next year, or within three years, decide to take over the whole system in London and remodel it from beginning to end.

3607. Do not you think it would facilitate greatly any proposal for purchase if the Post Office were to adopt a policy of giving licences under conditions that would absolutely prevent their being bought up by other people?—But is not that a *sine quâ non*, that there is to be no more purchasing or selling of licences?

3608. That would be, of course, if the State took the monopoly?—There would be no more licences then.

3609. There is not one word of that in the agreement; the agreement does not at all interfere with the rights of the Postmaster General to give any licences he likes. You have not looked at that portion of the agreement?—My feeling or belief was that no more selling or buying of licences was to be allowed.

3610. Selling or buying of licences?—Yes; or absorption, or whatever you like to call it.

3611. This Committee has to consider whether the policy of granting competing licences should be recommended. Of course I imagine every member of the Committee would be against granting any licences that could be bought up?—Yes; that I quite foresee.

3612. What I say is this: does it not appear to you that it would greatly facilitate the purchase of the entire system, or a portion of the system as it exists in London, if the Post Office reverted to a policy of giving competing licences?—Well, I have read all the answers that have been given to similar questions to that you have now put to me, sir, and it is entirely a question of what the systems will be worth at the end of 16 years. If there are two systems, as has been said, within one area, the Post Office would have the option of buying either one of them, but I doubt if the public would be so well served in this case.

3613. In what way?—Whether you have one licence in an area or two, as the 16 years approach completion an inevitable starvation will begin.

3614. But have you any idea, from your experience of telephony, what may be the development of telephony in 16 years?—I can form no conception of what it would be, except under two conditions, one under unlimited competition, the other absorption by the Post Office; then I hope it will reach what it should be.

3615. Assume unlimited competition: Is it not a fact that proposals have been made (and I think even Mr. Preece has looked carefully into that) for telephoning without the aid of wires at all?—Well, Mr. Tesla discussed that with me two years ago, and although it is not within scientific probability even yet, he referred to a condition of things which might bring about the possibility of communication between points on the surface of the earth without wires or any conductor at all.

3616. What I merely wished to ask you was this: whether the recent advances of science in the

Sir *Charles Cameron*—continued.

the matter of telegraphy and telephony are not sufficient to justify one in saying that at the end of 16 years the machinery that was up to date 10 years ago, or that may be even up to date to-day, may find itself utterly out of date?—Unquestionably. You mean the ordinary plant now used for telephony may be all obsolete?

3617. Yes?—There are improvements in telephones now in existence which I think will, perhaps, replace all the existing telephones.

3618. And what you would like to see is an ample field for competition?—Yes, in default of purchase by the State.

3619. As you are an expert on this subject, I should like to put this to you: You heard Mr. Preece's evidence, and there are certain points on which you do not exactly agree with him, and certain points on which you would wish to corroborate him; will you please let us know the points on which you disagree with him?—I have not got his evidence here; but there is one thing which both he and Mr. Lamb referred to, and which I have alluded to already; that is, the increased capital cost on a telephone exchange in proportion to the increase of subscribers. I do not catch that Mr. Preece gave what that was, but I think his reference to it even is an exaggeration of the facts. It is quite true that the unit of a telephone exchange is two subscribers; and for every additional subscriber, up to 10,000, or whatever it may be, so-called complication and labour increases, but its cost is nothing like in the ratio that was suggested, and it has not yet approached the position which has been suggested of dislocation, and I should hope that it is not likely to do so. I do not know why it was put forward, except as a reason for saying that we have got too many telephone subscribers in the United Kingdom already, and do not want any more, because badly designed and worked telephone exchanges are said to be dislocated by the large number of subscribers. If that was the reason for which it was put forward it seems to me to be almost a hopeless view to take of things. It is a hopeless view if you are going to put every one of a limited number of subscribers within 630 square miles in communication necessarily with every other subscriber, with only a few exchanges; but then that is such a wrong view to take of the whole question.

3620. On the system you propose that difficulty does not arise in the least?—Not in the least.

3621. You disagree with Mr. Preece as to the date when the value of the twin-wire was known—that is merely theoretical?—Yes, entirely.

3622. As to the question of iron for twin-wires and the small systems, you have not told us about the distinguishing of voices, but you have told us about the truly rural areas?—Mr. Preece has done great work in connection with long-distance telephony, and, of course, it is infinitely the most attractive, because it is the most scientific; but I think where he uses his experience in connection with that and applies it to all telephone exchange systems, it is an exaggeration, because while all these conditions that he speaks of as being fulfilled by twin wire, copper wire, and so forth, all hold good in the extremely intricate and difficult question of long-distance telephony,

Sir *Charles Cameron*—continued.

they do not hold good in the small local areas, and connections to the exchanges that I am thinking of, and which I suggest will be the most numerous.

3623. Is the wire you propose to use in agricultural exchanges iron?—No. I should use phosphor bronze.

3624. You have told us your views about the cost of underground twin-wires in pipes, and you gave us estimates?—I did not give you mere estimates; I gave you actual figures, at least as to that part which was most difficult to estimate was actual cost.

*Chairman.*

3625. That is the actual cost of putting these extra tubes in?—Yes, sir.

Sir *Charles Cameron.*

3626. You disagree with Mr. Preece; you have some criticisms to make on Mr. Preece's evidence as to the number of operators except under conditions to be described; what do you want to say about that?—I do not exactly disagree with him, but I do not think he has put it (shall I say) scientifically; he has left out the factor of time. It is all a question of speed. He says, I think, that one trunk operator could only work five trunk wires. Well, that is a question of time. If your telephoning is to be made costly by multiplying your operators, you must pay for it. The question is, whether there is not a very large constituency, even amongst the commercial world, who are ready to accept a less speed and pay less for it. The fewer trunk wire operators does not make the operation itself more difficult; it only makes it a slower operation, and that affects the whole of the operations from beginning to end.

3627. This is very much like the proposal that you made when we were both younger, nearly 20 years ago, before the Post Office (Sir James Goldsmid's) Committee for deferred telegraphs?—That is another question where the factor of time came in.

3628. And you laid before us an elaborate memorandum showing how deferred telegrams at a cheap rate might be worked and the Post Office wires utilised for those operations?—Yes. What we now call the "load factor" of the wire was high for parts of the day and very low for some hours of the day, and the idea was to get a uniform "load factor."

3629. As a matter of fact, your ideas upon that subject have been adopted in several of our colonies and dependencies?—In India and the colonies, yes.

3630. There is another point on which you and I found ourselves in accord at that time; that is the diminution of the price of telegrams. If I rightly recollect, you were the only Post Office witness who insisted upon the feasibility of that; you were one of them, at all events?—I do not say that; but that deferred principle I believe to be as sound now as it was then, and I believe it to be sound in telephony and everything else.

3631. You think that for long-distance telephony especially it would come in?—No; I am not disposed to cheapen long-distance telephony by making it slower during the busy hours of the

Sir *Charles Cameron*—continued.

day; but I think the Post Office might well consider a plan for charging less over their trunk wires at certain hours than they do during busy hours.

3631*. That is what I speak of; a man wishing to speak after five o'clock at night say, or three o'clock, after the busy hour, whatever it might be; you would have a great many people who would pay a shilling rather than three shillings, if they could get a cheaper rate by waiting a little?—Yes, who do not mind waiting.

3632. That is one of your suggestions?—Yes; if you have the deferred message, what I always called the second-class message; there were first-class and second-class messages. Might I go back to add to my estimate where you asked for the figures to follow the estimate I gave for telephoning the County of Suffolk? Assuming that the County Council were to go to the Post Office and ask the Post Office to put up a system to do this work; at the Post Office private wire rates, as published in the Postal Guide, the County Council would have to pay 24,000*l.* a year to the Post Office; a little over; they would have to pay 24,062*l.* a year to the Post Office as a rental for that system. I think that rather emphasises either that their rates are very high (and, comparing them with the German rates, they are very high) or else that my estimate is wrong.

Mr. *Grant Lawson.*

3633. What is your total estimate?—I say if the County Council earns 12,000*l.* a year on that system, nothing comes on the ratepayers. If they went to the Post Office to put that system up and rent it to them, they would have to pay 24,000*l.* a year for it.

Sir *Charles Cameron.*

3634. That is all you wish to say with regard to that?—Yes; and also I have left out in this calculation all private subscribers to the telephone exchanges that might be brought on in such a county; I leave out the profit on that in my calculation.

3635. Will you put in the New Telephone Company's prospectus?—Yes.

(*The prospectus was handed in.*)

Mr. *Benn.*

3636. You have told us that you have devoted special attention to London?—Yes.

3637. And that you got out a plan for the telephone service in London showing a hundred exchanges?—It did; approximately there were a hundred.

3638. For how many subscribers did you provide in that plan?—About 2,000 was the maximum which was then thought of, 2,000 subscribers per exchange; it was thought that was the maximum they would ever reach.

*Chairman.*

3639. For the City that is?—No, that is for the whole of London, the whole of the Metropolis.

Mr. *Benn.*

3640. So that in your plan for 100 exchanges you really provided for 200,000 subscribers?—Yes, 200,000 subscribers.

3641. You anticipate no difficulty, then, from such an enormous multiplication of subscribers?—No, because those subscribers would be classified.

3642. What is the present total for London, do you know?—I have seen it in the evidence.

3643. Under 10,000?—Yes, it is a very small figure.

3644. Do I understand you that this system of multiplying exchanges would largely minimise the difficulties suggested by Mr. Preece in his evidence?—May I preface my answer to that by saying my plan then was, in 1880, in the infancy of telephony, and I do not now advocate that number of exchanges, because I think that the conditions have changed, and my description of how I would provide for 50,000 in connection with the City on eight exchanges is a better description of what might be done.

3645. Then I will pass to that; you think that eight exchanges would be workable for the City?—I do.

3646. But at present there are in the City how many?—Four or five; I cannot tell you the number. I have no plan of the present system; there may be six or seven.

3647. The point I want to get is this: whether you are in favour, instead of this excessive centralisation which is said to be difficult and eventually prohibitory in cost, of rather multiplying your exchanges than centralising your system?—Yes, because it admits better of classification.

3648. You know probably that that line has recently been taken in Chicago with the service there?—I heard Mr. Preece's evidence.

3649. You do not know personally; you have not been there lately?—No.

3650. Then if the local authority, say, founded a system on the lines of that which you advised for the City, what do you think would be the number of subscribers which could be served without any great increase in cost under your system?—What I describe as having been already provided for in the City is 28,000 subscribers divided amongst eight exchanges.

3651. That is so?—If you regard the intercommunicating wires between those exchanges as trunk wires, irrespective of the distance between the eight points, that is only on a concentrated scale what the Post Office is now devising for much larger areas in the kingdom. There, I think, as Sir Charles Cameron pointed out, it means eight towns squeezed up into one town, with shorter wires between them.

3652. You gave the Committee some figures which you described as actual facts with regard to that City service, and after adding the several items you brought the cost out, I think, at 15*l.*, or under 15*l.*, a subscriber?—Yes, under 15*l.* per subscriber.

3653. The 5*l.* 8*s.* 6*d.* for the tubes is really an actual outlay; that is arrived at without any uncertainty?—Yes.

3654. And the other figures are based upon well-known cost of the subsidiary appliances?—Yes,

Mr. *Benn*—continued.

Yes, they are rather higher than the cost that is generally given.

3655. Now, I want to ask you whether, supposing the same facilities were given by local authorities outside the City area where subways do not exist; as you are aware, subways exist in a great many streets now: supposing like facilities were given by the local authority for the laying of similar tubes to those in the City, could you tell the Committee what the cost per subscriber would be outside the City area. Indeed, may I ask you this: Is it likely that it would be the same?—You observe that this cost is on the assumption that 28,000 subscribers would be provided for. Roughly, I have assumed that in an area of three-quarters of a mile outside the City you might expect 22,000 subscribers to make the whole 50,000, making 6,500 on each exchange. If the tubes were extended outside the area of the City and laid down in the same way as those that were laid down inside the City, they would cost in proportion more according to the diminished number of tubes in each trench. That I have not worked out in detail. I have a table which shows the cost of every yard of tube according to the number of tubes in each trench; that is to say, beginning at 1 up to 25; but I have not worked it out for you as regards all those streets which would have to be served outside, radiating from the margin of the City.

3656. But can you give the Committee any idea, based upon your experience in the City (which is actual experience), of what the cost of a similar underground service would be, say, for the area of the County of London?—I have not worked that out in full; I have all the data for doing it; it is a very big undertaking to do it.

3657. I did not know whether you could give any others than the City figures?—No; I only gave those I knew of.

3658. So far as the City is concerned, supposing it reached 28,000 subscribers, the difference between your estimate and that of Mr. Preece is something like 840,000*l.*?—Yes, it is very large indeed.

3659. So that what the City loses in the matter of capital outlay is represented by that figure; that is to say, supposing the City authorities decide to use these tubes (suppose they secured a licence from the Postmaster General), and were able to obtain them and provide the necessary fitments, your statement is that it would only cost for 28,000 subscribers 15*l.* a subscriber?—Yes, that is what it would cost them.

3660. The whole thing?—The whole thing.

3661. Comparing that figure with the figure which was given to the Committee by Mr. Preece, we get a difference of 840,000*l.*?—Yes, quite that. I do not know in the least how Mr. Preece made his figure.

3662. Now I want to come to the whole of London with regard to this financial aspect, which is very important. You told the Committee something about the tariff necessitated by the "mutual" of Manchester?—Yes.

3663. Manchester is not unlike London, is it?—Well, I have been over the roofs of Manchester and London pretty much, and they are very similar in some respects, except that in London they are rather older.

Mr. *Benn*—continued.

3664. The "mutual" was very successful, I think, as to dividend?—I have been told so. I do not know.

3665. The tariff was 5*l.* and 6*l.*, I believe?—£5 for shareholders and 6*l.* for non-shareholders.

3666. Can you tell the Committee whether, in your judgment, a similar enterprise to that of the "mutual" could be worked for "Greater London" at a similar tariff to a profit?—No. I always put the unit of tariff for London at 8*l.*; that has been my figure ever since 1884.

3667. £8 is your unit of tariff for London?—That is not for all London.

3668. No, that is for greater London, outside the City?—No, it is not for communication all over London. It is the unit of the region—London being divided into regions.

Lord *Stanley.*

3669. As was distinguished between Liverpool and Manchester?—Yes.

3670. You would have to subscribe 8*l.* for the West End, say, and 5*l.* for the East End?—Unless you lived in both you would not.

3671. Yes, surely?—If you want to go beyond Liverpool you must pay something for it.

3672. If you wanted to go beyond the City you would have to pay more than for speaking just within the area of one City exchange?—Perhaps I did not catch Mr. Benn's question to me. He asked me: Could not London be done for 5*l.* Then I said: My unit of subscription for London—the lowest subscription—would be 8*l.*; but it did not mean that that subscription would include the eight City exchanges.

Sir *Charles Cameron.*

3673. I think I might clear up the matter. Your proposed rate of subscription to your district, which would be analogous to Liverpool, would be 8*l.*?—Yes, the one exchange.

3674. Not the squeezed-up district, but the one exchange would be 8*l.*?—Yes.

3675. And a person would have the right to get wherever he liked, not only in London, but all through the country, on payment of through tolls extra?—Yes.

Mr. *Benn.*

3676. For instance, suppose you had an Islington region, that that region was the size of Manchester, and you had a tariff there of 8*l.*, if a subscriber desired to get into communication with another region it would not involve another subscription of 8*l.* a year, would it?—No, not another subscription of 8*l.* a year.

3677. If he wanted to go further afield he would have to pay for the convenience in some similar way to the payment made to the Post Office for the use of the trunk wire service?—Yes, according to his classification, either by toll for the time or by time for the talk.

Lord *Stanley.*

3678. Would it be cheaper than the present system?—Yes, if you choose to confine yourself

Lord *Stanley*—continued.

to your own area you would only pay 8*l.* a year; you pay for what you get.

3679. Suppose you do not confine yourself to your own area, but take in places all over London, it would not be much cheaper then than the National Company charge for all over London?—I think it is too little for the 630 square miles; I think I should charge more than they charge now, and meet the wants of an enormous number of people who only want to speak to a few, with an 8*l.* local subscription and tolls on talks beyond.

3680. But at a higher rate than the charge at the present moment?—If you are a subscriber to one system you pay the minimum charge.

3681. I understood you to say it was cheaper?—London would be divided into several regions.

Mr. *Benn.*

3682. You described that to the Committee as your capillary system, the country system?—I used that expression more with regard to the whole kingdom.

3683. The New Telephone Company proposed to deal with the whole of London?—They did eventually, because they made agreements with all the electric light companies who had spare conduits to hire those conduits from them; but I had only intimately to deal with the City part.

3684. The tariff they put out was for the whole of London?—Well, it was very vague what they proposed to give for the twelve guineas; there is no doubt they intended to give the whole City, but I think they would have revised it as to giving the whole of London before they had done. I think the uniform tariff system is altogether wrong for a place like London.

3685. That is to say, the "daily wants" people—those who only desire to communicate within a certain district—should have the opportunity to do so at a cheap rate, without bearing part of the burden of those who desire the greater luxury of either the long-distance service or of more extended communication?—Yes.

3686. If such a system were devised by the County Council of London, these tubes utilised and the streets used in a similar way, can you suggest why that should interfere with the proposed partnership between the Post Office and the National Telephone Company?—No, I cannot.

3687. Am I right in assuming that, if the County Council did that they would become equally an agent of the Post Office as the National Telephone Company is the agent of the Post Office now. My point is this: that if this privilege were granted to London to satisfy, say, the wants of the little tradespeople, "the daily wants people," as you have described them, is there any reason why that system should not be established without interfering in any way with the proposed arrangement between the National Telephone Company and the Post Office?—If I understand your question rightly, none whatever.

3688. I want you to understand it, because it is rather an important one?—The "daily wants people" have not been touched yet.

Mr. *Benn*—continued.

3689. And are not likely to be touched by the present high tariff of the National Telephone Company?—No.

3690. So that if the Postmaster General denied London, or any similar city, this privilege, he would be denying that which would not interfere, other than in a financial way, of course (I know that shares might fall, and that sort of thing, but other than in a financial way, it would not interfere) with the other system running side by side?—No; unless he took it up himself, for the next 16 years, certainly.

3691. Quite so; unfortunately we have not arrived at that. Then as to intercommunication; supposing such a system did exist, and communication was made with the Post Office system, you see no difficulty in arranging that?—None. The Post Office can have wires to their Post Offices through any organisation.

3692. Indeed, I gathered from one of your answers that such a system might prove very useful as a feeder to the Post Office system?—Originally the telephone was always spoken of as a great feeder to the Post Office system; then came the time when it was supposed to rob the Post Office system; now, I think the time is coming again when it will become a great feeder, because really the telephone system of this country only touched commercial business that the Post Office had been doing; and there is no doubt it did detract from that.

3693. Should I be right in describing long-distance telephony as a convenience, mainly for wealthy firms, and local telephony as rather a boon for the smaller tradesmen and worker?—Quite true.

3694. And in your judgment is it not rather unfair that the smaller class—the needy class—should be punished in the matter of telephone rates in order to contribute to that part of the service which is mainly used by wealthy firms?—It depends on the rate to which you are alluding. I think it is very hard on the small daily user of the telephone, the person we have been speaking of, that there should be conditions under which there is no inducement to establish cheap local telephones for him, and certainly there has been no inducement hitherto. I do not see why he necessarily should be saddled with the cost of the long-distance telephony, because that ought to pay for itself by the charges which are to be paid for it.

3695. Then you regard the alteration of the policy of the Post Office, that is to say, the attitude which is now taken up against competition, as rather disastrous for the local authority?—I think it is unpatriotic. I think the Post Office ought to be above all that sort of thing. It may give them a little more trouble, but they are prepared to take any amount of trouble from my knowledge of them.

3696. You think probably that the telephone service ought to be extended for the benefit of the people rather than to support the revenue of the telegraph service?—Certainly, in these days.

3697. I only

Lord *Stanley.*

3697. I only want to get really at the question of laying the extra pipes in the City, and I am not quite sure I understand the way first of all that leave is obtained; did you ask leave of the Commissioners of Sewers to lay these pipes?—Perhaps I had better answer the question by telling you the conditions under which the pipes were laid at all in the City. They were laid under an Electric Light Provisional Order; that was the power for taking up the ground.

3698. Under the Electric Lighting Act?—Yes.

3699. Therefore, under that Act, power was given to lay pipes for electric lighting?—Yes.

3700. In addition to that, pipes were laid which it was given to the Commissioners of Sewers to understand were for electric lighting, but which, under an understanding, were eventually to be turned to another purpose?—I would except from your question, if you will allow me, the "given to understand" and "under an understanding," because that is not the way in which I describe it.

3701. I am sorry if I misrepresent you; I want to get at exactly how it was those additional pipes were laid; I cannot understand that the Electric Light Company would lay down so many additional pipes unless they had a reason for so doing; what was their reason for so doing?—Their reason was to fill their trenches with all the spare pipes they could.

3702. Surely filling spare trenches with extra pipes must have cost them a large amount of money?—Yes.

3703. They must have put them there for some financial result?—No doubt they are a very valuable asset.

*Chairman.*

3704. Were these pipes suited for electric light purposes?—Yes; there are many electric lighting cables now drawn into them.

3705. Were they similar to the tubes that were being laid for the electric light?—Yes, the high tension tubes were all similar; the low tension tubes, for merely house to house distribution, were not similar, and the arc light tubes were similar, but not same size, and the number of tubes between every point was absolutely known to the authorities.

Lord *Stanley.*

3706. The Clerk to the Commissioners in his evidence said this in answer to Question 1987: "Many questions are involved before that consent could have been given, because in the first place the tubes were laid surreptitiously, without the knowledge of the Commissioners at all." Can you explain that?—No; I cannot. The Commissioners' engineers visited the trenches every day; I do not know why that should be called "surreptitiously."

3707. I want to ask you one other question; you spoke about the various exchanges at present being laid out by haphazard; on what system were you going to place your exchanges?—Dividing the City, or dividing the Metropolis into prospective areas and putting an exchange into each as the demand in each area arose, not putting an exchange there (*describing*), and then running out wires a mile or two miles, or wherever may be in the neighbouring areas; I think that is intelligible.

Lord *Stanley*—continued.

3708. Quite so; you would have had eight exchanges which would have comprised, so to speak, the map of London without any regard at first as to whether on each of these there had been an equal amount of demand?—Quite regardless of that. It is the same as in electric light distribution; you must estimate your probable consumption or your probable demand and work up to that. If your estimate is bad, you have spent too much money; if it is good, you have not.

3709. Can you tell me at all what the amount if charged for each exchange would have been?—You mean the subscription?

3710. The subscription.—The figure I have given of 8*l.* being the minimum for the subscriber to one exchange; if he wanted to go beyond he must pay more.

3711. Then suppose an exchange, we will say, took in this side of the river, and there was another exchange on the other side of the river, for that 8*l.* you would only be able to speak in certain area, and on this side of the river?—Yes.

3712. And if you wanted to speak to the other side of the river you would have to pay a toll?—Either a toll or an increased subscription. Might I just add that the whole thing I have partly described is a very complicated thing; at least, it requires very considerable description with the map of London under your eye; it is very detailed, and the way it is done requires an immense amount of detail.

3713. What I want to get at is, whether the subscription is high in proportion to the subscription now charged considering we have the whole of London for the present subscription?—I think I have said just now what I have to say upon that.

Mr. *Benn.*

3714. But for the 28,000 subscribers in connection with your exchanges in the City, your tariff would be 8*l.*?—For each of them.

3715. That would cover 28,000 subscribers in the City?—No, only one of the exchanges; if you wanted to get to the whole City you would pay more.

Sir *Charles Cameron.*

3716. Putting aside the extra subscription and confining yourself simply to the service for the tolls, your limited service and tolls, assuming that to be done, any additional cost involved beyond the initial 8*l.* would depend entirely upon the messages you wanted to send?—Yes.

3717. Exactly, and that service would not be confined to the different districts in London, but would extend over the whole of the United Kingdom all over the trunk lines?—Yes. It is the big question of regional tariff over again.

*Chairman.*

3718. The 8*l.* in the City would enable you to speak to one-eighth of the subscribers within the City?—Yes.

3719. If you wanted to speak to any one of the other seven-eighths, then what would happen?—You come on a fresh classification with a fresh toll, not to each one necessarily; I should propose to classify the subscribers with one increased subscription for all the eight exchanges.

3720. What subscription would your system result in if a subscriber in the City wanted to subscribe to all?—I think it is quite an exceptional thing what the people in the City system ought to pay to be able to communicate with 28,000; if you ask me I could not say what the figure ought to be right off, because it is entirely a question of the value of the service given.

3721. Would it be eight times eight?—Oh, no, nothing like it. I should think if you doubled it for the whole of the City it would be a very fair increase.

3722. £16; that is about the national charge now?—About.

Lord *Stanley.*

3723. That is for the City alone?—That is for the City alone.

3724. Could you tell me at all what idea you had of the rate of charge or toll that you intended to charge?—The Berlin tariff is a very fair one; it varies from 25 pfennige to 50 pfennige per talk of five minutes.

Mr. *Grant Lawson.*

3725. You said 8*l.* in the City, and 100 exchanges in the whole area of London, did you not?—I said that originally the question arose as to laying out London, and that my view was, in 1880, that London would require 100 exchanges. I said that was quite a question of modification. I have also said, I have never designed the whole of London in detail with the whole of the connections for such a system as that.

3726. You think 80 to 100 would be desirable?—I do not think 80 to 100 would eventually be too many.

3727. If a person had to speak to any other person in the City you would double his charge?—That is on the City exchanges.

3728. If he wanted to speak to any of the 80 exchanges in London, paying that would mean 10 times the amount?—No, because London would be divided, besides the City, into six regions.

3729. That we have not heard of?—It would take a long time to describe six regions in each of which there would be a uniform tariff, the City tariff being an exceptional tariff.

3730. Then there would be a great variety of scales, would not there?—There would be some variety, not very great, when you come to work it out.

3731. I just want to ask you a question about the position of these tubes, though I do not think it is really very material; you have, at present, 69,000*l.* worth of tubes?—I have not got them, I am glad to say.

Mr. *Grant Lawson*—continued.

3732. Are not you connected with the City of London Electric Lighting Company?—No, I am no longer engineer to the City of London Electric Lighting Company.

3733. Then I will not trouble you about it; you said the great difficulty about telephoning London was the City?—That is putting the lines underground.

3734. The same difficulty, I suppose, would occur in Glasgow?—Not nearly to the same extent.

Sir *James Fergusson.*

3735. Why not, please?—Because under the surface of the streets of the City there is now no space left; there was very little space when I put the last tubes under; and in Glasgow and all the provincial towns there is much more space. It is not a question of being more costly to lay them underground in London than in Glasgow; it is the want of space.

Mr. *Grant Lawson.*

3736. But you recognise, with your great experience, that there is great difficulty, in a place like the City of London, in arranging a telephone system?—Enormous, I think.

3737. So you are not surprised that there have been some complaints?—Not the least; I only wonder there have not been a great many more.

3738. The National Telephone Company, I think, did not call you in, did they, about laying out London?—No.

3739. The Duke of Marlborough's company did?—He came and consulted me personally, privately entirely; it was a matter of friendly conference. He knew I had gone into it, and he came and asked me my views.

3740. So you naturally would prefer your own system to the one the National Telephone Company adopted?—I do not think they have adopted any system; they have no system.

3741. You prefer the system you laid out to what they are doing?—Yes, I prefer regional rates and regional arrangements.

3742. On the principle of every father preferring his own child?—Yes, exactly.

3743. If there were more exchanges for the message to pass through it would necessarily take more time in passing?—It would; Mr. Preece gave us the time, a minute in each exchange.

3744. There would be more operations?—I think it would take longer than a minute, probably.

3745. There would be more operations or connections, would not there?—Yes.

3746. That would require more labour?—Yes.

3747. Therefore it would be more costly?—Yes, according to the time it was done in; it is only governed by time.

3748. And being more costly I suppose the capital would have to be increased?—Yes.

3749. And there would be more to buy out if they had to be bought out?—I have not gone into the question of buying out.

3750. There would be more material if you had a number of exchanges connected one with another

Mr. *Grant Lawson*—continued.

another?—Of course you have got to consider two conditions, two exchanges alongside one another and two exchanges super-imposed upon one another; and I do not quite realise the result. If you were to buy the two exchanges super-imposed upon one another it would be a costly purchase; I should not like to buy them, I think; or if there was one better than the other I should buy it and not buy the other

3751. I think your calculation about the City of London was for 50,000 subscribers, was it not?—28,000 for the City was the number provided for by those tubes I spoke of, and I roughly calculated, taking the density of the population and the area, that there might be 22,000 within three-quarters of a mile outside the periphery of the City.

3752. Your scheme would be laid out for something like 50,000 subscribers?—Fifty thousand for the four square miles it comes out—four to five square miles.

3753. If you did not get 50,000 subscribers there would be a waste of capital?—Then your capital expenditure, instead of being as low as I have put it, would be so much more per subscriber, but not more in proportion, because you would not draw in the wires, you see; you put in the tubes, but you do not draw the wires in.

3754. It would necessitate an extra charge on the subscriber who did come in?—It would.

3755. You said that having a number of companies on the system of telephones would not cause very much inconvenience to the Post Office in the matter of making up the books of the subscribers?—Yes.

3756. Have you considered the position of the call office; would not a call office have to have each list of subscribers on each telephone company?—A public call office?

3757. A public call office?—I do not think that that is necessary.

3758. Supposing I went into a public call office and wanted to speak to someone in Manchester, the operator would have to find out his number?—I believe you might just as well say you would require a directory for every town in the country before you addressed a letter. You will probably know the number of the subscriber you want to call. When the telephone reaches that position of things, that every subject should be able to speak to every other subject of Her Majesty by telephone, the Post Office will not remember our numbers for us; we shall be bound to remember the number of the subscriber we want to communicate with, just the same as we remember his address.

3759. You take it that a man who goes into this call office must have, somewhere at home, the list of subscribers all over each system?—He must know his friend's telephonic address; that is, his number—his number, say, at Manchester—whatever it may be.

3760. If there were two systems at Manchester he would have to have the two Manchester books?—If the Post Office is required to have at every call office the exchange list of every town in England it does not matter whether they have to have two or one; it is equally complicated.

3761. At present they only need to have the National Telephone Company's books?—You

Mr. *Grant Lawson*—continued.

have only reached 70,000 subscribers at present.

3762. Suppose there were municipal telephones established by 20 or 30 municipalities, you would want the books of those 20 or 30 municipalities, too?—No; the Post Office would be very unwise to keep a library in every call office; if it was necessary they would have to have that, whether there were two companies in one area or one.

3763. If there were two systems, say, in Glasgow, the municipal system and the National Telephone system, the Post Office would have to know which of those systems a subscriber was on before they could communicate with him?—I think not; why should they? The Post Office would simply receive the number that was required to be spoken to, and they would pass that number on.

3764. Yes; but where to?—Will you give me an example?

3765. Say from London to Glasgow?—You go into a call office in London, and you want to speak to your friend in Glasgow.

3766. To my friend in Glasgow, where there is the municipal telephone and the telephone of the National Telephone Company?—I see now your point; you mean that the Post Office would then have to provide two subscribers' lists of Glasgow instead of one.

3767. Yes?—My answer is, that the Post Office should not provide any; you know the address of the people you are writing to in Glasgow, therefore you ought to know the telephonic number, and which system the person you wish to speak to in Glasgow is on. That is perfectly reasonable.

3768. I can get a directory of Glasgow at a club, but I could not get all these telephone addresses?—You may have them in the club just as you have guides of the country.

3769. About the New Company; that was not a benevolent association, was it; it was a perfectly commercial speculation?—As far as I know.

3770. And if it could not have paid on the rates it suggested, I suppose it would have had to raise the rates, or break?—Yes; that is the corollary, is it not?

3771. Yes; there was nothing to stop them from raising their rates, except the agreement with these 1,700 people?—No; there is nothing to stop two people who are competing agreeing not to compete.

3772. You are not here, I understand, on behalf of those 1,700 people, or any of them?—No, nobody.

3773. Their rights under the agreement are protected by law, I suppose, if they have any rights?—Yes. I am one of them, but I have never attempted to go to law about it.

3774. Now just a word about rural telephones, a subject I am interested in; did you in your calculations make any allowance for the difficulty of persuading the agricultural population to adopt a new system; did you allow anything for lectures and technical education, and so on?—No, certainly not, in my estimate.

3775. Not for educating a county council in telephony?—No.

 3776. The

Mr. *Grant Lawson*—continued.

3776. The Post Office, I suppose, having experts at their command, have made some estimate by which they charge for their private wires; it is natural to suppose they would, is it not?—Yes, and it is a very full estimate.

3777 And it is 24,000*l.* a year they would charge?—£24,000 they would charge for that system: yes.

3778. But you think Suffolk could make a profit at 12,000*l.*?—No; 12,000*l.* would pay their expenses.

3779. Twelve thousand and eighty-one pounds, you told us, would be their expenses?—Their expenses.

3780. If they did not get the 12,081*l.*, it would come on the rates?—It would.

3781. A great deal of that money would be initial cost, would it not?—I can go into the detailed estimate.

3782. It is a fact that a great deal of it would have to be laid out at once by the county council?—You mean, having made up their minds to establish a system in the county, the rate at which they would proceed in constructing the system?

3783. Yes?—If I was their adviser in the matter, I should recommend them to lay out the 50,000*l.* and take their chance.

3784. And of its falling on the rates?—No, of its paying its way.

3785. Do you understand how rates are raised in a rural district?—I do.

3786. I know you are an authority on light railways?—I beg your pardon. I do not understand your question, perhaps, about rates.

3787. I was only going to call your attention to the way that rates are raised with the object of showing that if it falls on the rates it falls on the people who do not get the advantage; you have shown us one or two classes who would be benefited, the owners of bulls and stallions, for instance?—Yes.

3788. They are not rated on their bulls and stallions?—No; still, they contribute to the rates eventually.

3789. The village shopkeeper is only rated on the value of his shop?—Yes.

3790. Whereas a farmer is rated on his whole business or his whole holding; so that if there was a loss and it fell on the rates, it would fall more on the farmer than on the village shopkeeper?—Yes.

3791. Do you imagine the ordinary agricultural labourer would use the telephone system?—I do. I know many intelligent agricultural labourers who would use it if they could speak for 2*d.* into the town.

3792. Would you like to get up a private company in Suffolk to run a rural telephone?—That is not in my line.

3793. I should not subscribe, but you do not think it would be a success as a private enterprise?—No, because they would have these extra charges in connection with wayleaves which all private enterprises must encounter.

3794. Then you would authorize the county council to take wires where they liked quite free of charge?—They can do that pretty well where they please except upon private land; and in the case of private land they would be in a better position to get the wayleave than others.

Mr. *Grant Lawson*—continued.

3795. You know the Postmaster General demands a guarantee for any extension of the telegraph service in an agricultural district?—Yes.

3796. I suppose that is because there is a possibility that the telegraph may not pay its expenses in the particular place?—It was the Treasury in the first place who insisted on the guarantee. A large number of rural post offices were connected up at a loss in the early days of the telegraph.

3797. Where they are not paying now, and there is a guarantee, I fancy that if the telephone was introduced they would pay worse in the competition?—I have not been asked any question as to the interference with the existing rural telegraph lines.

3798. Will you tell us what is your idea of what would be the effect; do you think the competition would reduce the telegraph revenue much?—From the rural offices it would, I think.

3799. That loss would fall on the nation?—I propose that it should be compensated for by an eventual toll; an eventual royalty on the licence.

3800. Which should come out of the profits of the county council business, or would diminish those profits?—No. Am I right in assuming that there is a very benevolent intention in legislating about light railways, or that there is a very benevolent intention abroad towards agriculture at the present moment?

3801. That is a question I am afraid I cannot answer for the Government?—I think the loss on these rural telegraph offices would be very small.

3802. You know that the county council are not the road authority, except in a very few cases?—The district councils are the road authority; but I cannot for one moment suppose that they would act at variance with the county council in a matter of that kind, because it would have to be done by the suffrages of the district council; they would not undertake it unless the district council approved.

Mr. *Tully.*

3803. In London at the present time a subscriber has to pay 20*l.* a year subscription, and he is joined to a system which has 6,000 or 8,000 subscribers, I believe?—I understand that it is 15*l.* and 20*l.*; there is one subscription of 15*l.* and another of 20*l.*

3804. And 8,000 subscribers are the total he is connected with?—I believe it is under 7,000; I have the figure here, but I do not recollect it.

3805. You stated that 16*l.* would be your maximum price for any London subscriber who wished to subscribe to all the exchanges?—I did not say that; I was asked the question: If the subscription was 8*l.* to one of the City exchanges, what I would suggest should be the charge to the remaining seven; and I think that doubling the subscription would be reasonable.

3806. That

Mr. *Tully*—continued.

3806. That is 16*l.*?—Yes, I did not say to all London, to all the Metropolis; I said to one region of the Metropolis for 8*l.*

3807. Would you multiply it by eight if they wished to speak to the eight exchanges; speak over the whole system in London?—No, I am having in mind London divided into seven regions: one City region, and six regions external to that, and when I was asked as regards the City, I proposed to double the rate within the City area if you went beyond one exchange.

3808. That doubling the rate would entitle the subscriber to speak over the whole seven exchanges?—Yes.

3809. How many exchanges?—Eight exchanges, I believe; beyond that they would pay by toll.

3810. At present the 16*l.* entitles the subscriber to speak over the whole system to 6,000 or 8,000 subscribers?—Yes. I do not anticipate, with the present 20*l.* which is paid for the commercial use of the telephone, that there is any intention to increase that amount with the number of subscribers that are connected up to the National system. I know of no intention on their part to do that. They will be able to tell you what they propose to charge when they have 20,000 subscribers.

3811. You do not know whether their price would be lower or greater?—I cannot tell you what the alteration will be, or what they propose to do for the 20*l.*, as their number of subscribers to the London system increases. I do not know whether they propose to alter the subscription. I do not recognise that as an increased facility myself; but you will be able to get that better from them.

3812. You are aware that the evidence given by the Post Office experts here is that the country is losing largely every year through the telephone business cutting away the telegraph revenue?—I think I read it in the evidence.

3813. And at present farmers and agricultural labourers have to bear their share of that loss?—So far as it affects Imperial revenue, yes.

3814. Can you tell me up to what year the patents this company got originally last; when did they expire?—I do not like to answer you offhand. There were two patents, the Bell and Edison's patents; the time was either imminent or past in 1890; but you will be able to get that from the officials of the National Telephone Company.

3815. Then it was in 1892 that this agreement was drawn up, that gives them the practical monopoly for the whole country?—At the end of 1892, December 1892, the fusion was practically accomplished between the two companies.

3816. Do you think the Corporation would compete with any chance of success against the company with this large capital of 6,000,000*l.*?—Certainly.

3817. Do you think the Corporation could compete?—Quite.

3818. You do not think that if the company reduced their prices in one area to fight the competing Corporation, they would increase their prices in other areas?—I think it would be very bad policy to do so; they would kill themselves; with 16 years only to live, they would have an earlier death, that is all. You see the patents are out. One of the great things that upheld their competition was the possession of those patents; everybody was afraid.

3819. They had a practical monopoly by getting possession of the patents up to the end of 1890?—That was the crux.

3820. And now they have a practical monopoly for the rest of the term, no opposing licences having been granted to municipalities or county councils?—Yes.

3821. Can you say, has not each subscriber who subscribes at present to the National Telephone Company in his subscription to pay some quota to pay the dividend on this very large capital?—If you will pardon my saying so, you are asking me a question that I cannot answer you from knowledge, because I do not know the state of their accounts. Of course, on the face of it, it is obvious that the subscription must be kept high in order to pay dividend on capital, which has accumulated step by step through all these years up to 5,000,000*l.*, without a corresponding value in plant to repay it or a value in service rendered.

3822. Therefore the Corporation that would not have to pay dividend on capital swollen to that extent could supply naturally at a cheaper rate?—They could supply at cost price.

3823. So that the effect of competition by the Corporation would be to reduce the price to the people in that area?—Either reduce the price or give greater efficiency.

3824. And you think that the only effective competition against this company in local areas would be the competition of either the county council or the Corporation?—I do not know that I should say that the local authority are necessarily the best competitors. I should simply say, competition by whatever body the Postmaster General and the local authority, agreeing together, should say should have it, whether it was done by the local authority or a private company. I do not want to admit that I think that one is better than the other, that is all; I think one can do it just as well as the other.

3825. You think there is not any difficulty in competition in local areas?—No.

3826. No difficulty sufficient to prevent the Postmaster General issuing licences if he thinks it wise?—If he thinks it wise in the interest of the locality, I do not see any difficulty that would follow.

Mr. *Snape.*

3827. In 1884, in the paper you read at the Society of Arts, you said that the telephone service could be supplied at a charge of 8*l.* per subscriber per annum, I think?—Yes, in a London region.

3828. What number of subscribers had you in your mind at that time in expressing that opinion?—I am afraid I cannot recall the paper, but I know I had regional tariffs in my mind, and the number of subscribers within a region was a figure which few people at that time could estimate, because it is the ultimate probable number you have to deal with.

Mr. *Snape*—continued.

3829. So that you limit your region of subscribers to 3,500, which would be one 8*l.*?—I do not know quite whether you are mixing up two things in my evidence.

3830. You suggested a system of 28,000 subscribers divided into 80 exchanges?—That was if it was confined to the City area only.

3831. That would be 3,500 per exchange, or region; I suppose you mean the same thing by those terms?—Yes.

3832. For one of those regions or exchanges you make a charge of 8*l.*?—Yes, one of the exchanges, not one of the regions. The City region I call one region; that would have eight exchanges in it.

3833. In 1884, was it in your mind to limit the 3,500 subscribers in this charge of 8*l.*?—No; my view was not to limit it to a given number of subscribers, because at that time no one could say that 3,500 was too many or too few for an exchange; but it should be limited to the region within which there would be the operations of one exchange.

3834. Have you modified your view since then so as to lead you to say that if you pass a subscriber, or give to a subscriber the right to communicate with other exchanges than his own, you would double the charge?—I only mention the City as a case in which I think it would be fair to double it.

3835. You would not apply it to others?—I do not think it is uniform.

3836. I think you said the total outlay in that region would be something under 15*l.* per subscriber?—Yes.

3837. The capital outlay?—Yes.

3838. Does that include the cost of wayleaves?—The wayleaves would then be reduced to a minimum; in fact it is hard to say that they would be likely to come to anything.

3839. You have not taken that into account?—They are not taken into account, because the whole of the wires for which wayleaves are usually charged would be underground; there would be only what you might call the ends of the wires that would still be overhead. Might I just correct something I said: that was the capital expenditure; of course, wayleave is revenue expenditure; wayleave is chargeable to revenue.

3840. I want to ascertain if you can inform us what would be the charge upon the revenue under these circumstances per subscriber per annum. What would be the cost of working the system after this capital outlay had been made; can you give us any information on that point?—In other words, how much of the 8*l.* and 16*l.* would be earned?

3841. No, not so much how much would be earned as how much it would cost to earn?—I do not like to give you an answer on that.

3842. But that is a very important matter for us?—It is.

3843. On what data, then, have you made the calculation you have given us?—The profits would be a very large percentage on the outlay.

3844. On what data have you arrived at it?—I have not given you any revenue estimate; I have only given you the capital estimate.

Mr. *Snape*—continued.

3845. Let me finish my question. On what data have you arrived at the conclusion that, when you pass from one exchange to the use of the other seven exchanges, the amount should be doubled if you have no cost to guide you; do you not consider the cost before you arrive at such an estimate?—I feel quite sure of this: that that 8*l.* a year being my figure is correct; that is calculated on revenue and on cost; but that if you were to charge double for the whole City region it would not be too little.

3846. But on what data do you base that opinion?—There are a great many corresponding figures in telephone exchanges in other places. One view in estimating a tariff is this: you cannot multiply your tariff actually by the service rendered, except you do it by the toll system.

3847. I am not calling in question that there would be increased cost; I wish to know if I can ascertain it, the means by which you have arrived at the conclusion that that should be the increased charge?—Very well. I was asked the question how much more I should charge beyond that one exchange, and my answer was that I should charge a subscription for the whole City of twice as much.

3848. Without any data?—Without any data before me more than that one is accustomed to deal with in such things.

3849. On what ground do you limit your exchange to 3,500 supplied?—I do not limit it so.

3850. You propose to divide it?—No, I propose to bring in the extra area.

3851. You would have over 6,000 to each exchange?—Over 6,000.

3852. Can you tell us to what limit you think the exchange can safely go without producing confusion?—It is largely a question of the trunks between the boards. I think Mr. Preece's evidence showed you that in Chicago, under their newest arrangement, they can work comfortably between 6,000 and 7,000 subscribers on one board. In speaking of a board, I mean all the block of boards put together within the one room, if you choose to call it so.

3853. I think he said 5,000, if I rightly recollect?—I think he said they were coming up to 6,000; but whether those are in various stories of the same house, or in various houses, or at considerable distances apart, the trunk wires between those are worked under precisely the same condition—the 6,500 is manageable under the one supervision—it is largely a question of supervision.

3854. There is more economy in your view if at one exchange you can have supervision over the whole?—Yes, within limits.

3855. Not in any administrative matter?—No; it is impossible.

3856. How do you propose the tubes should be laid; in what way would you lay them?—Under the footways as much as possible.

3857. In subways?—If subways exist, certainly.

3858. Not in channels, but in subways large enough for them to have access to the wires?—I do not think you should build the subway specially for telegraph and telephone wires, but that

Mr. *Snape*—continued.

that where a subway exists you should put tubes in, or rather suspended cables.

3859. In a large city would it not be an advantage to have large subways in which gas and water and telephones could be had access to, and where it would be easy to repair without taking up the streets?—Not always. There are subways in the City of London so filled with pipes that there is no room to work, and no work could be carried on in them.

3860. How would you deal with the suspended cables and tubes?—I think they would be lead-covered cables suspended at the sides of the subways on shelves; that would be the best way of doing it.

3861. Do you know how many wires one of these pipes will accommodate?—A 2½-inch tube will take 85 pairs.

3862. Are you not aware that in some cases as many as 150 have been put in tubes of larger diameter rather than smaller?—I should not like to do it. I believe a hundred can be put in a 2½ inch tube, but I would rather keep to my figure of 85 for safety. I like a loose cable that can easily be drawn in and out, not a tight one.

3863. You have seen a hundred?—You would have a great deal too tight with 150; you will find a lot of difficult conditions when you come to maintain.

3864. Were the cables you propose high tension or low tension?—We are not speaking of electric lighting, you know. There is no high tension in telephony.

3865. Now, I want to ask you a question about the correspondence which took place about two years ago. The Duke of Marlborough and the other gentlemen who were corresponding with him seemed to anticipate that there was going to be a very great improvement in the telephone system through Manchester with these two companies. Some of them, I think, thought that the time of the telephone millennium was reached?—Yes. We no doubt thought then that the telephone millennium had been attained; but we are as far from it now as then.

3866. Do you think we are any nearer since that time to the telephone millennium?—I have seen no approach to it.

3867. You think there is very great room for improvement in the telephone system still?—I can see in the mind's eye what I call a telephone millennium, but it may be very different to other people's millennium.

3868. The opinion you have expressed to us to-day is that private enterprise is the best method in your judgment of supplying the telephone service?—Private enterprise and competition in default of the State undertaking it. I did say something in reply to one of the earlier questions that I was not quite sure whether the task of what I call the capillaries of the system was not too gigantic a one for even the Post Office to undertake; whether it would not be better to leave that to private enterprise.

3869. Only on that ground you prefer private enterprise?—Yes.

3870. And if that does not exist you prefer the State?—Yes.

3871. Are you of opinion that if the State does not take it over the county councils and

Mr. *Snape*—continued.

rural districts, and the county boroughs and urban districts should take it over, or have the power to take it over?—I think they would be the best agents for the Post Office to have.

3872. And as the agreement is in force between the National Telephone Company and the State until 1911, do you think those powers should be given to the municipalities and the council councils now?—Yes, certainly.

3873. You think they should establish competing systems now?—I think they should have the opportunity and the greatest facility for doing so.

3874. Supposing competing systems were established, have you given any consideration to the method by which, for intercommunication between the subscribers of rival systems, they could avail themselves of either system?—It is easily done; electrically, it is very easily done.

3875. I know, from an engineering point of view?—You mean to say the goodwill of the two competing systems, one towards the other, would get them to agree?

3876. Yes?—I do not think that the Post Office would allow inconvenience to continue.

3877. It is not a question of the Post Office so much as the existing company and new companies?—There would be a struggle, no doubt—one warring against the other; but I think in the end you would find that one set of people with one particular class of work would settle down as subscribers of the one system, and another class of people would settle down as subscribers to the other, and intercommunication would not be so frequent.

3878. Do not you think a reciprocal arrangement would be made which would be to the advantage of each of the companies?—I should hope so; but I thought you rather implied that there would be war.

3879. I asked you whether you yourself had given a thought to the subject?—Yes; as I said before, the new Telephone Company and the National proposed to work in that way; they said so in their prospectus.

3880. And you think that would be possible in other competing companies?—Quite possible.

3881. You referred in a letter to the railway competition having been a benefit, but you would scarcely consider railway competition analogous to competing with the telephonic system. A man has a choice of railways in going from town to town, and it is purely a matter of his convenience which railway he will take, but in the case of the telephone system if he could not get to telephone on the other system he would be in the awkward fix that his own system might not comprise the person with whom he wished to communicate?—Yes, I have not a word to say to that. The analogy is not complete in that way. It was more a general remark that I made as regards competition.

3882. You told us that in Birmingham instead of paying a special toll for communication to a distant place, they pay a larger annual subscription?—I do not think I have referred to Birmingham.

3883. You said "pay a larger subscription." I presume it was a larger annual subscription?—I

Mr. *Snape*—continued.

have not referred to Birmingham; I have not myself mentioned Birmingham to-day.

3884. Then I will not press it?—If you put the question as regards any other place I will answer it if I can.

3885. It is not so much Birmingham as the principle at which I wish to arrive. The Government is taking over the trunk lines?—Yes.

3886. Is it your opinion that the payment for the use of those trunk lines could be effected by the subscriber commuting with the Government for an annual charge instead of having to pay a given charge for each message?—I think that is entirely a matter for Post Office policy. I am quite sure that they will arrange it in the most convenient way to the public.

3887. Then, with reference to the rural telegraphs, by whom would you suggest that that service should be supplied; these call offices?—I think the system I have described would be eminently one for a county council to undertake.

3888. And they would have to take the risk of a profit or loss upon it?—Yes.

3889. And any loss would fall upon the people?—I may say I mentioned a very considerable source of possible profit, and that would be from private persons wishing to connect themselves with exchanges.

3890. You spoke of classifying the subscribers on each of the exchanges. Did you mean classifying by the locality of the exchange or by the business of the subscriber?—By the tariff.

3891. As you are aware, the present arrangement of the National Telephone Company will terminate in 1911?—Yes.

3892. Do you think that for the State to delay taking over the system until that period would be an advantage to the public?—No.

3893. Not even pecuniarily?—Not even pecuniarily; I am sure of it.

3894. Do you think they would have to pay as much at the end of 1911 as they would have now?—All experience tends to show that when the State comes to buy up, no matter what conditions they have attached, they have to pay more than anybody else has to pay.

3895. They are not compelled to buy anything in 1911?—No, but they cannot get out of the fact that they will be connected with a very big system all over the country, and they cannot shut them up in a day.

3896. Even though there was a pecuniary advantage in delaying taking over the system untill 1911, do you think the disadvantage to the public would not be immeasurably greater than any small pecuniary advantage that might be gained by such delay?—The disadvantage to the public in what?

3897. Do you think the disadvantage to the public of delaying taking over the system by the Government until 1911 would not be immeasurably greater than any advantage, supposing there was a small pecuniary advantage to be gained by waiting until then?—I think the disadvantage to the public is increased every day that the State postpones buying up the telephones. Is that an answer to your question?

3898. The sooner therefore they do it the better?—Yes, the better.

Sir *James Fergusson.*

3899. Do you contemplate these telephones on small exchanges in the hands of private companies or municipalities being under the existing law by licence from the Postmaster General?—Oh, yes.

3900. Then what currency do you propose such licences should have?—I do not know sufficient about it to know whether they ought to go beyond 16 years, but if I understand the official papers I have read there is no intention of giving them beyond 16 years from now or granting them more than 16 years from now.

3901. Then in the scheme you have been describing you are contemplating that these licences should only have the same currency as existing ones?—Yes, I calculated my sinking fund for 16 years.

3902. And at the end of that time that the State should have the power of resuming them and taking over the property at its value?—Yes, that is the idea. I do not understand that the Post Office contemplates that it should be compulsory on them in any way: it is entirely optional.

3903. It is the law that in 1911 all the licences fall in, and the Post Office would only have to pay for the plant?—If I understand rightly the Post Office need not buy them all; it is entirely in the option of the Post Office.

3904. It is entirely in the option of the Post Office to buy them, yes?—Therefore, I calculated my figures on a sinking fund of 16 years.

3905. The point I was coming to was this: Do you contemplate that municipalities or private companies would feel themselves safe in expending the necessary capital being at the mercy of the Postmaster General in 1911?—I do not think they would be safe in every case, but I think that they would have to face the necessity of providing a sinking fund for 16 years. We know how the thing would be done; they would receive powers to borrow, and then the inspecting officer who went down to settle the question would say, "You must provide a rate which will replace the capital in 16 years."

3906. Then in the rates that you have contemplated have you made allowances for such a sinking fund?—Which rate are you referring to now?

3907. The rates which you gave the Committee as the probable rates for such exchanges?—You mean the 8*l.* rate.

3908. Yes, the various rates you have described?—In the 8*l.* rate, no; that was made at a time (in 1884) when the whole conditions were different.

3909. But in your evidence to-day you have given us what you contemplate as the probable rates to be charged to the public, have you not?—No; I have given you no estimate more than a figure based on the 8*l.* I gave in 1884.

3910. Then you would not rely on that now?—I think it would have to be modified, but it would all depend on the capital outlay.

3911. But you do not think that any such licensees as you contemplate would be safe without their providing a sinking fund?—No, I think certainly they ought to provide a sinking fund.

3912. There

*Chairman.*

3912. There are just one or two questions I want to ask. I understood you to say that you are in favour of the State taking over the whole of the telephone system, except possibly the rural districts, which you thought might be managed better by a private company?—Yes.

3913. Now, with regard to London you formed an estimate in 1880, and you have seen reason to depart from the plan which you sketched out at that time?—Yes.

3914. That is to say, experience gained since has altered the opinion you then formed?—Yes, as to the number of the exchanges.

3915. You have lessened the number of exchanges?—Yes.

3916. But you have not lessened it to the extent of the National Telephone Company?—No. I do not really know what the National Telephone Company's view as to the future of London is; that is to say, what they think London will ultimately require.

3917. But your plan is wholly different to the plan which the National Telephone Company have adopted for supplying the service in London?—It does not resemble it in a sense. As far as I am aware, they put down their exchanges just as they think they are wanted. I do not know, of course; they may have a very elaborate plan, and they may give you information upon that point.

3918. You divide up London into regions for which you have settled the charges?—Yes.

3919. Do you know of any other town in any other part of the world where they do the same thing?—No, there is no town like London.

3920. But there is no town which has adopted your system?—No.

3921. Therefore you not only differ from the National Telephone Company in the plan which they have adopted, but you differ with the telephone authorities in every other town in the world as to the plan they have adopted in their particular case?—I cannot tell you whether the Americans have laid out New York for the future of New York, or whether Paris has laid it out for the future of Paris to serve really a large proportion of the population. I cannot tell you; I only know that the lines which they have proceeded upon, with the exception of Paris, certainly do not indicate that they look to a very large number of customers. Paris has done so, because the tubes running into the central parts of Paris will eventually provide for 30,000 subscribers; that is a large number.

3922. As I understand, in Paris they have a uniform charge for the whole of Paris?—Yes, there is no regional charge there.

3923. They have adopted that system, I suppose, because they think it meets the needs of the telephone subscribers in Paris?—Yes.

3924. I presume the National Telephone Company, being anxious to satisfy its subscribers, have adopted the system which they believe adapted to meet the needs of telephone subscribers in the City of London?—No doubt.

3925. But you think they are wrong?—I think they are wrong. I think if any other system of distribution had been laid out in the same way without foreseeing the possible demand arising out of supply, they would have come to grief. I look upon the thing as only in its infancy in London.

*Chairman*—continued.

3926. But you are the solitary advocate of that system?—I hope I am not. I do not know of that particular system, but I hope I am not the solitary advocate of regional tariffs.

3927. So far as the Committee have heard, you are; we have had no evidence in that direction?—I am not responsible for the evidence that has been brought before the Committee.

3928. No, that is quite true; then with regard to the question of the considerable difference in your estimate of the cost per mile of laying down a system in London as compared with the estimate given by Mr. Preece; did you take into account the cost of building offices?—The exchange buildings are not included in mine at all. I do not understand that Mr. Preece included the exchanges in his; if he did, of course there is a difference there. That is such a fluctuating figure, it is such a difficult figure to put anything to, that it is intentionally left out.

3929. You did not take into account, I suppose, the trunk wires?—Yes; the trunk wires.

3930. What we call junction wires?—What you call junction wires; that is, perhaps, the better word.

3931. I think you informed the Committee that you served the Post Office for some time under Mr. Preece's predecessor, Mr. Graves?—I was a divisional engineer at the same time as Mr. Preece was one under Mr. Graves.

3932. Did you find the estimates given by the Telegraph Department of the Post Office, as a rule, were so excessive as this estimate appears to have been?—No; they were very close estimates always; we worked to very close estimates.

3933. And largely subject to Mr. Preece, in consultation with other officers of the department?—I always made my own estimates.

3934. The estimates made by Mr. Preece at that time were generally found to be accurate estimates; were they not?—Yes; I do not mean to impugn Mr. Preece's accuracy. I do not understand the lines he has gone upon.

3935. But in the result you make out the sum of 15*l.* to be sufficient for that which Mr. Preece estimates at 55*l.*?—Apparently that is the difference. It is not cleared up, I think, where the difference lies.

3936. But you adhere to your opinion that the 15*l.* would supply the service you have named?—That is if that system in the City that I have described was completed it would have cost that amount

3937. Now, with regard to the agricultural system which you have suggested for rural districts, you do not propose to charge any annual subscription for the use of the system?—No; so much per talk from each call office.

3938. And that there should be no guarantee; you suggest that the county council should start the system without having any guarantee as to the amount of user?—Yes; as to the talks. I think the only thing that could tempt them to do it would be the value of that estimate; that i is a good, sound estimate.

3939. I want to ask one question about this estimate: you propose to charge 2*d.* a conversation?—Yes.

*Chairman*—continued.

3940. This is your letter to "The Times": "To cover this a charge of 2*d.* would be made for each conversation of five minutes within arranged areas, and this must amount to a daily average of takings at each call office of 1*s.* 11*d.*"?—Yes. or 2*s.* a day.

3941. Two shillings a day would be 12*s.* a week, excluding Sundays?—Yes; 309 working days a year.

3942. You calculate 12*s.* being received on the average at each call station would pay the whole cost?—Yes; it is a mere matter of multiplication.

3943. How much do you allow for salary and for taking charge of the call station?—I allow 3*s.* 6*d.* a week for each office as the charge, in the same way that the Post Office pays for their offices. The Post Office uses private houses and private dwellings for their postal business, and pays for the services rendered. Well, I should pay 3*s.* 6*d.* a week to each householder who allowed this telephone call-room to be in his house.

3944. You mean for the service, not of the operator; he could be hardly called an operator?—There would be no operator; a child could watch it.

3945. The person in attendance at the call office?—Yes.

Mr. *Grant Lawson.*

3946. May I ask if there would be a silence-box; would you arrange for a silence-box, or would you expect agriculturists to speak so that everybody could hear them?—I have included the cost of the box into which he could retire, in the capital outlay.

3947. What they call a silence-box?—Yes.

*Chairman.*

3948. And you think you could get the farmers to make use of this sort of communication with all the dangers of their conversation being overheard and prices being quoted?—Well; it is a very fair question to ask me; if it was overheard—that is a defect of all telephonic communication. There are very few of us that are not overheard. I know when I speak in my club I am overheard. I think the overhearing part of the question is not the thing that would frighten the farmers away. If there was a real risk, and if you could not provide a certain amount of protection, there might be something in it.

3949. You do not know of this system, exactly on your lines, having been tried in any country, do you?—The only place I have seen anything like what may be called an agricultural system is in Norway, where farmers club together and form a little exchange for themselves. The distances there are long, and it is an immense advantage to them to have it. The country is cut up by fiords.

3950. That is a country, I suppose, that is not well supplied with telegraphs?—Well, per head of population it is better supplied than this country is even.

3951. The districts you speak of, I suppose, are not thickly populated?—No, they are very sparsely populated, but the telephone is entirely used by that very class of men; for instance, for marketing.

Mr. *Snape.*

3952. Did they find it a case where the supply created the demand?—I should not like to give a positive answer on that; it is one of those things which everybody has had some certain class of experience in.

3953. It is very likely if you give increased facilities that a demand will spring up?—That I am perfectly confident of. A well-worked telephone is a thing that will most distinctly bring demand with it; a badly-worked telephone frightens everybody.

*Chairman.*

3954. There is one question I want to ask about the 1,700 subscribers to the Association for the Protection of Telephone Subscribers: I understand they have not brought any actions upon the agreement that was entered into?—I know of none.

3955. Are you aware whether that is because the National Telephone Company have given them satisfaction with regard to the demands they have made?—I am not aware of that. If individuals have made demands on the National Telephone Company, and got their wants provided, I have not heard of it.

3956. But, at all events, so far as you are aware, no actions have been brought upon the agreement?—No, I should probably have been asked to join if there had been.

3957. And I understand you are generally in favour of competition, not only in London, but elsewhere?—Everywhere.

3958. You think that licences should be granted to municipalities to compete?—Yes.

3959. Notwithstanding, I suppose, that you admit that there would be considerable waste of capital?—Yes, I do not think that matters in the least.

3960. A waste of capital generally means increased charges?—I do not think it always does, in fact, in most commercial undertakings; those people who have spent it wrongly lose their capital, that is all; and if anyone goes in and competes with them and can supply the want for less, they make a fair interest on their money.

3961. Notwithstanding the fact that in the past the competition which has existed has invariably led to one of the competing companies being swallowed up by the other?—Will you allow me to deny that competition has ever existed?

3962. Certainly, I put it to you as a hypothesis?—I say no competition has ever existed, no reasonable competition. Up to 1890 there was no possible competition on account of the patents: and those unsuccessful attempts on the part of various persons (I knew them all more or less) to compete were always miserable failures simply because the patent-owners were too powerful. You may imagine how frightened people were when the New Telephone Company not only received an injunction for the company, but against every individual director, and they all ran out of the room when they got their injunctions; as I say, you may imagine what a fright everybody was in.

3963. Still, it led in each case to the competing company being swallowed up by the larger company?

*Chairman*—continued.

pany ?—Yes, there were a few cases, but you must remember most of the companies mentioned in these lists were brought out under the auspices of the original company ; they were not really in competition.

3964. Do not you think that would happen again ?—Not if you do not grant licences to people with permission to buy one another out. I should make it go on the licence, sir.

3965. Suppose the licence was given, how could you provide against it ?—*De facto*, I should have the licence given subject to the same arrangement as under the Electric Lighting Act. Under the Electric Lighting Act, any company that makes an arrangement with another electric lighting company loses its order under the terms of Provisional Order.

3966. I am assuming that a licence is granted say in a town like Glasgow to another company, how could you prevent the National Telephone Company from buying up that company, the National Telephone Company being under no possible restriction, because their licence is unhampered by any arrangement of that kind ?—You could not prevent that, of course.

3967. Therefore do not you think it probable that competition would still mean the same process that has been going on ?—It might probably under the unfortunate agreement, which I am not supposed to allude to with the National, if they had the power to buy up.

3968. That does not result from the agreement ?—Do not you think the agreement could make it prohibitive for them to buy up anybody ?

3969. Do not you think that the result of competition would be that the same process of buying up would go on in the future as that which has gone on in the past ?—Yes ; but I think something might be devised to prevent it.

Mr. *Snape.*

3970. Do you think that could happen if licences were granted to municipalities ?—No ; but I think the Postmaster General was referring to companies.

*Chairman.*

3971. Yes ; I was referring to companies ?—I think it might be carried out by strict rules on the part of the Post Office, because if those people established a system it would be a system alongside the other, and I think it would be easy for the Post Office by rules to make it not worth while for the National to buy them out. If the Postmaster General put his mind to it and said that he would not allow that thing to happen, then I think it would be a very difficult thing to happen, because, of course, people like myself assume that you are going to lay down rules under which all this is going to be done.

3972. I do not think you must assume that we are going to take any course of that sort ?—I only put it in that way as my idea.

Sir *Charles Cameron.*

3973. About the buying up the competition, you have already said that it would be the easiest thing possible to make an arrangement with the Corporation, or to require the Corporation of Glasgow to give any amount of security that it would not be brought up ?—No.

Sir *Charles Cameron*—continued.

3974. You think that is easy. Now, to make clear your proposition about charges, you say that for the City you would propose having a subscription to one exchange of 8*l.* ?—Yes.

3975. And you would allow the person who got access to the exchange for the 8*l.* subscription to pay toll charges which would take him anywhere ?—Yes, I said an increased tariff.

3976. To pay an increased tariff for the whole range of the eight exchanges ; do you think it might easily be done for a double charge, namely, 16*l.* ?—Yes.

3977. That is about what the Telephone Company at present charges, is it ; or is it less ?—Less.

3978. Roughly speaking, what you propose to do would be to give a full service like the Telephone Company at the present moment supply at a rate not exceeding that of the Telephone Company ?—Yes.

3979. That service would be on an improved system—universal twin-wires and the most improved instruments ?—Yes.

3980. And in addition to that you would give everyone who wanted the minor service and access to the telephone system at a cheap rate that minor service at that cheap rate ?—Yes, or a local service.

3981. The cheap rate would be in the City, 8*l.*, and less outside the City ?—Yes.

3982. And as to the question Mr. Snape asked you as to the adequacy of the double charge to cover the increased cost or the difference of cost between access to one exchange and access to the whole eight, you have had experience, possibly, of trunk-line subscriptions, have you ?—I should not like to say I have taken the trouble to work out any calculation in connection with the usual trunk-line operation.

3983. No, that is true ; but may I ask you have you had any experience of a local service and trunk-line charges, you yourself ?—No, not in a sense.

3984. Then would it surprise you to learn that I, who am on an exchange at Greenock, a very small exchange, for which I pay 10*l.* a year, and a subscription for trunk lines, that my trunk-line service does not cost me 3*l.* a year, although most part of my telephoning is done to other parts of Scotland than the local exchange ?—Not at all. I think that is very much the proportion between the local use and the external use of a telephone system that most people one meets with require, London always excepted, and London is the great difficulty.

3985. Are you aware of the fact that in many offices in the City there is not merely one telephone, but a great number of telephones ?—Yes. That is a very reasonable way of getting over the difficulty of time. Mr. Preece described there being several telephone connections with one office to one exchange as a means of saving time.

3986. And that he mentioned as being very common in America ?—It is only another way of varying the tariff.

Sir *Charles Cameron*—continued.

3987. But as a matter of fact it exists in London?—As I say, it is only another way of varying the tariff.

*Chairman.*

3988. I am not sure whether you stated this: Is it your opinion that for the service given in London over the large area, and with the right to communicate with every subscriber, the charge of 17*l.* 10*s.* for the City, and 12*l.* or 10*l.* outside the City, is not an unreasonable charge, not an excessive charge?—I said that; but may I say that I attach conditions to it?

3989. Certainly?—That would be if London was telephoned in the way in which I think it ought to be telephoned, then I think it would be a very moderate charge. I will go so far as to say that; but London I do not regard as being telephoned at all well or adequately; I think it is a large charge to have to pay for what you really do not want; a large number of people do not want to communicate over 630 square miles. It is difficult to answer your question, if you understand me, except conditionally. I do not think the service is a good one; it may be dear at any price, do not you see?

*Chairman*—continued.

3990. Still you think for the facilities given, apart from the system of wires and the system of telephones, the charge is not an excessive charge?—It probably is not.

3991. I suppose you would say the same with regard to the 10*l.* rate in the larger towns throughout the United Kingdom?—Probably; but I cannot tell you unless you give me town by town.

Mr. *Tully.*

3992. Is it an excessive charge for an inefficient system?—It is an excessive charge for an inefficient system. It all depends upon the efficiency of the service rendered.

Mr. *Snape.*

3993. Then it has no relation to the cost of supplying the service, but you think the more efficient the service the larger the charge without reference to its cost?—Efficient, including area and time.

3994. Without reference to the cost?—I think the cost should be graduated according to what you get.

*Tuesday*, 21*st May* 1895.

MEMBERS PRESENT:

| | |
|---|---|
| Captain Bagot. | Sir John Gorst. |
| Mr. Baird. | Mr. Grant Lawson. |
| Mr. Benn. | Mr. Arnold Morley. |
| Sir Charles Cameron. | Mr. Snape. |
| Mr. John Ellis. | Lord Stanley. |
| Sir James Fergusson. | Mr. Tully. |

THE RIGHT HONOURABLE ARNOLD MORLEY, IN THE CHAIR.

The Honourable J. G. WARD, M.H.R., called in; and Examined.

*Chairman.*

3995. I BELIEVE you are the Postmaster General of New Zealand?—Yes.

3996. And Treasurer, I believe, of the Government of New Zealand?—And Treasurer.

3997. And a Member of the House of Representatives?—Yes.

3998. How long have you been Postmaster General?—About five years.

3999. But previous to that you had been, I believe, in the Post Office Department?—Yes; I graduated in the Post and Telegraph Departments both. I retired from the Post and Telegraph Departments rather over 20 years ago.

4000. During the five years you have been Postmaster General you have had practical experience of the working of the telephone in New Zealand?—I have; I have had the control of both Departments.

4001. And I believe in New Zealand both the telegraphs and telephones are in the hands of the State?—Yes; we legislated, in the first instance, to prevent anyone else introducing a complete telephone system. No one but the State can enter into that business there.

4002. Either telegraphic or telephonic?—Either telegraphic or telephonic.

4003. Was that so from the time the telephone was first introduced into New Zealand?—Yes.

4004. So that there has been no competition in any sense?—No competition in any sense; it is a State monopoly absolutely.

4005. Can you give us any figures as to the development of the telephone in New Zealand?—Yes; it has worked very successfully, I may say, and the development, for a sparsely-populated country, has been very marked. At the starting of the system we had in the whole colony only 116 subscribers; now we have got approaching 5,000; that is within a period of 12 years.

4006. Is that urban as well as rural?—Urban as well as rural.

4007. You say about 5,000 subscribers; what number of population would that mean per subscriber?—It is about $\frac{1}{120}$th, I should think, thereabouts; a little mor perhaps.

Mr. *Benn.*

4008. One in 120?—That is it, approximately.

*Chairman.*

4009. What proportion of those subscribers would be urban, as compared with rural?—Oh, I should think four-fifths of them would be urban.

4010. And would those four-fifths be mainly in the larger towns?—Our system extends very widely from one end of the country to the other; small towns and large towns also. In the larger exchanges the system really is a very connected one. The system is to have the larger exchanges connected with the outlying smaller ones, and that is so nearly all over the country.

4011. Connected by trunk-wires?—Connected by trunk wires. Those trunk-wires are in some parts used for either telegraphic or telephonic purposes. We have got a system of converting a telephone instrument into a Morse instrument in the case where the trunk-wires are used, and they are duplicated in that way over a single wire, and we change from one system to the other as the necessities of the public require.

4012. You are now speaking of the trunk-wires?—Yes.

4013. That is to say, you use your trunk-wires either for telephonic purposes or for telegraphic purposes, according to the demand of the service?—That is between smaller exchanges and larger exchanges.

4014. For telephonic purposes are they twin-wires; metallic circuits?—No; we have not the metallic circuits at all.

4015. Neither with regard to the trunk service nor with regard to the local wires?—With one or two exceptions they are single wires everywhere.

4016. What prices do you charge in the various

*Chairman*—continued.

various districts?—We charge a subscription of 5*l.* per annum, with an entrance fee of 1*l.* in the first instance, for business purposes, within half a mile of an exchange; and for private houses within a mile of an exchange; after that 1*l.* a mile until a distance of two miles (I think it is) is reached; then if a new line of poles is erected we charge 2*l.* 10*s.* per mile extra.

4017. And do those charges apply universally over the country?—Universally; and if anyone requires an instrument beyond a distance of two miles, they have to enter into a guarantee to keep the instrument for five years.

4018. That is to say, to continue subscribing for five years?—To continue subscribing for five years. That is, of course, the result of a very low charge we make. We will not put up a costly wire unless we have a guarantee that the instrument is to be held for five years.

4019. You make no reduction in your charge upon a guarantee of five years?—No reduction whatever.

4020. And you refuse to put up long-distance wires to subscribers unless they give you a guarantee for five years?—That is so.

4021. How many exchanges have you?—Well, I can scarcely tell you that at the moment; but we have a great number.

4022. Perhaps you can tell us the number for the principal towns?—We have them at Auckland, Dunedin, Christchurch, Wellington, Oamaru, Tamaru, and Invercargil, and other towns.

4023. I mean the number of exchanges in each town?—Oh, in each town. Well, we have one central exchange in each town, and those exchanges communicate with bureaux at points all over the town.

4024. To separate exchanges?—To independent centres all over the towns; bureaux, practically, they are.

4025. Do you mean what we call "call offices"?—Yes, I presume you call them call offices.

4026. They are not offices to which the subscribers' wires are led in?—Yes; the subscribers get on to those offices whenever they wish, of course.

4027. Do you mean that each of those towns you have mentioned has only one exchange?—Only one exchange; one central exchange.

4028. These are bureaux or call offices to which the public can go and speak to other subscribers, where the subscribers who have them may be in the town?—Yes, quite so.

4029. Can you give us any information as to the financial results of the telephone system so far as the Government is concerned?—Yes; the total cost of the system at the end of the last financial year (that is the financial year previous to the 31st March last, which I have not got, of course) was 104,500*l.*, and the total earnings of the system during the same period were 183,800*l.*; our earnings exceeded the cost by some 83,000*l.* We have provided all along for depreciation to the extent of 10 per cent. per annum over our lines, and we have contributed 62,000*l.* towards the depreciation of the lines, and after the whole of the working expenses are paid, the net earnings of the telephone exchanges at the date I name were 54,082*l.*

*Chairman*—continued.

4030. For that year?—The total net earnings.

4031. For that financial year?—No; right up to that period, covering the whole period up to that date.

4032. But did not you say that the balance of net earnings over expenditure was something like 183,000*l.* in that one year?—No; up to the 31st March, the financial year that these returns are made up to, that was not March last, but the March preceding that.

4033. Eighteen hundred and ninety-four?—Yes; the cost of telephone exchanges up to that date, that is, from the very inception of the system, was 104,500*l.*, and the revenue up to that date was 183,800*l.*

4034. The net revenue?—The net amount we have contributed from the telephone service to the Consolidated Fund of the colony is 54,082*l.*; that is the balance over cost, including depreciation and everything else.

4035. Of course you charge the cost of staff and plant; do you charge the cost or the rent of buildings?—We charge the cost of everything that is absolutely incurred, everything, rental and buildings. If we paid rental for a telephone exchange in a country place that would be charged. As a rule we do not pay rental.

4036. The buildings belong to the Government, and therefore there is nothing charged as against the telephone?—Generally the buildings belong to the Government, except in the cases of Government sub-post offices, where the telephonists would be paid under the system that we have half the fees received. That would entail upon them the providing of telephone offices free and everything else incurred.

4037. What would be charged as cost against the telephone?—Well, the gross earnings would be taken, and the balance that is payable to the officer in charge of the Telephone Department would be debited as the cost of working that particular branch. That would cover rent and everything else.

4038. In the larger towns I understand the buildings belong to the Government?—Entirely.

4039. And therefore no rent is charged against the telephone in these cases?—No, that is so.

4040. Have you gained any experience with regard to the question of centralisation or subdivision of exchanges?—Yes; even with our small system (a system which is comparatively small compared to that of a country such as this is) we are opposed to a large centralisation system in towns. In the case of Wellington, where there has been a considerable number of subscribers during the last year or two, we propose shortly to build an independent exchange a mile and a half distant from the existing one, to get it on a trunk wire rather than to have one very large central exchange. We do that really for the purpose of ensuring speed.

4041. But a subscriber on the two exchanges would be a subscriber to the same system?—Absolutely.

4042. And

*Chairman*—continued.

4042. And would have the right of speaking to all parts of the area?—Yes.

4043. At the same rate?—Yes; our subscription is a low one, and, I think, it is only right I should say that the average cost of each of our connections is not at all high; the average cost in 1894, including long and short wires, was 24*l.* 12*s.* 1*d.* per connection.

4044. That includes what; does it include the connecting wire?—It includes the cost of construction, the cost of all expenditure incurred in making the connection.

4045. And including the instruments?—Yes, it includes the cost of the instrument; it is the capital cost for instrument, wires, poles, labour, freight, superintendence. The average is 24*l.* 12*s.* 1*d.* per instrument.

4046. Your largest towns, of course, do not compare with the large towns of this country; I think the population of your largest town is only 70,000?—Yes, we do not compare in size with your towns at all. We have only one town of which the population is about 70,000; our population at the different centres is comparatively small.

4047. Therefore you do not suggest that the experience gained in towns of that magnitude has much bearing upon the question of telephoning London or large towns in this country?—No, your circumstances are so different, of course, that they require to be specially treated, I should say.

Sir *James Fergusson.*

4048. The construction of your post office and telegraph buildings is not paid for out of current revenue, is it; you do it on loan?—Not altogether; originally, of course, when the public buildings of the colony were a necessity to meet the pace of the settlement that was going on in different parts it was entirely debited to the public works fund. In later years a proportion of the revenue of the Department was, and is used for that purpose; for repairs very frequently.

4049. At present you say that new works are partly paid for out of revenue?—Partly, yes.

4050. About what proportion?—Well, our total public works expenditure last year would be, I suppose, under 450,000*l.* Out of that we paid 250,000*l.* of our revenue into the public works fund to assist to make up that expenditure.

4051. I only want to ask you about new works, not about general public works expenditure, and again I only want to ask you about post office work?—Yes, they come out of that fund that I speak of.

4052. Perhaps in equal moieties out of capital and out of revenue?—Yes; rather more out of revenue than out of capital at present.

4053. We may take it that whether it be buildings or whether it be lines rather more comes out of revenue than out of capital?—Yes, that is so.

4054. And after paying 10 per cent. to depreciation, and paying interest on capital you have that surplus that you have stated, is that so?—No. What I should have said is that the 10 per cent. includes 5 per cent. interest and 5 per cent. depreciation. We call it 10 per cent. depreciation. I called it 10 per cent. depreciation. We provide 5 per cent. interest on the capital cost and 5 per cent. for depreciation; that makes up the 10 per cent.

Sir *James Fergusson*—continued.

4055. Now, can you say what is the greatest number of subscribers that you have in any exchange?—The greatest number on the 31st March 1894 at one exchange was 872.

4056. Is that at Auckland?—No, that is at Wellington. Now I think it is, at the moment, about 1,200, but I am not sure about that.

4057. Then how many exchanges are there in the colony?—Well, of what you would call central exchanges here, there were 25 in the colony at the date I name.

4058. And 5,000 being the gross number of subscribers, that would give you an average of 200 for each?—Yes, about. That average really, as a matter of fact, would not be 200, because, as I say, we are a very scattered community in New Zealand, and there are a great number of places outside those exchanges I have named where there are telephone exchanges not included in these lists at all. There are scores of small places. Practically our telephone service in the smaller parts of the country we look upon as an auxiliary to the telegraph service.

4059. I saw that the other day, and I admire it so far; then may I ask you what is the longest line of trunk wire by which you telephone?—The longest line used by subscribers at an exchange, I should say, is about a hundred miles, but we speak distances of 150 and 180 miles over an iron wire.

4060. With only the earth connection?—With only the earth connection, yes.

4061. And do you consider that your telephone is generally efficient, and the sound clear?—It is a very efficient service; but a single wire system of course is not as good as a metallic circuit; you cannot get over the troubles of induction under a single wire system: but our system works excellently, we have very few complaints, very few indeed.

4062. What weight of wire do you use on trunks and exchanges respectively?—I cannot tell you that.

4063. You do not know?—No, I cannot tell you that; I have not that information with me.

Mr. *Benn.*

4064. The rate which you charge you told us was 5*l.* in addition to the initial pound, the subscription is 5*l.*?—The subscription is 5*l.*

4065. That is based upon the system, if I understand you rightly, of charging a low rate for a local and limited service, and an additional charge for those who want the advantage of a lengthened service?—Yes, after a certain mileage we increase in proportion to the length of line; it becomes a more costly service of course.

4066. Do you find that that adjustment of charges largely benefits those who only require a limited service?—The low charges?

4067. Yes?—Oh, decidedly so.

4068. Could you give the Committee any information as to the proportion of messages that come within your 5*l.* subscription?—No, I could not give you the proportion, but any one who

Mr. *Benn*—continued.

who happens to go to New Zealand will find that in all towns in the colony the telephone is not only a part and parcel of the establishment, but it is used continuously day and night.

4069. The matter is important, because of course you are aware that in this country we have one tariff for long and short service, so that the subscriber who only requires a limited service has, in the judgment of some of us, to bear the burden of those who require a more lengthened service; what I want to get at is this, whether your low tariff is not a great convenience, and a great saving to those who only require a limited service?—It is distinctly so. Before we decided to have the tariff as low as we have it now, we had a very very meagre subscription list compared with what it is now. It is not large now, as a matter of fact, over the whole colony, but previously it was very small. We made a reduction after I became Postmaster General. We reduced our subscriptions by practically half or very nearly half; we came down from an average of 9*l.* to 5*l.*, the result of that reduction being that we have made up more than the previous revenue that we had, and that has chiefly been got from people within the limited area.

4070. People within the limited area?—Within a distance of half-mile, or a mile, and two miles.

4071. So that if a proposal were made to alter your system or your charge from 5*l.*, say to 10*l.*, which should cover all the distances within your system, you would consider that an undesirable thing?—Well I do not profess to judge as to England. Of course, I can only speak about one's own country. I am quite certain many of our subscribers would go off if we did that.

4072. What applies in that respect to New Zealand would probably apply to this country?—Probably.

*Chairman.*

4073. I do not understand that there is a limited area over which your subscribers have the right of telephoning for a low rate; it is a length of line between the subscriber's house and the exchange, is it not, which reduces it to 5*l.*?—The subscription is 5*l.* within a mile from the exchange for private houses, and within half-a-mile for business purposes. Then there is a pound per mile charged to private people for every mile, or portion of a mile, and to business people for every mile beyond a half-mile.

4074. That is to say, some subscribers pay 5*l.*, some 6*l.*, and some 7*l.*, but all the subscribers have the right to speak over the same area?—They speak without any extra charge to telephone subscribers in the first instance, on the ordinary telephone exchange. Unless it is over a trunk wire, between two exchanges, that covers the whole cost. Some private subscribers may pay up to 30*l.* As a matter of fact, some do pay up to 30*l.*

4075. Where the distance between their instrument and the exchange is a very long distance?—Where it is a very long distance, yes.

4076. But the difference in price charged to different subscribers merely depends upon the length of wire between the exchange and the subscriber's house?—Entirely so.

*Chairman*—continued.

4077. It is not the limited area over which they have the right to speak?—No.

Mr. *Benn.*

4078. In referring to it as a limited area, I had in my mind, of course, the limited length of wire; that was my meaning, for the moment, in describing it as a limited area. My point is this: whether, in your judgment, a subscription covering the whole of your wires, irrespective of those distances, a subscription of double that which now obtains would be advantageous to your system in New Zealand, or otherwise?—You ask my personal opinion; I should say distinctly it would be disadvantageous.

4079. Then your evidence goes to show that it is better to have a low charge for the use of a limited length of wire for those who only require a limited use than to have a general charge which covers the whole of the system?—Yes; with a view to making up our gross revenue, I lay it down as a necessity (in our country at any rate, and you must form your own judgment and conclusions so far as this country is concerned) that for us to get our aggregate revenue we must have the low charge within a mile or two miles of the main exchange. By doing that we get a large number of subscribers; and those who go beyond that, by paying an extra subscription, practically assist to pay the cost of the extra length of wire and they do not pull down our general results.

4080. I think you said the population of your largest city was some 70,000?—Yes; about 70,000 I think it is.

4081. Can you give any information as to the proportion of messages in a town of that kind which would come within the 5*l.* tariff, and those which would come outside that?—Well, I should say that there are four-fifths of them within the moderate tariff.

4082. Four-fifths?—I should say so.

4083. So that if the subscription were doubled for the convenience of going over the whole of the system, four-fifths of the population would be punished to the extent of 5*l.* per subscriber?—Whatever the extra amount you put upon those four-fifths, of course would be favourable to those who had the long wires; and of course the four-fifths would not like it; that is a certainty.

4084. On the question of centralization, you said, I think, that your experience tended against centralization, even in a town of 70,000; what is your experience in such a case as that?—In New Zealand our system of telephonic communication, both between business houses and private houses is very rapid. They are small exchanges, of course, but the attention is just about as instantaneous as human beings can put you through. We want to maintain speed, which we look upon as very important; and rather than have a swollen exchange with an excessive number of subscribers, we would prefer to have two exchanges, with 1,500 or 2,000 subscribers each, at convenient points. We think that is better than

to

Mr. *Benn*—continued.

to have 4,000 or 5,000 instruments crammed into one exchange.

4085. Then does your experience go to show that a sub-division of exchanges really tends to speed?—Yes, it does, distinctly.

Sir *Charles Cameron.*

4086. There is just one point I think you did not mention; in addition to the subscription rate, you did not say anything about trunk rates?—The trunk rates to non-subscribers to the telephone service, if they want to use the service, they pay 6*d.* for three minutes within a distance of six miles; that is, non-subscribers to the telephone service.

*Chairman.*

4087. Are you speaking of the trunk wires?—Yes, the charges over the trunk wires; and if it is over six miles they pay 1*s.* for six minutes. Subscribers pay 6*d.* for six minutes. They pay a subscription of 6*d.* for six minutes at either end, and they are switched through more than one exchange for that charge.

Sir *Charles Cameron.*

4088. In fact, it is 6*d.* for six minutes anywhere?—Practically; we tried the system not very long ago of charging 6*d.* for six minutes to a certain distance, and then 6*d.* for a further distance. As a matter of fact, in practice it was very unsatisfactory, and not long before I left the colony it was abolished.

4089. So that now it is 6*d.* a subscriber for six minutes anywhere?—Yes.

4090. I understand that that long distance telephony is very much availed of?—Yes, it is used considerably.

4091. I understand you have introduced luxuries in the way of telephony which are not known in this country. You do not have to go to the instrument yourself, for instance?—In New Zealand, in addition to the subscription of 5*l.* per annum, anyone is entitled to as many extra instruments as they like for an additional charge of 1*l.* per instrument per annum. That means that you can, in addition to having your telephone in your public office, have a telephone in your private room anywhere, either in your house or your business establishment; you can have it on your table and get switched through off the main instrument. That costs you 1*l.* a year extra. I have myself at my own house an instrument which can be taken 400 yards away from my house if I like. It is frequently taken 100 yards and 150 yards out into the garden, and you can speak just as easily there as you can from the telephone elsewhere.

4092. That does not mean that you can have an instrument in your office at the usual rate and an instrument in your private house, too, for the same subscription?—No, it is two independent instruments. You can have an instrument in your office, for which you pay the 5*l.* a year, and you can have an extra telephone at your office for an extra 1*l.* a year, and at your house one telephone for 5*l.* per year, and an extra one for 1*l.* per year; and upon the score of convenience we give people flexible wires that they can coil up if they wish for the extra telephone; to suit their own convenience they can take it any distance they like from their ordinary fixed instrument.

Sir *Charles Cameron*—continued.

4093. You mention that you do a lot of this long distance telephony upon a single iron wire?—We do.

4094. Is the result clear talking?—It is very clear; but an objection to an iron wire, of course, is that there is a limit to the distance over which you can speak. As a matter of fact, in the colony we are now not importing any iron wire; we have stopped it. We are importing nothing but copper wire for telephone purposes.

4095. What instrument do you use?—The Blake transmitter right through the service; upon the principle that we do not believe in having different classes of instruments; we stick to one class entirely.

4096. You find the Blake telephone satisfactory?—It is very satisfactory.

4097. I understand the habit of telephoning is so much ingrained in your habits that you telephone frequently when you are in other countries?—Yes, as a rule I do.

4098. Have you telephoned frequently in London?—Not frequently.

4099. What has been your experience of telephoning in London, as compared with New Zealand?—The delay is the trouble. It is a large place, of course, and the delay is the only reason that I can give you for its being unsatisfactory in London. I rung up this morning, for instance; the Telephone Exchange did its best to put me through; but the line they wanted to put me on was engaged. That does happen sometimes. The result is you have to wait for a considerable time. That is, I presume, owing to the excessive population you have here.

4100. Do you think the instruments in use by the National Company are as good as yours, as clear-speaking?—The instrument I have spoken on is a very good one indeed. I have only used the one instrument since I have been here.

4101. The number of subscribers at Wellington, I think you told us, at the date of the Return you had in your hand, was 872?—Yes.

4102. You say it has since gone up to 1,200?—Yes; considerably beyond 1,000. I think it is 1,200.

4103. It is considerably beyond 1,000; and the population of Wellington is 70,000, I think you said?—The population of Wellington is about (I think, speaking from memory) between 40,000 and 50,000. Auckland is the heaviest populated place in the country at present.

4104. About 45,000, we will say; and there are over 1,000 telephone users; that will give 1 in 45?—Yes, about that.

4105. Could you give us any figures about Auckland?—At Auckland, at the date I named, there were 730 subscribers, but I am not quite sure of the population; I am speaking entirely from memory. I think the population of Auckland and its suburbs, where the whole system works, is, roughly, about 70,000, but I am not sure of that.

4106. That would give you one subscriber to less than a hundredth of the population?—Yes.

4107. The people generally in proportion to the

Sir *Charles Cameron*—continued.

the population, use the telephone service very freely?—They use the telephone service very freely indeed, and its use is growing very rapidly, of course, everywhere.

4108. What arrangements have you for utilising the telephone in connection with the post; for instance, if a man in Auckland wishes to communicate with someone who is out in the country, over 100 miles off, and a telephone wire runs to within, we will say, 10 miles of this man's house, can he utilise it?—Yes, we utilise it in every possible way. Our telephones from the smaller places to the larger ones are left through always at night-time for the purpose of getting doctors or anybody who may be wanted.

4109. Supposing a subscriber in Auckland or Wellington wished to speak to a man five miles distant from the end of a long-distance telephone wire, have you any arrangement with the Post Office whereby an express messenger or an ordinary postal messenger should take the written message?—Yes; the written message is taken out and charged exactly as if it were a telegram.

4110. Will you please explain to us how you collect the sixpences from the subscriber?—The sixpence is collected from the person who communicates in the first instance, if there is a person there to communicate with; if there is not then it must be collected from the addressee.

4111. You have not introduced any such system as exists here with the National Telephone Company, having a deposit against which all trunk-line charges shall be debited?—No, we have not done that, but I should say it is a very good system, very convenient.

4112. It is a very good system; it must save a good deal of trouble in collecting?—Yes. We have not done that, chiefly because we are a small community, and we find we can collect all our revenue in the ordinary course, without having any debits at all.

4113. You mentioned certain subscribers who pay 30*l.*, 40*l.*, and up to 80*l.*; but there are people who are practically supplied with a private wire on to the exchange?—Yes. At one time our system was that the whole cost of the private wire had to be paid for by the people who wanted it. Some people paid as much as 1,500*l.* initial cost of a private wire; but that system has been abolished entirely; it did not work very satisfactorily, and now it is entirely a subscription system.

4114. Will you take a telephone (say) 25 miles up country on a guarantee that a fixed subscription shall be paid for five years?—Yes; we do this: in addition to the guarantee of the subscriber, no matter how reputable he may be, or in whatever position he may be, in addition to that we compel him to have two securities; that is done for the obvious reason that a man who wanted a long telephone wire, unless he were able to get two good sureties, could not get it in the first instance, and no two sureties would come in unless the man was in a sufficient position to keep the wire going five years. That is quite general; it is quite one of our bye-laws and regulations, and it applies to everywhere.

4115. You could not make any exception?—

Sir *Charles Cameron*—continued.

We could not make any exception; we treat everybody alike; absolutely so.

4116. You say you legislate so as to secure for yourselves the monopoly of the telephones from the very first; was there any reward or recognition to the inventor of the telephone?—No, nothing whatever; of course, we legislated before telephones were established in our colony.

4117. In other Australian colonies they have even a better service than you, have they not; a service with double wires?—In Sydney the service is better; it is better entirely in that one way, that it is a metallic circuit.

4118. I suppose you cannot give the Committee, from personal knowledge, any details of it?—No, beyond the fact that the Sydney one is the most perfect working exchange I have ever seen.

4119. Do you know what the number of subscribers is?—No, I do not.

4120. You said, as I understood, that the average total capital charge per subscriber in New Zealand was 24*l.* 12*s.* 1*d.*, including instruments?—That is so.

4121. And including long lines with short?—That is so; that is, over our whole service.

*Chairman.*

4122. I just want to ask you one or two questions; have you any difficulties with regard to what we call wayleaves; that is to say, the right to put telephone wires under or over the streets in towns?—No, we have no difficulty whatever in that respect; we have provided for it; it is provided for in our legislation; we go anywhere and everywhere.

4123. So that charges of that kind, which have to be met in this country, do not apply to New Zealand?—No, not at all.

4124. You have no difficulty of that sort?—No; our ways are clear everywhere without any cost whatever.

4125. You say the system is one of uniform charge for the local services apart from the trunk wires?—Yes.

4126. I just want to clear up that point that Mr. Benn was examining you about; I think there was a little misapprehension. As I understand, there is no limited service for a certain class of subscriber as compared with other subscribers; every subscriber in a locality has the right to speak to exactly the same number of subscribers as every other subscriber?—Yes, they have the free right to communicate anywhere they like.

4127. Is the difference in charge wholly due to the expense incurred by the State in connecting the subscriber's house with the exchange; and is that expense regulated by the distance, which may be longer or shorter, from the exchange?—It is entirely regulated by the length of his wire to and from the exchange.

4128. It is the increased cost to the State of connecting his house with the exchange that regulates it?—We say, whatever the cost may be, over half-a-mile for business purposes, or over a mile for private houses, that the user must pay the additional cost, so as to keep the average of the whole department up.

4129. You

*Chairman*—continued.

4129. You said that the general average number of subscribers, in your opinion, to a particular exchange, ought not to exceed, roughly speaking, 2,000. I understand you have not tried the multiple board system?—We have tried it, and even under that system we would limit it in our colony. We propose to establish the multiple system in the larger centres; but even under that system we would limit the number. We prefer not to have an excessive number. Greater speed is what we aim at, and to have the trunk wire between the exchanges rather than the concentration of a very large number of people on one exchange.

4130. You recognise, do you not, that dividing your subscribers between separate exchanges, the number of subscribers you have described, means delay in getting over the junction wires on to the exchange?—It means an extra connection whenever you use the connection between two exchanges; that is so. Our experts in the colony, who have had life-long experiences at the business, believe in that system, and I think they are right myself.

*Chairman*—continued.

4131. You believe in the principle of subdivision?—Yes.

Mr. *Grant Lawson.*

4132. Does your right of wayleaves, carrying your lines as you like, extend to putting poles on people's houses?—No; we cannot put poles on people's houses.

4133. You cannot?—No; we do not put them on people's houses anywhere.

4134. Is it all underground?—No. Our system is almost entirely overground; overhead. We work upon the pole system with overhead cables really in the large towns. Where there are a great number of wires, we keep them all working upon the pole system entirely.

Mr. W. H. DICKINSON, called in; and further Examined.

*Chairman.*

4135. I UNDERSTAND that you wish to make a further statement, or, rather, to place some further information before the Committee, on behalf of the London County Council?—Yes, sir. I stated in my former evidence that in our opinion the service of the Telephone Company was unsatisfactory, and that complaints were made. Some of the Members of the Committee asked whether we had any special evidence of that. Upon that being reported to the committee of the Council, the committee resolved to issue a circular to the users of the telephone service in London, and on receiving the answers, they were digested and tabulated, and I have been instructed to hand the results in to the Committee. The circular was sent to all the subscribers of the National Telephone Company, numbering 7,329. It was in these words: "Sir,—You are probably aware that a Select Committee on Telephone Service has been appointed to consider and report whether the provision now made for the telephone service in London and other areas is adequate, and whether it is expedient to supplement or improve this provision, either by the granting of licences to local authorities, or otherwise. The highways committee of the London County Council, to whom the duty of procuring evidence on this matter is referred, being of opinion that telephone service in the metropolis should be rendered cheaper and more efficient, have submitted their views to this effect to the Select Committee, and similar evidence has been tendered by the Commissioners of Sewers of the City of London. The committee of the Council are anxious to know accurately what is the opinion of the users of telephones in London as regards efficiency, and I am therefore directed to ask if you will kindly answer the undermentioned questions on the accompanying form of reply, and return it to me at your earliest convenience;" and the questions were, (a) "Is the existing telephone service of the National Telephone Company efficient, and satisfactory to you? (b) If it is not satisfactory, in what respects is it unsatisfactory? (c) What suggestions, if any, would you make for the improvement of the service."

*Chairman*—continued.

Mr. *John Ellis.*

4136. Will you kindly give the date?—That was on the 6th of May 1895. In the result we received a total number of replies, 2,536, of which 555 subscribers expressed entire satisfaction, 1,981 were not thoroughly satisfied, and these 1,981 were made up of the following numbers: 1,305 who expressed general dissatisfaction with the existing telephone system; 350 who are undecided in opinion, but who make suggestions for improvement; and 326 who express themselves satisfied with the existing telephone system, but suggest improvements. I will hand you those figures in, sir. (*The document was handed in.*) They were also further analysed as regards the suggestions, but as they were very various, perhaps it will be sufficient if I hand to you that document, which gives the result of it.

*Chairman.*

4137. Yes, I will hand this round to the Committee?—The answers that we received were rather complicated from the fact that at the same time a circular was sent out by the National Telephone Company which evidently rather affected the answers which were sent to us.

4138. Which went first?—I should imagine they must have gone about the same day; I do not in the least know.

4139. Yours went out on the 6th May?—Ours went out on the 6th May. The form which was sent out by the National Telephone Company was to this effect: "We do not approve of the telephone service of the metropolis being undertaken by the London County Council, and are satisfied that the service given by the National Telephone Company is reasonable, having regard to the efforts which are made by the company to improve it by the adoption of the twin-wire system." A good number of those circulars

*Chairman*—continued.

circulars were returned to us, either by mistake in the affirmative, or else because the person who signed them wished to strike out words.

4140. Do you think the replies of the 5,000 subscribers who did not reply to your circular went to the National Telephone Company?—I do not know anything whatever about it.

4141. We shall hear that from the National Telephone Company, perhaps?—You will hear that from the National Telephone Company. As I say, certain of those forms which were sent out by the National Telephone Company came to us with the wording altered to the effect, either that they did approve of being handed over to the London County Council, or that they were dissatisfied with the service. In addition to that we had, apart from those circulars, a certain number of letters that came to us. One of them states: "I find that, although the company's service is a little better than it used to be, it is scandalously bad, and outrageously dear."

4142. I think, perhaps, the Committee can hardly go into individual answers, because, after all, it is very secondary evidence?—It is, sir.

4143. We have taken the general fact from you?—Certainly. I may put it in this way: there were a certain number of other letters that came to us expressing dissatisfaction with the company's service.

4144. It amounts to this, does it not, that out of 7,000 odd subscribers to whom the circular was sent, 2,500 only replied?—That is so.

4145. Out of those, 555 expressed complete satisfaction, and 1,981 were not thoroughly satisfied?—That is so.

4146. And even some of those, 326 of the 1,900, expressed themselves satisfied with the existing system, but suggested certain alterations?—Yes, sir.

Mr. *John Ellis.*

4147. That was rather in response, I think, to some questions I put to you?—It was.

*Chairman.*

4148. I am told that some of the subscribers who were communicated with have sent their replies to the Committee direct; that accounts for one or two?—And they are still coming in to us, we received 20 yesterday, so that a certain number of that 5,000 simply postponed answering the letter. Before I leave the chair, sir, may I explain to the Committee that our witness, Mr. Bennett, has been very ill, and that is the reason he has been unable to be called. Of course, we were very sorry that he was unable to give his evidence here, because it was his evidence upon the prices of foreign systems that we attached so great importance to. What he was going to say was almost entirely restricted to that, and it was based upon figures which he had put down in a document for us. If the Committee would like it we should be glad to furnish members of the Committee with that document, which gives the various prices that are charged elsewhere.

4149. We have already had put in by Mr. Preece (prepared by Mr. Lamb) the scale of charges in most European countries and the United States. Is it a statement of figures that you are speaking of?—It is heads of evidence proposed to be given. I think you have a copy of it, sir.

4150. I have a copy?—We had copies made, because they would have been so much more easily followed with the document, being a list of prices to a great extent.

4151. After all, it is only heads of evidence, and not subject to examination and cross-examination?—That is so.

4152. There can be no harm in your circulating it to the members of the Committee?—I will accept that suggestion of yours, sir.

Mr. *Benn.*

4153. I just want to ask a question with regard to the paper which was sent to the Committee, and which appears on the Notes, as to the County Council's estimate, an estimate which shows that London could be supplied at a rental of 10*l.* per subscriber for a system of 10,000 subscribers. Was this estimate simply the estimate of Mr. Newland or was it submitted to any other experts in order to ensure correctness?—There were two estimates which I handed in, the estimate prepared by our own engineer, which was done by him before we had communication with Mr. Newland, and which afterwards was submitted to Mr. Newland, and approved of by him. Then there was Mr. Newland's own estimate, based upon a rather different system, and both of these estimates were submitted to Mr. Bennett, and Mr. Bennett expressed his approval of the results, stating, as I think I have already put in evidence, that in his opinion the London service for 10,000 could be worked for 8*l.* per subscriber. Of course, if Mr. Bennett had been called he would have been able to answer questions accurately upon that. The Committee intimated the view that they did not wish to have our engineers called, so I contented myself by handing in those two estimates, which are in detail.

4154. Just a question upon these interesting figures that you have now put in. The circular which was sent out by the County Council was sent out on Monday the 6th May, I think you told us?—I think that was so, it is dated the 6th May.

Mr. *John Ellis.*

4155. It is dated the 6th, but was it sent out on the 6th?—I think so.

Mr. *Benn.*

4156. It was not sent out before the Monday, was it?—If I remember rightly, it was sent out on the Monday; I am told they were posted on the 6th and 7th.

4157. That would be Monday and Tuesday?—Yes, Monday and Tuesday.

4158. As to the inquiries sent out by the Telephone Company, what was the earliest date that you find upon those; I understood you to say that some had been sent to the County Council?—Well, we received this letter, which is dated the 6th May, which begins by informing me that a gentleman called from the National Telephone Office with a printed form that was dated the 6th May. I have no personal information of this.

4159. My only point is this: I want to ask whether

Mr. *Benn*—continued.

whether it is not a fact that some of the replies to the inquiries of the National Telephone Company were in the possession of the County Council before the County Council circulars were sent out?—I think that must have been the case.

Mr. JAMES STAATS FORBES, called in; and Examined.

*Chairman.*

4160. PERHAPS you will inform the Committee when the company sent out their circular of which Mr. Dickinson has spoken?—I think the County Council sent out theirs on the Monday; we sent ours out on the preceding Friday.

4161. I ought to ask you, for the sake of regularity, whether you are President of the National Telephone Company, and whether you appear here, as representing the company, to inform the Committee fully upon all the facts of the telephone service under the licence from the Post Office which has been held, I believe, by the company now for a considerable number of years?—Yes, we thought it was respectful to tender such evidence as might assist the Committee, and at the same time to be prepared with some sort of answer to the numerous complaints you have heard of the National Telephone Company.

4162. The Committee, I think, are anxious to hear that. Going first to the question of the circular, perhaps you will give the date of the circular sent out by the company?—It was sent out the Friday preceding Monday the 6th May, but it is not dated I see. That is the document, there is no date upon it.

Sir *Charles Cameron.*

4163. What was the date?—It was sent out on the 3rd May, "I (or we) do not approve of the telephone service of the metropolis being undertaken by the London County Council, and am (or are) satisfied that the service given by the National Telephone Company is reasonable, having regard to the efforts which are being made by the company to improve it by the adoption of the twin-wire system"; and the responses were, "signed unconditionally, 2,346; signed with qualifications, 266; signed in favour of the London County Council, 43; refused to sign, 36"; so that as regards numbers we seem rather to have headed them.

Mr. *John Ellis.*

4164. And what is the number of those who did not sign?—The same balance as in the case of the County Council. So many people were requested to express a feeling one way and a certain number expressed it; so many people who were asked to express an opinion upon another question have expressed it; and I think we rather scored as regards numbers.

4165. Did you send this out to 8,208 persons?—We sent it out to the whole of our subscribers, as they did.

Mr. *Snape.*

4166. Did you send any document besides the circular, any expression of opinion?—None whatever; simply that.

Mr. *John Ellis.*

4167. Five thousand five hundred and seventeen did not think it worth while to answer?—In either case.

Mr. *Benn.*

4168. If I may interrupt, would you just read the first question of that circular over again; I mean the company's circular?—The question is perfectly clear. It had become public property at that time from the reports in the papers of the proceedings before this Committee that the London County Council had particular views on this subject. We wanted to ascertain whether our subscribers concurred in those views, and this puts the question that they do not, as far as they express an opinion.

*Chairman.*

4169. I think the figures will speak for themselves?—They will.

Mr. *Snape.*

4170. You did not ask the question in any definite form, but merely generally?—They did send it back, and they understood what the object was, "we approve" or "we do not approve."

4171. Only about one-third of them sent it back?—As in the other case, in which about one-third sent an answer back. Of course, if you tout for a question to be answered in this way on any particular point, only a percentage of the people will take the trouble to reply. The County Council got our subscribers' lists, and they sent to the subscribers their circular the same as we did; we sent to all our subscribers that question.

Mr. *Grant Lawson.*

4172. Except that they asked for a reply, and you did not?—That is so.

Mr. *Benn.*

4173. Then there were two different questions; we sent out one question, and you sent out another?—Well, there it is, it speaks for itself.

4174. They speak for themselves?—You are welcome to the benefit of that.

*Chairman.*

4175. Is there any statement you would wish to make about the past history of the telephone as bearing upon the inquiry which is before the Committee?—Yes; if you will allow me, I think we had better get into the region of fact as affecting our company as soon as possible; therefore I have had three statements prepared dealing with various questions. The first is a telephone chronology, which I will hand to each member of the Committee. I think I had better commence by handing in those statements (*the statements were handed in*). There are three

*Chairman*—continued.

statements, and I shall deal with each in turn. On the first statement there are some material facts stated as bearing upon the initiation question of whether the company has been duly diligent in expanding the telephone system, and whether the delay or inefficiency of the system is attributable entirely to them or to circumstances beyond their control more or less. Now the chronology: Bell's Patent, 9th December 1876, expired in 1890; Edison's Patent was a little later (July 1877), and expired in 1891. The two patentees were in difference. They were quarrelling, and in May 1880 they put their horses together and amalgamated as the United Company: and as the United Company their responsibility began. The United Company started business on the 13th May 1880, contemporaneously with the date of the agreement under which they were amalgamated; they had been making efforts and attempts rather experimentally before that time; but on the amalgamation they began business seriously. Then the Post Office awoke, and proceeded to establish a right. That right was discussed and determined, as far as it went, by the judgment in the Post Office action on the 20th December 1880, and the first licence to the United Company was given on the 11th April 1881; but as the result of the judgment, and in accordance with the pledge of the Attorney General, Sir Henry James, that the object of the Postmaster General was not to prevent telephony, but simply to assert the privilege, he would be willing that the licences, or rather that the companies should work on under a licence; an agreement was embodied immediately, after the judgment under which we worked on feeling our way, until the eventual licence in the form of the first licence was completed and signed on 11th April 1881. That licence was full of limitations and difficulties, no doubt prompted by the legitimate desire of the Department to protect the monopoly of the Post Office; but it existed for four years and six months. Therefore, coming to the day from the dates of the patents, three years and four months had run before the amalgamation of the two competing owners of the patents in this country formed the United Company; and during the whole of that time any benefits of the licence of course were lost to those who had purchased it.

Sir *Charles Cameron.*

4176. Do you mean the benefits of the licence or of the patents?—Of the patents, not the licence.

*Chairman.*

4177. The first licence was for restricted areas, was it not?—Very restricted areas.

4178. In various parts of the country?—Yes, five miles round London, and one or two miles round certain other limited centres; and there were a great number of other restrictions. The operation of that, of course, for four years and six months from the date of the first licence—as we had occasion, I am afraid, to point out to the Post Office many times—was to absolutely restrict and suppress the development of the telephone. Well, under the second licence, we got for the first time what is called "an all-country licence"; I mean to say those limitations of area were entirely removed.

*Chairman*—continued.

4179. That licence extended over the whole of the United Kingdom?—Over the whole of the United Kingdom. Then, for the first time, we began to find out what telephoning really meant, and what it was capable of.

4180. These were licences granted to the United Telephone Company?—Granted to the United, and granted to several other companies, notably the Lancashire and Cheshire, and the National, and a number of other affiliated companies. Of course, no company could be formed for working the telephone without the licence of the patentee.

4181. So that, before business was commenced, it was necessary to get a licence from the Postmaster General, and also from the patentee?—Yes; the Postmaster General could license the area with reference to the Post Office rights; I do not like to use the word "monopoly"; it is so offensive. The licensee having that could not proceed to work in the area without the licence of the patentee; therefore, for that period, as long as the patents lasted, there was a double, so to speak, check upon the expansion.

4182. Were you connected with the United Telephone Company at the time of the grant of that first licence?—My connection with the United Telephone Company came about from the fact that I brought it about between the two companies. I was called in by the parties on either side to negotiate; I, in fact, was the author of the amalgamation.

4183. In 1880?—In 1880. A certain number of other licences, not great (there were 13 in all), were granted by the Postmaster General at different times to other companies, and all those companies, of course, were subject to the operation of those two licences, one to exercise telephoning in the area; the other to use the instruments and the patents. That went on, of course, till the expiration of the patents. The effect of the amalgamation, in view of the approaching expiration of the patents, was (each company having worked on for a number of years in its own area upon this principle) that it was much more likely in the interests of all parties that new business (business of this novel character) should be taken up by local people; that they should have the machinery in the different areas for raising the capital and for carrying out the work, and a great number of committees were formed in different places, some in Scotland, some in the north, and some in other places. They worked with their own directors and their own officials in their own areas under those two licences for a number of years. The first step taken to alter that position was when in the more important areas the Lancashire and Cheshire and the National Companies' area, which was a very large one covering a great many important places in England, and covering Scotland; when they had felt their way, when each in his respective manner according to local necessities had so far made the best of it. In the meantime, trunking having become very important (because we had very soon found out

that

*Chairman*—continued.

that the local business in telephony depended a great deal upon the question whether it was to be purely local or whether it was to be local and combined with communication from one centre to another); we found that, as a matter of practice, a great many people thought it worth their while to become local subscribers and to pay the local subscription for local objects; but a great many others did not think the local object of sufficient importance, and could only be induced to join the exchange if they had for what it was worth to them, the local service and the facility of trunking outside the area to other areas.

4184. When you speak of areas you mean areas of operation of the particular company?—Yes.

4185. Not area of licence which by that time had become the whole of the United Kingdom?—Yes; but the operation of the other limitation of area had led to these particular companies being, so to speak, localised in different parts of the country; therefore trunks became a very important part of the matter, and it was the questions arising out, not so much of what they were doing in their local areas for local purposes, which led to the necessity of this amalgamation. We found we were getting so tied up together and that the business was becoming so one, that we thought they had better come back into the fold; therefore we negotiated and brought back the United, or rather brought into the fold, the United, which was the parent company, the London Company; the Lancashire and Cheshire and the National, those at the time being the most important of the whole of the Telephone Companies.

4186. What date was that?—That was the 1st May 1889; therefore between starting business in 1880 and May 1889 these different companies had been working in their own fashion according to local circumstances on their own terms in their own area.

4187. Did they, in any case, overlap?—No, I think not, or at all events in very unimportant particulars.

4188. Then you say, on the 1st May 1889, they amalgamated and became one company?—They amalgamated and became one company.

4189. Under what name?—Under the name of the National Company. The parent company was the United, from the fact of Bell and Edison having united their forces; but when we came to the amalgamation of what was at that moment the largest portion, and very much the larger proportion, of the whole business, we thought "National" was rather a better term than "United," so we called it "National." Then there were a number of other affiliated companies which, I think, I had better perhaps refer to, companies which have had from the Postmaster General licences for particular areas.

4190. Licences for particular areas; were they not all unlimited?—Oh, no; they were universal licences, but they were limited to particular areas by the operation of the patents.

4191. Yes, by the operation of the patents?—I think there were 13 of them.

4192. I think you stated to the Committee in

*Chairman*—continued.

1892 these facts, so that perhaps you will take them very shortly, so as not to cover the ground again?—I was only trying to bring the history up to this, how we became one company. Under the obligations incurred by us in the negotiation with the Post Office, we undertook to effect, and have in fact effected, the fusion with us, of all the outlying companies besides the three.

4193. Do you say "under obligations incurred with the Post Office"?—Yes.

4194. Under what document?—We were, as a matter of fact, to be prepared to undertake that every one of these licences should be surrendered to the Post Office.

4195. Now you are speaking of the present agreement?—1892, the present agreement; the agreement negotiated in 1892.

4196. With the National and the New?—With the National and the New; the National, the United, and the Lancashire are the first three that came in. Then there was the Northern District Telephone Company; they came in in April 1890; the South of England Telephone Company, 31st October 1890; the Western Counties and South Wales Telephone Company, 1st January 1892; the Sheffield Telephonic Exchange, 10th March 1892; the Caledonian Telephone Company, 30th April 1892; the Universal Telephone Company. I need not trouble about that; that was a small private company; the Isle of Man Telephone Company; the Telephone Company of Ireland; the Thanet Telephone Company.

Sir *Charles Cameron.*

4196A. You are not giving the dates; will you please continue to give the dates?—Yes, I will give the dates.

*Chairman.*

4197. Up to that time those amalgamations had taken place before the agreement?—Yes.

4198. And not in consequence of the agreement?—In August 1892, we negotiated the agreement, and up to that time we had already got in the Northern District, the South of England, the Western Counties, the Sheffield Telephone Company, and the Caledonian. The Isle of Man Telephone Company, 1892; the Telephone Company of Ireland, 1893; the Thanet Telephone Company, 1893; and, of course, the New Company; another corporation, had their own amalgamation; the Mutual and the Stanhope; and they have all been acquired under that agreement by the National.

4199. As a matter of fact, I believe, at the time of the agreement being entered into by the National and the New, the National and the New between them, practically, had control of all the licences with the exception of the Irish Company?—That is so; the result of the amalgamation of the three great companies was that in view of the approach (as I have put it there as shortly as possible) of the expiration of patents, on the 1st May 1890 (you will see, sir, the patents expired, one on the 9th December 1890, the other on the 30th July 1891) there was a subscription in Manchester, Liverpool, and Warrington of 20*l.*; that was reduced from 20*l.*

*Chairman*—continued.

to 15*l.*; that was the first step. In those places (in Manchester and Liverpool especially) they had made such progress that we felt we could carry it on at a much more moderate rate than 20*l.*, and it was reduced to 15*l.* Then, on the 1st January 1891, having felt our way as to the advantages of the combination, of the fusion, the more economical working of great establishments, more effective service (such as it is), we concluded that a general reduction in rates in the provinces from 15*l.* in some places, and 12*l.* in others, to a uniform 10*l.* should take effect, which it had, from the 1st January 1891; and the effect of that reduction involved an immediate loss of revenue of 55,000*l.* on the then number of subscribers.

4200. Did that lead to a large increase in the number of subscribers?—Yes. I will give you the number of increase as we go on. This is the numerical progress of the thing. When we amalgamated the National Company had 10,813 subscribers; the United Company, 6,793; and the Lancashire and Cheshire, 6,230. That was a total of 23,836. In the first year of the amalgamation that total was increased by 3,870 new subscribers in the area, bringing the number up to 27,706. That was the year ending the 30th April 1890. In 1891 we took in the South of England, with 3,235 subscribers, and the Northern, with 1,551; that is 4,786 lines taken over. During that year there was an increase on the other part of the business of 6,183, making the total increase brought in 10,969.

4201. And making the total of subscribers what?—Thirty-eight thousand six hundred and seventy-five. In 1892 there was no other company brought in, but the increase in the number of subscribers was 7,788, bringing the 38,675 up to 46,463. In 1893 we took in the Western Company and the Sheffield, bringing in 5,442. The increase upon the other business was 7,126, being an increase in that year of 12,568, and bringing the figure up to 59,031. In 1894 we took in the Irish Company, with 1,550 subscribers, and of course in our business the new subscribers was 7,825. In that year the total increase brought in was 9,375, bringing the figures up to 68,406. And to the 30th April 1895, or rather to the 31st December 1894 (we had altered then our system of book-keeping and made the year end in December instead of April) we brought in 4,947, bringing the total up to 73,353. Therefore, from the year ending 30th April 1890 to 1894 we had increased from 27,706 to 73,353. That is the manner in which the thing has progressed.

4202. You stated just now with regard to these figures that in 1893 you took in a company. I think you had told me before that at the date of the agreement, which was August 1892, you had practically acquired the licences of all the companies except the Irish one?—These were brought in in 1893 by this table; therefore, I must correct that answer by that table. Perhaps, you would like me to hand this table in?

4203. Yes, I think we had better have it?—I think it is rather difficult for honourable Members to follow this table.

*Chairman*—continued.

4204. I think we had better have the figures on the notes in the form in which you have got them there?—That being so, I thought it might be interesting to bring it up to date, and that is the subject of the second table; that shows exactly how things were at the end of April. Perhaps you will allow me to go through that?

4205. Certainly?—You have the towns and places supplied, 537; number of exchanges open, 593; number of subscribers' lines, 75,216; number of telephones in use, 86,032; present ratio of effective calls per annum (I need hardly say that there are a great many calls and a great deal of work done which is not "effective"; we only deal with an effective thing, that call which results in one subscriber being put into connection and conducting his business with another), 139,639,032; of course, a call means one man wants to speak to another and speaks to him, therefore a call is followed by these two operations, a conversation consisting of two parts, one from the caller, the other from the called—that we call "a message," that makes 279,278,064 messages. That is, of course, estimated upon accurate observation or accounts from time to time. I do not mean to say it would be impossible, but it would be an enormous waste of time, labour, and expense to keep a daily record of the call of every operator, but these are based upon calls carefully noted at specific intervals.

4206. Intervals not specially selected from either one point of view or the other?—No.

4207. Fair average days?—They are so taken as to get a fair mean.

4208. Do you take them for a week or for a day?—We take some for a week, some for a day, some at different times; and if you would like to have the details, we will hand them in. We wanted, for our own purposes, to get some accurate knowledge, because, of course, to us it is a matter of importance to know how much the average call a day is. In some places it is certainly larger than in others. Now, sir, if I may say so, that being the development so far, I come to the tender thing of whether this service is charged for at an extortionate or extravagant rate. One would rather like to remove misapprehensions of that sort, which are formed by people who are both ignorant and unreflecting. When you know the facts, the big figure which frightens you in the distance looms into small proportions. Our average annual payment per line on the year ending December last was 9*l.* 2*s.* 2*d.* That includes all our areas, and all our towns, and all our places, big and little, lumped together.

4209. That is, payment by subscribers to the system?—Yes.

4210. That does not include, of course, private wire rentals?—That does not include private wire rentals; they have been taken out.

4211. How do you arrive at the 9*l.* 2*s.* 2*d.*, because you have so far only told us of a reduction to 10*l.* per subscriber?—Since then we have made a great number of reductions in the duplication of subscribers' wires. A subscriber pays so much for one wire, so much less for a second wire, and so on, and that brings down the average. You can only deal with averages.

4212. Certainly?

*Chairman*—continued.

4212. Certainly?—This is the average payment made by a subscriber for the use of his wire. By-the-bye, in order that there may be no misunderstanding, and that I may not be accused of attempting to "fog" this business, I should like to explain this: That factor here is somewhat difficult: "The subscriber" conveys no meaning. The Midland Railway is a subscriber, but they have a great many wires in different places. In some towns a company, corporation, or firm are subscribers in one name, but they have several wires, and they pay several subscriptions, and in order to get a reliable factor, which would stand you in stead in all cases, to see where you have been getting to, both as regards income, revenue, working, and so forth, we had to fix upon an equivalent to a train mile on a railway, the effective earning implement, which is a wire.

4213. A wire with a telephone at the end of it?—A wire with a telephone at the end of it.

4214. And connected at the other end with an exchange?—Yes.

4215. In the case of the Midland Railway Company, or other companies of that kind, who may subscribe for 15 or 20 instruments, you count them as 15 or 20 subscribers for that purpose?—Take my own case. I have got four or five telephones in different parts of London in my own name. If that were a subscriber it would be one man. There are four or five different connections.

Sir *Charles Cameron.*

4216. Just one word of further explanation: I have, for instance, three telephones in my own business; what do you reckon those?—Do you pay for three wires?

4217. I pay extra, I presume, for each instrument?—Then you pay 10*l.* for one, 8*l.* 10*s.* for another, and something less for the third.

4218. I do not think it is so much?—Well, whatever it is.

4219. I want to know how you reckon it; I merely want to understand?—Each payment is in virtue of the use of a separate wire inside the same building.

*Chairman.*

4220. I think I can put a question which will explain it: if a subscriber has a single wire to his house, and inside his house he has three telephones, and can be switched from one to the other, that is one wire, is it not?—That is one wire.

4221. And if there are three telephones, three wires, and three connections, that would mean three subscriptions, would it not?—Yes.

Mr. *Benn.*

4222. The same analysis would apply, for instance, to the system of Berlin; it is not peculiar to this country, is it?—I think not; oh, no.

4223. That is to say, it would reduce the apparent subscription in Berlin in some way if you split it up on this mileage system?—Yes, it would. The honourable Member says he has three: for the initial one he pays 10*l.*, we will say, for the sake of the argument; for the second one he pays 8*l.* 10*s.*, we will say; and for the third one something less, that wears out into an average subscription of less than 10*l.* Now, what is this service, when you come to think of it? What is a message? Well, it is very low to estimate it at a minimum of a hundred spoken words. I do not know whether any honourable Member has ever had the patience to count a conversation, but you can speak 400 words in three minutes, and applying the estimated average of words per minute per message, taking it at a hundred, which is extremely low, you get this: that the average cost to subscribers of a message is ·58 of a penny. That is one way of looking at it. I do not know whether that to people who use the telephone very largely is a figure which can be called extortionate or extravagant, or that it is a ground for grievance.

*Chairman.*

4224. That is to say, the charge per conversation on the average in the experience of the company is slightly over a halfpenny?—On the subscription. The annual revenue, divided by the number of messages of the subscribers in the aggregate, comes out at ·58 of a penny. Now, I will put it in another way. I will test it by something else. I myself use the telephone some days hundreds of times; if the telephone company were to say to me: "Mr. Forbes, you must pay 20*l.* instead of 10*l.*, or 50*l.* instead of 20*l.*," it would not cause me to do without it. It has become a matter in commercial (almost in some sense in social) relations so important to some people that the question of price, the present price, at all events, does not in the least influence them. It has become a necessity, and a necessity of such immense value to the people who use it most that the price is ridiculously low.

4225. That is, to a person who has already experienced the beneficent operation of the telephone?—To people who have taken the trouble to learn how to use the telephone.

4226. But that would not necessarily apply to a person who has not yet had that experience, and therefore does not appreciate the real value of the telephone?—No; therefore I am going to put the thing in another way: Suppose the case of people who do not require, and who have not taken the trouble to learn what an enormous auxiliary and comfort a telephone may be in business and private; what is it as a mere auxiliary in your house, or for limited purposes? Well, it costs 9*l.* 2*s.* 2*d.* a year, that is as nearly as possible 3*s.* 6*d.* a week, that is sixpence a day including Sundays, because you can telephone on Sundays, and you can telephone in the day all day to every place, and to many places all night; therefore, to put it fairly, every subscriber can at his discretion have the use of the telephone in the day, and in most places in the night, for the price of the sixpenny telegram; and whereas 100 words by telegraph would cost 4*s.* 2*d.*, the average cost per message (minimum a hundred words) by telephone is ·58 of a penny. Now if you examine it by the facts, what becomes of all the outcry about the extravagance of the telephone? I will leave that

*Chairman*—continued.

for the honourable Members to attach such value to as they think fit. Then the comparison of charge with other European countries: that is another very sore place. There does not seem to be any very accurate information presented to the Committee upon that point. A good many tables have been put in, and we have heard some statements, but I think we might perhaps have them stated with a little more accuracy on some points. But taking them for what they are worth, I should very much like the Committee to consider how important it is, when you are dealing with matters of this kind, to know what the facts are; and, knowing what the facts are, to apply the facts to the circumstances. Now when you come to that, in comparison with New Zealand or Stockholm it is futile. The facts as regard the figures want to be known first. When you have got the facts as regards the figures, you must know the conditions, the social conditions, the climatic conditions of places, and what a telephone means in one place as compared with what it means in another, before you can form any estimate of its relative value or its relative use. Now our subscription, being 9*l.* 2*s.* 2*d.* on the average, is said to be extravagant. I will leave out for the moment all questions of a more or less efficient service and deal with the price. But, now, is it extravagant? Well, I do not think it is. From my point of view, certainly those figures do not seem to encourage the complaint of extravagance. But if it is extravagant, is it entirely our fault? Well, I do not think it is, as I will show you, if you will allow me to call your attention to this paper. The price, of course, has to cover the costs, all the costs, and taking 9*l.* 2*s.* 2*d.*, I have asked this question of myself, and I wish to present it to the Committee; what would the charge be, or what could it be, upon the assumption that the National Company were relieved from those direct and extraneous charges not pressing, or very slightly pressing, upon State telephones abroad? There, of course, I mean Stockholm, Berlin, Switzerland, and several other of our model examples, Berlin included. There is such a thing as what is called royalty, also wayleaves, and, of course, rates and taxes; for the ingenuity of the tax gatherer has found its way even to telephone wires and telephone establishments; and then another very important matter (which we feel in this country not only in telephoning, but in manufacture) is the greater relative scales of salaries, wages, and rents of premises. Those are two items, "A" and "B." Now, you will see what relative importance they have when you see the figures. In the year ending 31st December 1894, the working expenses of the National Company amounted to 456,809*l.* 15*s.* 4*d.*, or 62 per cent. of the telephone revenue; 62 per cent. of the telephone revenue was absorbed in the working expenses. The charges under "A" (that is royalty, wayleaves, and rates and taxes) amounted to 147,938*l.* 10*s.* 1*d.*; that is a shade over 20 per cent.

4227. Just one moment; you are speaking of these as charges which the Telephone Company have to meet, but which the State would not have to meet: you do not apply that to wayleaves, do you?—In a great measure I do.

*Chairman*—continued.

4228. To some extent?—To a very large extent.

4229. Of course, you are aware that the State has to pay wayleaves in various parts of the country, and sometimes heavily?—I am talking of the States in other countries.

4230. You mean to say that in some countries the State is relieved of wayleaves by statutory rights, which enable them to evade the question of wayleaves?—Yes; of course, one is at a disadvantage in not having the profit and loss account of the foreign countries. I have sought for it very carefully, and cannot find it; I have been trying to find it in the postal statistics of the Department, in the case of Berlin, for instance; we do not know what their profit and loss account is; I cannot find any details as to that, but I know, as a matter of fact, that their payments for wayleaves are extremely small.

4231. I believe in Berlin they merge all their telephone accounts in the postal accounts, and keep no separate telephone account?—That is so. I do not know what they "keep," but I know what they give to the world. Then I will come to the charges under "B." Now is it, or is it not, a fact that wages in England are relatively higher than they are abroad? I only know that (rather from a patriotic and sentimental point of view) it shocks me when I find that in this very business we are obliged to go not to England for wire, but to Cologne, where we get the best wire that is possible for our business at the cheapest price, there being no sentiment in business. Why? Well, I happen to know why. I have been a very large employer of labour in Germany myself in collieries and ironworks, and I know quite intimately the interior of this manufacture of the people near Cologne. Labour: I have tried to bring that home to you by showing that in the charges under "B" amounting to 214,123*l.*, they start with the line and instrument repairs, 93,537*l.*; and I had the curiosity to have analysed, a long time ago, what proportion of repairs, maintenance, was labour pure and simple. Of this amount of 93,537*l.* wages stand for 72·87 per cent. of the whole; that comes to 68,000*l.* out of it. The wages paid in Great Britain to the people employed in this category (skilled labour) are about 33 per cent. higher than they are abroad; certainly in Germany or Stockholm.

Mr. *Benn.*

4232. Might I ask you on that, would you say 33 per cent. higher than in America or Canada?—No; I do not know about Canada.

4233. Canada is rather important?—Yes, it may be, but I am dealing with the comparisons which have been forced here in this Committee, particularly Stockholm and Berlin.

4234. But of course they have extended over some American cities particularly, and Canada also?—Yes.

4235. I did not know why you had left out Canada, for example?—Well, let us deal with the particular, Stockholm and Berlin. I shall

Mr. *Benn*—continued.

shall come to Canada, if it is necessary, later, and to America. Well, that is one item. That item alone, assuming that that statement is pretty nearly correct, gives 22,719*l.*

*Chairman.*

4236. Extra?—Extra. Now salaries. The salaries of officers, clerks, head office expenses, and rents of premises; we have left operators out of this, because I am almost grieved to find that our operators are paid on the average certainly not more than they are in Berlin or in Stockholm. I daresay I could find reasons and explanations for that. I think the available women's labour in this country, particularly in places like London, is much more (sad enough to say) abundant than it is in either Berlin or Stockholm.

4237. And you find the wages paid to the operators about equal the wages paid in Berlin or Stockholm?—Yes; I am almost afraid I may say they are a little less than those. They may be a little less, but they are the market price, and for every operator we have a vacancy, for there are 20 applicants on those terms. With respect to the higher class of things, what you call the brain business, the payment here in England is enormously greater than it is anywhere on the Continent. You have got to meet it, and I put that down at 30 per cent. That, you see, takes another large lump, 36,000*l.* That makes 58,879*l.*, or about 8 per cent. more goes in those items. Now, if they are anywhere near the mark they are incidental to the conduct of the business in this country with this machinery, and they have got to be paid for. Who is to pay for them? The telephone user. But the average payment being 9*l.* 2*s.* 2*d.*, the working expenses, including these items and all others, come to 6*l.* 4*s.* 7*d.*; this is on the account of one year, the year ending December last. But if you come to apply the figures I have given you, even assuming them to be somewhere near the truth, those working expenses are reduced to 3*l.* 8*s.* 4*d.*; they are less than at present by 2*l.* 16*s.* 3*d.* Now, if the Postmaster General will give up his royalty, if we can get our wayleaves for nothing, or next to nothing, or upon terms adequate to those which are paid in Stockholm or Berlin, and if we can get rid of the rates and taxes (I do not believe the Post Office in Berlin pays rates and taxes on its wires); very well; that would be a different position. We should be most happy to be assisted in that way, then we should have a charge of 6*l.* 5*s.* 11*d.* That brings it down very nearly to these ideal hypothetical illustrations which seem to be the substratum upon which is built up all the theory and illusion we have been listening to. I am sorry to say, sir, I must excuse myself for being in some sense both a witness and an advocate. You see I have to defend the position of the National Telephone Company. I cannot afford to deal with abstract propositions; you must look at the facts.

4238. I think it is facts the Committee want. We have had a great deal of opinion expressed, and we are very glad to get facts?—I was rather anxious that the Committee should really

*Chairman*—continued.

be put into possession of the facts relating to the position of the National Telephone Company and telephoning in this country really.

4239. I understand the case you put before the Committee is that the business of telephony in this country is carried on under circumstances which makes it much more expensive than it is in the countries with which it has been compared in Europe?—Yes.

4240. Specially with regard to Berlin and Stockholm?—Absolutely.

4241. That is to say, these charges which you have indicated, and the amounts of which you have given, to a very large extent do not exist in those cases, and therefore the comparison from that point of view is not a fair one between England and Berlin and Stockholm?—Exactly; the same underlying principle as compels me against my will, when I have a dozen tenders lying on the table for wire, to select the lowest, and that is in Germany. I know why it is the lowest; it is because the burdens of industry there are lighter, and wages are much lighter; that is why.

4242. Still, that is not a difficulty for the National Telephone Company. You go into the cheapest market?—We do.

4243. And buy your material or plant on equally good terms with Germany or Stockholm?—Unfortunately I cannot buy the labour; I cannot get the German labour here.

4244. Therefore you have to pay higher wages?—We have to pay much higher; wages is the great thing; wages is the thing that is going to ruin us.

4245. Have you anything more to say upon that particular point: the extra charges that the company have to meet as compared with Germany or Stockholm?—No, I think that is a fair statement for starting cross-examination or founding a view. I put it to the common sense of the Committee as to whether it does or does not explain, and whether it does or does not justify, the moderate average charge which the facts show to be the charge of the National Telephone Company.

4246. What particular point are you going to next?—I am going to some other points as affecting the care and efficiency of the service; I think I have disposed of the price. Now, another complaint is the comparative inefficiency of the service.

4247. Perhaps before you go to that—it is rather kindred to the subject you have been dealing with—have you any statement to make with regard to the demand for the telephone in this country as compared with countries like Germany and Sweden and Norway?—I think so. I think one has to consider what the conidtion of things is is in Germany or Stockholm. I do not know whether any gentleman here has lived in Berlin; I have; and to compare Berlin to London, or to compare Stockholm to London, or North Germany with England, or Sweden with England, is an entirely misleading comparison. London is, no doubt, for its population, the particular city in the world which has less telephones than any other, having regard to the number of its inhabitauts. Why? Well, I do

*Chairman*—continued.

not believe the cause of the "why" is to be found entirely in the cost, or entirely in the efficiency of the service. It is to be a great deal more found in the difference of circumstances in London as compared with other places. Take, for instance, the relative position of the telephone and the telegraph. The telephone is a more convenient, evidently cheaper, and rather more satisfactory method of communication between minds than telegraphing; but, of course, I suppose the relative spread of the telephone would depend upon how far the telegraph has met the reasonable wants of the general public. That brings me to this: I am obliged to call in the evidence of a very eminent person, the Postmaster General of Germany. He is good enough to compile a number of very interesting statistics bearing on postal matters.

4248. Is that Dr. Von Stephean?—Yes, Dr. Von Stephean. I do not know, I may be misled about it, but it rather struck me that those figures might, perhaps, give us some indication how it is that telephoning in England does not progress as rapidly as it does in Germany and in Sweden, and in some other places. Here are some tables which show, first of all, the population of different countries. It then shows the number of inhabitants to the square kilometre, and it goes on to divide that over the post and telegraph. They apply the telegraph service of the different countries to every hundred inhabitants. How many telegrams are there in each of those countries to every hundred people? Now, suppose we take Sweden to start with, 30·7. Well, now, I can understand that.

4249. What does that 30·7 represent?—30·7 telegrams to every hundred of the inhabitants.

4250. Telegrams sent in the year?—Yes, 30·7. Now, in Great Britain it is 177·1. Well, if the inhabitants of Great Britain are so blessed as to have 177 telegrams to every hundred people, as against somebody who has only got 30, it would appear rational to induct that the telephone would probably, in that country, spread more rapidly than in the country where there is 177. Take Berlin, or rather Deutschland and Germany, where there are 55.

Mr. *Snape.*

4251. Per hundred?—Per hundred of the inhabitants, 49,428,000 inhabitants, and that is the average rate per hundred in telegrams. In England, Great Britain, it is 177; therefore the telegram is a much more severe competitor with any other means of conveyance, like telephoning, which is another form of telegraph, than it can be in any of those other countries. Now, there is something in the habits of the people.

*Chairman.*

4252. I understand you to mean that where the telegraph service is a very efficient service, and very largely made use of, you would not expect to find such a demand for telephones as you would in a country where the telegraph service was much less efficient?—No.

Mr. *Benn.*

4253. Does not that show that the people of those countries where the telegraph is very little used comparatively, find the telephone service so cheap and so much more efficient that they naturally use the telephone instead of the telegraph; that is to say, the citizens are very much benefited by the similar service at a cheaper rate?—Is it so much cheaper? We have not come to the question of cheapness yet.

4254. I ask you?—I have told you what the service is; 58 per cent. of a penny per conversation.

4255. The point I was wishing to inform myself upon was this: you have told us that in this country the telegraph service is 177 per hundred?—Yes.

4256. And in Sweden only 30?—Yes.

4257. As tending to show that where there is a good telegraph service the people do not want the telephone?—Not to the same extent; they do not realise the want of it as rapidly as it is realised in another place.

4258. Does it not prove this: that the people in Sweden, being provided with a cheap telephone service, find it is better and cheaper to use the telephone than the telegraph?—It may; you may induct that.

Mr. *Snape.*

4259. May I supplement the question by asking whether you can give the Committee a statement with reference to Germany similar to the one you have given with reference to yourselves as to the telephone on the Second Statement; then we can compare them for ourselves?—As to what development they have made?

4260. Not so much the development, as the ratio of effective calls, the cost to subscribers per message, and so on, the later details of that Statement No. 2. Then we could compare the figures for ourselves as to whether the telephone was more used because it was cheaper there than here?—This is, what it gives for the whole of Germany, that is the German Postal Union, including, I suppose, Bavaria and Wurtemburg; the number of places having telephones, is 442.

4261. Is that the whole of Deutschland?—The whole of Deutschland. The number of telephones is 91,458; the number of subcribers, 84,129; the number of conversations, 391,388,000.

4262. That is equivalent to your effective calls?—That is our effective calls multiplied by the two messages or conversations.

4263. How many do you say?—391,388,000. Of course you have to compare that with the population, which is 49,000,000, as against ours which is a good deal less, 39,000,000; and (which is material) that this business in Germany has been in the hands of the State from the beginning mostly, and it has had all the prestige of the State, and all the advantages of the State organisation, and the advantages which the telephone in this country has not yet had, but which, happily, the enlightened department have made part of the condition of the agreement they should have, that is to say, the use of the post offices for the purpose of telegraphing and telephoning. We have made almost as much progress,

Mr. *Snape*—continued.

progress, with all our blunders and faults in England (this private company restricted and limited for a great portion of the time by the policy of the Post Office, and without these concurrent advantages which have made the telephone so valuable in Germany), we have made almost as much progress as they have.

4264. Have you worked out the cost to the subscriber per message in Germany, the same as here?—No; they do not publish statistics of that kind; they give the general receipt of the whole postal business, including letters, telegraphs and telephones in one large lump; and they give the outgoings, that is all; and that is all the information they give of the financial part. Allow me just to put it quite plainly; this is what seems to be the case: the whole thing I find is on page 60 (no doubt, sir, you have this at the Post Office), the finance. The receipts for the year 1893-94 were 290,615,418 marks, the Ausgaben, the expenditure, 270,887,743 marks, leaving a balance (Ueberschuss) of 19,727,675 marks, that is to say, about a million sterling, or nearly a million sterling, of profit upon the whole of their operations, postal packets, financing, insurance, telegraph and telephone; but they give no details; therefore I cannot tell you, as I can with our accounts, how much a message it costs.

*Chairman.*

4265. I think you were going to state the special circumstances of this country as compared with foreign countries, which tend to diminish the demand for telephones?—I have often asked myself the question why, in London, the call is so relatively small, not pressing. First of all, as regards the telegraph administration in London, the account (of course, I am not in possession of the figures; I believe they are in the Post Office account) shows what an enormous use is made of the telegraph in London, very effective, very prompt. That is one. Then I do not know whether the multiplication of deliveries of letters in a great city has anything to do with abridging the importance either of a telegram or a telephone message; but I suppose in London you have as many deliveries as in Berlin, or in Stockholm; somewhat more I fancy. Then, as to the habits of the people: I do not know any city, I have lived in a good many, where the commissariat is carried on as it is here. Mr. Slater, the butcher, Mr. Charles, the fishmonger, Messrs. Cambie & Pratt, the poultry people, will send every day to your house for orders, and a bill of fare from which to order; they go away, and deliver the thing. That has become the habit of London. You cannot get that done, that I know of, in any city in the world. It is not done in Paris, it is not done in Berlin, it is not done in Stockholm. There the habit is marketing. That means movement, and until the telephone came it was a serious call upon people in all weathers. I daresay Berlin and Stockholm are not quite all the year round such pleasant places or so easy to get about in as London. I have known Berlin, for weeks together, almost impassable. You could go out, of course, you

*Chairman*—continued.

could move about, the men who had business on the exchange got there; but movement was greatly suspended, and people suffered great inconvenience. The telephone has become valuable, because at a relatively low price they can pay for the saving of that inconvenience. The same in Switzerland. The telephone goes now in Switzerland to places where even the telegraph did not go, where there was no access except by mule track, or by roads which were impassable for long periods in the year. All those places are now covered with telephones. People are kept in touch with civilisation by the telephone, which is erected at a very small cost by the Swiss State.

4266. The commissariat argument would apply to the residential portion of the town more than to the commercial?—The residential; and therefore there are many reasons, and until people will take into consideration the facts, first of all as borne out by the figures, and then circumstances, it is quite idle to be denouncing people for not doing something in one place which is impossible to be done under the circumstances, although it is quite possible in some other places. Now, sir, another branch of the subject is the badness of the service and the cost. I have disposed of the cost, and I am now coming more to the cost of installation; figures such as we heard from General Webber; some impossible price at which London could be installed, and even the estimate put in by a gentleman for whom we have considerable respect; we trained him, we know his capacities; all he knows about it he learnt from us; he was one of our own officers.

4267. You are speaking now of General Webber?—He learned a good deal from us; he was with us for some time; he was a director of the company when it was first united.

4268. Who are you now speaking of then?—I am speaking of the gentleman who made an estimate, which I shall come to, of how London is to be telephoned.

4269. What is his name; we shall identify him then?—Mr. Newland.

4270. You do not agree with his figures?—It is impossible to agree with them if you understand the question.

Mr. *Benn.*

4271. Would you say the same of Mr. Bennett, who confirmed those figures?—We also had the pleasure and honour (if it be one) of training Mr. Bennett; we know him very well. I have not seen Mr. Bennett's figures, by the way.

4272. No; but when he was appointed your chief engineer, was he merely an apprentice, or was his training prior to his appointment?—Oh, prior, of course; he was trained in our service. Whose chief engineer do you mean?

4273. Mr. Bennett was associated with your company in several important matters; I think he was chief engineer of part of your service?—Hardly "chief engineer."

4274. Well, it is not an important point; but you spoke of training all these people. Now, for instance, Mr. Bennett was engineer for the National, chief engineer and electrician in Scotland and Ireland of the National Telephone

Mr. *Benn*—continued.

Company in 1883, was he not?—I do not think so; does he describe himself as such?

4275. And was he not also chief engineer, general manager, and electrician for Scotland and the north-west of England to the National Telephone Company from 1883 to 1890?—I do not admit that he was. I will tell you what he was chief engineer of; the new company.

4276. The New Telephone Company?—Yes; I daresay you will approach that by-and-by, then I shall be able to tell you something about it. But what I want to deal with is the initiation. Who formed the telephone in this country? Why the people who started it; the licensees. They had to find and create the people; they were not trained; you could not go and pick them up in the streets; they have had to find out their way, and in finding out one's way, it is like the railways; I was early enough to remember the training of the railways; I myself was born in it. We had to make the thing, and I remember one of the very first things that puzzled Mr. Brunel was this. He said: "Well, we have made a railway, and we can run engines upon it, but how we are to become carriers, and find the people who can conduct this business commercially, is quite a new problem." Well, we have had to solve this question of training people as well as adapting ourselves to the commercial necessities, and we have made mistakes. I have no doubt if we had all been as wise as we are now (it is so easy to be wise after the fact) we should probably have avoided the drawback of the single-wire system about which we hear so much complaint, well-founded complaint. Everybody admits that the single-wire system is a mistake, but it was the fashion at that time; and the oddest thing in the world is that Berlin, which is the great example, and which has certainly the largest number of telephone exchange subscribers of any city or place in the world, is absolutely single wire at this moment. Very well; we started the single wire, and no doubt the single wire is the cause of a great deal of the discredit that attaches to our company; but we are quite sensible of that. We have not conducted this business under our responsibility to the Post Office and to the public for a number of years without learning our business; I admit that we are learning our business; we are now doing it, and what I am rather anxious to put into the minds of the Committee is what we on our own initiative have done. We recognised from the beginning that we were agents of the Post Office. I have good-humouredly said sometimes at the Post Office, when I have had the pleasure very often of meeting Mr. Lamb and other gentlemen when I walk into the Post Office, "I feel that I am just as much an official of the Post Office as any of you gentlemen." The Post Office have charged us with a public duty, and I will not say how we have performed it, because I ought not; but we recognised what our duty was to the Post Office and to the public by adapting ourselves (as soon as our experience convinced us we were wrong) to the right system. Now, about this great question (which is a great question) of the metallic circuit; I want to see what we of our own

Mr. *Benn*—continued.

initiation have done; I then want to see what we are prepared to do; what we are doing. We have got a settled policy; we know quite as much about this as Mr. Bennett, or the General, or the other people.

*Chairman.*

4277. Mr. Bennett has not been here as a witness owing to ill-health. He was referred to through another witness as having corroborated a certain statement. I think it would be better to leave Mr. Bennett's name out; he has not been before the Committee. General Webber has; his evidence is before us?—I should not have mentioned the name of Mr. Bennett but for the question of the honourable Member. Then I will drop Mr. Bennett for the present. Now, sir, this is a statement showing the "Proportion of plant working and ready for metallic circuits," and if you will allow me I will hand it in. (*The document was handed in.*) We have recognised all the objections to the single wire in important centres, and we have set ourselves to work to repair the wrong done by relying too much upon the single wire, and this table shows where we are at the present time; it is the "Proportion of plant working and ready for metallic circuit"; "number of exchanges fitted or in process of fitting with complete metallic circuit wires and switchboards, 117."

4278. This applies to the whole country?—Yes, representing a total of 18,978 subscribers' lines. "Number of exchanges fitted with metallic circuit switchboards not included in above, 78, representing a total of 20,995 earth circuit lines"; that is to say, we have got the preliminary and most important accessories (the boards) ready. The lines can be added, of course, and instead of being 20,995 earth circuit lines, they will become, in the course of time (and not a very long time), metallic circuit lines.

4279. Is the alteration in the board one of the most difficult and complicated operations?—It is one of the most difficult and complicated of all the business, the switchboard. Then the number of metallic circuit subscribers working on metallic circuit and earth circuit switchboards, a sort of hybrid, 706; and the number of exchanges fitted with earth circuit switchboards and lines, 398. They represent a total, those two, of 22,485 subscribers' lines. The material point there is summed up in this one thing about London. At the end of this year London will be entirely on a metallic circuit.

4280. Every subscriber will have a metallic circuit; the twin-wire system?—Every subscriber will have a metallic circuit. Of course, it is a very serious thing, not only in respect to cost, but in respect to the terrible disturbance which must take place in the conduct of the service during the time of transition. It is exactly like trying to carry on an enormous traffic on a railway when you are re-laying the line; it is the same thing; you must have disturbance, and I have no doubt that the greater part of the complaints that have been properly launched against this company during the last three or four years, the time which it has taken to carry out this complicated business, is attributable to the fact that people were disturbed in occupation.

For

*Chairman*—continued.

For instance, one prolific source of complaint has been the changing of numbers. A man was on our exchange for a particular number; the fact of reducing the number of exchanges and putting two or three sets into one involved the alteration of a man's number, a serious difficulty to a man who had printed his circulars, and sent them all over the kingdom, whose correspondents knew he was Number So-and-so; then to have his number suddenly changed was very inconvenient. As a matter of necessity the transition from one system to another was serious. The interruption of wires, constant during the process of construction above the wires thrown and touching other wires, producing all sorts of derangement during the four years, has been, no doubt, a source of great individual annoyance and inconvenience. We cannot help it. If we could have foreseen that when the system was first laid out we could have avoided it, but then we did not and could not see it. We are going on doing that work at a very great cost.

4281. You have said that in London by the end of the year it will be a complete metallic circuit?—Yes.

4282. With regard to other towns in the country can you give us any facts?—Manchester is going on very rapidly. Glasgow is a place that we are prepared for by putting in there a very fine board. That is a place which I believe is not slow, sir, in making its grievances known. We admit that in Glasgow the service is not what it ought to be, but as a matter of principle we have determined that it shall be when we know where we are. We cannot carry out these works without the concurrence of the authorities in a place like Glasgow, and I venture to suggest to the Committee (in fact, I pledge the company) that we are ready at all costs to give Glasgow the best service that can be got, a metallic circuit, if we can be assured of the concurrence of the authorities to enable us to do what must be done to give it.

4283. Is it the case that an effective carrying out of a great change like that from a single-wire system to a metallic circuit system does depend to a great extent upon the harmonious co-operation of the local authorities?—It must be so.

Sir *Charles Cameron.*

4284. There were witnesses up here from Glasgow, brought up, I understood, by your company, to give evidence as to the general satisfactory nature of the work of the company in Glasgow?—There were.

4285. Then you do not agree with them?—I do agree with them.

4286. You agree that it is unsatisfactory, and you pledge yourself to make it satisfactory. They gave evidence on your behalf that it was satisfactory?—No, not quite; they said it was not nearly as unsatisfactory as the other Glasgow witnesses said it was. Nobody pretends that it is as good as it might be.

4287. You are aware, probably, that since your witnesses were up the Town Council have taken means to find out the opinion of the telephone users similar to those means which you

Sir *Charles Cameron*—continued.

and the County Council here have adopted in London?—I was not aware of that, sir.

*Chairman.*

4288. You were stating that the company intended, with regard to Glasgow, and I imagine with regard to other places, as rapidly as the circumstances would allow, to change the system to a metallic circuit system?—If you remember, sir, I stated before the Committee two or three years ago, in 1892 (I have been reminded of it by witnesses here) that a great deal of the service was monstrously badly done. So it was. But the witnesses omitted to follow up that statement by stating the reasons which I gave the Committee as to why it was bad; but that is not important. We have admitted, we have realised, we are taking measures, and have taken measures, and have spent 200,000*l.* up to this moment in substituting metallic circuit for single wire, and we are going on; but it cannot be done in a day, and it cannot be done without during its doing inflicting a certain amount of annoyance on the subscribers, and it cannot be done in places like Glasgow without the concurrence and assistance of the local authorities. That is all. And therefore the complaints of Glasgow, whatever they are, however they are got at, can be met by the metallic circuit whenever we can carry it out with the assistance of the authorities. Then, sir, about the great advantages of competition in a particular area; well, that has been a matter of a good deal of speculative evidence, but one experience is better than a great deal of speculation, and we have experienced it in Manchester. What is the result to the public of two people competing with each other in one area? There we had an illustration of all the theories, all the tempting things that are put into these circulars to people inviting their complaints against a system as being both dear and inefficient. We had that played out in Manchester. There a great number of subscribers by solicitation (yes, I think "by solicitation," I will not put it stronger than that), were induced to subcribe to a telephone system on the theory that it would turn out to be cheaper and better than the existing one. Well, it was carried out, the company was formed, subscribers were enlisted in that way; they were also invited not only to be subscribers, but shareholders; and now we know the result, and you have only got to induct from it whether really that experience is one which would make it a desirable thing to follow. Here is the story, sir. I will just hand copies of this document round to the Committee. (*The document was handed in.*) This, sir, I have had prepared with great care by Mr. Gaine, our general manager. I am not one of those people who take a statement myself without taking the trouble to realise its accuracy by my own investigation; but Mr. Gaine has the credit of these statements, and I endorse them, having examined into the truth of them.

4289. These are statements relating to what?—This is the story of the Mutual Company at Manchester, founded on the strength of complaints against the National Telephone Com-

*Chairman*—continued.

pany, as regards the inefficiency of their service and the extortionate character of their charge. Now, the date when the Mutual Company's Exchange was opened at Manchester was the 28th February 1891. They opened with 170 people. Their method of obtaining subscribers was to invite them to become shareholders, and a great many of them were shareholders. They had a subscription of 5*l.* a year for shareholders in virtue of their having taken one or more shares in the undertaking. They also started upon a 6*l.* subscription for non-shareholders; and this is the story: Number of subscribers to the New Telephone Company at the end of April 1895, 1,349. The Mutual became the New. The Mutual Company took several forms, and eventually, at a greatly enhanced price, found itself in possession of the New Company. This was one of their bargains. They then had 1,349 subscribers at the end of April 1895. On the 28th February 1891, the National Company's subscribers, when they commenced working, were 1,944. In April 1895 the National Company's subscribers in Manchester had grown to 3,374. The number of the National's subscribers who gave up the National to join the Mutual was 27.

4290. I see, under heading 5, you bring in Bolton?—Manchester and Bolton, yes; there is a small business at Bolton which is hardly worth mentioning. That is the Mutual. Number of National subscribers who gave up the National to join the Mutual, 27. Number of National Company's subscribers who were also New Company's subscribers at the end of April 1895, 492. Now, this was the result.

4291. What were the charges of the two companies?—We were 10*l.*; they were 6*l.* to non-shareholders, and 5*l.* to shareholders. That pound was the recognition of their having a share.

Sir *James Fergusson.*

4292. May I interpose a question: Are there still subscribers to a separate system known as the New Telephone Company in Manchester?—Oh, yes.

4293. Still?—Still.

4294. And some of them in connection only with the New Company's wires?—Yes, sir. At No. 7 you will see the number of the National Company's subscribers who were also New Company's subscribers at the end of April 1895 was 492; therefore 492 people, in consequence of the existence of the New Company thought it worth their while to pay the double subscription.

Mr. *Snape.*

4295. Is there any inter-communication between the subscribers on the New Telephone Company in Manchester and your company?—There was not, sir. Of course, that competing company started; they got their list of subscribers; those subscribers could talk with each other. We had a much larger number of subscribers than they had; an immensely larger number of subscribers. There were some who, for reasons which I cannot pretend to understand, thought it worth their while to continue to pay our 10*l.*, and to pay the other people their 6*l.*

Mr. *Snape*—continued.

4296. But you have no arrangement by which without a subscription to each company the subscribers on the one can communicate with the subscribers on the other?—We had not as long as we were in competition, but when the competition came into a friendly form we allowed any gentleman being a subscriber on the new company, either at 6*l.* or at 5*l.*, to have communication with all our subscribers by paying 10*l.*, or the difference between his subscription and the 10*l.*; in fact, any of their subscribers can now, if they choose, become subscribers to the united system by paying 10*l.*

4297. And *vice versâ*, I suppose?—And *vice versâ.*

*Chairman.*

4298. That is to say, that while competition lasted, there were two bodies of subscribers to two independent telephone companies, neither of which could get on to the system of the other?—That is it.

4299. If the subscribers of the one company wanted to be put in communication with the subscribers of the other company they must join the two companies; is that so?—They must join the two companies.

4300. That was the system under the two companies?—That was the system under the two companies.

4301. As soon as the competition ceased and the amalgamation took place, an arrangement was entered into by which the subscribers on the one system had every advantage given to them to get into communication with the subscribers on the other system?—Yes; the number of the National Company's subscribers who were also New Company subscribers at the end of April 1895 was 492, paying to both companies. It was a larger number, but gradually a certain number of these gentlemen have accepted our proposition as to paying the difference between their subscription to the New Company and our 10*l.* They have the benefit of the whole system. By that means, and after wasting a great deal of capital, complicating the thing very much in a particular area, a combination ensues. I heard, 50 years ago pretty nearly, enunciated in a Committee of the House of Commons that competition must end in combination. Here is a case in point. It will be so.

Mr. *Benn.*

4302. Have you a similar table to this with regard to Dundee?—No, I have not Dundee. I can get it, I daresay. Would you like it?

4303. I think this is so very useful with regard to Manchester that a similar table with regard to Dundee would be specially instructive?—I will have a note made of it.

*Chairman.*

4304. Does that complete that point?—That is my little contribution, sir, to the "advantage of competition."

4305. But you would apply the experience of Manchester to other places?—Yes.

4306. Where the same results have followed from competition between different companies in the

*Chairman*—continued.

the same area?—Yes; it was the realisation of that state of things at Manchester which led, in London, to the absorption of the New Company. The moment the Duke of Marlborough realised the difference between fact and illusion, he saw that it was impossible to go on on the theory of a competition which involved these sort of consequences. Of course that happy change of mind was not arrived at until a vast amount of money had been thrown away.

Mr. *Snape.*

4307. Do you think that competition would have to end in combination if the municipalities were the competitors with your company?—Yes.

4308. Would you have to combine with them, or they with you?—If the municipalities, of course, worked irrespective of profit and loss, and could induce the ratepayers to pay the losses of a reckless competition, our position would be a little awkward; but I do not apprehend that that will come off. A combination of convenience probably would have to be arrived at upon some terms or other (I do not know what); but all I want to point out is that in this business it is so sensitive, it is so difficult; the convenience may be so extraordinarily interfered with by two people working in one place, that it ought to be avoided, if possible, at any cost. We have had some experience of it. We had great trouble in London, and our service was very much disorganised; we had a great many complaints through a company called the Globe Company, which had a license. They found it a very convenient practice indeed to go where our wires were. They could see where the line of the traffic was; they found out who the subscribers were (that was open to all the world), and they proceeded to erect a superstructure in London; their men were, of course, zealous, and had to put up their structure regardless of the convenience of other people; and this is an illustration of what ensued (*handing in some photographs*). Those are our lines, and there the interests involved led to their tying our lines up in lumps while the operation shown there was going on.

Sir *James Fergusson.*

4309. Did they do that at their own risk, or with your consent?—At their own risk.

*Chairman.*

4310. What was the result of that competition?—The result of that competition was that we got into such discredit with our people; it was bringing telephony into such absolute disgrace, that we bought them out.

Mr. *Benn.*

4311. I suppose you were both doing this sort of thing (*referring to photographs*). You were both on the same footing with regard to your trying to disfigure the heavens in this way?—Neither of us had any right.

4312. So you were both equally guilty of the monstrosity?—Yes, that is one of my complaints, that you and others complain of an inefficient service which depends for its efficiency upon

Mr. *Benn*—continued.

rights which you will not grant. You are the people to blame, not us. That is an abstract proposition; I do not mean the honourable Member, of course.

4313. If the municipality preferred to put all this underground, to destroy any chance of this sort of thing (*referring to photograph*), it would be a reasonable request, you think?—I do not know that it would be. I do not know that even underground you might not have the same thing arise, but we have not arrived at that Alsatian moment yet. You must have a good deal overhead notwithstanding.

*Chairman.*

4314. Is it your opinion that the inefficiency in this particular case, when the Globe Company, without the sanction of the local authority, or any right whatever, tied your wires up in this way, was directly the result of the competition which was going on?—One would scarcely like to put too plainly what one thinks was the object. I do not think the erection of their works absolutely required that, but perhaps the zeal of their servants outran their discretion.

4315. A possible desire to be bought up at a good price, you think, had something to say to it?—I fear that desire to be bought has a good deal to do with this telephone agitation.

Mr. *Benn.*

4316. Perhaps they had an idea of buying you up, Mr. Forbes; did not that occur to you?—They were not big enough.

4317. It is a question of size, and not of right?—Well, the County Council is big enough to buy, if they can get the power to do it.

*Chairman.*

4318. Are there any further points you would like to deal with?—I have a great many points, but I am almost afraid I shall tire the Committee. I should like to give some account of our progress in some of the Scotch cities (Glasgow and others) during the last five years. There are some figures I thought might be useful about Scotch towns, showing that we are not really at a standstill in progress in Scotland. (*A further table was handed in.*) There are six years shown upon the table, but it shows the progress in five years only in Glasgow, Edinburgh, Dundee, and Aberdeen. I do not know that I need enlarge upon it beyond showing that we are keeping pace with the demand. I have no doubt that if Glasgow is metallic circuited, the demand probably will be a little more prompt than it has been, because the service will be better no doubt; I could not undertake to say that it would be cheaper, but it would be better. Then, sir, there is the question of the number of complaints by subscribers; that has been presented to you in rather, I should be sorry to say, exaggerated terms; but it is just as well to know, as far as we can ascertain it, what it really does mean; and with that view we have had a careful return prepared, for which Mr. Gaine is responsible, but as to which I have taken the pains to ascertain that it is

*Chairman*—continued.

reasonably correct (*handing in a further document*). You will see what it is: Glasgow is one of the worst places; that is perhaps why there is such a conflict of evidence as between those who came on the one side and those who came on the other. There is no doubt that the "average number of complaints per exchange subscriber's line for the year ending 31st December 1894" (3·79) is not so favourable as Edinburgh, where it is 0·09 each subscriber. "The average number of exchange messages, local and trunk, per exchange subscriber's line for year ending 31st December 1894." In that table you will see that the number of complaints fluctuates enormously.

4319. Would these be complaints sent by letter. They would not be complaints at the exchange, would they?—Mostly by letter.

4320. Formal complaints at the office?—Formal complaints at the office, either by calls at the office or by letter. They amount, apparently, over the average of the United Kingdom (averages are sometimes good and sometimes bad) to ·73, less than one complaint a year per subscriber; of course in some places they are worse than others, and Glasgow, unhappily, seems to be the worst of all.

4321. London stands at less than 1 per cent. per subscriber?—London is ·94 per subscriber. Then, sir, you have got already a statement handed in by Mr. Preece of the charges in different places. We have got one prepared, I suppose from some other sources, which I will take the liberty of handing in, and it will reveal that although in some places, which have no analogy whatever with great cities, the rates are lower, in many other places they are much higher. It is to be taken for what it is worth. (*The document is handed in*).

4322. Those places being mainly in the United States?—Yes, there are a great number in the United States; Baltimore, and those places. Then there is Brussels, and there is one feature about Brussels which I should like to comment upon, that is, the State now have acquired nearly the whole of the telephones there. They attach so much value to the metallic circuit, as compared with the single wire, that they charge 50 per cent. extra for it; the subscribers can have the option of being served by a single wire for 10*l.* within a radius of three kilometres of the exchange, or 15*l.* on a metallic circuit.

4323. You are making no extra charge for the twin-wire service?—No.

Sir *James Fergusson.*

4324. Do you not in some places give the subscriber the option of having his single wire doubled by paying so much more?—Yes. I think when the Irish wire was laid we were anxious to facilitate the through trunking, and there we proposed if any subscriber thought it worth his while to have a metallic circuit for the long telephone, 2*l.* 10*s.* for special instruments; in fact, to make his local connection fit for long telephony.

4325. Is it not the case that in the large towns there is a certain extra charge made on conversion?—For conversion, yes; what we call a special trunk installation.

Sir *James Fergusson*—continued.

4326. I do not say it is not quite right?—Now, Amsterdam; I am a little familiar with that. Amsterdam and Rotterdam are two very important centres, and as I spent four years of my life a good deal in those two cities I know a good deal about them. There they are essentially a commercial community. I suppose for the size Amsterdam is a financial centre of great importance, and as a commercial centre it is of great importance. Rotterdam is less important financially, but quite as important commercially. I do not know any people who know better the value of a thing they buy or sell than the Dutch; in fact, they are reputed by Mr. Canning to have had some faults in that direction; but in comparing London or any of our great cities with Amsterdam, it stands thus: There the charge is 9*l.* 16*s.* 8*d.* for a kilometre, and anybody who has visited Amsterdam may know there are some outlying suburbs, such as Neuwer-Amstel and Ouder-Amstel, within a very moderate distance, where in one part it is 12*l.* 10*s.*, and in the other part it is 20*l.* 16*s.* Of course, one does not expect absolute accuracy in gentlemen giving evidence like Mr. Dickinson, but I was a little struck with what he said about Holland, that there the subscription was from 2*l.*, or something of that sort, upwards. There is no such subscription in Holland as 2*l.*; and that which I have stated is what the subscription is in the two most important centres.

*Chairman.*

4327. Varying from, I think you said, 9*l.* up to 20*l.*?—£. 9 16*s.* 8*d.* for one kilometre, and in the same city, in the outlying suburbs of the New Amstel and the Old Amstel, in one case 12*l.* 10*s.*, and in the other 20*l.* 16*s.*

Mr. *Snape.*

4328. £. 20 16*s.* for one kilometre?—No, these are areas outside the kilometre.

4329. From the central exchange, how many kilometres?—The space covered is about 30 square miles, while in London (I have heard it very often) it is 600 and something.

*Chairman.*

4330. Six hundred and thirty?—But if we compare like things with like, I cannot imagine myself anything more akin to London than a place like Amsterdam, as a comparison. It is a great commercial centre, and it is a great social centre; so is London.

4331. But the population is, of course, very much smaller?—Of course; but, still, the price per telephone is very much larger as regards some parts of it.

Mr. *Snape.*

4332. In whose hands is the telephone there?—That is very peculiar. The State have the monopoly of the telephone there. The telephone was determined to be a telegraph, and the State erected the trunk wires. It is carried on by Bell's Company, the commercial business. The State there anticipated the Post Office in this country

Mr. *Snape*—continued.

country by allowing a company to work what I may call, as an old carrier, the collection and delivery department; but they left the trunk line in the hands of the State; they took that into their own hands, but the companies work it. They hand over to the State 75 per cent. of the trunking.

4333. The trunk receipts?—The trunk receipts. They hand that over to the State, and they retain 25 per cent. for working. But what is peculiar about Amsterdam (and all the Dutch towns) is this: The State gave the concession to the company to telephone, but left them to find their way with every area; and the different corporations or municipalities have licensed this telephone company to carry on the business in their area; and that is an exclusive license. They found out that one was enough.

4334. The exclusive license is to the municipality in this small area, I understand?—No, the municipality license the telephone company in their area.

*Chairman.*

4335. As I understand, the State has no monopoly?—Oh, yes; the State have the monopoly.

4336. Then how is it the municipality license the company?—They license the company as regards the area in which they can carry on the business.

4337. They do not license the persons, but only the area in which they may carry on the business?—That is so.

*Chairman*—continued.

4338. They authorise the company to carry on the business in their municipal area?—The State license the company, but the company have to go to the municipalities to obtain their license to work in their area; and the municipalities elected to license them with an exclusive license. That is going on in Holland.

Mr. *Tully.*

4339. Have the company to pay anything to the municipality for this license?—I can tell the honourable Member very shortly, for I have the whole story in their own book here.

Mr. *Snape.*

4340. Can you tell us what the scale of charge is that is made by the company for the use of the trunk lines?—If you will allow me I can tell you, because I have it in their book, but I am afraid that involves a little research.

*Chairman.*

4341. The tariff for three minutes' conversation over the trunk lines is uniformly 50 cents?—That is 10*d.*

4342. For three minutes, or part of three minutes?—Yes.

Mr. *Snape.*

4343. That is in Amsterdam?—All over Holland.

4344. And the same company, all over?—The same company, all over.

*Friday, 24th May* 1895.

MEMBERS PRESENT:

Captain Bagot.
Mr. Baird.
Mr. Benn.
Sir Charles Cameron.
Sir James Fergusson.
Sir John Gorst.
Mr. Grant Lawson.
Mr. Arnold Morley.
Mr. Snape.
Lord Stanley.
Mr. Tully.

THE RIGHT HONOURABLE ARNOLD MORLEY, IN THE CHAIR.

Mr. JAMES STAATS FORBES, again called in; and further Examined.

*Chairman.*

4345. I THINK when you were giving evidence on the last occasion you were giving some particulars showing the progress made in Scotland especially, and in other parts of the country, and you were dealing with the question of complaints?—Yes, sir.

4346. Have you any further evidence on that point to give to the Committee?—Yes, I rather wish to put in some other statistics. I think we exhausted the price question; and the other ground of complaint was the inefficiency of the service and the great cause for complaint, and I have some papers bearing upon that which I should like to submit to the Committee. "No. 8," sir, is a paper I will put in, in order to test the reasonable truth of the assertion that this is a very bad service, and that people are kept waiting, and so forth. This is a statistic which shows the number of "local messages (exclusive of trunk messages) for one day (3rd April 1895) passing through the exchanges at Glasgow, Aberdeen, and Edinburgh." The material point there is to bear in mind that all these exchanges must be subject to a common user, and that the subscribers to an exchange cannot be in the same happy position as one in possession of a private wire, which is there at his service unencumbered with any common user. When he calls, his being a private wire, there being no other call upon the private wire, of course he is answered rapidly. Subject to that, this is what takes place: "Time occupied in placing subscribers into effective communication" (very often the first call upon a subscriber himself does not bring him; that involves a further call, therefore effective communication is the factor). Under half a minute, 59,020; under one minute, 4,590; under one and a-half minutes. 974; under two minutes, 698; under two and a-half minutes, 260; under three minutes, 572; under three and a-half minutes, 54; under four minutes, 326; under four and a-half minutes, 218; and five minutes and over, 2,694. Now, as in some sense a defendant in this cause, I claim that that, under the circumstances, disposes of the accusation that this is an intolerable service, and that people cannot use it. "Aberdeen." Under half a minute, 14,050; under one minute, 490; under one minute and a-half, 394; under three minutes, 66; under five minutes, 54. "Edinburgh." Under half a minute, 12,130; under one minute, 1,956; under one and a-half minutes 1,298; and so on down to the end of the table. That is, as regards the complaints in Scotland. "London." (That was taken in a different fashion): "Number of messages dealt with by one operator in charge of fifty subscribers during seven hours (10 a.m. to 5 p.m.) on the 3rd of April, 1895." You see that lady conducted 508 operations. Under half a minute, 176; under one minute, 146; under one minute and a half, 116; and then they tail down in some proportions to five minutes and above. That I put in as information for the Committee. (*The document is handed in.*)

*Chairman*—continued.

4347. Could you give us the number of subscribers at Glasgow, Aberdeen, and Edinburgh?—Yes; 5,221, Glasgow.

Sir *Charles Cameron.*

4348. Is that in the town, or what does that include?—That is in the Glasgow Exchange area; and Edinburgh, 1,741; and Aberdeen, 1,029; and in London, 10,848.

*Chairman.*

4349. Then may we take it that on this day in Glasgow 5,221 subscribers used the telephone 69,000 odd times?—Yes.

4350. And the same with regard to Aberdeen and Edinburgh?—The same. That was the number of calls in the day.

4351. Showing a very considerable user of the telephone by the subscribers in each place?—Yes.

Mr. *Grant Lawson.*

4352. It is the number of messages, I think you say?—Messages.

4353. I take

*Chairman.*

4353. I take it, you mean the number of calls by subscribers?—Effective calls. The number of messages is 69,000. Those are the number of messages that passed as a consequence of that call. That is the question and answer.

4354. In each case two people are brought into communication and carry on a conversation?—Yes, representing those messages, 69,000.

4355. Fifty-nine thousand under the half minute?—Yes, an effective call means a call which results in the person called being able to speak with the person calling; that makes two messages.

4356. Just to make it quite right on the notes: the 69,000 odd in Glasgow mean that 69,000 people have been put into communication, but there would be only half that number of actual calls by people wanting to be put into communication?—Yes, that is so. Then, sir, "No. 9" I will put in, a "Return of local messages through a few important exchanges on the company's system." (*The document is handed in.*) That is a return bearing materially upon the user, and the occupation by users, of the wires and the cost per occupation; rather an interesting table.

4357. Have these anything to do with trunk messages?—Local; those are exclusive of trunk. You will find that stated in the second column. The first is, "No. of exchange subscribers." Then, "No. of local messages per day (including Sundays) exclusive of trunk messages"; "Average number of local messages per day (including Sundays), per exchange subscribers line. Exclusive of trunk messages"; and the "cost to subscribers per message." Lime-street Exchange, London. ("The number of messages is based upon a return of the calls for the week ending 28th March, 1895, and dividing the total number by seven, the Sunday is therefore included"); number of subscribers, 2,135; number of local messages per day (including Sundays), exclusive of trunk messages, 22,625; average number of local messages per day (including Sundays), per exchange subscribers line. Exclusive of trunk messages, 11; cost to subscribers per message, 1.04*d.*

Mr. *Benn.*

4358. Could you at this stage give us the number of trunk messages, so that we may here compare the local service with the trunk service?—No, I cannot do that just now. Of course, we can furnish it, but their number is insignificant in comparison. Central Exchange (Birmingham), number of exchange subscribers, 1,388; number of local messages per day (including Sundays), exclusive of trunk messages, 16,463; average number of local messages per day (including Sundays), per exchange subscribers line, exclusive of trunk messages, 12; cost to subscribers per message, 0.53 of a penny. Blackburn, 558; 6,194; 11; 0.51 of a penny.

*Chairman.*

4359. I do not think it is worth while reading them; we have the figures before us. It is a useful table, but I do not think it is necessary for you to read the whole of the figures?—

*Chairman*—continued.

What I want to emphasize is the extraordinary user at any particular place. Leeds, for instance; there you see there are 40,000 messages, an average of 26 per day, at a price of under a farthing; Liverpool (a very important one), 96,000 messages, 25 per day average, cost ·25 of a penny; Manchester, 70,000. That bears upon the question of user, taken in connection with the figures I have given you about the efficiency of the call. Taken in connection with the price, it hardly bears out the pretty strong assertions as to the dearness and want of efficiency of the system.

4360. How do you account for the fact that in London it is, I think, more than double, or very nearly double, the highest figure at other towns; is it because it is so much less used?—There are only 11 messages in London, compared with 25 in Liverpool. The telephone in London has not become so essential a part of the commercial machinery as in Liverpool, or Manchester, or Leeds.

4361. And is it also due to the fact that in London (in the city) the charge is higher?—No doubt the charge is higher in London.

4362. The annual charge?—Yes.

Mr. *Benn.*

4363. Do we understand that the greater the business done the less the charge?—The figures point to that; that is to say, the more the capacity of the machine existing is worked up to, the less the charge.

*Chairman.*

4364. The less the charge per message?—The less the cost. The greater the user for a fixed sum, the less the cost per user.

4365. I will put it in this way; that if there are two subscribers paying the same annual amount, and the one subscriber uses his instrument much more frequently than the other, naturally he is charged less per message than the man who uses it less frequently?—Naturally the division of the number of messages he sends into the price is the proportionate sum each pays per message. One man would pay, of course, these averages. It shows that in Liverpool and Manchester some people, who use it more largely than others, must have got it at less than the average a great deal; but it is on the whole of the user (the whole 96,000, or 40,000, or whatever the figures are) of messages; those who use it most get it cheapest.

4366. And the figure in the last column is the average price in each place of each message?—Each message taken over the whole; therefore, it is obvious that somebody at Liverpool, Manchester, and the other big places must have had their messages carried at something very much less than a farthing.

4367. Are these taken as fair average specimens of the various towns in the country?—Yes, with a view to testing for our own information, and (I was going to say "for the instruction of," but I will say) to submit to, the Committee, as near as we can ascertain, the facts, as against the statements that have been made here.

4368. And are they fair specimens of the general state of circumstances over the country

*Chairman*—continued.

where the National Telephone Company provide a service?—I present them to you, sir, in that form as being fair records of what goes on from day to day.

4369. Is Glasgow included?—Yes. "Royal Exchange (Glasgow) 3,169, 39,957, 13." You see the use in Glasgow is much less than it is in Liverpool or Manchester.

4370. And it costs just over a halfpenny a message?—It is over a halfpenny there. Then, sir, I think I will put in this paper. (*The paper was handed in.*) It bears out from another source, and in another form, what I stated the other day as to the possible effect of telephoning on more or less perfect telegraphing. You will remember I stated out of the German "Statistik" that in Great Britain there was a very much greater average of telegraphing to the population than in any other country, four or five times as much as in Sweden, for instance. This is taken from the "Journal Telegraphique," which is a well-known paper amongst telephonists. They show there in another form the same thing. The "Grand Total of Telegrams," that is, of course, derived from an official source open to everybody, the "Population," and "Telegrams per head" of the population. There you see (taking Sweden as one of the model places as a telephone country, and Switzerland) ·435 for Sweden; England, 1·902; therefore there are, in round numbers, five times as large an average of telegrams to the population in Sweden as in England. That may be useful.

Sir *Charles Cameron.*

4371. You mentioned Switzerland just now?—Switzerland, if you have got the return, you will see is 1·315.

*Chairman.*

4372. I understand you to suggest that the larger user of the telegraph probably indicates a more effective telegraph service, and, therefore, a probable less demand for telephone service?—Yes. That proposition is very simple. We are asked: How is it that in Berlin there are so many more telephonic subscribers than in London? How is it that in Stockholm there are so many more? We try to find the cause. If the telephone in one country bears a much larger proportionate valuable means of accommodation than some other, probably it means that it will expand more rapidly. I have no doubt that our telephone expansion in England, amongst other causes, has been kept where it is by the extreme goodness of the telegraphic service.

Sir *Charles Cameron.*

4373. Could you tell us whether the telegrams mentioned here include what are called telegrams in France and, I think, in Germany: messages sent by pneumatic tube?—Whatever passes as a telegram or telegraph; how it is sent we do not inquire. A good deal of ours is done here in a pneumatic tube. These are taken from the statement of the "Journal Telegraphique," and they give the grand total of telegrams. They do not tell us how they transmit those.

Mr. *Benn.*

4374. On that point, if I may interrupt, the question of the relation of the telegraph service to the telephone; do not your figures go to show that the larger use of the telephone on the Continent is not so much an evidence that the telegraph service is unsatisfactory, but that the telephone service is cheaper and more satisfactory?—No, I do not see that it does that. First of all, I am not at all sure that your *premise* is right, that the service on the Continent is larger. However, I have got some tables which will show what it really is.

4375. Do you wish us to understand that it is the efficiency of the telegraph service in this country which causes the telephone to be so little used?—Of course, one has to deduct upon ordinary common sense principles that if you have an extremely efficient telegram service and an extremely efficient telephone service in one case, and an extremely inefficient telephone service against an extremely efficient telegram service, the result would be that the telephone would not advance against the telegraph; and the reverse. The telephone service would present great inducements to the user if he was not already well served by the telegram.

*Chairman.*

4376. Would you apply the same argument to the system which has, I suppose, extended more in this country than, certainly, in any other European country, of express messages and commissionaires, and other means of conveying messages which are provided for the public by the Post Office or private companies?—Yes, sir, and happily under the agreement the telephone company will have the benefit of it; but up to this time the telephone, as compared with the telegraph, has not had those great additional facilities. Mr. Preece handed in a very interesting table which really seems to bring this down into the region of comparison. This document which I hold in my hand is a statement showing the number of lines and the population at various centres at the 1st January 1895. (*The table was handed in.*) I thought it was worth while to see what were the facts, the telephone having developed so enormously in America, where it is quite notorious that it is the work of a private corporation. We know that it is dear compared with ours. That is already in evidence; but it was assumed that, being dear, it was also much more available for the population. Therefore, sir, we have treated it as being useful to everybody interested in this question, especially the Committee, to ascertain the relative number of lines, the population of various centres at the 31 December 1894, and the population per line. Glasgow has 5,221 lines, 565,839 population, population per line 108. You see what the comparison is, 108, as against New York 145, so that every 108 people in Glasgow have telephonic facility as compared with every 145 in New York.

4376A. Where do we find this?—On Mr. Preece's table, you find the latter figure. Perhaps you will allow me to read these in comparison. I think the next one is Chicago. Chicago is much better off than New York; I think it is 101. I will read in comparison with that

*Chairman*—continued.

that list you have before you what the facts are in Scotland. In Edinburgh there are 1,741 lines, 329,932 population, and population per line 189; in Dundee 1,291 lines, 153,308 population, and 118 population per line; and so, without repeating the number of wires and the number of population, I will go down the table to show in the various centres what number of lines there are to the population, or rather what the population is to the lines.

4377. Perhaps you will take one or two special instances, because we have the figures before us?—Greenock, 100; Aberdeen, 118; Galashiels, 49 (a very small number of subscribers who seem to be extremely well accommodated, every forty-ninth has telephonic facilities), Dumfries, 89, and so on; but the average in all Scotland is 127, or, rather, in those towns of Scotland that you find on the table.

4378. Do those include all the main telephonic centres in Scotland?—Yes, all the chief cities in Scotland; Glasgow, Edinburgh, Dundee, Perth, Montrose, Aberdeen, Greenock, Galashiels, Paisley, Kilmarnock, Kirkcaldy, Dumbarton, Hamilton (the coal district), and so forth, and the pleasure place "Oban" has one to 40. In Ireland it follows almost by induction from one's everyday knowledge that the population per line would not be so well served: it is 244 for Ireland; Belfast, 261; Londonderry, 329; Dublin, 239; Cork, 190; Limerick, 239; an average of 244. Then come the great centres of England and Wales. First, you come to the "Northern Province." There you get the same thing. "Population per line": Newcastle, 257; Sunderland, 260; Middlesboro', 257; West Hartlepool, 123 (there seems to be some exciting cause there for telephone user); Durham 263; Hull, 257; York, 455 (well, York is one place and West Hartlepool is another. Without any figures one imagines that in a place like York there would be less telephonic communication than in a place like West Hartlepool); Leeds, 156; Goole, 514; they vary enormously, but compare very favourably with the great American cities. Then in the "north-western province," Liverpool, one in 119; Birkenhead, one in 131; Manchester, one in 147, and so one; Blackburn, Burnley (which are low), Lancaster, 154; and so on through varying figures. But the chief places of commerce (shipping, and so forth), manufacture, will bear a very favourable comparison with similar places in America. Therefore that would seem to indicate that after all, with all the drawbacks and shorter life, great limitations of the power to develop the telephone under the legislation, which, of course, we were bound to obey, we have not made so poor an advance as it is asserted we have. Then you come to another group, the "midland province"; and then you come to the "southern province," and then you come to "London"; and London, I think, is almost the worst in respect of the population per line, or to put it the other way, to the telephoning to the population; it is worse than Canterbury, and Canterbury is a sleepy place, so that there must be some reason why it is so bad in London, and it is the object

*Chairman*—continued.

of these figures and of this inquiry to find out why London is so behind. Now statement "No. 12." This shows "the number of subscribers on the Metropolitan Exchanges having a limited local service, and the number of subscribers on the same exchanges having full Metropolitan service." (*The table was handed in.*) This is rather an important question when you come to administration. We have learned in this business that unity and simplification are two great essentials. We have to deal with millions of operations; we therefore want unity and simplicity; and amongst other things in which it is desirable to have unity and simplicity is the question of tariff; whether in fact you may have one uniform moderate tariff in an extensive area which, in the result, on the average, works out at an extremely low figure for the service rendered, or whether you should have a series of concentric circles where the rates vary with every half, quarter, or some other fraction of a mile. Well, that is possible; but in practice it would be found extremely inconvenient. Of course, if the initial figure of subscription were exorbitant and extravagant, there might be some use in considering whether a limited service might not be desirable at a lower rate; but even taking London (or take the whole Kingdom), sixpence a day, or something under a half-penny a message, is what it amounts to. Well, that seems to me to be secured by the extreme moderation of the initial charge for every area. How does it work out if you try it? Of course, we try experiments from time to time to see what results. We argue amongst ourselves as to whether this, that, or the other is the best way. Well, that is talking about it. Then we set to work to see, without prejudicing the general question, whether we can find out the right thing to do. In London, some people said: What an extravagant subscription this is, 15*l.*, 20*l.*, or whatever it is. Cannot we have a subscription which will limit the user; a house-to-house subscription; or: Cannot we have a subscription for our own local area. "All London" is a very fine phrase, but we are not mixed up in our association with all London; we want something for ourselves in our own neighbourhood. We tried both those things, and with this result: we have a local service at Croydon. Croydon is a populous place: a busy place; it has got elements of trade, and it is a busy place; it has a great number of residents within its borders and outside; and although we have by canvassing, by pointing out to the people the great advantages of this local subscription (which means a free speaking in the area of Croydon between Sydenham, Bromley, Redhill, Epsom, and Streatham) managed to get 61 subscribers for that limited service in that area at 10*l.*, whereas in the same area we have 250 subscribers on the exchange at Croydon who pay the London price. Living there, or having relations in Croydon, they prefer to pay that additional subscription.

4379. I understand that 250 subscribers pay the full rate and have the right to speak over the whole Metropolitan area?—Over the whole area.

4380. These local subscribers, the 61?—Are limited.

*Chairman*—continued.

4381. They pay 10*l.* a year for the limited service?—Yes.

4382. And how much do they pay if they want to communicate with other subscribers in the other portions of the metropolitan area?—If there be a fee they have to pay the fee; they use the call office then, and they have to pay a fee of 3*d.* a message.

Mr. *Benn.*

4383. Of course, in Croydon the telephone is mainly used by business men, city men, who desire to communicate with the Metropolis; that is what this means, I suppose?—Yes; and it means another thing, as to which, I think, some questions were rather harped upon; that is, that because a man's address in the city is given he is looked upon as a city subscriber. The fact of his being a city subscriber means that he finds not only the advantage of the city intercommunication, but he lives somewhere in the London area, and that, quite as much as the city user, induces him to become a subscriber.

4384. Of course, Croydon is not in the London area?—Oh, yes, it is.

4385. It is outside the county of London, as we understand it?—I am talking of larger London in our sense.

Mr. *Grant Lawson.*

4386. He could not be supplied by municipal London?—Not at all. Now, "Kensington"; we were pressed a long time ago to have a local exchange at Kensington. There, at 10*l.* per annum, we have three subscribers; and the people who live in Kensington area (the area of the Kensington exchange), who subscribe to the metropolitan service, is 342. "Kingston, including Richmond and Wimbledon"; well, we had lots of representations, lots of grumbling about the necessity of paying a London subscription to be provided in Kingston and those neighbourhoods with these telephones; we said: "We will have a local exchange at 10*l.*" That is the result of it, two subscribers; whereas at Kingston, 36 people live who pay the metropolitan subscription. "Battersea," one; well, Battersea is a growing place, but Battersea is a very good illustration, and it seems to me very much to explode the fallacy of this being a working man's necessity. Battersea is the working man's paradise, and we have managed to get one subscriber for 10*l.* It is not a working man's necessity the least in the world, and anybody who founds upon it will be disappointed; there is a very good practical illustration.

Mr. *Benn.*

4387. Do you think many working men would pay the 10*l.*?—I do not think any working man, not one in a hundred thousand, would ever use the telephone. They do not use the telegraph to any particular extent; it is not a necessity of the working man.

Mr. *Snape.*

4388. Do you think many working men travel first-class by railway?—No.

4389. Then do not you think this may be a question of cost?—Not the least.

Mr. *Snape*—continued.

4390. You think, then, the working man would have no appreciation of the telephone if he could get it at a price within his means?—I do not think the necessities of the working man would involve the use of the telephone once in the year. The necessities of the working man in London do involve his travelling by tram or railway; and I suppose that is the apology for the trams being taken over by the county council. That is a real necessity and a real benefit; but what is a working man to do with the telephone?

4391. Would a small tradesman, a small shopkeeper, use it if it were within his means?—Yes; that is coming nearer home. Now, then, is it worth the while of a small tradesman to subscribe for a thing of which he can have the reasonable use day and night for 6*d.* a day? What is 6*d.* a day to a small shopkeeper whose trade is big enough to induce him to telephone to keep his customers together? It is covered by 6*d.* a day, or something of that sort.

Mr. *Benn.*

4392. That is not the London tariff, is it?—It is a little more in London; suppose it is 1*s.*?

4393. Twice that?—No, it is not twice that.

*Chairman.*

4394. Sixpence a day would be, roughly speaking, the price of this local service, which is given in these localities at 10*l.* a year?—Yes.

4395. And that is a kind of service, I think, that General Webber recommended?—Yes.

4396. Local district exchanges scattered all over London?—Chimerical! impossible! That is impossible.

Sir *James Fergusson.*

4397. If the system of call offices, with all the facilities under the agreement, comes into play, it will then be seen whether the working classes use it, as they will only have to pay for the separate message?—They now can use it for 3*d.*; the working man does not want to subscribe; the local working man, or any other man,—the richest man in the neighbourhood—if he chooses can go to a call office and use the telephone. If he wants to telephone once a week or once a day he can do it.

Mr. *Snape.*

4398. Would the call office be of service if the people to whom he wished to speak were not on the telephone at the other end?—No, of course.

Sir *James Fergusson.*

4399. Except that he can have his message written down and delivered now, can he not?—Now he can. Of course when that arises we shall have some of those advantages which have made telephoning more popular and more expensive abroad than in this country. We have 138 call offices now open in London. We are on the agreement, I understand, and what the agreement really is intended to do. That is what it will do. It will certainly encourage the multiplication of call offices; it will certainly encourage telephoning, and, I suppose, increase the subscribers to the exchanges, and then the working man,

Sir *James Fergusson*—continued.

man, or any other man who chooses to rely upon a call office at a fee rather than become a subscriber, will find from year to year that the 3*d.* remains, but that the number of people he can call from any particular office will increase. The thing will work its own way.

*Chairman.*

4400. These are results which you think will accrue from the agreement?—Yes.

4401. But the agreement not being operative yet you have had no actual experience of it?—No, I have no doubt that will ensue. Now, another thing, private houses. There are a great number of people connected with London, professional men and others, whose necessities are not so great that they think it worth while to pay the full rate (I may tell the honourable Member that the average rate in London is about 14*l.* 10*s.*), and therefore we give, to anybody who chooses to take it, what we call a private-house connection in the metropolis; that is to say, he pays 10*l.* Of those we have 492. "Private house," no doubt, means that a man may speak from his private house to anybody on the exchange; but the same man, if he has an office in the City, cannot speak from that private house on his city business; therefore he has an option. Take the case of men at Westminster: lawyers, engineers, men of that class; they live in and they have their work about London. If they think it worth while to take the London subscription they can use the instrument at their office to talk all over London; but if they think their necessities are served by their telephone at their house they can only use that for domestic purposes. We have 492 of those out of this very large number of subscribers in London; so that it really shows that universality of user coupled with moderation of cost is the policy to pursue; and if you split it up into too many categories, you not only greatly embarrass the administration, but you do not succeed in the object in view. We have got to persuade the public that on the bare facts telephony is so extremely cheap and so relatively efficient that they had much better subscribe for the whole area.

Mr. *Snape.*

4402. How many of these 492 private houses are those of business people who subscribe for their office or business premises?—If you wish to have the particulars we will have it analysed

4403. I wish to know how far private persons not in business use the telephone; how many private houses?—We will get out the thing. I expect you will find that a good many of those people who use these are solicitors, Parliamentary agents; people at Westminster and in the City, who when they are at their particular business have no great urgent call in their business for telephoning; in fact, I know some solicitors in London who will not have it in their office at all. I do not think they are very wise, but they will not. No doubt those may be gentlemen who dine at a club occasionally, *haute* London; they may find it worth while to subscribe 10*l.* a year in order to explain why they do not come home to dinner. I dare-

Mr. *Snape*—continued.

say there are a certain number of those. I will have it analysed, sir; you shall see the addresses.

4404. The analysis, if made, you think will show such a result. If that be so, it is obvious that there are not many householders who, for the sake of their household and social arrangements, use the telephone?—No. I tried to explain at the last meeting that one of the chief uses (I am speaking now of my own experience) of the telephone when you understand it is the advantage of communication with your tradespeople without the necessity of going yourself to them.

4405. And you have very few householders who take advantage of that?—Because they have not learned it.

4406. Is it not rather because the charge is too high?—No; 6*d.* a day cannot be too high.

Mr. *Tully.*

4407. Would it be because the system was inefficient that the people do not use it?—No. Of course, "inefficient" is a term. I am not pretending, I never have pretended, that this is the perfection of a service, but the figures I have given to-day about the calls show what it really is. No doubt from time to time people are irritated by what appears an unusual delay; in fact, when you are waiting at the telephone it is irritating; I have in my own experience, being rather a hasty man, discovered that a second's delay means a minute, and my temper, my expletives, and so forth, are greatly aroused. In my cooler moments, when I calculate and think a little, I cannot complain about being kept sometimes for five minutes, and even 10. You must take it for what it is worth; but that is an illusion; people think that the telephone must be at their instant command; they forget the common user. I do not know whether anybody is going to give you any information about Germany; but there, with their perfection, you will find that people have to take their turn; they have to wait; they are disciplined to wait. But then the Germans are disciplined; we are not.

*Chairman.*

4408. Do you think the people of this country are rather spoiled by the excellence and rapidity of the telegraph service, where there is practically no waiting?—That is one thing; and, as regards the commissariat of London (as I said last time), there is no city in the world so little dependent upon telegraph or telephone for their supplies. Your tradesman sends to you for orders; he executes the orders at your own house; whereas in Berlin and in Paris the whole social thing is different: you must go and seek what you want. However, whatever the cause is, we have a great and growing number of people who will pay the full subscription for the general user of London, and a very limited number who will pay the less amount of money for the use of it; and a mere fraction of people who will use the thing with the local limitation, at a price like 10*l.*, or any price at all.

4409. What is the next point?—Rather a tender one, sir. I think I had better pass it over at present. It is a comparative statement

*Chairman*—continued.

of the Post Office and the National Telephone Company's subscribers in the country.

4410. I do not know why you should pass it over, if you have got any information which you think would be of value to the Committee?—Well, sir, as a servant of the Post Office, it is not a very grateful task to draw comparisons, and perhaps when I do draw them they are not worth much; but this is the list (*handing in the document*).

4411. Is that the Paper which I have here?—It is. The number of the subscribers on the two systems, showing what progress we have respectively made in the Post Office and in the Telephone Company; and perhaps I may spare myself (if I may so say) the embarrassment of dwelling upon it. I will simply hand it in, and honourable Members can draw their own conclusions.

Mr. *Tully.*

4412. Does that mean that the Post Office is behind the Telephone Company?—If you discuss, as you probably will do, whether these achievements of the telephone and the enormous advantage of the telephone is to be brought most rapidly and most efficiently in aid of the wants of the general community, it becomes material to see under which "ring" that object is likely to be most rapidly developed and most efficient. That is the use of it.

4413. Does that table show that the Telephone Company are more efficient than the Post Office?—It shows that they have made much greater progress; but I am bound to say, the Post Office have not acted in the sense, I suppose, of competitors; they have done the service in their own fashion in the places where they were established when we began; but the fact remains, that they have been more or less stationary, and that we are the people who have made the advance.

4414. The Post Office could not give telephones for nothing to subscribers, as it was alleged the National Telephone Company did in Plymouth?—I will not criticise what the Post Office do; but that was a Plymouth thing, I know, and it produced an awkward impression upon the honourable Member at the moment; but it was a very small matter, and was not a common method of procedure. I do not defend it; it was done by a small local company over which we had at that time no kind of control.

*Chairman.*

4415. It is the fact, is it not, that the Post Office telephones are only in a very limited number of places—not in the principal commercial cities of the United Kingdom—and that the Post Office has abstained from canvassing for subscribers, and has therefore been at a great disadvantage as compared with the company?—Yes, quite true. Now, the next disposes, sir, of rather a tender point, the question of the pledges made by the New Telephone Company to a certain number of people who signed some instrument or agreement as to the service of London by the New Company at a certain price. I do not know whether that is to be gone into, but if it be, I shall have a great deal to say about it; but this

*Chairman*—continued.

was a specific complaint that faith had been broken with the subscribers under this agreement, to a possible new telephone company. (*The document was handed in.*) The principal people connected with that agitation were Mr. Hastie, a solicitor of Lincoln's Inn, and a Mr. Haig; and this is the letter which was printed in the "Times" which explains: "Sir,—We hope that you will allow us to inform the telephone users of London, through the medium of your journal, that, as the direct result of the pressure brought to bear upon the National Telephone Company by the Association for the Protection of Telephone Subscribers, the prices of private house telephones in London, giving communication over the whole metropolitan area, will be almost immediately reduced from 20*l.* a year to 10*l.* a year, subject only to the condition that they are taken upon a five years' contract. The price of business telephones will remain as at present, but since the National Company have promised immediately to instal the twin-wire system, which will make speaking on the telephone clear and easy, the chief objection to entering upon five years' contracts for business telephones, and taking the discount of 3*l.* per annum then allowed, vanishes. Had the New Telephone Company continued to have an independent existence, our association had great hopes of obtaining an even better telephone service than has now been secured to users; but, on the other hand, it must be remembered that these benefits would have been seriously discounted by the fact that it would have been two or three years before the New Telephone Company would have been in full working order, while the present advantages will be secured immediately." Now, that was the conclusion at which the representatives of that body of subscribers arrived, and discharged the National Telephone Company and the New Telephone Company of whatever legal consequences attach to that agreement.

Mr. *Benn.*

4416. There is nothing in that to indicate that if the New Telephone Company had continued, it would have failed to carry out its financial promises with regard to rate of subscription and service?—No; but the gentleman whose name is second there (Mr. Hastie of Lincoln's Inn Fields) is not a man who would have taken a mere assurance about probability; he had satisfied himself as we all had. I cannot call the dead before you, but the Duke of Marlborough himself, when we came to sit down and go into the matter, altered his views. I am responsible for that circular; my name is on it. It made certain pledges, and when we made them we believed the possibility of them; but when we sat down to examine the question, not from their point of view but ours, we convinced them that their scheme was impossible; and with that conviction these gentlemen were persuaded by the same reasoning and arguments as those which led to the New Telephone Company disappearing.

4417. My point was this: that with regard to this letter, dated the 20th of March 1893, by which time you had acquired the New Telephone Company,

Mr. *Benn*—continued.

Company, this was a public declaration of the close of the transaction?—Yes.

4418. There is no indication whatever that the pledges given in the prospectus of the New Telephone Company were other than genuine and *bonâ fide*?—I think they were genuine and *bonâ fide*.

4419. Thank you?—And I think we have gone a long way to realise them.

Sir *Charles Cameron.*

4420. You mentioned that Mr. Hastie had carefully gone into this, and verified the statement for himself. Is Mr. Haig of Mr. Hastie's opinion?—Yes, I fancy so; I have no doubt he is. Mr. Haig is not a lawyer, but his name indicates rather common sense and acuteness, and he was equally satisfied.

Mr. *Snape.*

4421. In this statement you pledge yourself to the New Telephone Company to remodel the London system upon the metallic circuit system which you are pushing forward; can you say when that will be completed?—By the end of this year, sir. The object of the New Telephone Company was to metallic-circuit London, to put it shortly, and at a moderate rate, a less rate than we we were charging. I think they talked about 12*l.* The result of the negotiation between the New Telephone Company and the National Company was to satisfy the Duke of Marlborough (who was extremely able, and an enthusiast, and who hit the weak points of this thing in London) that it could be done without the enormous waste of capital equally well by the National Company, and what the National Company have done is this: They have ensured what he went for principally (the metallic circuit for London); it ensured what he went for, secondly, a reduction in the price. It is not 20*l.* now; it is 14*l.* some odd shillings.

*Chairman.*

4422. On the average?—On the average. In London we have spent 200,000*l.* (or we shall have spent it ultimately) in metallic-circuiting London as the result of that fusion with the New Telephone Company.

Mr. *Snape.*

4423. Is the House of Commons telephoned on that principle?—Yes, I am told it is.

4424. Then it is not very effective?—I suppose that would depend upon what parts of London you were telephoning to. There must be a blot in the system until all of it is done; and, no doubt, in the neighbourhood of Regent-street (that exchange, the Pelican Club that was, we are putting it to a much better use as a telephone centre) there is disturbance, because there is an entirely new system of metallic circuit boards going on, and this part of London is most affected by the eccentricities of the single-wire system that we have at present; that will all be completed this year.

4425. Therefore, whether a message be sent to one exchange, or to another exchange, the sound will be perfect after that?—Yes. I am

Mr. *Snape*—continued.

afraid I have troubled you with a great many papers, but they will be extremely useful to any honourable Member or any gentleman interested in this question when he comes to sit down to study it. I am going now to a question that I think I must say a few words upon, and that is the value of estimates.

*Chairman.*

4426. Are you now referring to the estimates that have been put in on behalf of the London County Council?—Yes; and before I proceed to that, sir, I should like, if I could, to impress upon the Committee a point which I think is not generally borne in mind in these questions when they are discussed, and that is the enormous waste that goes on. I will try to illustrate it in this way——

4427. Is this a new paper?—Yes. (*The document is handed in*). The number of new subscribers to the company's system during the year ending 31st December 1894 was 12,502. That is the additions of new people. But when you come to look at the progressive growth of the company you find that 12,500 is not the figure; it is diminished by the number of subscribers who, during the year, go off the telephone. Now, as to the gentlemen who dealt with those estimates, I am quite certain that is a thing they had never considered at all, that those 4,410 people went off, which involved an enormous sum of money in waste, gone for ever. And that is a very material thing, when you are dealing either with the capital expenditure or with the price per subscriber. What amount of waste is there? You see there are 4,000 people, 4,410, out of 12,502, go off. This is what takes place: A man subscribes for a year, or two years; he goes out of business; he moves; he ceases to be a partner; things are bad; and this telephone system in London has been extremely influenced by the state of things in London during the last four or five years, because no place has suffered at all in the same proportion as London. An enormous number of people engaged in financial business in the City, who are, so to speak, out of work, have disappeared in tribes, financiers, brokers, brokers' clerks, and people of that sort, during the last five, six, or seven years. Every man who goes off the telephone leaves you with this item of "labour," which, as I have already said, forms an extraordinary element in our calculation, 80 per cent. in round numbers, but I will put it at 75 (it is easier), 75 per cent. of the cost of a great deal of our business is labour. Now, what ensues when a man joins a telephone? You have to connect him with your machinery from the exchange with a wire; that wire is laid into a house. At the end of the wire the instruments are fixed and prepared; the cost of the labour in that operation is 75 per cent. of the material. Now, the man has been on a year or two years, we will say; he gives you notice to quit; you have the salvage in the value of the instrument and in the value of such portion of the wire as remains for application to another subscriber; but you have lost all the labour on it, because it costs just about the same to take it out as it did to put it

*Chairman*—continued.

in; and then in respect to the instruments that you have taken out and the wire and so forth, it costs just as much to transfer it to another floor or to another house. In that element you have an absolute loss of a large portion of the subscription, waste again.

4428. Or rather of the capital sum expended in putting it in?—Yes.

4429. What proportion of that capital sum, do you say, is represented by labour?—Seventy-five per cent., if you take all the elements of it.

4430. And what on the average do you consider the cost of putting an instrument into a new subscribers house?—Well, the capital cost in London is 55*l.*

4431. Fifty-five pounds?—Yes.

4432. And 75 per cent. of that represents labour?—The mere operation of putting in and taking out. Of course, one has to correct that with this: The 55*l.* is the average cost with every subscriber who is connected in London, but then that includes switch boards, and all the internal machinery, not affected by a change of owners; but if you dissect the 55*l.*, you probably will reduce that particular element involved in joining up a man down to less than one-half of it, but still there is an enormous wastage. I suppose, roughly speaking, we might say, 25*l.* out of the 55*l.* would be the cost of attaching every individual subscriber over and above the contribution which, as a subscriber, in common with the general body of subscribers, he contributes to the central administration, the switch boards, poles, and distributing machinery.

4433. Then it would be 75 per cent. of that 25*l.* which is lost in labour?—Yes, absolutely lost; gone, waste. That has to come out of the capital, or out of the revenue; whichever way it is, whether capital or revenue, it has got to be paid for.

4434. I understand you to say that so far as you have examined the estimates given on behalf of the London County Council, no account was taken of this great wastage which is constantly going on?—I cannot think that it was, because if so it seems to me that the estimate is not very reliable; but perhaps I had better say what it is, because I am very anxious to give the County Council the full benefit.

Mr. *Benn.*

4435. Have you any similar figures showing new subscribers and ceasing subscribers in such a city as Berlin; any comparative table to help us?—No, I have not; but, of course, it goes on; the same causes operate in every place; subscribers do go off.

4436. You gave us several reasons for this large figure, 4,400?—Yes.

4437. Changes and fluctuations in business?—Yes.

4438. Does it not occur to you that a very large portion of that number may be accounted for by persons getting sick of the telephone and giving it up?—Well, I can imagine some very silly persons giving it up.

4439. I have heard of cases where they have said they would not stand it any longer?—No doubt there are a certain number of persons who will cut off their noses to spite their faces.

Mr. *Benn*—continued.

4440. Do not you think those figures rather show that it may be due to the inefficiency of the service, and that there is some ground for a plea of justification?—I can understand that if people hope for something and do not get it, they go off; that is what my complaint is; most of these complaints are founded upon unreason, not reason. As far as they are reasonable one accepts them with regret; as far as they are unreasonable; well, what shall I say one thinks of them?

4441. Any way 4,000 people are not satisfied, and go off for some reason or another?—Do not put it in that way; if you suggest that they all went off because they were not satisfied, I will tell you that people die, then they do not want a telephone; people fail in business, then they do not want a telephone; I know some people who are so sick of London (including the telephone) that they go and live out of it, then they do not want the telephone; therefore your induction, that any material part of the 4,000 went off from disgust is not the real reason.

4442. I was only struck by the fact, that among your reasons for people giving up the telephone, you did not suggest to the Committee that some few people might be disgusted with it?—Of course it would be ridiculous to say that some few might not have gone off from that reason; but that would not affect my question very much if it were a few; if you suggested that the whole went off it would.

4443. I do not suggest that for a moment?—You did suggest it, I think.

Lord *Stanley.*

4444. In this number of subscribers who went off, were there any who ever wrote, and asked whether they could have a more limited service, a smaller exchange, and a cheaper rate?—It is just possible one or two may have done so; but I think none did.

4445. At any rate, not more than an infinitesimally small number?—Just so. In the case of deaths, removals, badness of trade, the telephone users do not want you any more; and I am sorry to say there have been a large number in bankruptcy. Of course the moment we find a man going off, we go and see what is the matter; and we sometimes ourselves have suffered through not having been paid. The incidents of business involve a certain number of people going off. My suggestion to gentlemen who draw inferences is, that they had better take into calculation the incidents that involve the constant wastage of capital.

4446. You say a number of subscribers cease; do you count in those such a case as this: Suppose a man changed his residence, we will say from No. 31 in the street to No. 30, do you count that as a subscriber gone off?—No.

4447. That does not count as one of those you speak of as "gone off"?—We take the risk of moving the instrument there, and I think he pays some small sum for the change.

4448. You do not count taking the instrument from No. 31 to No. 30 in the same street, as the loss

Lord *Stanley*—continued.

loss of a subscriber?—No; he pays the small sum we think fit to charge him for the change; he is a continuing customer.

*Chairman.*

4449. He is a continuing customer under a five years' agreement?—Yes.

4450. The agreement still holds good?—It does.

Lord *Stanley.*

4451. Did not you issue, the other day, a paper saying that if one bound oneself for five years one could get the telephone on lower terms?—Yes; we have a descending scale of charge.

4452. Can you tell me at all how many came into that agreement?—We are getting now a very large number of our subscribers on long agreements; they get a substantial benefit, the 20*l.* drops to a lower figure. I have already put in a return showing this. This is the paper. It is a general statement of the tariffs of the company throughout the kingdom. In London (the metropolitan area), "on a five years' agreement, first connection, 17*l.*; second and additional connections, 12*l.* 15*s.*; private houses, 10*l.*; on a yearly agreement, first connection, 20*l.*; second and additional connections, 15*l.*; private houses, 12*l.*" That is the London thing.

4453. The rates to Members of Parliament are special, are not they; Members of Parliament are given cheaper terms still, are not they?—Of course there are exceptions to all rules. The result of that has been, of course, that we get a considerable number of our subscribers now on long agreements.

*Chairman.*

4454. I am a subscriber, and a Member of Parliament; I have not had it cheaper than the rates quoted; I do not know whether I am entitled to any consideration?—Some Members of Parliament, sir, are less persistent than others.

Mr. *Tully.*

4455. Does a shareholder get it cheaper?—No, sir, we are very severe with our own family. However, the operation of it has been that what with the five years' agreements, and what with the second and additional connections at a reduced scale, the 20*l.*, the initial figure for one connection for one year for one instrument, is brought down to an average of 14*l.* 10*s.*

*Chairman.*

4456. Have you anything more to say with regard to that estimate?—I was just going to point out one or two things upon it. This is Mr. Newland's estimate. Mr. Newland was in our service for a great many years, and I would wish to speak of him with the greatest respect as a very able and quite unexceptionable gentleman; and I have no doubt that in making his estimate he acted entirely upon his experience and conscience.

4457. In what capacity was he in your service?—He was one of our sub-engineers on the south of the river. This is for the benefit of those gentlemen who are the advocates of the

*Chairman*—continued.

County Council taking this thing over. It is a question whether this estimate does not in itself include a great many fallacies. It is an estimate for a metallic circuit in London based on 40*l.* for 10,000 subscribers; and about the 40*l.*, well we know, as a matter of experience, that it is more than 40*l.* a great deal. I have great respect for Mr. Newland, but I would rather act upon my own ascertained experience from day to day, and from year to year, than upon any opinion; but if it is a case of "opinion," I prefer infinitely the opinion of Mr. Preece, of the Post Office, to that of any gentleman connected with the County Council. He says it is 55*l.*, which is in fact about the truth. Then he goes on. That estimate justifies a 10*l.* subscription; but it carefully ignores one of the things which is always being discussed and thrust upon us, and that is the method in London of carrying on this business. We have been driven to metallic circuit London overhead; we have none (or next to none) in the shape of underground communication, and the Committee have heard many opinions upon that as to what can be done, and what cannot be done. This estimate does not deal with that; it shirks that altogether.

Mr. *Snape.*

4458. Why have you been "driven" to it; you say you have been driven to adopt the metallic circuit overhead; why is that?—For want of power, No. 1; in consideration of the enormous difficulties of getting under streets, and want of power of going under them; and the enormous cost, the additional cost. This gentlemen is good enough to say, first of all, "my estimate is for a metallic circuit system." I quite agree. We so much agree with that, that we have done it. "There is, I take it, no question but that it would be a physical impossibility to erect an overhead system of bare wires similar to the greater portion of the National Telephone Company's system, that company's wires forming such a network in places as almost to prevent a single wire being run, and quite to prevent the running of spans, consisting of a large number of wires." Then the alternative to that is cables in the air; and I understood Mr. Preece (who is the great authority to whom of course I should bow) to say that cables in the air are not the best method of conducting this business with reference to its efficiency. "Undoubtedly, from the point of efficiency" (this gentleman concurs), "a system entirely underground would be the best for many reasons, and although this would entail an expenditure not to be lightly entertained, I do think that in undertaking the wiring of such a city as London, it would in the long run be undoubtedly the best policy to adopt." Well I agree with him. When the system was started years ago, when the electric light companies had not commenced to undermine London, when the sewers and gas companies were in less occupation, it might have been possible then, very difficult very costly, but it might have been possible to do it. But that possibility has gone with time, almost, I believe to the vanishing point; certainly not without enormous expenditure could it be done.

Mr. *Snape*—continued.

"It would entail an expenditure not to be lightly entertained." "I have not attempted here to arrive at the cost of a system entirely underground, but understanding that the council would, in the event of their obtaining a licence, adopt an aerial system" (in trunks that is), "I have estimated that the bulk of the wires would be run in overhead cables," notoriously the very worst method of getting efficient service. The best method is a wire not cabled up at all in the air. Then he goes on, "Taking it for granted" (people take a great many things for granted) "that at the ordinary tariff rate the exchange wire would not exceed one mile in length" (you see he takes for granted an element which it is of the greatest importance to know, not to take for granted), "it would be found that the average length per subscriber would be not much more than 400 or 500 yards, but, to be on the safe side, I have taken the average length all through to be half-a-mile." Inasmuch as this expenditure for a large part of it depends upon absolute truth and knowledge of the element (which is an initial element, because so many things cost so much money; if you estimate for half-a-mile, and it turns out to be a mile, it just costs double what the estimate is). I am afraid if this is critically examined it will be found that this date is not sufficiently accurate.

Mr. *Benn.*

4459. Can you tell me what the length of your wire is, on the average?—Over a mile.

4460. For London?—Yes. Now here is another thing which I commend to the attention of honourable Members who think this thing can be done, and who are going to take the responsibility (if they do) of suggesting that it shall be done. "To estimate for such a large system, covering so large an area as the County of London, is a very difficult matter, as the knowledge of the position of subscribers and exchanges would alone enable a close estimate to be made." It is the vital position. It is a position which has entailed upon our company immense loss, because we had to start this business without knowing who was going to subscribe to it; and without knowing what we do know now; without knowing what was the scientific and the easiest means of accommodating that service; and, instead of sitting down with a map of London, as this gentleman has done, or as some other experts have done, and being able to lay out the thing in the manner the most economical as regards expenditure, and the most efficient as regards work, we are at the mercy of everybody. We never know when we start an exchange how we can get people connected with it; we are at the mercy of so many people. This gentleman knows the disadvantage of this, because at a later period of this thing he says "the knowledge of the position of subscribers and exchanges would alone enable a close estimate to be made." But then he says: "After looking at the position of the subscribers to the existing system I have estimated that about 15 exchanges would be necessary."

*Chairman.*

4461. Fifteen exchanges (about) in the area of London?—In the area of London. "I am aware that for a larger number of subscriber than now exist, this is a smaller number of exchanges, but I would point out that the policy, and I rightly think, of the National Company is to work with as few exchanges as possible without unreasonably increasing the length of subscribers' wires." Now, you have had two gentlemen. This gentleman is a perfectly competent man to form an opinion if his data are right. You have had another gentleman who wants to have I do not know how many exchanges in London, to be cut up into small areas; multiplication of exchanges. We have been striving all these years upon the best advice in this country and elsewhere to diminish the number. Every exchange that you have to communicate through to somebody else involves the elements of disruption and delay. If you go from one to another, a simple operation, the chances are that it is effectual and prompt; if you go through an intermediate one to a further one, at the intermediate one there are chances of delay and disruption; and that multiplies (well, I almost must say as the cubes of the numbers) the disadvantage of it. And we, all these years, poor creatures, have been trying to eradicate this evil from our system. But now we are told we are all wrong. I do not think we are; at all events, I call this gentleman as a witness in my favour, and I put his against General Webber's evidence, which seems to indicate a totally different method.

Mr. *Benn*

4462. Of course you are aware that General Webber was not called for the county council?—No, but somebody called him; "General Webber" is General Webber.

4463. But this is a county council document?—Then I am happy, sir, to present you with this as counteracting any influence which General Webber may have had upon your mind.

4464. I only draw your attention to the fact?—I am much obliged. I accept this very much as evidence from the county council engineer: "It would probably be found, on the completion of canvassing, that this arrangement" (that is the method he proposes) "might be subject to variation, but inasmuch as all figures must necessarily be hypothetical, it will, I think, form a good working basis; and even if it were necessary to divide up the 10,000 subscribers in a different way, it would not make much difference in the cost." Well, that is a sort of saving thing; it must be hypothetical: until I know certain things which I do not know, I cannot possibly estimate the cost, &c., &c.; but, now this is the bit I want particularly to bring home to the Committee: "As it is not at all likely that a start would be made with as many as 10,000 subscribers, I have for the present reckoned the principal exchanges as accommodating 2,000 subscribers, and I have estimated that for that number it would be necessary to branch out from the exchange in 40 different directions, with 50 pair cables"; and so on. Then he goes on to do us the credit to say he thinks as regards the new exchange in Lime-street, the switchboard there, it is safe to state, is the most perfect switchboard in existence; and then that his estimate is based on experience,

and

Mr. *Benn*—continued.

and this, sir, is a part to which I beg to call your special attention. He estimates that the charge for wayleave rentals in London will be covered by 5,000*l.* for these 10,000 subscribers. All I can put against that is our experience which I have already communicated to the Committee. He is entirely living in illusion about that. That is not a capital charge; it is a working expense; and we are paying at this moment in London 1*l.* 13*s.* 4*d.* on every line in the nature of wayleaves. He allows 5,000*l.* for 10,000 subscribers; that is 10*s.* each.

*Chairman.*

4465. £1 13*s.* 4*d.* per mile?—Per subscriber.

4466. Per subscriber for wayleave?—Yes, but then he says we do not know how to do it. Well, I shall be happy to give him a very handsome commission on all he can reduce to 10*s.* from 1*l.* 13*s.* 4*d.* This shows the sort of thing we are subject to. Now, here is the cream of the whole business: "It may, perhaps, be thought that my estimate for procuring wayleaves (500*l.*) is too low, but I am convinced that the National Telephone Company do not secure theirs in the most economical way; and I may further state that they often pay extravagant rentals for them." Well, I am sorry to be condemned by one of my own infants; it may be true. I do not think it is. "Independently, however, altogether of this" (now here is a saving clause), "I take it that the council, in the event of their obtaining a licence, would secure compulsory powers." You know, sir, that the thing we have been asking for, knocking at the doors of Parliament for years, is to get some reasonable powers. I have no doubt that with compulsory powers we could make better bargains; but we have not got them, and I do not think the county council will get them in the present temper of Parliament, if I know it; therefore, the whole of this thing is hypothesis.

4467. And the hypothesis is based upon the idea, or upon the belief, that the local authority would do it cheaper than a private company; is that consistent with your experience of the comparative cost of matters carried out by a local authority and a company?—Well, local authorities are of course most estimable people, and one desires, especially in these days when they are getting so powerful, to speak with the greatest respect of them; but I should not think they are model administrators.

Mr. *Tully.*

4468. Have not the local authorities power over the streets?—Oh, yes, they have power over the streets. That, I think, they ought to have.

*Chairman.*

4469. But not a county council, have they?—Power over a street means regulation of the street for the purpose it was designed for; that is, traffic and passage. They must have that authority.

4470. The county council for London have not such powers over the streets, have they?—Not in the city.

Chairman—*continued.*

4471. Nor anywhere?—No. That is a natural power to the local authority; but if you ask me whether they do the work under the streets better or cheaper than a private company, amongst my other misfortunes I have had the misfortune of being chairman of one of the largest electric lighting companies in London, and for the sake of peace we employed the local authorities to do our work under the streets; but I think we could have done it certainly as efficiently, and perhaps cheaper, if we had been permitted to do it ourselves; but that was a condition they put upon us, that they should do it.

Mr. *Tully.*

4472. The local authorities having powers over the streets would not want compulsory powers for putting wires under the streets?—They have no powers to run wires at all. The local authority has no power to use the street for any but specific purposes.

4473. The Glasgow Corporation, for instance, have no power to put down wires?—I do not know what their powers are. If they have such powers they must be special powers obtained from Parliament. A local authority may license gas and water companies, who have power from Parliament, to do certain things subject to the local authority.

4474. The Glasgow Corporation would not have power to put down wires, you say?—Unless they have that power in some Private Act; I do not know that they have; and I do not think they have. If they have it is quite exceptional. These powers to do these things cannot be got without going to Parliament.

Mr. *Benn.*

4475. Quite so?—If they do go to Parliament on this estimate, I pity the gentleman who is put into the box to support it, if he is subject to cross-examination at the hands of Mr. Pope or Mr. Littler.

Mr. *Grant Lawson.*

4476. Is there anything in that estimate put down for the expense of coming to Parliament to get the Bill?—No, nothing whatever.

Mr. *Benn.*

4477. There is a large item for contingencies, is not there?—Yes; I am sorry to weary the Committee, if I am wearying them, but I am so anxious that they should really be placed in possession of the facts of the case that at the expense of being tedious I want to impress this upon them. Here is a fallacy underlying this: It means really that you cannot do this unless you have compulsory powers. Well, you cannot get them, I am assured. But now, supposing you have got them, this proceeds upon the theory that the man that does the work is in possession of powers which will enable him to lay out scientifically and with the utmost economy a perfect system; and then the calculation proceeds. Having done that, it is for 10,000 subscribers, the annual income is so much, and that means that the 10*l.* will leave a profit. How long are they going to be getting 10,000 subscribers? Suppose they achieve the erection of this

Mr. *Benn*—continued.

machinery two or three or four years hence; there it is, they have spent the money; how long are they going to be before they get 10,000 subscribers? Because the cost per subscriber, and therefore the payment per subscriber, must depend upon how that capital and how the working expenses (which for a large part are fixed charges) are spread over the numbers. I will undertake to say that they will not get 10,000 subscribers in three years. What does it cost per subscriber? During the first year they may have 2,500; in the second and subsequent years they will have got more and more and more, with all this wastage going on; it is purely chimerical. They would be bankrupt at 10*l.* subscription.

*Chairman.*

4478. And so far as you can see, this estimate takes no account of these facts?—Not at all; it estimates that you are at once to jump into beneficial occupation of the expenditure of 400,000*l.*, whereas it will take a very long time to develop in the area of the County of London 10,000 additional subscribers.

Mr. *Benn.*

4479. True, but it says at the bottom of the page: "As it is not at all likely that a start would be made with as many as 10,000 subscribers, I have for the present reckoned the principal exchanges as accommodating 2,000?—Yes.

4480. This estimate you have described as "chimerical;" I think that is the word you used?—It strikes me so.

4481. Do you happen to recollect a similar estimate of which you were the father?—Yes; you mean the new company.

4482. Yes; I should like to compare that, if you will allow me, with this?—Yes.

4483. That is an estimate which was put out under your distinguished name in this prospectus?—A more distinguished name than mine, too.

4484. It is also endorsed, I see, by a number of eminent engineers?—Yes.

4485. Dr. Thompson, Mr. Kennedy, and Mr. Bennett?—Yes.

4486. Do you remember that estimate sufficiently to tell the Committee, with regard to London, how much it varies in the matter of price per subscriber from the one you describe as "chimerical"?—I think this must have been based upon that; I think the source of origin must have been the same.

4487. Then are we to understand that this statement of yours which bears your name was chimerical?—It was; yes. I see you look surprised.

4488. I am not so accustomed probably to the drafting of a prospectus as you are?—I did not "draft" the prospectus. I signed it. I take all the responsibility of having signed it.

4489. Then I should like to ask you whether this statement is entitled to respect. We have here a statement of a capital outlay for supplying the first 10,000 subscribers in London.

Mr. *Benn*—continued.

This is the prospectus of the new company; I will commence at the top of page 2: "It is intended, therefore, to supply plant on the double wire (metallic circuit) system, to accommodate 10,000 metropolitan subscribers, with central exchange switchboards, and other apparatus, capable of working 25,000 London connections. The system to be adopted by the company will comprise all substantial improvements in telephony, and especially the metallic circuit, which will be available for connection with the Government trunk system. The capital outlay for supplying the first 10,000 subscribers in London, and upwards of the same number in the provinces, including 1,400 private lines and about 400 call offices for public use, for developing the Manchester and Bolton Exchanges, and for opening others in some of the provincial towns, has been carefully considered by Mr. A. R. Bennett." You told us he was a gentleman trained under the auspices of your company?—Yes.

4490. "Acting as the chief engineer and general manager of the company"?—Yes.

4491. "His estimates have been checked and approved by Silvanus P. Thompson?"—That is the gentleman you have had before you, the electrical engineer, who wanted the telephone company to be a training school for young engineers.

4492. At all events, he was good enough to be referred to as an expert here?—Oh, yes, he was.

4493. And A. B. W. Kennedy: "It is estimated that 750,000*l.* should suffice for these purposes, and on this basis the net revenue of the company should be sufficient to show divisible profits equal, at a moderate calculation, to 12 per cent. per annum on the capital, while the additional facilities of the Telegraphs Act, 1892, may be expected to open up new sources of revenue, and thus increase the profits of the company"?—Yes.

4494. Am I not right in saying that if you divided that figure, allocating the proper proportion to London, the amount per subscriber tallies almost exactly with the figures put in by Mr. Newland?—Yes.

4495. Then, do not you think that instead a company, the company having to fight the natural opposition that some persons have to the request of a company; a municipality, asking for wayleaves and accommodation, and having power to treat with local authorities, and establishing a system which would be by the citizens for the benefit of the citizens, would be in a better position to cope with the difficulties (such difficulties as you have mentioned) than this company?—No, I do not think they would. Why should they? Of course, if they had exceptional powers, if they had compulsory powers, if they are to be put upon a different footing to the commercial company, they would have certain advantages; but I think, against those advantages, there are some disadvantages.

4496. They could borrow money cheaper?—They can; not very much now.

4497. May I point you to the municipal enthusiasm which occurs in such a city as Glasgow with reference to any municipal enterprise of

Mr. *Benn*—continued.

of this character?—Well, I do not know much about the "municipal enthusiasm" in Glasgow; I believe it is a divided house even on that; but London is not peculiarly enthusiastic about municipal telephones; I have not found any evidence of it.

4498. It is young yet?—It is; it will get wiser as it gets older.

4499. I agree with you; but to come back to this point, I want you to explain to the Committee how it is that this estimate here, issued upon such high authority, certified by the leading telephone experts of the day——?—No.

4500. Well?—Oh, well, there I must come in.

4501. You have told us what an able man His Grace the Duke of Marlborough was?—So he was; but he was not an expert, you know.

4502. Still, a business man, combined with the expert; we have your name as the second?—That is very good, too.

4503. I do not think we can have a higher authority?—I have the sense, you know, of my own shortcomings. I hoped it was true, and I wished to see whether it was true, and I was satisfied of the integrity of the conviction of the Duke of Marlborough; I had some doubts whether he was wise, or whether he was not mistaken, and it was when the thing came to close quarters, and when these estimates were examined and understood, that his convictions changed, and that we both came to the conclusion that they were utterly unreliable for this purpose, either as regards outlay or income.

4504. Anyway, they were sufficiently dangerous from a practical point of view to necessitate the clearing of all this out of the way?—The clearing of all which?

4505. By the amalgamation of which you were the author?—I was not the author of it.

4506. You told us you were the author of the amalgamation?—Not the author of that amalgamation, the United. You do not mark time quite.

4507. I beg your pardon; you helped me?—I was the author of the amalgamation between the Bell and the Edison years before I went into this amalgamation with the Duke of Marlborough, and I went into that because I hoped he was right. If he had been right it would have been a splendid business for our company, the National; a great many other people agreed with him, but he turned out to be wrong, and he publicly recanted, as I do. I was mistaken; I hoped for a thing which, when we came to examine it, turned out to be illusory, that is why. Is that a good ground for recanting? If you are my father confessor in this matter I confess freely I was mistaken; so was His Grace; so were we all; and we deliberately did what we did in order to save London getting into a great mess, and an enormous waste of money.

4508. I am afraid I can hardly pose as your father confessor; that would take a lifetime, I am afraid, Mr. Forbes; but I want you to tell the Committee how, in the light of all the experience, continental and other experience, which was at the service of this group of gentlemen, you came to put out a statement which you now tell us is chimerical?—Well, I tell you. Can I

*Mr. Benn*—continued.

be more frank in my confession? The wish was father to the thought. I had no particular ground for utterly casting aside the opinion of Mr. Bennett or Mr. Silvanus Thompson or the Duke of Marlborough, and it was quite worth our while to go in to test this thing. We put our money into it, but before we put our money into it we were wise enough to take care that if these estimates and aspirations could not be realised they should not play "ducks and drakes" with our money. That is why we went into that, and we have saved London from an immense inconvenience and enormous loss.

4509. How far did you go with your enterprise to discover all this?—Oh, a considerable time; some months we were at it.

4510. Did you get to the point of supplying the citizens with any service?—We got to the length of supplying a better method than was suggested by the new company.

4511. But how could you possibly discover that those figures so certified were fallacious unless you proceeded with your enterprise?—Upon examination and instruction cannot you arrive at a conclusion without spending the money first. We arrived at it by argument, and induction, and conviction, and so did the Duke of Marlborough and his colleagues; Sir Albert Rollit, I think, was on the board; he is not altogether a baby.

4512. On that?—Yes.

4513. Sir Albert Rollit was on the board of the New Telephone Company, and in the course of time I think it was absorbed by the National Company?—You have not seen the agreement, I dare say, between the two companies, but the agreement stipulated that inasmuch as we were to put 250,000*l.* into this enterprise we were to be represented on the board; and the agreement stipulated that as we had agreed, as part of the business, that there was to be inter-communication between the two systems, as you see in the prospectus, the Duke of Marlborough should come upon our board. Unhappily, the poor Duke of Marlborough disappeared suddenly. Then we carried out our agreement by putting on another director, Sir Albert Rollit. That is the sense in which he came upon our board.

4514. I will just ask you once more, because I think it is very important; you put out this estimate; upon that estimate persons subscribed to your company, the New Company?—Yes.

4515. I want to ask you how you discovered by practical experience that these figures were fallacious?—Well, we took our own experience. We had urged upon the Duke of Marlborough over and over again: "Well it may be, but now just look at our figures. If you, Mr. Bennett, Mr. Silvanus Thompson, or any of these people you rely upon, can do this thing, it will pay us well to go in and assist to have it done." When we came to dissect it the Duke of Marlborough was confirmed in the doubt as to whether it could be done or not; and he was confirmed in this, that there was a better way, a more expeditious way, a more economical way, and a more efficient way of doing the same thing; and that was by carrying it through the machinery of the National Telephone Company. The object he

Mr. *Benn*—continued.

had in view was to give a metallic circuit for London and a more moderate and a more efficient service. That is exactly what we have done. Now what do you think we paid for doing it? Because of that circular, and because of our connection with it, we have bought back the shares of all the people who were induced to go into that thing upon the credit of our names. Could we have done anything more than that?

4516. Oh, no; I am not saying anything as to that?—We have not left them out in the cold.

4517. I am not concerned with the subscribers?—You had better know the truth.

4518. I desire to know the truth; but I want to ask you this: When you put your name to this document you were fully acquainted with all the experience which had come from your experience with the National Telephone Company?—Yes; but then you see I had that weakness not to be over-confident either in myself or in our organisation; and I thought there might be cleverer fellows in the world, and if there were they deserved encouragement. As a matter of business, it was worth our doing; we did it; and we converted the Duke of Marlborough and his colleagues to the view that there was another, more effectual, more prompt, and better way of doing the same thing, and we have done it.

4519. But my point is this: that in 1892, with all your experience with the National Telephone Company, you sign a document and you put out an estimate?—On the faith of certain experts.

4520. Yes. But you came to that signature with all the experience of the National Telephone Company, in view of all the difficulties which you have recently mentioned to the Committee?—Yes; now you may state it just as high as you please, as if you were counsel prosecuting a defendant, and I am prepared to meet it all. I say that we did; we hoped that Mr. Bennett and Silvanus Thompson and their advisers might be right; it was our profit that they should be right. Nobody had a greater interest in its being right than we did; but when we came to examine those gentlemen we found they were wrong, and we found that there was a better (as I have said before) and a prompter and more economical way of doing the same thing; and we have done it. Now you may go on harping upon that as long as you like; but that is the fact.

4521. Excuse my being so dense; but I want you to tell the Committee what additional information you derived from the practical point of view at the date of the amalgamation other than the information you had when you signed that document?—The information we derived was this: that although we hoped that Mr. Bennett and the Duke of Marlborough might be right, and although we knew that what they said was possible, it was contrary to our experience, we persuaded them that they were wrong and that we were right. That was the reason; and they were not prepared to go on with it, and they withdrew from it because they were satisfied that those estimates were illusory.

4522. You and your friends had taken the precaution, I think, to absorb most of the capita

Mr. *Benn*—continued.

of the New Telephone Company?—No, we had not then. We had subscribed by agreement 250,000*l.* It was worth our while to risk 250,000*l.* to ascertain whether these gentlemen were right or wrong.

4523. Is it not a fact that had this company proceeded with its enterprise it would have seriously affected your National rate of subscriptions and your profits?—No.

4524. Will you tell the Committee the difference in the two tariffs?—£12 they talked about.

4525. £10, I think?—£12.

4526. £12 was it?—Is it in the prospectus?

4527. It is not in the prospectus?—Then I can tell you it was 12*l.* 12*s.*

*Chairman.*

4528. There are no other points that you wish to mention, are there?—No; I trust the Committee have appreciated that I have rather been lengthy because I was desirous, as far as possible, of dispelling the grave charges brought against the National Telephone Company.

4529. I think the information you have given has been of great interest. There is just one question I want to ask, that is, whether the 14*l.* odd which you say is the average subscription in London is an average of the actual subscriptions paid?—Yes, sir.

4530. Supposing all the subscribers entered upon a five years' agreement, the average subscription would be to some extent lessened?—The 20*l.* being the initial subscription for one year, 3*l.* coming off in respect of a five years' agreement, and the duplications at the lower rate bring it down to an average of 14*l.* 10*s.*

Sir *Charles Cameron.*

4531. You have given us some very interesting information about the cheapness of telephone communication. I think you told us that whereas a hundred words by telegraph cost 4*s.* 2*d.*, the average cost per message of a minimum of a hundred words by telephone is about a halfpenny?—A little over.

4532. A little over a halfpenny?—Yes.

4533. That is at the present cost of your instruments. The present average cost, I think, is 9*l.* odd?—Yes; 9*l.* 2*s.* 2*d.*

4534. That, of course, is very interesting and very cheap; but in those places where you have cheaper subscriptions of course that cost would come down in accordance with the subscription; that is evident, is it not?—I do not know whether I quite follow the honourable Member.

4535. We will take a concrete case: you have spoken a good deal about Stockholm?—Yes.

4536. You hold that it is not very fairly comparable to London?—I should have thought not in the least.

4537. There are in London how many subscribers. I think you said 10,000 odd?—Yes, I gave those figures.

4538. I suppose you are aware that in Stockholm there are 11,500 odd?—Yes.

4539. So that in point of magnitude and the number of subscribers you have, the towns are very much upon a par; is not that so?—That is so.

4540. I presume you do not contradict what has

Sir *Charles Cameron*—continued.

has been said about the excellence of the service in Stockholm?—No.

4541. You admit that there is no fault whatever to be found with it?—No.

4542. And that it compares favourably with what it is in London?—I have no right to complain of the service of Stockholm.

4543. And you are aware that the Duke of Marlborough, in his letters when he was recanting, described the service in Stockholm as an ideal service?—Yes. I do not know whether it was the Duke of Marlborough or Mr. Bennett; however, it was described as an ideal service.

4544. It was the Duke of Marlborough. May I just recall to your memory who it was? The Duke of Marlborough, in a letter that we have in our Appendix No. 6, says: "From what I have seen of the working of the telephone in that country" (that is, in Sweden), "the facility with which persons in one town converse with those in another is quite remarkable. The subscriber calls up the Stockholm exchange, say, and requests to have a conversation arranged with either Malmö or Gottenburg. The trunk operators communicate together by comparing the lists of persons who have appointments, and the operator at Stockholm telephones back to the subscriber the hour at which the conversation required has been negotiated, and in the busy time," and so on. He says: "With regard to Sweden, which is probably the European country which has developed the telephone business more completely than any other, the system of Government trunks and local exchanges has arrived at a wonderful state of development"?—Yes.

4545. You have rather more subscribers in Stockholm than in London?—Yes.

4546. Let us compare the area of Stockholm with London; the area of London is 630 square miles?—Six hundred and thirty square miles is the London area.

4547. Could you tell me what number of square miles would be comprised in a circle with a radius of 43 miles, which is the radius of the Stockholm area?—Forty-three, is it?

4548. One of your engineers could tell us roughly, in a very short time?—Yes; we will work that out.

4549. I think you will find that it works out to a good deal more than the London area?—It may; but one side of it is sea.

4550. There are no inhabitants on the sea. We may possibly get the accurate information shortly. The question I have asked, as to which you can fill in the answer, is, the area, the number of square miles which would be embraced in a circle of 70 kilometres, or roughly, 43 miles round Stockholm. I think we may take it at once that it is a larger area than London?—It may be; we will take it for the sake of argument.

4551. Take it that it is a larger area than London. You have told us that there are a larger number of subscribers in Stockholm than in London?—Yes.

4552. Can you tell us the population of Stockholm?—Two hundred and fifty thousand, or something of that kind.

4553. If you had the same proportion of

Sir *Charles Cameron*—continued.

telephone subscribers to population in London as you have in Stockholm, that would give you something like about 250,000 subscribers in London, would it not?—Yes.

4554. If the result of a system such as has been current in Stockholm had been to increase your subscribers so enormously, and give them a much cheaper service, would it not sweep away all theories as to what could or what could not be done?—It would sweep away all profits.

4555. If the result were that the company that provided the thing was able to pay 8 per cent., which was their maximum dividend, would not that sweep away your theory as to no profits?—I think that "if" is a very important factor.

4556. What I wish to show you is what has been done there?—But I cannot find the slightest analogy between Stockholm and London. I am rather inclined to agree with the Director General of the Telegraphs in Sweden, who tells you what the effect has been. He says, that "in consequence, a competition has arisen, which works in all ways unfavourably, and which has also entailed the result that the fees have been brought down far below the proper ones." We are not philanthropists, and a system, however satisfactory to the subscribers, that has operated in that way, is not one, I think, that you would find any commercial company in England very keen to follow, or any bankers to find the money to carry out.

4557. Assuming that there are people who sometimes embark in schemes that do not turn out any great financial success, and assuming that the public benefits by the competition which results from these unwise schemes, the public would have something to say in the matter, the public convenience?—The public, of course, will enjoy the benefit of other people's unwisdom; but that is not a claim that should operate, I think, in the decision of a question of this sort.

4558. I wish to get at some ground-work of facts, and to allow the Committee to draw its own deduction from those facts?—If you ask me my opinion, I respectfully give it.

4559. You have given your opinion very clearly there; but I wish the facts as against certain theories that have been put forth. If I, being a telephone subscriber in London, wish to speak to someone who is not on the telephone service and the telephone exchange, can I do it?—If he is not on the telephone exchange, I suppose you cannot.

4560. Then, are you aware that arrangements exist there by which you can telephone for a messenger to be sent to a man who is not on the exchange, and he is brought to a call office and talks with you?—That is a rational thing to do, and can be done. When this agreement comes into operation we have got a long way in that direction; we can then, by telephone, call a messenger.

4561. That is quite true; but what is to prevent your doing it now, or what was to prevent your doing it up to 1895?—The rules under which I work for my masters.

4562. Did you ever apply to your masters for a license similar to that that has been given to

Sir *Charles Cameron*—continued.

the District Messenger Company?—I do not think the honourable Member can have taken the trouble to read the license to the company from the Post Office, either the first or the second. The limitations are numerous and precise, and what you describe as being desirable to be done was a thing we were precluded from doing.

4563. I do not describe anything as being "desirable to be done"; I simply wish to ask you whether you have inaugurated services which, under the spur of competition, exist in Stockholm?—How can we inaugurate a service which we are precluded by law from doing.

*Chairman.*

4564. Is it not the fact that when the license was granted it was strictly confined to oral communications, and that that restriction was made with the sanction of Parliament at the time?—Absolutely imposed.

Sir *Charles Cameron.*

4565. But is it not also the fact that since the license was granted the Post Office has modified its policy, and has granted a license, for the carrying of written communications, to such organisations as the District Messenger Company?—Yes, they have, under a special contract, I understand, with the District Company; but our license at this moment precludes us from doing what you say ought to be done.

4566. Is it proposed to change your license when the new agreement with the Post Office comes into operation?—Yes, our agreement with the Post Office will enable a telephone subscriber to the adjacent post office to call for several things; the taking down of a message to be sent by messenger, or to be sent by telegram; in fact, pointing to the very thing you say ought to be done.

4567. That is done by an agreement with the Post Office, and what I wanted to bring out was that it was possible to have had that agreement with the Post Office by means of a similar arrangement to that which has been come to with the District Messenger Company, but that has never been applied for?—That has never been done.

4568. You have never applied for a license similar to that which has been given to the District Messenger Company. As a matter of fact, you have not?—Of course I have not; but then I want to say something more.

Sir *James Fergusson.*

4569. May I put one question to you; is it not the case that the Post Office would never have allowed you to do it if you had not surrendered the trunk wires?—My experience fully confirms your question, Sir James; they would not.

4570. As a matter of fact they would not?—What has surprised me all through this thing is the utter disregard of the first principle of this contract, that the Post Office have a monopoly of this business.

Sir *Charles Cameron.*

4571. Will you, if you please, allow the postmaster and the ex-postmaster at the proper time to get out the facts concerning the Post Office, and allow me to go on with my line of examination at present?—It is a little hard to blame us.

Sir *Charles Cameron*—continued.

4572. I am attributing no "blame" to anyone; I am simply asking for facts?—I beg your pardon.

4573. If I, being a subscriber to one of your exchanges, wish to send a telegraph message from my house to the Post Office and through to some other part of the kingdom, can I do it?—Not now. After the operation of the new agreement you can.

4574. You cannot do it at present?—No.

4575. Are you aware that in Stockholm, even with a company that competes against the Post Office, they have messengers who will receive a telegram and hand it into the Post Office?—Yes.

4576. You are aware of it?—I am aware of all that.

4577. If I, being a shipowner, wish to put the telephone in my ship, have you any arrangement or tariff for that?—No, none. I am quite aware that it is done in Stockholm.

4578. You are quite aware that it is done in Stockholm?—Yes.

4579. You are aware that there is strong telephonic competition in Stockholm?—Yes, there is, with the results that I have given the Committee.

4580. There are two companies?—Yes.

4581. The General Company and the Bell Company?—Yes.

4582. And there is a State or postal telephone system besides?—Yes.

4583. Possibly, now, if any of your friends have worked out the area of Stockholm, we might get it in at this point?—It is about 5,000 square miles.

4584. We will take it at a very reduced figure and admit that half of it is sea; you have got between one and two thousand square miles of telephonic area?—Half of it is sea, and a good deal more than half of it is desert, forest.

4585. That does not make telephony any the more remunerative?—But it does affect the character of the population.

4586. The character of the population it would rather tend to make less telephonic, would it not?—But I mean when you talk about 5,000 square miles, you must see how much of it is possible for telephonic uses, otherwise you have got a fiction.

4587. As a matter of fact, you have there the General Company, which competes with the Post Office, which charges half the subscription for a maximum subscription, and *5l.* 11*s.*, with an initial payment of *2l.* 15*s.* 7*d.*, gives a metallic circuit and free communication over this circle of 70 kilometres?—Yes.

4588. And you have got the fact that there is an enormous development of telephone business there?—Yes.

4589. Now, we will come to talk about the injurious effects of competition. You say that if the New Telephone Company had gone on it would have cost the public a great deal of money?—Yes.

4590. I do not quite follow you how it would. I can see how it would have cost the companies more

Sir *Charles Cameron*—continued.

more money, but I cannot see how it would have cost the public money. Will you please explain what you mean?—First of all, I should have thought that the people who go into these ventures and find all the money are part of "the public." They want some consideration.

4591. We will take that as an abstract proposition; "the public" generally is a large entity, whereas "the public" of shareholders is a small one?—I may say at once that I cannot agree with what I have heard suggested in this room. It seems to me to be this (well, I know what would be thought of it in the City): that the position of the undertaker, the man who runs the risk of the enterprise, is not to be considered; that the moment he has spent his money, led the way and developed the business, he is to be utterly disregarded, or his claims for consideration, and those people who profit by his experience and by his risk are to come in and to be encouraged by corporations to extinguish him. That does not seem to me to be very moral or very wise.

4592. Then you must sympathise very strongly with the position of the General Telephone Company in Stockholm?—I sympathise with any company in those straits.

4593. I ask the question for this reason: after they had developed their business the Postmaster General came in and competed with them?—Yes, they are precisely in the same position there as we are in England. There is nothing to prevent the Postmaster General coming in and competing with us. That is a very different thing from other speculators, and people who want to cultivate this sort of enterprise, not for the public, but for themselves.

4594. But just let us confine ourselves to the simple fact. As a matter of fact, what occurred in Stockholm was this: The General Telephone Company had established a service?—I see you have got Mr. Bennett's book there.

4595. I have?—Is that evidence?

4596. We will get Mr. Bennett if you dispute it, but I thought you had some objection to Mr. Bennett giving evidence?—Not the slightest.

4597. You have no objection?—Not at all so far as I am concerned. I take it *cum grano*. I do not know what is in that book. I have a general idea.

4598. We will take it *cum grano*, as you say?—I do not know whether it is any good pursuing the question; I find no parity between Stockholm and London.

4599. It is not what you "find;" it is what the Committee have got to find?—Exactly.

4600. As a matter of fact, you had in Stockholm the General Telephone Company, with a large business?—Yes.

4601. On the single wire?—Yes.

4602. Then you have the fact that the Postmaster General came in and started a competing exchange at a low rate with double wire?—Yes, I take it from you that it is so; I have not read the book.

4603. When you express yourself so very strongly as to there being no analogy between the case of London, or this country, and Stockholm, I presume you are acquainted with the case of Stockholm?—Well, of course, I have got a heap of papers here about Stockholm, and I know what is in that book pretty well, but I cannot see its application to what is here.

4604. Probably you cannot; it is for us to find the "application;" but after being subjected to that competition, you are aware that the present system in Stockholm of the General Company is entirely metallic circuit?—Yes; everybody profits by their business experience and supersedes a bad system by a good one. That is just what we are doing in London.

4605. Exposed to this strong competition of the Post Office, the General Company has reorganised its system, put down complete metallic circuits everywhere, and paid a handsome dividend at the same time?—Well, we have done it, you see, without competition in London.

4606. They have got it finished and you have not?—We shall have ours finished within a few months of this time; and it is a much easier job in Stockholm (I do not know whether the honourable Member knows it) than it is in London.

4607. They have more subscribers in a town of 250,000 inhabitants than you have in a town of five millions?—Yes; but that does not rest with us. We are arguing round a circle. I have already said why. What are the public reasons; what are the apparent reasons why, in one place, a telephone should expand, and in the other it should not?

4608. You have given us a number of very interesting figures which appear to me to apply equally to the case of Stockholm and to the case of London. For instance, you have told us the various charges, and so on?—Yes.

4609. Wayleaves; they have wayleaves, I believe, in Stockholm?—They have.

4610. Municipal interference. You are aware that in Stockholm the municipality actually had a quarrel with the Postmaster about wayleaves?—Yes; I can understand municipalities doing odd things; but how much money did ever they pay for wayleaves? Does the book tell you that?

4611. How much money?—Yes, per subscriber.

4612. I will get it for you; you mean their charge per subscriber?—Yes; I want to know that.

Lord *Stanley*.

4613. The cost of wayleaves you want to know?—Yes; of course they are subject, as we are in this country, to certain limitations about the interference with private rights; therefore in theory you have to pay wayleaves in Stockholm; so you have in Belgium. Last year I can tell you what they paid for wayleaves in Belgium, 1,600*l*. What do we pay for wayleaves? I have put it in evidence.

4614. The question I understood you to ask was: How much per subscriber the wayleaves cost in Stockholm?—That is what I should like to know; but then, unfortunately, the accounts of the State administration do not show that. I know what it costs in London, 1*l*. 13*s*. 4*d*. If it costs 1*l*. 13*s*. 4*d*. in Stockholm, then there is a parity of reasoning. I doubt whether it costs the odd 3*s*. 4*d*.

Sir *Charles Cameron.*

4615. You have got municipal control and the lack of the powers which you possess here. You say you are aware that the Postmaster has been interfered with by the municipality?—I daresay the Postmaster here has been interfered with.

4616. That makes the analogy the more complete?—No, it comes to this: what is the practical application of a theoretical obligation? Nothing in this country.

4617. You have told us about the restricted service of tolls that you have instituted at Croydon, and so on?—Yes.

4618. You are aware that a similar system is pursued by the Bell Company in Stockholm?—I daresay; I hope with more success.

4619. Their charge is under 2*l.*?—£1 19*s.* 9*d.*, with an initial charge of 11*s.* 1½*d.* and a restricted number of messages.

4620. You are aware that in Stockholm the competing exchanges intercommunicate?—Yes.

4621. And you are aware that the General Telephone Company (and I believe also the State) gives access to its subscribers over the entire 70 kilometre radius?—Yes.

4622. Without extra charge?—Yes.

4623. You are aware also that there are a number of submarine cables involved?—Of course, being a water city, it would be so, as in Amsterdam.

4624. Those are more expensive than land cables, are they not?—Well, I should hardly think they are under the canal. Under the sea it is so, but I doubt whether it is under the canal. Stockholm and Amsterdam are moderately fit for comparison there. I do not think it is very much dearer in Amsterdam under the canals than under the streets.

4625. You are aware that there is a very great extension of the public call office system there?—Yes.

4626. And that there are many more call offices than in this country?—Yes. I will assume, or take it as evidence, that there is a totally different degree of expansion in Stockholm and the neighbourhood; but that does not affect my mind at all as to the great difference in circumstances, why one thing is possible in one place, and not in another.

4627. What are the rates at your call offices?—Threepence for a small radius.

4628. Are you aware that the rate of public call offices within Stockholm is 1*d.* and a third?—I take it to be so: yes, I am aware of that.

4629. And beyond Stockholm, within the 70 kilometre radius, under 2*d.*?—Yes. In some of our towns in England the rate is 1*d.*; but there is such a thing as "standard of values," which people who want to talk theories do not fully realise. What is the relative value of 3*d.* in London, and 1*d.* something in Stockholm?

4630. Where is your system of 1*d.* calls?—London is 3*d.*

4631. What is it in Glasgow?—Mr. Gaine will tell you; I really do not carry every detail in my head; but, in answer to the honourable Member, we will produce the fact. Incidentally, I may quote the postmaster in Sweden: "The fees for conversations are quite too cheap in Sweden." If the state of things evolved in

Sir *Charles Cameron*—continued.

Sweden is such as to make a competition which works unfavourably bring down far below the proper ones, the fees ("we are endeavouring to restrict the districts within which one may converse free. The fees for conversations are quite too cheap in Sweden"), that is hardly a thing to follow, that is not an analogy. This is the Swedish postmaster's statement. I can now give you the names of some of the towns where we have the penny calls: Brighton, Leeds, Newcastle, Sunderland, Bristol, Portsmouth, Middlesbrough; those are just a few which Mr. Gaine has mentioned on the paper handed to me.

4632. Is the same charge made by the Post Office there?—That I do not know. However, there they are, and there are a great many others.

4633. Newcastle is a place where you have postal competition, is it not?—Yes.

4634. The severest postal competition, I suppose, in the kingdom?—I do not know about the "severest."

4635. I think in one of the statements you have given us, you show the largest number of subscribers in Newcastle?—Yes.

4636. Now, there is just another point in connection with that. You have shown us the absolute absurdity of Major General Webber's proposal for sub-dividing telephone exchanges. Are you aware that that system has been adopted in Stockholm?—I hope I did not suggest anything of that kind about Major General Webber. What I said was that we had been acting on the assumption that a reduction in number of exchanges was the right policy to pursue.

4637. That is quite right?—And that we were satisfied it was.

4638. That is perfectly right?—Therefore, whatever Major General Webber said upon the subject, as far as we were concerned, it is no matter what he said; it is contrary to our convictions and our advice.

4639. Of course, that is not my position. I fully admit the absolute right of your company to carry on its business exactly as it pleases, but I maintain that the interests of the public will be best served by competition which will enable other men to compete with you on whatever system they please. You have given the strongest evidence against the feasibility or the possibility of a certain plan laid out by General Webber, supported by certain other engineers, and I ask you: Are you aware that that has latterly under the spur of competition been the very system that has been adopted in Stockholm?—No, I am not aware of it.

4640. Is there any reason why the Post Office should interfere to prevent, by refusal of a license, competition or amendment by a better system in this country?—I cannot venture an opinion upon the discretion of the Post Office. I think if the Post Office by law are in possession of a monopoly of telephones, they have a right to make their own terms.

4641. That is quite true. Now we will just go to another point about "their own terms"; they have made their own terms by this agreement?—Yes.

4642. And they strictly reserve to themselves the

Sir *Charles Cameron*—continued.

the right of granting competing licenses?—They do.

4643. Mr. Lamb, whom we examined, or who was a witness on behalf of the Post Office, said (I think I can almost quote his own words), that the Post Office was certainly not in law, on the strictest interpretation of the agreement, in any way debarred from granting competing licenses, and that it was under no obligation, even in honour, not to grant competing licenses?—I believe they are absolutely free.

4644. You agree with him that there is not even an honourable engagement on the part of the Post Office not to grant competing licenses?—The Post Office are absolutely free. I will go a little further and say that in all the negotiations (which were prolonged) there never was the slightest suggestion, directly or indirectly, of any such cession on the part of the Post Office of a promise or pledge to lock up their own discretion; on the contrary, from the very beginning to the end, it was strictly reserved; therefore they are quite free.

4645. That bears out exactly the Post Office statement of the arrangement; you talk about wages: What is the salary of your telephone clerks, who are ladies, I suppose, chiefly?—Yes. The wages vary from 5*s.* for young understudies (who, of course, have to be taught) up to 17*s.*, and I think you will find that is less than is paid in some places and more than in others.

4646. It gives here the wages at from 2*l.* 4*s.* 1*d.* to 2*l.* 15*s.* 7*d.*?—A month.

4647. A month?—Divide that by four.

4648. That is very much about the same as yours?—Relatively, no doubt, it is a higher wage, because the money will purchase more in Sweden than it will in London.

4649. Oh, yes; it is merely a matter of the relative cost of wages?—Yes; but that is a very small portion of the wages.

4650. We will go through a few of the wages; what hours do your young ladies work?—Eight hours, with an interval for luncheon, and another for tea, or dinner, rather, and tea.

4651. The hours, then, would be about the same; they are about seven hours there?—Yes.

4652. Your lady superintendents; I suppose you have lady superintendents?—Yes; it is about two guineas, I think, we give them.

4653. A week?—Yes. Then they are a rare class; they are worth a great deal more for some things.

4654. Then, your wiremen, for instance; what would their daily wages be?—Six shillings a day.

4655. There you are considerably over Stockholm?—Yes; you may take it from me that for all work of that kind, all mechanical work or skilled labour, we are at least 33 per cent. higher than in most European countries. I know it by my connection with the railways.

4656. *Here* we have a system of twin wires embracing over 8,000 subscribers on the General Company's system in Stockholm and a couple of thousand more outside, that is about 10,000, and the total value of the company's Stockholm system, at December 1893, was 2,600,000 odd

Sir *Charles Cameron*—continued.

kroner, and of its country system 1,018,000 odd kroner, making a total of over 3,000,000 kroner, or 165,890*l.*; that is a very much smaller estimate than you give in your prospectus of the New Telephone Company?—Yes.

4657. They have actually done, upon one-third of the money there set forth, what you decided it was absolutely impossible to do, in the terms of your own prospectus?—Yes. That does not convey much to my mind. Look at the elements of cost: railways in Sweden cost 5,000*l.* a mile; in England they cost 50,000*l.* Poles grow in Sweden; I have seen telegraph wires on living trees at the edges of the forest. We do not grow poles in England; we buy them, and very expensive they are too. I mean the elements of cost are so different that it is ridiculous (I beg your pardon, I am thinking now of the author of the book) to compare things which are utterly unlike.

4658. Of course we have your view upon that subject; you have already stated it; and what I wish is, to get a few facts from which those of us who do not quite agree with you may form our own deductions; what have the dividends of your company been?—We have debentures at 3½ per cent.; we have a very small sum (300,000*l.*) of first preference at 6 per cent.; we have a considerable quantity of second preference at 5 per cent.; and we pay a steady 5 per cent. dividend.

4659. And *this* general company pays 8 per cent., besides creating a renewal fund as you do, and a reserve fund as you do, a renewal and deterioration fund as you do, an assurance fund, of course, as you do, an accident fund and an employés' benefit fund, as I presume you do?—Then I wish now the analogy applied in this case.

4660. Probably, if you had adopted the New Telephone Company's prospectus you might have been earning the 8 per cent; you do not think so?—Well, you see, I have not seen their accounts. Figures are susceptible of various treatments.

4661. If the Committee will give them the opportunity of producing their balance sheet you and we can do so?—Yes.

*Chairman.*

4662. Do you know whether the Stockholm Company is limited to a term of years?—That, sir, is a material point. I think Mr. Bennett's book will tell you. We sent him out to Sweden to get a report. *That* is our report printed in another shape.

Sir *Charles Cameron.*

4663. That adds to its value probably; it is most interesting?—Of course it is rather material to know what is the length of the tenure.

4664. What is the amount of your sinking fund?—Well, it would take a very large sum; but then before I can answer that, I must know what is going to happen.

4665. You do put away money; you have got a 16 years' license, and, as I understand, you make provision for the extinction of your capital in 16 years?—Why should we? You "understand" something which is not the fact.

 4666. You

Sir *Charles Cameron*—continued.

4666. You must understand I am not criticising it; I understood that was so?—I am most anxious upon that subject; it is one of the things upon which my mind has been engaged for several years, and I have sleepless nights over it.

4667. What do you do?—I cannot discount the unknown. Before you talk of a sinking fund you must know what the sum is that is to be sunk. Can you tell me; can anybody tell me?

4668. I simply wish to know for information, whether you before declaring profits put away any money for sinking fund, and if so, how much, and on what principle?—Yes, we do put away money; we have put by about 320,000*l.* so far, but we have not called it "sinking fund."

4669. What do you call it?—"Reserve."

4670. "Reserve fund;" then you do not have any fund that you do call "sinking fund"?—No, we do not call it "sinking fund"; but if we do "sink" there is the fund.

4671. Yes, it will float?—Probably I might shorten the thing by this: If you, or any other people, or any municipality who have embarked upon this enterprise, can solve this question, it may assist me. The possibility of getting the money turns upon the length of the tenure and upon something more, not only the length of the tenure, but the character of the bargain at the end of the tenure, as to what is saved for you; what you get I do not know, what we are to get nobody knows. Then how can we form an adequate idea of a sinking fund?

4672. You find some fault with the County Council's estimate?—I do not "find fault."

4673. You pointed out what omissions their engineers had been guilty of; but they in their estimate make a provision of 19,600*l.* for "sinking fund and interest"?—They may make a provision, I do not know what the value of it is until I know a good deal more about the facts.

4674. I do not wish at all to criticise your method of keeping accounts; as I have told you, I do not wish to criticise either your method of carrying on the business, or your perfect right to act upon your——discretion.

4675. Knowledge and belief of what is right and wrong; and about this thing that we call "sinking fund" or "reserve fund," I only wish to know, for information purely, whether you put it by with any reference of ratio to your capital, and to the termination of your license?—Yes, I quite understand the application of the question, and the wisdom of it, but I want the factor.

4676. I cannot give you the factor, but do you put away a given sum, we will say, of 1 per cent. or 2 per cent., or do you simply put away to reserve fund what you think you can spare?—About 60,000*l.* a year we put to reserve.

4677. And that 60,000*l.* is not worked out on the basis of your capital, or as bearing a certain proportion to your capital, but simply as a sum which in your judgment it is wise to put to reserve fund?—No living creature can tell what is going to happen in this business between now and 1911. The Post Office cannot tell; we cannot tell. Of course, if the assumption is that at the end of that term the whole of our capital is lost, and that were realised, it would be a very serious thing. If there were a *possibility* of that it would be very serious. Of course that is too chimerical for serious consideration; but you will find it a great difficulty when you come to raise money to go into this business on a short tenure. We have raised ours and spent it.

4678. You have got, at all events, some 300,000*l.* of a sinking fund?—Yes; I am looking, if you will allow me, for the precise amount. It is about 300,000*l.*

4679. And your total capital is what?—£5,000,000, about.

4680. Mr. Preece gave us a number of reasons against competition in telephone areas, and among others, he pointed out that it would be a great inducement to a strong company like yours to go in and undersell or "cut" the rates in any town which received a competing license; that course was pursued in Plymouth, but you repudiate the responsibility for adopting it?—It was a small local company at that time.

4681. Then it was a small local company that beat the Post Office out of the field by cutting down the rates in this one town?—Yes, it was a a very small thing at the time.

4682. Had it any other resources of revenue to tap besides Plymouth?—No, I think not. If you wish me to go into it I will do so. It is so remote and so small that I had not gone into it.

4683. That is not a system the practicability of which (given that the Postmaster has a free hand) will commend itself to you, is it?—I do not quite follow; starting a competition do you mean?

4684. No; I wish to take the commercial feasibility; in case of Glasgow getting a license, Mr. Preece assumed that a strong company like the National Telephone Company would come down and cut its rates to an utterly unpayable sum and starve the new company out of the field; do you think that that could be done if the Postmaster General had the right to grant, or if the Postmaster General adopted the policy of granting, competing licenses all round?—Really, I cannot answer for the Postmaster General. Of course, if he grants a license for any centre and the licensees get their money on conditions similar to our license, and a 17 years' run without any agreement or definition of what is to happen in respect to the going concern at that date (if they get over that primary difficulty, which they cannot and will not), then I should wait and see what arose.

4685. I am very glad I have been the means of drawing that expression from you; you say that they cannot and will not get over the difficulty of raising capital on the same terms as you?—I do not think so.

4686. Therefore, is there any necessity for the Postmaster General adopting a policy of refusal to issue licenses to, for instance, responsible bodies like the Corporation of Glasgow, who ask for them?—I think that the Postmaster General would be justified in considering the point of whether the corporation were likely to raise money upon terms. Of course, if a corporation wished to pit themselves against an existing company and upon rates to enter into a competition

Sir *Charles Cameron*—continued.

competition, regardless of profit and loss, that would be a different thing.

4687. We may put aside the question of the rates, because in the case of Glasgow they express themselves absolutely decided that there shall be no call upon the rates. You think if the call upon the rates were forbidden they could not get the money and could not go on?—I am quite sure (of course, one is always sure, but I am quite certain) that as regards any attempt to raise money on our existing tenure, for a short term of years, upon the usual method of the issue of prospectuses and the preparation of them by financial agency, it would be utterly impossible at this moment.

4688. They are equally sure, apparently, that they could carry out the intention embodied in their application for a licence, and I presume that that is a matter which might be allowed to settle itself by public opinion, the money market, and competition?—Well, that is one way of settling it; but Parliament, you know, would have to be invoked, and they, notwithstanding the Postmaster General's licence, might not feel inclined to authorise a corporation to go into ventures of that sort.

4689. That is quite true, and that is a matter that would have to be considered afterwards?—No financial combination would venture upon such a thing, because it would be in the highest degree improvident to do it; and I do not know that when a corporation gets before a Parliamentary Committee it is in a very different position to any other promoter of a scheme of that sort. If it is an unreasonable scheme they are not likely to get assent to it.

4690. We are merely discussing the preliminary step of the policy of refusing or granting licences for competition to public bodies or other responsible corporations?—I do not think you must ask me for an opinion upon the subject, because my natural bias is against granting licences in competition.

4691. That is perfectly true, and perfectly right?—I think if the licence is granted in competition with the object of driving the company out of the field, it is not a creditable ground for an application.

4692. Talking about competition, you promised the other day to get some details concerning Dundee. Have you got them?—I have; but I do not think they are in a shape that is very intelligible. Such as they are they are here.

4693. Have you got copies?—Yes. [*The document was handed in.*] There are certain facts, sir, on that paper. I do not know what you wish to get from me upon it.

4694. You volunteered to speak upon it, and I thought you were going to do so. We have had Sir John Leng's evidence about it, which you have seen?—Yes; you have also had the evidence of the gentleman who was chairman of the company, and he told rather a different story to that of Sir John Leng. He was a gentleman who came rebutting the evidence of the inefficiency, &c., &c.

4695. As a matter of fact, during the time of the competition Dundee was, I think, next to London, the most numerously-telephoned town in the kingdom; is not that so?—Now let me see: The Dundee Company, I see, had 332 subscribers when they were purchased, and the National Company at the date of the purchase had 642; therefore, they had, you see, 1,074 people on the exchange system.

4696. I do not at all hold by the success of the other company; I am speaking of the public convenience. The result of competition was to cut down the price. You will admit that?—Oh, yes.

4697. Largely to reduce the price to the public and largely to increase the number of telephone users in Dundee, on whichever company's exchange they were?—That is the underlying motive in the promotion of many of these things; the underlying motive in starting a company is to cut down the price. Dundee is a very good illustration.

4698. Then there is another illustration?—Would you allow me just to finish? Dundee had its competition; we progressed more rapidly than they did, notwithstanding our higher rate and the competition in Dundee; but it ended in, what?

4699. You say notwithstanding *your* higher rate; they had the higher rate?—Yes, they had a slightly higher rate. But what did it end in? The purchase of the whole machinery of the Dundee company, which was erected to sell, not to keep.

4700. It was sold?—It was sold; and within a very short time of its being sold, it being so flimsy in construction, it had to be bodily taken down and re-established. That is what it was put there for.

4701. They may not admit that?—They would not now, because they were handsomely paid out.

4702. They were handsomely paid out at a very considerable profit to themselves?—I daresay a fair profit, that is what they went in for; but they built a flimsy structure in order to cut down our prices. They succeeded. They kept the competition going long enough, and they were bought out, and the result of being bought out was that they made a very good profit upon a thing of such value that we had immediately to pull it down and to reinstate it.

4703. I will take another point in connection with it. When their competition started, the charges were, I think, 15*l.* or 20*l.*; at all events, they were pretty high?—They began in June 1880.

4704. You speak for the company, I suppose, as having taken it over?—It was taken over really by a Scotch company at that date (we absorbed all these things later on in the greater company), and that is why I am not quite so familiar with some of these details as with those of the larger ones.

4705. I do not wish to press you about details; the point is simply this: As a matter of fact when they started the price, I think, was stated to be 20*l.*?—The Dundee Company.

4706. When the Dundee Company (the company that you bought up) was started the subscription was 20*l.*?—Yes. What it was at the end of the term when we bought them is shown in the table just handed in. I do not understand

Sir *Charles Cameron*—continued.

understand it; but I see here some figures as to the analysis of the rates paid by the Dundee Company's subscribers at the date of the purchase. There is one at 2*l.* 10*s.*; two at 3*l.*; nine at 4*l.* 10*s.*; three at 4*l.* 13*s.* 4*d.*; and so on, and so on.

4707. The effect of the competition was to cut down the rates until you were running at 5*l.*, and they at 5*l.* 10*s.*, or something like that?—Something like that.

Mr. *Grant Lawson.*

4708. The Dundee Company were started before the National in Dundee, were they not?—They were. They started first. The National Company started in Dundee; it was a Scotch company. The company, which had a Scotch area, was opened in July 1881; the Dundee company opened about June 1880; therefore, the operation of the competition seems to have been the other way; we cut down their rates apparently.

Sir *Charles Cameron.*

4709. The "D and D Company" I cannot identify with the many migrations that the soul of the company appears to have had; but, at all events, there were two companies, one with a high rate, and another which came in with competition; the result was to cut down the rates materially?—Yes.

4710. And when the amalgamation took place, it is stated here (are you in a position to contradict it), that the amalgamation was accompanied by a condition that the purchasing company should not raise the price above 10*l.*, which was about half what the price had been when the competition was not in force?—I am not absolutely informed, but I will have the papers looked up and submit them to the Committee. I daresay there was, as a condition of purchase, some stipulation.

4711. It will be very simple to let us have the agreement?—Yes.

4712. Now take the case of Manchester. I think the company that introduced competition there was called the Pioneer Company?—Was it the Pioneer or the Mutual. The Mutual, I think it was. We have had three transformations of it; the Mutual began it.

4713. The Mutual began it; then the Pioneer bought it up; is that it?—The Pioneer, no.

4714. Then the New Company bought that up?—There was an intermediate stage between the Mutual and the Pioneer; the Investment and General Electric; so that the capital was rolled over three times.

4715. That appears to be a favourite system of financing with telephone companies?—With telephone companies started on that principle, yes. That is what they are started for.

4716. The result has been that of a rolling snowball, so that at last, I suppose, there is a very large accretion of capital in the long process of rolling?—Of course, with such people they do not go in for nothing; they go in to sell their "razors."

4717. Well, take the Manchester "razor." I have before me a copy of a letter which was addressed by Mr. Provand (of whom we have

Sir *Charles Cameron*—continued.

heard) to the Chairman of this Committee, and I shall ask you some questions about what he says about the company. Mr. Provand, I believe, was one of the "getters-up" of the company?—He was the chairman of the Mutual, I almost fancy.

4718. He says: "That the Mutual Telephone Company was established by Manchester merchants on account of the bad service and exorbitant charges made by the National Telephone Company." That, of course, we do not ask about. He says: "That it erected a double wire exchange for a capital outlay of between 16*l.* and 17*l.*", that is per subscriber?—Yes.

4719. Can you credit that, or do you think it is likely?—Coming from Mr. Provand, I must credit it.

4720. "That its subscription of 5*l.* to shareholders and 6*l.* to non-shareholders was ample to supply service and pay a fair rate of interest on the capital. That the Mutual Company compelled the National Telepone Company to reduce its rates by one-half over the chief business parts of England and Scotland; in Manchester first, and latterly generally. What were your rates (do you know) in Manchester before it started?—Yes; I think I have reported that they have been as high as 20*l.*, reduced to 15*l.*, and subsequently to 10*l.*

4721. Then he goes on to say: "That on account of the Mutual Company's limited capital (the total amount called up was only about 36,000*l.*), it was unable to attempt competition in London, and consequently rates have never been lowered in that city"?—There you see he is not quite correct.

4722. "That on account of its limited capital, the Mutual Company sold its exchange and business to the new Telephone Company, which was brought out by Messrs. Rothschild for the net cost and interest, at the rate of 10 per cent., and under a deed binding the new Telephone Company to carry out the Mutual Telephone Company's policy, and establish double-wire telephone exchanges in other towns at low rates." Is that a fact?—There is a deed; yes.

4723. You could let us have it?—No, I do not think we can; it does not belong to us.

4724. May I ask who it belongs to?—It belongs to the New Company.

4725. Who is the representative of the New Company?—The liquidator.

4726. You say that it is not a public deed?—No.

4727. You are the shareholders, are you not?—We are the shareholders, but the company is in liquidation, and you know how important a liquidator is.

4728. I know the company is in liquidation, and that is a great bar?—I should be sorry to pursue the story of the Mutual too far, because it would involve very disagreeable features.

4729. I do not wish to pursue the thing more than it bears upon our own point. The assertion here is that "the Mutual Company sold its exchange and business to the New Telephone Company, which was bought out by Messrs. Rothschild for the net cost and interest, at the rate of 10 per cent., and under a deed binding the

Sir *Charles Cameron*—continued.

the New Telephone Company to carry out the Mutual Telephone Company's policy, and establish double-wire telephone exchanges in other towns at low rates"?—Yes.

4730. Is there nothing within your knowledge on that point?—Oh, yes, there is something within my knowledge. Manchester was put under an 8*l.* rate for the area served by the Mutual Company, but Manchester served by the other company at the higher rate liked that higher rate. I have put in a table showing the number of subscribers.

4731. Yes; I saw that there was a larger number at the low rate, if I remember rightly, than at the higher?—Is that so? I do not think you will find that it is so. I think it is just the other way.

4732. "Analysis of rates paid by New Company's subscribers." Is it Article 8 of No. 2?—No. 2; yes; Article 8 gives the analysis.

4733. That shows that there were 501 subscribers at 10*l.*; 20 at 8*l.*; 709 at 6*l.*; and 119 at 5*l.*?—Yes.

4734. That is to say, there were 521 at 8*l.* or over, and 828 at 6*l.* and under?—Yes. The 119 at 5*l.* were people who were to have a service at 5*l.* in consideration of taking a share in the undertaking.

4735. I know that?—But allow me; the 709 at 6*l.* were the general public who were persuaded to join the exchange in virtue of the reduced rate; and the 20 at 8*l.* are there in virtue of the agreement which said that at no time was the subscription for that exchange to exceed 8*l.*; and the 501 are the people who found that stipulation at 8*l.* for the service of the Mutual Company in Manchester so onerous and unsatisfactory that they transformed themselves into National Company's subscribers at 10*l.*

4736. But the fact remains that you had 521 subscribers at 8*l.* and over, while you had 828 subscribers at 6*l.* and under?—Yes.

4737. I am referring to Manchester here. You have told us that the Mutual Company, in being bought up, made a bargain which secured a low charge for its customers?—For a limited service.

4738. For a limited service?—Yes.

4739. That is all right: which secured a low charge for a certain service to its customers in Manchester?—Yes.

4740. But the allegation of this letter is that it also made a contract with the New Telephone Company, binding that company to establish double wires and telephone exchanges in other towns at low rates?—Yes.

4741. You are not aware of that point?—I have a general idea about the nature of the agreement, but the liquidator is in charge of the thing, and whatever it is worth, there it is. The company utterly failed in the carrying out of it. It was a service which the Manchester people did not appreciate upon those terms.

4742. The figures here will inform us?—You can see quite easily. Notwithstanding the fact that they had the sympathies of a great number of people behind them in Manchester at the low rate, we made much more progress in our figures at the high rate than they did at the low rate. A very considerable portion of the people who

Sir *Charles Cameron*—continued.

had been, shall I say, persuaded to go in at their low rate, had to continue as subscribers to us at the high rate; they found the service so limited.

4743. We are now talking about different things?—Oh, no! we are talking about the same thing.

4744. No; I am talking about the obligation of the New Telephone Company with regard to other towns to carry out the Mutual Telephone Company's policy and establish double-wire telephone exchanges in other towns at low rates?—Then, sir, I must respectfully decline to discuss that matter further, for the reason that their affairs are in the hands of the liquidator, and questions under that agreement will probably (most likely) be the subjects of legal procedure.

4745. The point is this: that assuming that to to be true, you have got the case of the Dundee Company, which sells itself, with a proviso, guarding what it considers the public interest; you have got the Mutual Company, which sells itself, with a proviso also, which it believes to be guarding the public interest?—Yes, it is not a matter of what "it" believed, it is what the public believed. The public did not appreciate the boon; they are sometimes ungrateful.

4746. Did the public ever get the chance?—Why, of course; it went on ever so long; until very recently.

4747. In Manchester; but we are talking about "other towns"; we are talking about more than you "decline to discuss"?—What other towns did they start in, sir.

4748. That is exactly the point?—Then I can relieve you. None, except Bolton, where there were four or five subscribers only; a very limited number.

4749. The Mutual Company did not start in any town?—Oh, yes, it did, I think.

4750. The Mutual Company sold itself to the New Company, as the chairman of the Mutual Company alleges, "under a deed binding the New Telephone Company to carry out the Mutual Telephone Company's policy, and establish double-wire telephone exchanges in other towns at low rates"?—Now I find the Mutual Company Exchange was opened the 28th February 1891.

4751. We are not talking about that?—I thought you said the Mutual Company never attempted any business.

4752. No, I did not say that. In other towns, I am talking about. You say there was nothing done by the Mutual Company in other towns?—No.

4753. That is the fault of the Mutual, I suppose, if there is any "fault." According to this covenant, the National "took over the New Company subject to the obligations of the agreement the latter had made with the Mutual Company." That is the allegation of the chairman of the Mutual?—I cannot make any explanations of the allegations of the chairman of the Mutual.

4754. Having been in it so long I thought possibly you might continue conversant with it?—No. I do not think I can express any opinion upon that. We shall certainly not take the view (in the National) of the chairman of the Mutual.

4755. Can you let the Committee form its own view by letting us have the agreement on which

Sir *Charles Cameron*—continued.

you did take the Mutual?—I do not think we can. I take the liberty of just suggesting to the Committee the very unfair position in which our company are placed by this sort of procedure. These facts, may be (I do not say, of course, on the part of the honourable Member himself) being elicited to make use of in litigation hereafter; therefore I am obliged to reserve my views upon it. We have no right to be prejudiced, even by questions put in a Parliamentary Committee. I say that with great respect from much experience of that tribunal.

4756. I should be very sorry to ask you anything that would prejudice your case before a legal tribunal. The production of documents which may come before a legal tribunal cannot prejudice you. I should prefer the production of the documents to any comments of yours upon them; perhaps you can oblige us with those documents?—I must respectfully put this to the Chairman: I should like to know what the view of the Committee is about that. Of course, if the Committee think it is a fair thing; if the Committee think the prejudice which may be brought about in future legal proceedings against the company by production of documents here——

Sir *Charles Cameron*—continued.

*Chairman.*

4757. As I understand, you object to produce certain documents which you have been asked to produce?—Yes.

4758. On the ground that they may prejudice the National Telephone Company, which you represent on this occasion, in possible litigation hereafter?—Yes.

*Tuesday, 28th May* 1895.

MEMBERS PRESENT :

Mr. Baird.
Mr. Benn.
Sir Charles Cameron.
Mr. John Ellis.
Sir James Fergusson.
Mr. Grant Lawson.
Mr. Arnold Morley.
Mr. Snape.
Mr. Solicitor General.
Lord Stanley.
Mr. Tully.

THE RIGHT HONOURABLE ARNOLD MORLEY, IN THE CHAIR.

Mr. JAMES STAATS FORBES, again called in; and further Examined.

*Chairman.*

4759. I UNDERSTAND, that with reference to the document to the production of which you objected upon the occasion of the last meeting of the Committee, in deference to the expression of the Committee, that, on the whole, it would be better the document should be produced; you withdraw your objection?—Entirely, if that is the wish of the Committee, and I will hand the document in.

4760. You will hand in a copy?—Yes, a copy. (*The document was handed to Sir Charles Cameron.*)

Sir *Charles Cameron.*

4761. Perhaps you will show me the clauses that relate to the question. If you will do that it will save my wasting the time of the Committee in looking for them?—What is the particular point you were asking about?

4762–3. The alleged stipulation under the agreement that the New Telephone Company should erect cheap double-wire exchanges in other towns, under a penalty?—Yes, that is so; and also about a limitation of rate, I think?

4764. Yes?—This is an agreement which, by descent, after passing through several stages, came into the possession of the New Telephone Company. It is an agreement between Swindells, of Portland-street, Manchester, on behalf of the Mutual Telephone Company, Limited, and the Electric and General Investment Company. It stipulates, amongst other things, for the transfer. They shall "complete as a part of the business purchased the Vendors' Exchange System in Manchester, as already designed on the metallic-circuit principle, so as to meet the requirements of, in all, 2,500 subscribers, and the purchasers or other the transferees of the said business will not for 10 years from this date raise the charge for an ordinary exchange wire to a private subscriber communicating between one part of the Manchester district and another within a radius of three miles from the Manchester Infirmary, above 8*l.* per annum per exchange wire." That is one of the stipulations. Then the other is,

Sir *Charles Cameron*—continued.

"This agreement has been made with the intention that telephone exchanges on the metallic-circuit principle shall be developed and extended. And, accordingly, if the transferees of the business shall at any time within 10 years from this date sell such Manchester business to, or amalgamate the same with, any other company which shall at any time within such 10 years conduct any telephone exchange in Manchester or London on the earth-circuit or single-wire principle, or shall, without going into liquidation, discontinue the said Manchester business, they shall pay to the vendors the sum of 15,000*l.* as additional purchase money." Those are the two particular items.

4765. You have read, I think, No. 10 and No. 12; I might ask you to read No. 11?—If you please: "The purchasers or other the transferees of the said business shall (unless in their opinion good and sufficient reasons shall at the time exist for not doing so) in any case in which within two years from this date any town in Lancashire or Yorkshire of sufficient size, and with pledged subscribers to a sufficient extent to justify the expenditure with a reasonable prospect of a remunerative return on the capital outlaid, shall desire the erection of such exchanges as hereinafter in this clause mentioned, erect or cause to be erected telephone exchanges on the metallic-circuit principle in such town, provided two-thirds of the capital required for the purpose shall be subscribed locally or otherwise, and unless, in the opinion of the purchasers or other the transferees of the said business, there shall be a good and sufficient reason to the contrary, shall within two years thereafter provide inter-town communication on that principle between such town and the other exchanges of the purchasers or other the transferees of the said business."

4766. You describe that as a very curious proviso?—Yes; I think that is a curious proviso. I should think it provides, "How not to do it."

4767. That does not refer to Article 12, which runs in this way (I think you read it): "This

Sir *Charles Cameron*—continued.

agreement has been made with the intention that telephone exchanges on the metallic-circuit principle shall be developed and extended; and, accordingly, if the transferees of the business shall at any time within 10 years from this date sell such Manchester business to, or amalgamate the same with any other company which shall at any time within such 10 years conduct any telephone exchange in Manchester or London on the earth-circuit or single-wire principle, or shall, without going into liquidation, discontinue the said Manchester business, they shall pay to the vendors the sum of 15,000*l.* as additional purchase money." That practically bears out, I think, what Mr. Provand said in his letter to the Chairman, from which I examined you?—Oh, I forgot that letter.

4768. What Mr. Provand says is: "For the net cost, with bare interest added and without profit of any kind, the Mutual Company's directors, in good faith and belief that they were doing the best they could in the interest of telephone users, sold their exchange and business in Manchester to the New Telephone Company, by an agreement by which the New Company bound itself under a penalty of 15,000*l.* to carry out the policy of the Mutual Company, and to erect double-wire exchanges in other towns." That is practically what is the effect of the agreement, is it not?—That agreement, you see, is not with the New Company.

4769. The agreement, you say, descended to the New Company?—Yes.

4770. The New Company was the company with whom this agreement was made, subject to the obligations, of course?—Yes. There was a "Pioneer Company" founded on that, and the New Company became seised of the Pioneer Company, with their obligations and business, and it remains the property of the New Company, who are in liquidation.

4771. It remains the property of a company which is in liquidation?—Yes.

4772. And of which the National Company possesses all the shares?—A considerable portion of them, yes.

4773. I thought you told us the other day it possessed all the shares?—Nearly the whole of them. Some of the gentlemen interested in that 15,000*l.* are holding out.

*Chairman.*

4774. It has a controlling influence over the shares of the New Company?—Yes; but the New Company itself is in process of liquidation.

Sir *Charles Cameron.*

4775. Mr. Provand's complaint is that "the re-establishment of the monopoly by the Post Office enabled the New Company to obtain an enormous profit by, in effect, selling itself to the National Company, then going into liquidation, and thereby evading the terms of the agreement." Of course I do not ask you to express any opinion upon that?—No, you must not.

4776. But I suppose that is the position taken up by the other gentlemen you speak of as interested in the 15,000*l.*, and holding out?—I do not know what they are proposing to do; they have made no advance, as I understand, at present.

4777. Is Mr. Provand one of these gentlemen, do you know?—I do not know that he is interested now.

4778. Mr. Provand informs me (it was in some Minutes of Evidence that he proposed to give) that he was offered a directorship of the National Telephone Company about that time, and so strongly did he feel upon that point that he refused it?—Mr. Provand?

4779. Is that so?—Not within my knowledge.

4780. Is it within your knowledge that he was offered a managing directorship of the New Telephone Company, and refused it?—It is not within my knowledge.

4781. We will come to another point. I gave you notice the other day that I should ask you some questions about the financial positions of the company; that is to say, the capitals of the different companies absorbed by the National, and you said you would be good enough to look into the matter?—I have looked into it; I am quite familiar with it.

4782. Did you prepare any statement?—I do not know what the feeling of the Committee is about that; whether that is within the reference. I am entirely in the hands of the Committee; if they think it desirable to go into a very long story I shall be happy to go into it.

4783. You have evidently prepared something, therefore I think it better to allow you to give it in your own way; I do not know which end you will commence with?—I will commence with the whole of the companies, showing what their capital was, what it is, and how it is merged into the entire capital of the United Company, as it is all one thing now they are all in:—The National Telephone Company, the United Telephone Company, the Lancashire and Cheshire Telephonic Exchange Company, the Northern District Telephone Company, the South of England Telephone Company, the Western Counties and South Wales Telephone Company, the Sheffield Telephone Exchange, the Caledonian Telephone Company (which was a private company), the Universal Telephone Company (that was private), the Isle of Man Telephone Company (that was a licence), the Telephone Company of Ireland, the Thanet Telephone Company, and a small concern called the Home Telephone Company, which was private wires. Now the National Telephone Company, "Expenditure," "Construction Outlay," 404,851*l.* (we will leave out the shillings and pence, I think); the United Telephone Company, 673,705*l.*; the Lancashire and Cheshire, 274,031*l.* Those are the three companies which, after working in their various areas for a certain number of years, were fused, and they were fused on the principle of market value. A great number of methods were suggested. We tried to find, through a great London accountant, a method of appreciating their values with reference to the capital that had been spent, the profits made, and so forth. After waiting for a year or more he gave up the task, and we cut the knot by looking at the market value. A negotiation ensued, and this was the market value calculation;

Sir *Charles Cameron*—continued.

tion: "Valued at amalgamation or purchased by National Telephone Company":—The National itself, 854,851*l.* 17*s.* 4*d.*; the United, 957,000*l.*; the Lancashire and Cheshire, 615,000*l.*

4784. What arrangements were there as to the division of the shares into preference and ordinary?—Perhaps I had better exhaust this, and then come to the whole capital account of the company.

4785. Take it in your own way?—That was the basis upon which they were brought together, amalgamated at the market value of the day. Of course, that is one method. There are other methods of assessing the value of a particular thing at a particular time as amongst partners. Northern District Telephone Company, 78,235*l.*, valued at amalgamation, 80,942*l.*; South of England, 84,916*l.*, valued at 150,000*l.*; Western Counties and South Wales, 185,366*l.*, valued at 277,607*l.*; Sheffield Telephonic Exchange, 38,696*l.*, that was taken at value.

*Chairman.*

4786. The par value?—Yes, at the value of the work; that is, what they had spent on the works, which we had acquired. The Caledonian (private wires), 4,235*l.* (the cost of that); Universal Telephone, 3,200*l.*; Isle of Man, 1,935*l.* 17*s.* 3*d.*

Sir *Charles Cameron.*

4787. You are only giving one of the figures?—There was no (what you call) "water" there. The Telephone Company of Ireland, 61,341*l.*, came in at 98,390*l.*; the Thanet Telephone Company came in at 20,100*l.* Beyond the promotion and the keeping it alive, they never spent a farthing; the Home Telephone Company, 2,648*l.* 19*s.* 9*d.* So that at that date, when these things were all absorbed, the total amount of money spent in the actual construction of the thing was 1,813,000*l.*; the amalgamation value and purchase value (those are the figures I read to you) was 3,105,000*l.* The difference (what some people are pleased to call the "water" value) was 1,292,000*l.*; I must take that over.

4788. Before you go further, will you explain to us the principle on which the amalgamation of the National, the United (I think), and the Lancashire and Cheshire was brought about. It was on the basis of the market value of the stocks, was it not?—Of that day?

4789. Yes, of that day; but as you went on you did not give us any information on that point. I was not able to follow your figures; I got one; for instance, the Irish Telephone Company, was that taken over on the same basis, the market value?—No, that was taken over on negotiation; all these were taken over on negotiation. The construction outlay was the amount actually raised in sovereigns, and in the shape of either debentures or preference stocks, by the people who conducted those enterprises; but when these companies were formed they received, or created, rather, a certain number of ordinary shares, which did not represent money raised in cash, but represented what the undertakers (the promoters) of these different companies had in reserve to turn into value out of the future profits

Sir *Charles Cameron*—continued.

of the undertaking. Of course, we intercepted the final issue of the thing by acquiring them in conformity with the desire that the whole thing should form one company, and that is what we had to deal with. The bare sovereigns spent was not the estimate of value. We had to compound with these companies for the value of their "open shares," as they called them, which represented the premiums paid, or rather, the discounts paid, to raise the capital; and that is the character of that "water," if it is called "water."

4790. You state, roughly, a million two hundred thousand?—£1,292,000. But now I must carry it on. Since these companies have been amalgamated under the National, beginning with the year ending 30th April 1890, up to the end of December, we have spent in sovereigns, 1,459,000*l.*; therefore, the "construction outlay" account (dealing with it from that point of view) was 3,272,000*l.*; the "book value," 4,565,000*l.*, which leaves what you call "water," if it be "water," 1,292,000*l.*, as against 4,565,000*l.*

4791. Have you done with that branch? You mentioned those various companies. The National at the time you spoke of, when it was of the construction value of 404,000*l.*, and the market value of 854,000*l.*, was not a simple company, was it; it had swallowed up some other companies, had not it?—The National? No. The National had a very large area, Scotland and some parts of the north of England, but they had been at work a long time.

4792. Exactly. I thought the Dundee Company had found its way in?—It found its way into the National; the National absorbed the Dundee.

4793. That is what I asked. Had the National previous to that time absorbed other companies?—Two or three small companies, the Dundee Company and others.

4794. And in connection with that there was a certain premium paid to the Dundee Company; would that figure be among the 404,000*l.*?—Yes.

4795. They absorbed the Glasgow Company, did not they, Graham's?—Graham's, they absorbed; yes. There there was a good deal of "loading."

4796. The "loading" there would appear amongst that 404,000*l.*?—Yes, but it is a very small sum in comparison with these large amounts.

4797. I merely wish to understand the principle; you have no note of the absorptions of each of those companies prior to their final absorption?—No.

4798. Then we will come to the other end of the matter?—It is a very simple principle. It suited the convenience of the National Company to buy somebody out to get rid of these enormous difficulties which it was in the power of a small competing company to impose upon the bigger company, and they bought them out. People do not generally accept that position without requiring some inducement, and they had to be bought out at a premium.

4799. Of course, I am not making the smallest adverse criticism upon your commercial policy,

Sir *Charles Cameron*—continued.

which I think was perfectly sound from your own point of view; but I wish to understand exactly what the amount represented by the 400,000*l.*, for instance, really was, what the material represented really was; and in every case, I understand, you take the purchase price of any company that was absorbed as the construction value?—Yes.

4800. Now, to go to the other end, about the New Telephone Company, of which you were also a director?—Yes.

4801. It bought up several companies, did not it?—Yes, it bought up the Mutual and the Stanhope, those were the other two outstanding companies.

4802. You have told us that in the transition from the Mutual to the New there was a good number of different other companies interposed?—There was the Pioneer Company.

4803. There was the Pioneer Company and some other company that that agreement was made with?—Yes. This was the General Electric Company, or some electric company. They were financial machines, invented by gentlemen in the city to raise the capital.

4804. Certainly; I suppose they were fairly successful. Who bought up the Pioneer Company?—The Pioneer Company, I think, was started by the New Company as a means of starting themselves, and the Mutual and the other obligations incurred between that agreement and the later one involved several other matters; for instance, city tubes was one of them. Five thousand five hundred sovereigns were paid by the company for the option of using the city tubes; a thousand pounds was deposited for the city tubes; they bought the Stanhope licence, and various other things.

4805. To come down to one particular point, they bought the Manchester Mutual Company?—Yes.

4806. I think it is stated at a profit of 10 per cent. above the cost price?—Yes.

4807. Well, that was not very much. The prospectus to which your name is attached was for a company which, I think, bought up the Pioneer Company?—Yes.

4808. At a profit of——?—Well, 90,000*l.*, less 3,000*l.*, I think; about 87,000*l.*; but that covered a great deal more than the purchase of the Mutual.

4809. But there was a considerable lot of "loading" in it, was not there?—There was some "loading," perhaps. I have got the particulars. For instance, the amount expended on construction to Manchester, Bolton, and Liverpool at the date of the purchase of the Mutual Company was 34,480*l.* That included the 10 per cent. paid the gentlemen who were good enough to get out of the way, and who will get their fingers (if they can get them) upon that 15,000*l.* I do not think they will get it. Since expended, 25,810*l.* That is between the date of that agreement and this transaction with the so-called "Pioneer." Now, here are some of the items which people who draw estimates and talk illusions do not understand. The original capital, including the acquisition of the licence (that is, of the Pioneer Company, whoever they were; the Duke of Marlborough's friends, that is who they were), 14,950*l.*; payment on account of options, City wayleaves, 5,500*l.*; deposit in connection therewith, 1,000*l.*; purchase of the Stanhope Company, including acquisition of licence, 3,375*l.* (it was made to sell); Stephens' claim on patents, 316*l.* 17*s.* 8*d.*; payment in connection with the issue of 732,000*l.* additional capital, 10,597*l.* (that was the commission paid to the eminent firm who issued the capital; very moderate); legal expenses and cost of the Act of Parliament, 2,497*l.* 3*s.* 7*d.*; bonus to shareholders of the Pioneer Company and expenses of liquidation of that company, 15,104*l.* 12*s.* 9*d.*; capital expenditure in London office, management, rent, canvassing, office furniture, and other charges in connection with the development of the company, 8,129*l.* 15*s.* 3*d.*; purchase of premises on Strand site, 26,357*l.* 2*s.* 5*d.*; preliminary expenses, 2,109*l.* 9*s.* 3*d.*; Notting-hill Electric Light Company, 250*l.*; Kensington and Knightsbridge Electric Light Company, 256*l.* Those are the details of the expenditure of the New Company, including the Pioneer, and all the money that they had (I was going to say "wasted") disbursed up to that date.

*Chairman.*

4810. What is the total amount?—£150,727.

Mr. *Tully.*

4811. How much did your company pay for that?—We subscribed 250,000*l.*

4812. For that 150,000*l.*?—Oh, we had nothing to do with this; this was part of the expenditure of the gentlemen we associated ourselves with.

4813. You bought them up?—That company?

4814. Yes?—We bought their shares, as opportunity offered.

4815. How much did they cost?—Some we bought at par value, some at a pound premium.

Sir *Charles Cameron.*

4816. At all events, the company was started, and you appear in this prospectus as nominated by the National Telephone Company?—Yes.

4817. You are on the board, not provisionally, but as nominated by the National Telephone Company, Limited?—Yes.

4818. Then at once I understand it was arranged to drop competition; in fact, I suppose that was the basis on which you joined?—I am very anxious that these things should be thoroughly understood, so perhaps you will allow me to read the agreement under which this thing was brought about.

4819. Certainly?—We had, of course, the prospect of fighting his Grace and his friends, and of upsetting the business in London by processes which we had had some experience of, and by wasting a great deal of money in order that at some future date we might combine. Well, I had had rather more experience of this sort of business than his Grace, and I talked to him very seriously, and I made him see what a reckless course he was entering upon, so we came to an agreement, and this is it: "Memorandum of agreement made this 14th day of July 1892, between his Grace, George Charles, Duke of

Sir *Charles Cameron*—continued.

of Marlborough (on behalf of the New Telephone Company, Limited), of the one part, and James Staats Forbes, Esquire (on behalf of the National Telephone Company, Limited) of the other part. Whereas the New Telephone Company has been registered under the Companies Acts, 1862 to 1880, with a nominal capital of 750,000*l.*, divided into 75,000 ordinary shares of 10*l.* each, of which 1,500 shares only have to the present time been issued, and 3,000 founders' shares of 1*l.* each fully paid up, all of which have been issued, and is possessed in addition to its own licence of two several All-England licences for telephonic purposes, viz.: The Mutual licence and the Stanhope licence being the only licences now current except those possessed by the National Company. And whereas it is believed that if an arrangement can be come to whereby the two companies can work their respective systems without rivalry, greater efficiency and convenience will be secured to the public, and beneficial results will accrue to both companies. And whereas as a basis by which to effect this object, it has been agreed that these presents shall be entered into." Then it goes on: No. 1, "The New Telephone Company and the National Company shall, so soon as definite arrangements with Her Majesty's Government have been made, surrender to Her Majesty's Postmaster General the licences held by them respectively, and in lieu thereof they shall respectively accept fresh licences from the Postmaster General in a form to be agreed upon between each company respectively and the Postmaster General." That was in anticipation, of course, of what we knew then to be the policy of the Government about taking over the companies on the theory of the purchase of the trunk wires and a revised licence.

*Chairman.*

4820. What date was that?—That was in July 1892.

Mr. *Benn.*

4821. That was prior to the signing of the agreement by the Postmaster General?—Yes.

4822. Then amalgamation had been decided upon prior to the agreement with the two companies?—This agreement for mutual working had been agreed to, not amalgamation.

4823. Mutual working?—Yes, mutual working. This is the agreement under which we became subscribers to the "New" capital: "The New Telephone Company will, through the medium of Messrs. N. M. Rothschild and Sons, or them failing, through some other channel to be agreed upon, issue to the public the whole of its unissued ordinary share capital, viz." (the New Company; they had only issued a very small proportion), "735,000*l.* nominal, and the National Company shall subscribe for at par, and duly pay for 250,000*l.* of such capital which the New Company shall allot to them accordingly. In consideration whereof the New Telephone Company will cause to be transferred to the National Company or its nominees on payment of 1*l.* per share, 1,500*l.* of the said founders' shares in respect of which the holders shall be under no further liability whatsoever. The board of the

Mr. *Benn*—continued.

New Telephone Company shall consist of not less than eight members, and one half of the board shall always be nominated by the National Company. His Grace the Duke of Marlborough shall be chairmain of the New Telephone Company, and shall have a casting vote on all ordinary matters of business. On all other matters (including the fixing of rates, making contracts, appointment of higher officials, and voting expenditure) the chairman shall have no casting vote. The Duke shall also be offered a seat on the board of the National Company. Both companies shall adopt the same scale of charge, and such scale shall not be varied except by a resolution passed by a majority in number of the boards of each of the respective companies, subject to arbitration in case of difference as hereinafter provided." *This* was one of the great benefits to them: "There shall be mutual intercommunication upon terms to be agreed between the subscribers and the exchanges of both companies and also over their respective trunk lines, and so far as practicable all matters in regard to such intercommunication and the working by the New Company of their business, shall be the subject of arrangement between the companies." Then in the case of difference a committee of the boards were to intervene, and if the boards could not settle it, then it was to be referred to Lord Balfour of Burleigh as sole arbitrator. Then: "In case Her Majesty's Postmaster General shall exercise the option which he may have of purchasing the business of both or either of the said companies, the companies agree that they will use their best endeavours to secure that the net earnings of the companies or company in respect of which the option shall be exercised, shall be the basis on which the sale shall proceed." Then "A more formal agreement" and so on.

Sir *Charles Cameron.*

4824. You went in and subscribed the 250,000*l.*, and a public prospectus was issued at the end of July 1892?—Yes.

4825. Was the capital fully subscribed?—Yes.

4826. That is to say, the 750,000*l.*, including your own?—Yes.

4827. You mentioned something about "founders' shares"?—Yes.

4828. I did not exactly catch what you said in that agreement?—There were 3,000 founders' shares, and those founders' shares carried a right to the contingent profits of the undertaking after, I think it was, six or seven per cent. had been paid.

4829. Seven per cent.?—Yes; and we thought, as we were going in for a considerable portion of the capital, we had better have some of the founders' shares.

4830. And you took them over at par?—We took them over at a pound a share, which we paid in cash.

Mr. *Benn.*

4831. Might I ask upon that, did not you, as a matter of fact, pay 40*l.* for each 30*l.* founder's share?—Yes, we did for the others; for the balance.

Sir *Charles Cameron.*

4832. That would bring up the capital of the company, I suppose, the money paid into the company, to about 800,000*l.*, or close on it; at all events, over 750,000*l.*?—Yes.

4833. Nothing was ever done, was it, in the way of operations of the company?—First of all, we had to get the money; then, having got the money, we had to consider what was the best way of applying it; and we found the best way of applying it was to do what we did; agree that the objects which mainly influenced the Duke of Marlborough would be the better carried out, more economically and more promptly, by the National Company doing them than by his company doing them; and in the midst of that he died, poor man.

4334. Then the progress of the company was such that this company, in fact, has never done anything?—Yes, they did something; they committed themselves to a good many items of waste, such as the tubes and the Strand site, and so forth; but they did no telephoning.

4835. But they did commit themselves previous to that, and previous to your joining, to the Telephone Users Association?—Yes, and to that large Bill which I have just put in.

*Chairman.*

4836. They did some telephoning in Manchester, did not they?—In Manchester; yes.

4837. You mean not in London?—Not in London; the Manchester operations are going on now, of course, to-day.

Sir *Charles Cameron.*

4838. When were they put into liquidation?—Quite recently.

4839. You say your company has acquired practically the balance of the 500,000*l.*?—Nearly the whole of the shares we have acquired, yes.

4840. Of course you do not get any interest on them?—Well, it is a part of our general capital.

4841. How does it stand in your capital; how do you take it in your capital?—That comes into our capital account.

4842. In what way; to what extent. You have told us you took the market value of certain shares, and that you took the agreed price of other shares?—This, of course, comes into our account at what we paid. Some of the shares were exchanged. A great many of the people who subscribed the money have exchanged their shares in the new company for shares in our company. There was a mere wiping out of one security and the creation of another; but those who preferred to take cash got cash; and we found sovereigns with which to pay them.

4843. How does it stand on your accounts now?—As part of our general expenditure.

4844. At what figure?—The money we have paid, or the shares we have paid for.

4845. That is 750,000*l.*?—It is as much as we paid.

4846. Then it is not in your published accounts, I presume, since you are not telling me exactly what it is. I do not ask you to answer the question unless you like, but what I thought I had clearly indicated that I wanted

Sir *Charles Cameron*—continued.

was the amount; the figure, the sum at which the thing stands in your company's books. Of course the balance-sheet is a different matter, but I asked whether it was on your published account, and if so, on what account?—The shares were 4*l.* paid up, not 5*l.* Part of those shares was converted into our shares at par; (National shares, 5*l.* shares); part was paid off in cash. That money we have paid off; we raised the money on our own credit, and it is in our capital account.

4847. But then it is an asset. The shares of the new Telephone Company, the 750,000*l.* which you hold, is an asset of your company?—Oh, yes.

4848. And I ask you what does it figure at?—Well, what we paid for it.

4849. Well, I know you have repeated that two or three times; but you have told us that you bought certain shares at certain prices; founders' shares at one price; some at 40*l.*?—I have not got it worked out.

4850. And it does not stand in your balance-sheet?—It is not in *this* balance-sheet. I will find it directly. You shall have the fullest information. There is nothing to conceal. If we had, in meal or in malt, to pay the 750,000*l.*, or rather, the difference between one's own subscription of 250,000*l.* and the balance, I thought that would have been a sufficient answer.

4851. My point is this. We will assume it stands (*seq.*) at 750,000*l.* in your books as an asset. That is unproductive capital, is not it?—Oh, no; we have got the valuable Manchester business.

4852. The Manchester business of the New Telephone Company was that of the Mutual Telephone Company?—Yes.

4853. And I thought that you did not consider that it had made a very valuable business?—I do not think it has; on the contrary. Still, for what it is worth, there it is.

4854. I think the expression you used was, that it was a business "made to sell"?—Yes, I think it was.

4855. And that the purchaser got a very rubbishy plant, at all events, for his money?—I do not think I said that of the Manchester, did I? I said that at Dundee it was a very rubbishy plant, so much so that within a year of our taking it over we had to reconstruct it entirely. Manchester was very well laid out, but rather temporary too; it was a poor business as long as it lasted, and is now.

4856. Your chief business in Manchester is your own business you have told us, I think?—Yes.

4857. At all events, there were between 500 and 600 subscribers on your entire system, 10*l.* subscribers?—On theirs.

4858. No, on yours?—We have 3,000.

4859. Five or six hundred of theirs; you are right?—Yes.

4860. But their Manchester business cannot bear interest on any material part of the 750,000*l.*, so that a large portion of the 750,000*l.* must be unproductive capital?—Yes, it is; 60,000*l.* is the Manchester bill.

4861. Then you may say practically there is 700,000*l.*

Sir *Charles Cameron*—continued.

700,000*l.* unproductive capital?—Yes, more or less unproductive.

4862. That is another burden which it has to bear in addition?—Yes.

4863. I see the Manchester business represents 60,000*l.* That would leave about 700,000*l.* which is unproductive, and has been unproductive since 1892?—Yes, if you put it in that way. But then you lose sight of the fact that we have gone on spending the money for those improvements in London, which if we had not done, they would.

4864. That is quite true?—It is a mere transition; it is going out of one pocket into the other.

4865. I have never criticised your financing; it is from another point of view I ask these questions. You are perfectly right in that. I am not at all insinuating that you are wrong in a commercial point of view?—I think I know what your point of view is; at least I think I can induct it, and if you will allow me I will come to close quarters with that at once. It is cheaper for us to have done this thing, and therefore better for the telephone subscribers than it would have been if the Duke of Marlborough and his friends had run "amuck" in London with us, to end in combination late instead of early. That is how I should defend this transaction.

4866. Then how would you defend this transaction; the issuing of this company with your name on the prospectuses, knowing that this company had been in the first instance floated practically, or the company on which this was based, on the terms of 1,700 subscriptions in consideration of reduced rates?—We knew that quite well; but, of course, we had to consider what probability there was of getting money if we had not been subscribers.

4867. My point in connection with that was simply this: It may be fairly argued (and I do not ask you to admit more than that) that what is called "watered" capital is capital which requires a heavier charge for telephones to enable you to pay interest upon it; and this is another piece of unproductive capital in addition to the other?—Obviously if we had had what we have got for a million less we should have been all that better off; but then, you see, the second man got it.

4868. That is true. You told us a minute ago that you were acquainted, when you were making this agreement with the New Company, with the policy of the Post Office as to the arrangement. Had the Bill come before the House at that time?—No, I do not think the Bill had come before the House as early as that, but of couse we had been in negotiation with the Post Office. We were in negotiation for some time.

Mr. *Tully.*

4869. Was the General Election over at that time?—Oh, no, it was before the Dissolution.

4870. It was over the 17th July, was it not?—Oh, no. The 11th August the agreement was signed. Sir James Fergusson was then Postmaster General.

Sir *Charles Cameron.*

4871. The Bill was passed in June, therefore you must have been acquainted with it?—Yes.

4872. There is another very important point, and that is this: What is the precise nature of your licence with the Post Office; it comes to an end in 16 years, does it not?—Yes, a little over 16.

4873. And then the Post Office is not compelled to buy you up?—No.

4874. There is no obligation there at all?—None at all.

4875. So that if there were two or three systems in one town, the Post Office would take whatever suited its purposes and leave the rest alone?—Yes.

4876. If it avails itself of any break before then it is bound to buy you?—Yes.

4877. To buy all your concern; is it on arbitration?—On arbitration.

4878. Was there any understanding that there should be a purchase at the next break?—None whatever. The licence speaks for itself. There it is. We go on; we have spent our money; we have got a tenure, and of course it wants a good deal of prevision and a good deal of courage to face that question. That is one of our difficulties that will find itself out by-and-bye.

4879. We understand there is not even an obligation on the Post Office to pay the old iron value of the system at the end of 16 years?—As far as I remember the licence, there is no obligation whatever; the licence expires by effluxion of time.

4880. I think, in mercy to you and the Committee, I shall not keep you any longer, except just to correct one or two points?—If you please.

4881. First about your foreign evidence. You mentioned the case of Amsterdam as a case that was on the same footing as London?—I thought it was a good parallel.

4882. You found fault with Mr. Dickson for saying there were 2*l.* telephones in Holland?—Yes, I did.

4883. You are not aware that there are some 15 or 16 towns in which they are worked by the Amsterdam company?—You mean Zutphen and those places, two or three outlying places, where amateurs have banded themselves together as shareholders, and provided a sort of amateur telephone.

4884. In a number of towns they have given the "amateur" telephone, which works satisfactorily, and gives a service to the town for 2*l.* a year?—I know, but if you go to a village and find one gentleman who is willing to take the risk of capital, another gentleman who is willing to act as secretary, somebody else who will act as something else, for nothing, I do not call that a commercial undertaking.

4885. I do not wish to raise a controversy about it. I wish rather to allow myself not to trouble other witnesses about it?—There are several other places where there are very large subscriptions.

4886. Of course one does not expect absolute accuracy in giving evidence like Mr. Dickinson, but I was a little struck by what he said about Holland, that there the subscription was 2*l.*, or something of that sort, and upwards?—Yes.

Sir *Charles Cameron*—continued.

4887. You said, I think, that there was no such subscription in Holland as 2*l.*?—Now would you allow me to suggest this: Was it a frank or fair way of suggesting to the Committee what the charges for the general conduct of the business was in Amsterdam, to come and say it was from 2*l.* upwards? Why did not he say it was from 9*l.* (or 20*l.*) at Amsterdam downwards to 2*l.* in some remote village?

4888. There is another point in connection with Amsterdam; you said the charge at Amsterdam was 9*l.* 14*s.* 2½*d.*; in which you are right; but are you aware that upwards of 2*l.* of that is royalty paid to the town of Amsterdam?—"Wayleave" I should have called it, not "royalty" certainly.

4889. It is licence duty; the municipal authorities, as you told us, have absolute power over the telephones, and they charge 2*l.* an instrument?—Yes, and then they provide wayleaves, or give the facilities of the Corporation for that purpose.

4890. They must give something for the 2*l.*?—Yes, but we pay royalties and wayleaves, too. But that, I think, is the only case in Holland.

4891. No?—I think so.

4892. I have here a list of 10 or 11 of such places: Breda, Deventer, Enschede, Leyden, Tilburg, and some others?—It may be so in some of the small Zuyder Zee towns or villages.

4893. As to what has been produced by other people in the United Kingdom; Graham's, whom you bought up in Glasgow, had a lower tariff than you, had not they?—I believe they had; but really I am not very familiar with that, it is so long ago.

4894. Messrs. D. and G. Graham, in Glasgow, charged 12*l.*; Charles Moseley, in Manchester, 8*l.*; Tasker and Company, in Sheffield, 7*l.*; the Globe Telephone Company, in London, 10*l.*; and Mr. Sharples, in Preston, 6*l.*; and these were bought up, as you have told us, at very considerable premiums?—Yes.

Mr. *Tully*.

4895. Can you tell me what is the total number of your subscribers?—Seventy-five thousand.

Sir *Charles Cameron*.

4896. About municipalities; you are aware that in Norway there is at least one instance of a municipality running its own telephones?—I do not know that.

4897. That is at Trondhjem?—I should like to satisfy the mind of the honourable Member by saying this: We have dealt with the average subscription, 9*l.* 2*s.* 2*d.* This is how the thing works out: Metropolitan area, 14*l.* 14*s.* 5*d.*—not 20*l.* as people are incited to believe; Manchester, Liverpool, Blackburn, Leeds, Bradford, Dundee, Glasgow, Edinburgh, Dublin, Belfast (that is a very good type of what we call cities and big places), 8*l.* 15*s.* 8*d.*; Norwich, Exeter, Chester, Bath, Ipswich, Worcester, Lincoln, and towns of that class, 6*l.* 13*s.* 8*d.*; Oban, 4*l.* 3*s.* 5*d.* Oban would appear to be the paradise of telephones—4*l.* 3*s.* 5*d.*; therefore, when people talk about extortionate charges of 20*l.*, &c., these facts will dispel and correct some of those illusions. The Manchester, Liverpool, and Blackburn charge of 8*l.* 15*s.* 8*d.*, at all events, does not seem to be a charge of such an extravagant character as to be quite worthy of all the condemnation one hears fired at us.

Sir *Charles Cameron*—continued.

Mr. *Benn*.

4898. It is rather cold comfort, is it not, to the London subscriber, who, on your showing, is paying 14*l.* 14*s.*, to know that the rest of the country works out at 9*l.* 2*s.* 2*d.*?—Yes; "cold comfort" or no, rents are much higher in London than in the country, and you have to submit to it, if you are in London; and all labour is so much dearer there. There are reasons for it. You cannot have the same things at the same price if the circumstances and the constituents which make them are different.

4899. Is it not a fact that where competition has reached a successful point, in every such town your rates have been reduced?—Competition! Well, there has been scarce any competition.

4900. I refer to Dundee and Manchester, and places like that?—Yes.

4901. The rates have been reduced in those cases?—Yes, for the time being.

4902. Of course; for the happy "time being"?—If I may venture to suggest this, as a very old hand, you must not lose sight of the fact that no doubt competition (cutting of rates) always ends in one way, that is, in putting them up again; and the waste of competition has got to be covered; so that the probability is that in the end they are put up to a much higher rate than the initial figure.

4903. I want to ask you a few questions on that prospectus again, which you repudiated, but which, so far as I can discover, other gentlemen whose names appear here have not repudiated; the prospectus of the New Telephone Company, dated July 1892; according to that prospectus, I think it shows that for 20,000 subscribers 750,000*l.* was enough to provide for that business?—Will you kindly just draw my attention to the paragraph? It is a long time since I saw it.

4904. This is the paragraph which sets out the amount of money required, beginning with "The capital outlay"?—"It is intended, therefore, to supply plant on the double wire (metallic circuit) system."

4905. "It is estimated that 750,000*l.* should suffice"?—Yes.

4906. That would be, roughly, for 20,000 subscribers?—It says here, "10,000 metropolitan subscribers, with Central Exchange switch-boards and other apparatus, capable of working 25,000 London connections."

4907. "And upwards of the same number in the provinces," you see?—"The system to be adopted by the company will comprise all substantial improvements in telephony." Yes, "25,000 London connections." Central Exchange switch-boards and connections to 25,000 subscribers.

4908. Let me take you to the commencement of the sentence: "The capital outlay for supplying the first 10,000 subscribers in London, and upwards of the same number in the provinces";

Mr. *Benn*—continued.

vinces"; that may be taken to mean something like 20,000?—Yes. What does it say? It says: "and upwards of the same number in the provinces, including 1,400 private lines and about 400 call-offices for public use."

4909. I quite understand. Now, on that basis, 750,000*l.* for 20,000 subscribers, the country over, may I assume that 50,000 could be provided for on the same basis for 1,875,000*l.*, that is doubling the 75,000*l.* and adding the proportion for the 10,000?—Yes; but what proportion?

4910. Well, it is doubling exchanges, doubling everything?—You see there is only here provision for a portion of the necessary outlay for the 10,000 subscribers.

4911. But there is a full complement of apparatus here for your 20,000 subscribers. This estimate is to cover the whole of the expense to provide for 20,000 subscribers?—Yes.

4912. Very well; then I ask you, if that be true with regard to 20,000 subscribers, whether it is not fair to estimate that 50,000 subscribers (about the number at present subscribing in Great Britain) could not be provided for on this basis for under two millions of money?—No; it is ridiculous.

4913. Taking this as a basis?—You lose sight of the fact, that if there were 50,000 subscribers in one place, or in one limited area, the relative cost would greatly exceed that figure.

4914. It is not "one limited area," I am asking you to take the whole of the kingdom, as set out in this prospectus. Imagine that, instead of the number being 20,000, it is 50,000, distributed over the whole of the area; I ask you, with double the figures in proportion to what it is on this basis, is it not fair to assume that Great Britain could be telephoned for under 2,000,000*l.*?—It is absurd.

4915. This may be absurd; but on this basis, is it not so?—It is quite absurd; we cannot ignore facts.

4916. I want to ask you to look at some other figures as affording, I think, a remarkable corroboration of the truth of that estimate. With regard to the National Telephone Company, I think your expenditure up to December 1894, roughly speaking, is something like 4,400,000*l.*?—Yes, about.

4917. About that?—Yes.

4918. Now, if we deduct from that 4,400,000*l.* what you have spent to purchase competitive undertakings, can you tell the Committee what it would leave?—What do you mean by what we have spent "to purchase competitive undertakings"?

4919. To purchase new undertakings, buying up the various companies you have described to us?—I have already told you what it has cost. Up to the final issue of that table that I read, it has cost 3,272,000 sovereigns.

4920. I have it separated in this way: I have your total expenditure; I have your purchases from the year 1890 on to 1894, and I make it (I may be wrong): Purchase of new undertakings, 2,250,000*l.* odd; I deduct the 2,250,000*l.* odd from your 4,430,000*l.*, and that leaves a balance presumably for actual cost of efficient works of 2,179,000*l.*?—Yes.

Mr. *Benn*—continued.

4921. Is not that rather a remarkable confirmation of the estimate of the new Telephone Company?—Now, let us get back to your proposition and our experience. You suggest that 50,000 subscribers could be started for double 750,000*l.*, do not you?

4922. Well for double, plus the 10,000*l.*, for under 2,000,000*l.*?—Yes. Very well. Now, we have spent since the amalgamation in the years 1891, 1892, 1893, 1894, in hard cash, 1,459,000*l.* over and above all expenditure up to that date.

4923. You have not repudiated my figures?—You can easily get out the mean. How many people do you want to accommodate; 50,000?

4924. I take your figures in this prospectus, which you have repudiated, but which three eminent engineers still say is a valid estimate?—I have not repudiated it.

4925. I take the actual expenditure here of your company on works, separating the purchase of these competitive companies. I find that the figures almost tally, and I ask you: Is not it a fair assumption that the figures put forth under your own name in 1892 are after all correct?—Well, no; I do not think they are correct. I think it was an estimate which we only hoped might be realised. As I said the other day, we were most anxious that it should be so, but it was because we found upon examination that it was not likely to be so that we resorted to another plan.

4926. Is it not rather interesting to find that the figures of your own National Telephone Company come out almost identical?—Where do you get those figures from?

4927. Burdett?—Well, what does he make them; I have not seen the figures.

4928. I do not think you will have any difficulty in checking them (*handing a document to the Witness*)?—The 4,463,000*l.*, do you mean?

4929. Yes?—And that now corresponds to 75,000 subscribers.

4930. 75,000, is it? No, not so many; about 50,000 now, is it not?—Oh, no, 75,000. Then if 75,000 cost 4,463,000*l.*, what will 50,000 cost? Is not that the answer to your question?

4931. Yes, after deducting this "watered" capital, about which we have been talking?—If you like to call it "watered," yes.

4932. It is in a separate column; but you have told us the assets in that column are very unsatisfactory?—Which column?

4933. The assets of the purchased undertakings?—As regards the bulk of them they are of a satisfactory kind, because they are what represented the market value at the moment.

4934. The market value of the shares?—The market value of everything.

Sir *James Fergusson.*

4935. I do not think you have yet been asked to what extent you have carried out your undertaking to the New Company, and through the New to the Mutual Company, in the way of improvements?—We have spent a very large sum of money upon the improvements. As I stated to the Committee, the metallic circuiting of London is nearly complete, it will be complete by the end of the year; Manchester is under-

Sir *James Fergusson*—continued.

going a transformation; Glasgow has had the appurtenances of a metallic circuit provided, that is to say, the switchboards; we have spent a great deal of money upon the switchboards.

4936. Without going into too precise detail, might I ask you, could you say anything like the percentage of your lines which you have converted?—We have converted 117 exchanges, fitted, or in process of fitting, with complete metallic circuit wires and switchboards. London is included in those. That represents 18,978 subscribers' lines. Nearly the whole of that work is done. All the boards are in, and it is a question now of completing one station in London (the Pelican station), and at the end of the year we shall have that complete.

4937. What will that leave uncompleted?—That will leave the number of exchanges for the metallic circuit switchboards 78, representing a total of 20,995 earth-circuit lines.

4938. Then you will have nearly completed one-half?—Yes, the important outlay there is on the switchboards, and they are in, and new wiring has to be done to transform that into a metallic circuit system. That will bring on 20,900 more circuit lines. That is 38,000, or in round numbers 40,000. That is very easy and very equal, and that would include Glasgow.

4939. Am I correct in saying that your statement means that you have nearly completed one-half of your lines on the improved system?—Two-thirds.

4940. Could you say within what time you expect to complete all that you have thus undertaken to convert?—As regards London we see our way, because we are up above the ground. As regards Manchester we see our way; but with respect to Glasgow and some of the other important places, they must depend entirely upon the facilities given to us for wayleaves.

4941. Presuming that you had the assistance of the local authorities, within what probable time could you complete it?—In the case of Glasgow I should think a year.

4942. Do you think that within a year, receiving the necessary facilities, you would have converted the line so as to fulfil the engagement which has been referred to?—Yes, I think so.

4943. Now you, of course, desire to attract all the business possible. Your object, I have no doubt, is to attract subscribers, and develop your business as largely as possible?—Of course we have the strongest inducement to do that, because our short tenure involves this, that unless our business largely increases there will be no possibility of redeeming beyond a very small percentage of our nominal capital. Of course that is one of our difficulties. I do not know what is going to arise, as I have said, or what value to put upon our machine as we leave it. It will have some value, but nobody can tell what. It would not be all loss, because private wires are becoming an important element in this question, and on the effluxion of time as regards exchanges, we shall still be in the possession of the private wires; and I daresay the interest of our company (and I feel pretty sure the convenience of individuals) will very largely increase the business of private wires.

4944. If you will excuse my interrupting you for a moment, I was leading up to another point. You say (and it is natural to suppose) that as a commercial business you desire to develop it as much as possible, and so to meet the wants of the public?—Of course. I am afraid even "the wants of the public" is only second to our own sense of salvation; we have got to save ourselves.

4945. I mean that would be the necessary effect of your profitably developing your business?—Nobody can be placed in such a position as we are, no new company, not the Post Office themselves, can be placed in such a position as we are in, to so improve the business as to attract customers and make profit.

4946. Now I wish to ask you this: How long would that be your interest. Your existence, humanly speaking, will cease in 1911. How long would it pay you to go on developing your business and meeting the requirements of the public?—Well, as long as any man of a tolerably sound actuarial mind could make up his mind to spend money on a continually decreasing tenure; and it will not be long before we have to face that; between now and nine years hence that will arise, and how long we go on spending money can only be determined by the increase of our business from year to year, and the amounts we are able to set aside for redemption.

4947. Then a day will come, and possibly in nine years, when it would not be remunerative to you to extend your capital expenditure?—Not remunerative to anybody on the tenure on which we hold.

4948. Then by that time the Government would have to make up its mind how the wants of the public were to be met. They would not after that be met by the ordinary operation of your company?—Of course, they would have to meet that. We should possibly be driven by the force of circumstances to say: No; now we cannot afford to spend any more money; what is to be done? You must do it, we cannot; no new company can. Nobody could raise a shilling upon the present tenure to start a new concern.

4949. In fact, after that time, either the need of telephones must be supplied by another agency or you would have to work on separate conditions, on account of the Government or otherwise?—I think so; I think that is inevitable. Anybody who considers the position for a moment must see that, and that is rather intimately (I may just incidentally remark) mixed up with the question of prices. Of course, if we had 25 years to run instead of 16, or 42 years instead of 25, the question of price would at once assume a totally different position.

4950. You told the Committee that hitherto (meaning before the agreement) your development had been extremely hindered?—Yes, under the first licence, extremely so; under the second licence less so; because there we were enabled to get our exchanges on the trunk wires; and that was immediately a large additional inducement to the public to join us.

4951. But now there is no hindrance other than the want of facilities?—The want of facilities, yes.

4952. Given proper facilities, there is no hindrance to your developing your system as much as

Sir *James Fergusson*—continued.

as possible, and it is your interest to do so?—If we had had even as much facility as they have in Liverpool under the law here in London and the great cities we could have developed telephoning much more economically, much more rapidly, and at a price which would have enabled us to supply our customers at a less annual charge.

4953. Would your expenses decrease with increased subscriptions?—In some respects they would; in others they would not. When you reach a particular level of subscribers in an area, up to a particular point, the more subscribers the better, because they dilute your biggest charges, but when you get beyond a certain number complications are so increased that the cost per subscriber becomes larger.

4954. Then you have to sub-divide your area, and then with a moderate number on each switchboard it becomes again economical, does it not?—Yes, but there comes a question of the choice of evils. You must elect one of two things.

4955. I want to get at this, whether it is quite clear that it is your interest to develop the business, because it would appear that after a certain time it would be rather your interest to discourage subscriptions, and if that were so that would tell the other way?—That would tell the other way. Happily that position has not yet arisen. Our interest now and for some years to come will be to develop the business as rapidly as possible.

4956. A contrast was drawn between the use of the telegraph and the telephone; you were asked about it, and I am not sure that you did not say that the use of the telegraph was relatively much greater in this country than that of the telephone, consequently that the telephone was not so much taken advantage of. I think you said that?—I produced the figures of the great postmaster, Von Stephean, who gives it. He says that in Great Britain there are 177 telegraphs to every hundred of the population, whereas, in Germany it is only 55, and in Sweden and the model places it is only 30.

4957. But the telegraph lends itself more to some business transactions than the telephone; where, for instance, a man has to dispatch a great number of messages he cannot wait to dispatch them by word of mouth; is not that so?—Yes; I have no doubt the telegraph will have its uses; but where the telegraph service is cheap and prompt (as it is in this country to a degree which no other country enjoys, according to Mr. Stephean's tables) it is a very severe competitor with the telephone. I think the condition will be somewhat altered on the completion of your great trunk system. I look forward to the possibility of the competition by telephone being much more severe in its influence on the telegraph revenue in respect to long distances than in and about London. For instance, I see that in London (the metropolis alone) you have pretty nearly half your entire number of telephones, according to the Post Office returns. Well, I do not look for any very great impression on the telegraph revenue in London, within a mile or a half-mile or two miles, but when you get out of London, when you get long distances, the telephone is so much superior as an implement and the price is so encouraging that I think your telegraph revenue will be seriously affected.

Sir *James Fergusson*—continued.

Mr. *Tully*.

4958. I think in the last answer you gave you stated that the telephone was a much superior instrument to the telegraph, and that it would compete with ruinous effects against the telegraph?—I think with serious effect.

4959. I see that on your examination in 1892, when you were a witness here, you lamented that the telephone system had been the means of reducing the revenue of the Telegraph Department from 80,000*l.* or 90,000*l.* a year to 68,000*l.*?—It has had the effect of reducing the telegraph revenue; in fact, the whole of this modern development, the separation of the trunk lines from the local services, is based on the necessity of protecting the public revenue. As in other Acts of Parliament, the *raison d'être* of the new measure is to protect the public revenue.

4960. The public revenue has been protected very largely during the present year to the extent, according to the Post Office, of 300,000*l.*?—I think, according to the last report, it showed a somewhat considerable reduction.

4961. If the rerson of that instrument was to protect the public revenue, it has failed in that respect, because the public revenue has been seriously affected since?—This has not yet come into force.

4962. I believe your company commenced its operations by getting hold of all the telephone patents?—Yes.

4963. You could not tell us how much it cost your company to capture all the telephone patents, could you?—Yes; about 300,000*l.*

4964. And as the result of your having all the patents in your possession, the Post Office was unable to compete successfully with your company in the telephone?—The user by th Post Office, or anybody else, was somewhat restricted, but they had, under arrangements, a considerable number of telephones, and did, in fact, use telephones independently of the company. No doubt, during the term of the patent, or rather, for 11 years out of the 14, the possession of the patent gave our company an advantageous position, as compared with competitors.

4965. I think, with regard to Plymouth, you said (that was a very small matter) that what happened in Plymouth was that the company gave subscribers of the Post Office telephones for nothing?—Yes; that is one of the usual efforts of competitors. It was done on a much larger scale in London by the new Telephone Company. Those subscribers which you heard of were tempted in that way.

Sir *Charles Cameron*.

4966. They were done; "it" was not done?—Well, the doer was "done," perhaps; they were to have the telephones put into their houses and free use up to the time when the subscription of the National ended.

Mr. *Tully*.

4967. Then you do not agree with the opinion of the Post Office expert who gave the Plymouth case (this very small one) as a reason why the use of the Post Office telephones was a failure all over the country?—That particular case I do not remember; of course I was not mixed up with the Plymouth case, but I do not remember any other case of the kind as having been alleged against our company by the Post Office or anybody else.

4968. When I asked why the Post Office was unable to compete with the company, and he gave the Plymouth case as the reason, would you say the Plymouth case was a very small one?—That was a very small case.

4969. That showed he was arguing from a very small fact to a very general conclusion?—I know of no other case where that particular class of tactics has been resorted to except in the case of the New Telephone Company in London, who seduced, I will not say "seduced," but induced, those thousand or more people who signed the document which has become historical to compete. Some people do compete in that form; we do not.

4970. I was reading this very interesting evidence you gave in 1892. I think you said that you were connected with the old telegraph companies; it was you who carried out the bargain or agreement between the old telegraph companies, was it not?—No.

4971. This is not the telephone, but the telegraph?—Well, I had a good deal to do with the telegraph business.

4972. You negotiated that bargain?—Well, I negotiated for myself; one of the first telegraph bargains was made by me for the Chatham and Dover Railway a long time ago.

4973. That paper you produced showing the actual cost of construction of each of these companies, and the amount of their share capital; the companies which you swallowed up; you have no objection, have you, to hand that paper round?—Not the least.

4974. You stated to us that 1,292,000*l.* of your capital is "watered" capital?—No, I did not state that; some honourable Members have suggested it.

4975. You say, "what some people call 'watered' value, 1,292,000*l.*"?—Yes, what is described as "water;" but there is a good deal of spirit in it.

4976. Well, to pay a dividend of 5 per cent., I suppose, on that portion of your capital costs about 64,000*l.* a year?—Five per cent. upon a million and a quarter is approaching those figures, yes.

4977. And each telephone subscriber, in order to enable you to pay this 64,000*l.* a year, has to pay an increased price necessarily for his telephone?—Well, that is a proposition; I do not know that he has.

4978. Where do you get the money to pay that 64,000*l.*, if you do not get it from the telephone users?—One gets it in the subscription.

4979 That follows what I say; it has to be charged to each subscriber?—Yes, it has.

4980. A certain proportion of it?—Yes, and anybody who attempts to found another telephone company will find themselves in exactly the same position.

Mr. *Tully*—continued.

4981. Would a corporation, like that of Glasgow, be in that position?—Yes, I think so.

4982. They have what is called a "common good fund"?—I do not know whether they can apply their fund to this purpose; but they would have to charge a paying rate. Of course, they could raise money at a little less rate of interest.

4983. Surely they would not have to pay a percentage on one and a quarter millions of what is called "watered capital"?—On what is called "watered capital;" I do not know what corporations do; I do not know that they are more far-seeing, or more able, or that they do their work cheaper than we do.

4984. The Glasgow Corporation has 100,000*l.* in this public fund?—I do not know the application of that fund.

4985. Could they not start without having to meet any such charge?—Of course, if they can start a telephone system without paying for it, it is a very convenient thing to do.

4986. And it would be a great advantage to the people in this place to take it at such reduced rate?—It would be an extreme advantage to the people who could afford to pay a rate per annum for a service so valuable that the rate is as nothing in the consideration; but it would be a great hardship upon the inhabitants of Glasgow, for whom that fund is intended, who could not possibly (and never would) use the telephone. If the theory is that these cheap rates are to be brought about by corporations by pledging the rates, or by appropriating moneys, it means this, that the merchants, the manufacturers, the people who, in fact, use the telephone, and who can well afford to pay a great deal more than they do pay for that user are to be relieved of payment at the expense of the general good.

4987. The taxpayers are paying already for the business that you have captured from the Post Office?—Are they?

4988. Yes; in the loss to the Telegraph Service?—That is not my fault.

4989. I do not say it is your fault, but that argument about the tax and you posing as the guardian of the taxpayers does not come very well from you?—I think, if the proposition is that the rates of any city are to support the risks of a telephone service in order that tradesmen (going up), merchants, financiers, people who could well afford to pay, are to be relieved of payment, I think if that went on the taxpayers would have something to say of it.

4990. The taxpayers of the three kingdoms are paying at present?—The taxpayers of the three kingdoms are gaining something; we paid 70,000*l.* odd this year.

4991. There is the loss of the royalty?—That is not our fault; there is the working expenses.

4992. I am not talking of your fault; it is the point of view of the taxpayers I am talking of?—Who is responsible? The telegraph revenue increases, so does the telegraph expenditure, and it will increase; and the deficit arises from the cost progressing much more rapidly than the income; and that will go on.

Mr. *Tully*—continued.

4993. One of the Glasgow witnesses told us that your company were pushing their claims so far that you objected to their having electric tramcars?—That seems natural if the electric tramcars were pushed in a fashion to make electric telegraphing or telephoning impossible. We established that. It is like marrying a wife; you have got to live together. We had to live with the tram companies, and that was recognised. We had a great fight over that. The tram companies wanted to paralyse the telegraph and the telephone by running currents which would be fatal to both, particularly the telephone. That was not a very rational thing. If the tram companies of Glasgow had had their way there could not have been any telephoning in Glasgow.

4994. Your company here in London, making this dividend on this large amount of capital, which is called "watered" capital, object to the people of Glasgow having electric tramcars?—Not at all. We are delighted that they should have them, even if they lose money upon them, but not at the expense of stopping the telephone or the telegraph; that is what they wanted.

4995. And the gentlemen from Edinburgh who told us that your company objected to their pulling down some old houses which they thought unsightly in their beautiful city; that gentleman was also unreasonable?—I should have been with him about pulling down anything in Edinburgh that is old; but I do not remember that.

4996. Sir James Russell told us that your company had wires attached to some old houses; that they wanted to remove them, and that you would not permit them to do so, and that you put them to a great deal of cost about it?—I really do not know the circumstances, but, I suppose, if we had a right to the occupation of some old houses, and somebody wanted to pull them down, we had a right to maintain our right; that seems reasonable.

4997. You think it is a fair use of the powers, under this licence from the Postmaster General, to put the people of Edinburgh to such costs?—We have no "powers" under the licence of the Postmaster General; that is what I complain of. We had no rights whatever under any compulsory powers. Any rights we had were the result of agreement and negotiation, and, I suppose, if we were in occupation of premises by agreement, we were entitled to the beneficial occupation; we paid for it. Of course, if you get up a movement of this kind, and provoke and invite such complaints against a company, you can get plenty of them, especially from imaginative places like Edinburgh and Glasgow.

4998. You want power under this agreement to compel these corporations and these people to give you wayleaves?—We only want them, I suppose, because the public want telephones. We do not want unlimited powers; we want defined powers; and it is quite idle to suppose that this thing is to go on and grow, and grow, and grow, unless somebody has power to do those things which are essential to make it grow. I have had to say that almost *ad nauseam*.

4999. I want to show that a private company is not so likely to do those things in harmony as a public body?—Then you have no experience.

Mr. *Tully*—continued.

I only wish I were the Post Office; I only wish I could send sappers and miners about to put up my poles. The Government have got an enormous advantage over us.

5000. But with their enormous advantage they were not able to compete with you?—We are very much more obliged to be upon our good behaviour than the Government are. Everything we do is done on mere suffrance, and has to be done with as great skill and with more forbearance. We have the public hammering away at us on one side, saying we do not give a proper telephone service. Glasgow comes, and is frantic on the subject. On the other side we have people with wayleaves, people with powers, with caprice, well, something even worse; they are getting now to insist upon enormously increasing the payments for these things, because we have no powers. It is a wonder what has been done by this company in England to put up this machinery on suffrance.

5001. What remedy can you see under this agreement; if your company supply an efficient and a dear service, what remedy have the public?—Well, I suppose, to complain to the Post Office.

5002. What is the use of complaining to the Post Office; the Post Office cannot supply, themselves, a cheap and efficient service?—The Post Office have power to listen to such complaints. As licencees of the Post Office (I have often announced the feeling of our company about that) we consider that our duty is to satisfy the Post Office that our service is reasonable under the circumstances of a particular place.

5003. Supposing the public (that you tell us do not know the difference between 20 seconds and 20 minutes) do not think your service efficient and cheap, what remedy have they?—Well, they have the remedy of applying to the Post Office and making their complaints.

5004. In what way can the Post Office enforce a better state of things?—If the complaints are reasonable they can intervene; we are the agents of the Post Office; we are a part of their machinery.

5005. What is the penalty?—I am going to tell you the penalty. The Post Office have reserved the fullest right to themselves, in cases where the service does not exist at all, or where it exists in an inefficient form, to remedy the evil by themselves competing with us.

5006. But is not the whole effect of the evidence given on behalf of your company that competition is, and would be, a nuisance?—So it would be; so it is.

5007. So that to get rid of the bad service, the Post Office are bound to establish what you describe as not being something for the benefit of the people?—Well, you see, there are imaginary evils and real ones. You cannot carry on a business of this sort without complaint; I even think sometimes I see complaints about the Post Office. It is inherent in a thing. What is the average of it? People are very ready to make complaints; they are not always reasonable.

5008. But people sometimes know the differ-

Mr. *Tully*—continued.

ence between 20 minutes and 20 seconds?—Poor Telephone Company!

5009. You say that the competition of the Post Office would be the only remedy against an inefficient and a dear service?—I think it is a very good remedy. Of course they could license to anybody they pleased.

5010. So competition in that case would be a benefit?—Competition, I suppose, would have the effect of pulling us up to the mark.

5011. How are the Post Office to arrive at a conclusion that the service is bad and dear?—By taking evidence instead of rumour, and forming a judgment.

5012. Suppose a corporation are willing to risk their own rates instead of asking the Post Office to risk the public taxes in competition, would it not be far better for the rest of the country?—No; I should think about the very worst thing that could happen would be for the telephone service of the country to be cut up into little areas worked by corporations.

5013. Under the new agreement are not the companies confined to local areas?—Yes; and those local areas cover all places where there are corporations. This business is too delicate, it is too important, to be broken up; it is a monopoly in its very nature; it is pronounced to be a monopoly by the law; it belongs to the Post Office now. We are mere agents, and I suppose the Post Office have given evidence, or will give evidence, as to the importance of conducting it as one uniform system.

5014. That is exactly my grievance; the Post Office seem to have given up to your private company a monopoly. I do not ask you about the telegraph service for which they paid so much through the nose a good many years ago?—I have had so much to do with the Post Office in different capacities that I bow to their capacity to take care of themselves and the public.

5015. It was for the benefit of your shareholders that you entered into the agreement?—Of course I am bound to do the best I can for them.

5016. I congratulate you upon it?—But I cannot do the best I can for them if the service is so bad that the people will not use it. I should like to see, experimentally, what a big corporation would do in competition with our company on even terms.

5017. Of course you would give telephones for nothing there as in Plymouth?—I do not know that we should. No, we would not, and I would undertake to keep the business at a bigger rate than the competitor.

5018. Of course that is a matter of prophecy, and we can all be our own prophets; what date is this agreement?—Which agreement?

5019. The new agreement?—August 1892, I think it is dated. This would run on until 1911.

5020. Was that when the new Government came into office?—The heads of agreement were settled before the old Government went out; they have been matured by the new Government during the last two years.

5021. Was it dated on the exact day when the last Conservative Government went out of office?—Well, it was very near the time when the Government went out.

5022. It would not be two hours before, would it?—That has nothing to do with it; it is a matter which had involved weeks, almost months, of the most serious discussion; innumerable points had been discussed, and difficulties overcome; and the heads of agreement were in shape.

Sir *James Fergusson.*

5023. May I interpose this: and the purport of the agreement had been stated in Parliament, had it not?—Over and over again.

5024. That had been stated in the House of Commons?—It has.

Mr. *Tully.*

5025. You have stated that this license would be made the more valuable to your company if it was extended for a longer period?—It would be more valuable to the public, because it would enable us at once to reduce the rate. If you do a little sum in redemption, you will find how it runs up, whatever we get, 1,000,000, 2,000,000, 3,000,000.

5026. If you were to be bought up instead of having this increased length of time, the Post Office would have to pay a largely bigger price?—It is a choice of evils.

5027. And the Post Office would have to pay for this, one million and a quarter of capital, which is called "watered"?—The Post Office will have to pay upon the award of an arbitration if we not agree; and if we do agree, they will have to agree upon some intelligible principle, not having so much relation to the nominal capital as to the value of the going business, "market value," now, for instance.

5028. If the Post Office entered into competition with your company in any districts, because of your giving (we will imagine) an inefficient and dear service, would the Post Office have to buy up the portion of your materials in that district?—Well, I do not know; as a matter of business, I should think the Post Office would pay very dearly if, in order to cripple our business, they spent their own money.

5029. But you state that that is the only remedy the public have under this agreement; that is competition by the Post Office?—The remedy they have will not involve that consequence; there is no such deep-seated complaint in any place against this company as would justify the Post Office doing more than they can do.

5030. That is a matter of opinion. You may have one opinion, and we on the other side may have another?—I have an extremely strong opinion. One has to do with these things as matters of business, and not as matters of what proposition.

5031. There is just one other question with regard to these pipes that were laid surreptitiously; could you tell us anything more about them; that is, in London?—Well, I can tell you they were laid surreptitiously in the sense that the engineer of the Commissioners of Sewers and the authorities of the Commissioners of Sewers did

Mr. *Tully*—continued.

did not know that they were laid until I told them.

5032. Those particulars you gave us with regard to a sum of 5,500*l.*, mentioned as the price for the option of using those pipes which were laid surreptitiously?—The Duke of Marlborough was chairman of the New Company; he was also a director of the London Electric Company, and he and they made what I suppose they thought was a very good agreement in the interests of telephony by stipulating that when they were opening their trenches and putting in their electric pipes these auxiliary pipes should be put in at the same time, and there is an agreement in existence governing that.

5033. That 5,500*l.*, I suppose, is part of your capital at present?—Well, no, it is not part of our capital; it is part of the New Telephone Company's capital, but taken over from the Pioneer. All that Pioneer business, as I told you, took place long before we had anything to do with them, and that 5,500*l.* was for the option; and there is 1,000*l.* there in deposit, and there is a bargain which, if it were carried out, would be ruinous to the telephone subscribers of London and to the Telephone Company.

5034. There is just one other question; I do not know whether it has been asked before: the Post Office are in competition with your company in Newcastle, are they not?—Yes.

5035. Is there a connection between the exchanges of the Post Office and the exchanges of your company?—I do not think so.

5036. Your company object to the connection?—I do not know that we have ever been asked for a connection. First of all, is it the fact? I will ask. I am told we have no connection.

5037. You object to make the connection?—Well, we have not been asked, that I know of; when we are, we shall consider what we will do.

5038. Although you are there under the licence of the Postmaster General, you will only make it a matter of consideration whether you will make connection between your system and the Post Office system for the convenience of the public?—I think we should possibly do, if anything were suggested by the Postmaster General, very much what he asked us to do in that particular for a consideration.

5039. For a consideration?—We should do what we have done at Manchester with the other company, we should afford his subscribers the opportunity of going on to our system for something for us. Is that rational?

5040. So that this agreement, in case the Postmaster General competed with you in any district, would not compel you to connect your exchanges with the Postmaster General's exchanges?—No, there is no power to compel us; but we are people who are extremely open to reason and to consideration.

5041. You are open to persuasions such as the persuasion of a quarter of a million of money. You have told us about the "persuasion" of the New Company to amalgamate with yours?—You do not find generally that people give valuable consideration for nothing. We cannot afford to do it in the interest of the telephone.

Mr. *Tully*—continued.

Mr. *Snape.*

5042. I wish to ask you two or three questions on the statements, one and three, which you put in. In statement "three" you describe the working expenses to average about 6*l.* 4*s.* 7*d.*; what do those working expenses include?—They include everything.

5043. Everything?—Yes.

5044. Interest on capital?—Oh, no; working expenses.

5045. Is there any exception; anything that you have to add to that at all?—They are the whole cost of working and maintaining the thing from day to day as a going concern, including the up-keep of the material. That is the working expenses.

5046. The whole of the administration?—The whole of the administration, but no charge for interest on debentures or any portion of the interest on capital.

5047. Your charge per subscriber being 50 per cent. more, or thereabouts, amounts to 9*l.* 2*s.* 2*d.*?—Did we show a balance quite as much as that?

5048. That was your statement?—I do not think that was so; 62 per cent. I think we made it; 62 per cent. of the working expenses or of the receipts.

5049. The balance is devoted to paying interest on capital, is that so?—The balance is devoted to two things, paying interest on capital and reserving for redemption.

5050. Then, practically you are realising a profit of 50 per cent. on the working expenses?—Oh dear, no; 62 per cent. for working leaves 38 profit; that is how the figures work out.

5051. Well, 38?—Thirty-eight and 51 are very different. Allow me, sir, just to look at the figures.

5052. Amongst those working expenses you classify under the head "A" certain amounts for royalty, way-leaves, rates, and taxes. Can you tell us how much of that sum which you state here in that statement three is for way-leaves?—A very large sum.

5053. What percentage of the 20 per cent. is for way-leaves?—It is a very large sum.

5054. And neither the way-leaves nor the rates and taxes would have to be paid if the telephonic supply was in the hands of a municipality. They would have a right of control over their own streets, and would not have to pay way-leaves, and of course they would not have to pay rates to themselves?—I do not know that they would not have to pay way-leaves. Have they any power to attach to people's houses or to go over them? They can use the streets; the streets they have power over.

5055. If the telephonic supply was in the hands of the municipality, a large portion of this 147,938*l.* would not have to be paid. That portion you have to pay for way-leaves and for rates and taxes the municipality would not have to pay?—That entirely depends on the methods of construction. The municipality of London, if it

Mr. *Snape*—continued.

carried on an overhead system, would have to be subject to pay wayleaves as we are, and London is the worst case of all; 1*l.* 14*s.* per subscriber per annum.

5056. Still, they could arrange to carry the lines on their own thoroughfares without having to pay wayleaves?—No doubt in that sense they might have some advantage; yes.

5057. Now, following on; suppose, instead of the municipality having to give the telephone supply, the State did this; the State would have not a penny of this 147,938*l.* to pay. It would neither have to pay royalty wayleaves nor rates and taxes?—They would have to pay it in a sense, because they would have to give it up; they are getting it now; 75,000*l.* they are getting this year; it will be clear money. If they do not charge it, they do not get it; therefore the State do not get it. I want particularly to impress this upon the Committee, because this does affect the public interest very largely. They would be giving a service beyond all comparison more valuable than the price that is paid for it for less money, and therefore they would be giving people an article much below its value in order to reduce the public revenue.

Mr. *John Ellis.*

5058. To a very limited class of people, I suppose you would say?—The bulk of telephone users. You cannot put it higher or lower than this: that every man in England at this moment, for 6*d.* a day, can use the telephone; that covers shopkeepers, merchants, and every class. Can it be said that the people who use the telephone are over-charged at 6*d.* a day?—Why, it has not the slightest reference to the value of the service done. Now, are you going to reduce that? What for? To diminish the public revenue? Not at all to benefit what you call the "masses"; they do not want the telephone; they do not use the telegraph to any extent. Then who are you going to benefit? The people to whom this thing as a commercial instrument and a social instrument is of ten times more value than the present subscription; that is not in the interests of society.

Mr. *Tully.*

5059. Anything that helps the commercial interest would not help the masses?—It would help them indirectly, enormously.

Mr. *Snape.*

5060. I will not enter into that; I do not agree with the views you express?—I am sorry for that.

5061. I will pass on to the first statement you handed in. I shall be glad if you can tell us what has been the effect of the reduction in the provinces from 15*l.* and 12*l.* to 10*l.* I mean the effect in the increase of the number of subscribers?—Well, that I cannot tell you; the immediate effect was a loss of 55,000*l.* a year in the revenue of the then subscribers.

5062. Yes, that I see too. I think it is of the very greatest importance, if you make the one statement, you should give us the other information. It may be well worth the loss of revenue (it might have been in the hands of the State) to have given the greater facilities to a very much larger number of subscribers?—I think I put in a table showing the progression of new subscribers from year to year since that date; and you have got, if you can, to find out the relative operation of two things: What number of those subscribers came on as a consequence of the increased knowledge of the value of the telephone; and what number came on from the reduction of price. I will undertake to say myself, as a matter of judgment, that the bulk of them came on from the increased knowledge of the value of the telephone, and not from a reduction of price.

5063. I wish you could have given us the information in a more precise form, because it is of importance, I think, that we should know how far a reduced charge leads to an increased use. However, you have stated to-day (I think in answer to Sir James Fergusson), that there is a point beyond which an increase of subscribers brings no profit; I am not quite sure whether you intended us to understand it would really produce loss?—Yes. Suppose you have got, for instance, a small exchange for 200 subscribers. That enables you to treat the matter with a particular class of board with a particular establishment and the wires. Very well: your 200 get to 250. Over 200, looking forward to the growth (natural prevision), you go into a very much more expensive board to begin with; you probably put in a board for 500, and the board itself will cost (take 500 as compared with 200), certainly twice as much, somewhat more. Very well; now you have to incur that expense when you get beyond the 200. Then you have to wait until the capacity of the board is exhausted, in order that your outlay may be covered. If it is not covered the first or the second or the third year, per subscriber, the price (the working expenses) has been greatly put up, and that goes through from 200 to 500, from 500 to 1,000, and so on. The illusion in which some of our friends live is that they have only to spend the modest trifle of 400,000*l.* a year to find themselves at once in possession of the full user of machinery up to that capacity; that is not what arises. You have to provide a large outlay, and it takes a very long time before that large outlay is used to its full capacity; therefore all the years it is being used below its capacity the cost to the subscriber is so much more. The same with the working expenses.

5064. Then I understand the point to which you referred in reply to Sir James Fergusson meant that until you attained the number of subscribers for whom you had provided increased accommodation it would not pay, but that when it attained that point it would pay?—You have got to do the two things. You have got to consider the present and the future. It will pay when the time comes that you enjoy the full beneficial occupation of the machine, but not in the interregnum.

5065. In connection with the multiple board, I think you make provision for increasing the 200 subscribers; I think that is the addition you make, is not that so?—Yes.

5066. Can you tell us what the cost of providing

Mr. *Snape*—continued.

viding for these 200 subscribers would be; how many operators does it require; extra operators?—I will show you what the mere cost of the board is. I have had that worked out. Mr. Gaine will give it me, I daresay.

5067. I asked for the information from another witness earlier in the inquiry; I was told it was to be supplied by you?—I am sorry I did not note that, but we shall be happy to produce it; it may be in the room. I had it worked out. For the sake of the argument, the cost per subscriber in respect of the board is 1*l.*, we will say; when you get to a bigger board, it is 3*l.*; when you get to a bigger board still, it is 7*l.*

5068. That is exactly what I wish to ascertain; I want to get at that?—At all events, if I cannot give it you now, sir, I shall be happy to do it afterwards.

5069. Whilst Mr. Gaine is finding it I will go on; there are only one or two questions apart from that; I may as well interpose them here; you are of opinion that a telephonic supply is a necessity for business premises?—Judging from my own experience, certainly.

5070. And a luxury for the wealthy?—Yes. It is less essential, I think, for purposes of luxury than of business.

5071. You do not think the small tradesmen and the less wealthy classes would be likely to make much use of it?—No, I do not think they will; at all events, if they will, they can.

5072. Yes, they can by paying a sum which is beyond their means?—Sixpence a day, or 3*d.* a message.

5073. That is beyond the means of many of them?—Small tradesmen?

5074. Was not that argument one that had force when the Post Office used to charge 10*d.* for carrying a letter; that correspondence was only the privilege of the well-to-do, or a necessity of the business people?—It is so remote a time since those rates were fixed by the Post Office that I do not know the arguments by which they were supported. There is no doubt the penny post did abolish the force of the argument.

5075. I think you know well enough that in those days it would have been said that the working class and working people would never send letters through the post?—Yes, but there must be some measure between the character of things; you can, of course, carry letters for a penny at a uniform rate all over Great Britain, because, concurrently with that invention, came the thing which made it possible, the railways; you have no machinery there as you have in the case of the telephone; you have no outlaying of capital at all in proportion to what you have to furnish a telephone communication.

5076. I am not so sure, but even if it does not apply in that respect the analogy does hold good; I think you will admit that the more you cheapen the supply of anything the more likely it is to be used, and extensively used?—Of course; that seems obvious.

5077. That is why I am asking these questions; I want to get at the increased cost; we have been told that it grows in geometrical ratio; I have asked questions about it, and been unable so far to ascertain what the geometrical ratio is; and I have visited the exchange at Liverpool to try to find out?—We will try to pose it for you, sir, in figures; shall I read this note of our engineer?

5078. Yes, if you have it?—"I likewise notice that a Member of the Committee asked Mr. Preece what the cost of an additional section to our Liverpool Exchange would be, both as regards capital and maintenance, and that he replied that probably this information would be given by the company." (That must have been your question, sir.) "Now, it is well-known that on multiple exchange boards the cost per line varies with the size of the exchange, and the facts in regard to this are as follows: Cost per line of a switch board for 200 subscribers, 1*l.* 7*s.* 9*d.*; 1,000 subscribers, 3*l.* 4*s.* 7*d.*; 2,000 subscribers, 3*l.* 17*s.* 8*d.*; 5,000 subscribers, 6*l.* 2*s.* 2*d.*; 10,000 subscribers, 9*l.* 16*s.* 11*d.* It will thus be seen that as the exchange grows larger the cost per line becomes very much greater, rising, as the figures just given show, from 1*l.* 7*s.* 9*d.* for 200 subscribers to 9*l.* 16*s.* 11*d.* for 10,000 subscribers, and this is more forcibly shown when we consider the case of increasing a 2,000 line exchange to 3,000 lines, and so on up to 10,000 lines. In this case the figures are as follows: Cost per line for new lines filled: 2,000 line exchange increased to 3,000, 5*l.* 7*s.* 2*d.*; 3,000 line exchange increased to 4,000, 7*l.* 1*s.* 7*d.*; 4,000 line exchange increased to 5,000, 8*l.* 10*s.* 10*d.*; 5,000 line exchange increased to 6,000, 9*l.* 17*s.* 4*d.*; 6,000 line exchange increased to 7,000, 10*l.* 15*s.* 7*d.*; 7,000 line exchange increased to 8,000, 12*l.* 19*s.* 2*d.*; 8,000 line exchange increased to 9,000, 14*l.* 4*s.* 11*d.*; 9,000 line exchange increased to 10,000, 16*l.* 6*s.* 4*d.* These figures make clear the greatly increased cost per new line as the exchanges grow larger."

5079. That does not supply me with the information I want; that is a statement that that is the increase (you say) of cost you are under; but I want to see the details of that increase and how you get at it; for instance, you have four extra operators for 200 extra subscribers?—Yes.

5080. What is the cost of those four operators?—Will you kindly pose your question? I will have it worked out in figures.

5081. I want to know the details; how you arrive at the extra cost, say of adding 200 to the Liverpool Exchange?—Suppose we were to take it in this way: I have got a certain number of people on the Liverpool Exchange, I will say going at a current outlay; let us assume that the capacity of that particular machinery is exhausted and that we are called upon to enlarge it up to another thousand.

5082. It is done on 200, according to what I saw in Liverpool?—Well, whatever it is.

5083. Take it at what it is?—What will it cost to travel out of one capacity to another? I shall be very happy to consult Mr. Sinclair, who is much more skilled in the detail than I am, I am happy to say, on the proposition.

5084. I do not want to delay the Committee further upon the proposition, as the time is advancing; the point I wish to arrive at is this: that

Mr. *Snape*—continued.

that while we are told the increase is great, as you tell us by these figures you have just read, we have had no details to show this, and all I wanted to ascertain by personal inquiry was, in addition to the four operators extra that are required, what connections are required; you get 200 extra subscribers at 10*l.* each, that is 2,000*l.*, and you have to pay the capital required for the connection of the wires, and you have also to pay the cost of four operators; you have 2,000*l.* to do that with; and I cannot quite see where the increase comes in, nor has any information been given us to show that?—Well, sir, I will see whether we can make it clear to you in a tabular form. I cannot give it you of my own knowledge, nor do I think it can be got out without a good deal of inquiry.

5085. You will hand that in?—Yes.

5086. I do not know whether I ought to ask you this question, but I will; you can choose whether you answer it or not: the question is, whether in the event of the Committee thinking some change desirable in telephonic supply, you, in treating that, would prefer, in the decision to which they might come, that they should decide to buy your concern at a reasonable price for the State, or that they should sanction licences to municipalities to enter into competition with you; or that they should let the licence you hold run out, in which case you would not be entitled to receive anything?—You do not expect I am going to answer that off-hand, do you?

Lord *Stanley.*

5087. You said that since the amalgamation you had spent in sovereigns 1,459,000*l.* Will you tell me how many extra subscribers you got for that?—Yes, 37,739.

5088. At the end of the 16 years you may be bought out by the Post Office; at all events, the licence lapses, and the Post Office may take over the business, or purchase from these other companies. I suppose you have taken two things into consideration: first of all, good-will, and, secondly, material out-goings, such as telephone plant and patents; is not that so?—Yes, we took them as a going concern.

5089. But in the event of the Post Office taking over the telephone, it would not be taken over so much as a going concern; your goodwill would lapse at the end of the 16 years?—Absolutely.

5090. Therefore, what they would have to pay you would be, according to arbitration, the sum that you have expended in placing the telephone plant throughout the kingdom?—In an arbitration at that time?

5091. In an arbitration at that time?—I am afraid I shall not be before the arbitrators, but I think I could find out a claim for something more than that.

5092. Very well; whatever you found out was the claim, that would be the principal part?—Yes, that would be.

5093. There might be other parts of the claim?—Yes.

5094. Any other companies that started would have to be bought out on precisely the same terms as you would, I apprehend?—I do not know, of course, what is in the mind of the Post Office; I know what would be just, that is, to put any competitor upon the same footing as ourselves about the condition of licence and duration of licence.

Lord *Stanley*—continued.

5095. You would expect them to be put on the same terms?—I think that would be reasonable.

5096. In a town where there were rivals to you, the Post Office would have to pay for two separate plants?—Well, they might elect to pay for neither. The honourable Member for Glasgow, I think, put it in that attractive form that it might be worth the while of the Post Office to encourage corporations to drive down the value of our business in order that they might buy us cheap. Well, that is a proposition which it is easy to put.

5097. What I want to get at is, that in one town they might buy two companies, where one would pay; they would have bought two companies, and the two together could not possibly pay?—Yes, that is true.

5098. Then the effect of having rival companies might make it so that the Post Office in buying the plant at the end of the time would be, in places, buying a non-paying concern?—I think they would. I cannot conceive it is the interest of the Post Office to complicate themselves with two or three telephone companies in the same area.

5099. Then in the event of purchase by the Post Office, their object would be, I suppose, to give as efficient a service as you do, but at the same time to give it cheaper?—Yes.

5100. That would be their object?—I fancy so.

5101. They would reduce their prices largely; at the same time that they reduced their prices, would they not at once reduce the number of telegrams that would be sent?—I should think the effect upon the Post Office revenue from telegrams by any very serious reduction of price would be, well, worse than cutting off your nose to spite your face (it must have that effect), with this additional danger, that the multiplication of the means of competing with the telegram will cause extra competition with the telegraph and reduce prices. The margin of profit now is very narrow, and by a very slight reduction of the annual subscription you would do away with the margin of profit altogether; and therefore you stand to lose upon the telegraph revenue; that is, damaged by the increase of machinery to damage it, and you stand to lose by the working expenses of the telephone, absorbing the gross revenue of the telephone just as they now do in the telegraph. That will be the position.

5102. Then by the reduction of the price of the telephones used only by a limited number of persons, it would entail a loss upon the telegraph service used by the majority of the people; therefore the people who used the telegraphs would be paying cheaper rates than for the telephone?—That is it. The State would pay; they would pay the loss upon the great expansion of telephones at 5*l.*, say, instead of 10*l.*; there would be a dead loss upon that upon present figures

Lord *Stanley*—continued.

figures, and putting that great expansion of telephones at 5*l.* they would at the same time multiply greatly the effect of loss upon the telegraph revenue.

5103. And they would lose the royalty that you pay at the present time?—Of course that would go.

Sir *Charles Cameron.*

5104. Might I just ask one question. You said that you could give us the figures. You have no objection to give us the figures at which the New Telephone Company's shares stood in your books, and you have got it, I understand?—Yes, I have looked at our balance sheet since then, and I can now give the precise figures; 439,896*l.* 17*s.* 6*d.*, that is what they stand at; we talked about 750,000*l.* in the prospectus, but I had not emphasised, I think, that of the 10*l.* share only 4*l.* was paid up at the time of this (what shall I call it) transmutation of companies.

5105. And that includes the founders' shares for which 40*l.* was paid?—Yes, that includes the founders' shares. It also includes 180,000*l.* of that money which we have in our business, and the Manchester business, and the outlay upon that, and Bolton, and the Strand site, and certain other advantages which we get in the purchase.

5106. I forgot to ask you whether you could tell us about the United, whether there was any "water" when the United joined the Bell and Edison?—No "water"; they had not any business; or very little.

5107. Was there not 40,000*l.* of "water"?—I do not think so.

5108. That was before your time probably?—No, it was not indeed; I did the whole thing. I found that the Bell (Mr. Edison's friends) had got a patent, and they were going to work that patent; and the other people had got a patent, and they were going to work the patent; and they had each up to that moment spent a certain amount of money. I went into the accounts, and I had to come to this conclusion, that we must assume that each company had done what was reasonable up to that moment, and that the expenditure must be taken as having been a reasonable expenditure to get the thing up to that moment; we put them together upon those

Sir *Charles Cameron*—continued.

proportions. Of course, the bulk of the capital was raised long after that; it was a very small sum at the time.

5109. You merely paid for them the amount expended by each company?—Yes, the formation of the company, the interest which Mr. Edison and those people had; he had some of his in shares. Mr. Bell had some money and so forth. It was a very small amount and quite reasonable. There is one thing, sir, I want to correct. My censors behind me seem to think I have stated that the effect of the establishment of the Mutual Company in Manchester was a reduction of our rates. That is not so; therefore I correct it. They began at lower rates than ours, but we maintained our rate from that day to this, and have increased our subscribers in a greater proportion than they. I only want to have that made clear.

5110. Your rate when they started was not above 10*l.*?—Not above 10*l.*

5111. It was 10*l.* when they started?—Yes, 10*l.* They started subscribers at 5*l.*, outsiders at 6*l.*; and notwithstanding that we maintained our 10*l.* rate, a very large number of their subscribers paid our subscription as well as their own.

Mr. *Tully.*

5112. What is the capital of the two companies (the Bell and Edison Companies) out of which the United Company was formed?—Upon my word, I cannot tell you; but if it is a matter of any moment to this Committee, I daresay I can refer. It was a good many years ago. It is a very small sum. Before I leave the Chair, may I say one more thing: that table which Mr. Benn was good enough to put in about Mr. Burdett's view of our capital is said not to be correct; and, therefore, in the absence of the honourable gentleman I must protest against it being taken as one upon which he could found arguments.

*Chairman.*

5113. I understand that Mr. Benn based his argument upon the number of subscribers (50,000) in the United Kingdom?—Yes.

5114. Whereas, I believe, he was very far short of the mark?—It is 75,000.

## Mr. ALPHEUS CLEOPHAS MORTON, a Member of the House; Examined.

*Chairman.*

5115. I UNDERSTAND you wish to place some information before the Committee, the result of a circular which the Commissioners of Sewers, I think, have sent out to the telephone subscribers in the City?—Yes; I have been asked by the Commissioners of Sewers to submit a summary of what has taken place with regard to the circular which they sent out; and which they sent out because it was stated that the opinion of telephone users had not been got at in the City at all. I shall only take two or three minutes if I read the Report, sir, and that will be the shortest way of placing the facts before the Committee.

*Chairman*—continued.

5116. Very well; if you think it is the best way?—This is the report of our chief clerk, which has been verified to see that it is correct: "Agreeably to the resolution of your honourable Court of the 7th instant, instructing me to ascertain the experience of telephone users in the City of London as to the efficiency and cost of the existing telephone service, I issued on the following day the circular, of which I append a copy, to 3,450 subscribers to the National Telephone Company, which include, so far as I could ascertain, the whole of the users in the City, directing their attention to the inquiry by the Select Committee of the

*Chairman*—continued.

House of Commons, as to whether the provision now made for the telephone service is adequate, and whether it is expedient to supplement or improve this provision, either by the granting of licences to local authorities or otherwise. Answers were invited to the two following questions, and suggestions or remarks on the subject were solicited: (Question 1.) Do you, as a subscriber to the National Telephone Company, consider their service efficient? (If unsatisfactory, state in what respects.) (Question 2.) What is your opinion as to existing charges? I now have the honour to submit a list giving the names and addresses of the telephone users to whom the circular was addressed, and the replies that I have received, 1,085 in number, together with an abstract and summary thereof. Having very carefully perused and analysed these replies, I beg to report that the opinion of the majority as to the inefficiency and costliness of the service confirms in every particular the evidence given on your behalf, by the Chairman of the Streets Committee (Mr. George Berridge) and myself, to the Select Committee of the House of Commons, now inquiring into the subject. How far the investigations of the London County Council, which were commenced the day before those of the Commission, affected the number of replies received by either body it is very difficult to say, but there can be little doubt that the memorandum, issued to their subscribers for signature by the National Telephone Company, some time previously, considerably discounted the inquiries of the Commission, as for obvious reasons it must have drawn largely on the sympathy of telephone users, besides confining the issue to the narrow limits of an invitation to disapprove of the service being undertaken by the London County Council, coupled with a vote of confidence in themselves. I append a copy of this memorandum. It will be observed, nevertheless, that about one-third of the circulars issued have been responded to, and I think it may reasonably be assumed that the views expressed by the majority in regard to cost and efficiency represent the opinion of city telephone users generally. The replies are still coming in, but of those already received, 690, or 63·5 per cent., condemn the existing system as inefficient from various causes, whilst 380, or 35 per cent., are satisfied with it; the remainder, 1·5 per cent., being neutral; 909, or 84 per cent., think the cost excessive; and 109, or 10 per cent., do not object to the prevailing charges, whilst about 6 per cent. offer no opinion on the subject. Two hundred and one subscribers indicated what, in their opinion, would be a fair charge for a telephone, the sums mentioned averaging as nearly as possible 10*l.*, which was the amount fixed by your Streets Committee as being, in their opinion, a reasonable and sufficient rental. To be absolutely accurate, the average of the suggestions is 10*l.* 1*s.* 5*d.* In analysing the causes of complaint, I have divided them under two heads, viz.: those affecting the operators at the exchange; those affecting the system. The causes of complaint against the employés at the Exchange include the following: Delay in answering calls. Further delay in getting connected. Incessant interruptions by exchange operators during a conversation. Frequent cutting off whilst speaking. Noise of voices at exchange. Ringing of call bell in error. Being placed by mistake in communication with wrong numbers. The obligation on the part of subscribers to ring up a second time when line is engaged. General inattention and insufficiency of staff. Of these the chief causes of dissatisfaction are in respect of the delay in answering calls and getting connected, the general inattention of the employés (including a few complaints of incivility and impertinence). The complaints against the system comprise: Difficulty in hearing, through confusion of sounds. Defective insulation. Frequent blocking of lines on account of the number of subscribers. Instruments and wires continually out of order. Delay in executing repairs Want of proper signal for disconnecting. Bad service over trunk lines, and to outlying districts. The larger number of these complaints are as to the difficulty in hearing through confusion of sounds, defective insulation, instruments and wires being continually out of order, and the delay in repairing them. Amongst the remedies suggested are: The adoption of the twin-wire system. Increased staff at the exchange. Second receiver to each instrument. Additional trunk lines and call offices. Improved suburban and provincial service. Improved switching facilities. Better discipline at centre. Employment of men or boys instead of women. The placing of wires underground. Competition. State control. Control by local authorities. Although no direct question was asked on the subject 172 expressions of opinion have been volunteered by subscribers in regard to the future control of the Telephone Service, of which, as will be seen by the following figures, the majority are for public control, the greater number favouring State management: For State control, 57; against State control, 4; for local control, 40; against local control, 12. Of the remainder, 24 advocate the development of the system being left to competition and commercial enterprise, 29 simply express the hope that the service will not be vested in the London County Council, whilst six are opposed to the control being placed in the hands of the Corporation or the Commissioners of Sewers. In conclusion, it is quite clear that the evidence afforded by the replies to the inquiries instituted by your honourable Court, condemns the existing telephone service as costly and inefficient.—I have the honour to be, Gentlemen, your obedient servant, H. MONTAGUE BATES, Principal Clerk." Since this was put in we have had more than a hundred replies, and could get more, because, of course, it was all done in a hurry.

*Chairman*—continued.

Mr. *Tully.*

5117. Are the people who send complaints to you the people who complain to the London County Council?—We do not know; the County Council, of course, had no right in the City at all making inquiries, but how far they got replies I do not know.

5118. What about these surreptitious tubes we heard about; can you tell us anything about them?

Mr. *Tully*—continued.

them?—You mean the tubes put down by the Electric Lighting Company.

5119. Yes?—All I can tell you is that we found out in 1892 that they had been put down without our consent, and, in fact, after we had refused to allow them; we refused, I think, the National Telephone Company.

Lord *Stanley.*

5120. It was not the National, was it?—All sorts of people have been before us; we have had the Electric Lighting Company, we have had the Pioneer Company, we have had the New Telephone Company, and we have had the National Telephone Company, all making inquiries; and at one time the two companies (the National Telephone Company and the New Telephone Company) were competing as to which should get these tubes, and they came before us, and asked us to delay our consent until they could make fresh proposals. When we met again we found that the National Telephone Company had bought up the other company, and there was an end of the competition.

Mr. *Snape.*

5121. Were these subscribers, who thought 10*l.* a reasonable and sufficient rental, business people?—Yes, all business people.

5122. Had you any replies from small tradesmen or families, who would use the telephone, as to the charge?—Of course, we have not got many in the City of London of that sort, but a great many are offices.

5123. Do you think they would suppose that 10*l.* was a reasonable and sufficient rental, small tradesmen and householders?—Yes, that is a general feeling, that it ought not to be more than 10*l.* in the City of London.

5124. You say it was from business people you got these?—So far as we know the small tradespeople are of the same opinion as these.

5125. You cannot form any opinion as to whether small tradesmen would entertain a similar view?—Some of them think they ought to have it for less.

*Chairman.*

5126. Some would like it for nothing, probably?—No, none have put it down at that.

Lord *Stanley.*

5127. You mention 63·5 per cent. as condemning the system as inefficient; that is 63·5 per cent. of the answers received, is it not?—Yes.

5128. That is to say, out of the total number of 3,450, as far as you are aware by their written answers, there are only 5 per cent. who condemn it as inefficient?—Only 5 per cent.?

5129. Yes; I ask you that as a question. Of those who actually answered your letter there are only 5 per cent. who condemn it as inefficient?—Only 5 per cent.?

5130. Yes?—But we have got 63·5.

5131. No; that is 63·5 answers received, you said, of the total number using the telephone?—I cannot tell you that, because we have had a number of answers since (over 100), and they are still coming in; therefore I cannot tell you.

5132. On the paper you put before us only 5 per cent. of the total number to whom you sent out the circular have answered adversely to the company?—I have "63·5 per cent."

5133. That is the number of answers you have received?—Yes.

5134. Of the number sent out only 5 per cent. have answered adversely?—Only 5 per cent.?

5135. Yes; there are only 690 out of the 3,450 *l*—That must be more than 20 per cent., looking at it roughly.

5136. Yes; it is more than "5 per cent." It is my mistake?—It is not fair to make any calculation on the people who did not answer. We have had no time. We did not send canvassers or take any trouble at all.

5137. It is 20 per cent.?—It is about 20 per cent., looking at it roughly.

Mr. *John Ellis.*

5138. I understand this inquiry has been made since Mr. Bates was here on the 26th April?—Yes.

5139. And it is to supplement his evidence, given in Questions 1958 and 1959?—That is so.

Mr. WILLIAM BEVERIDGE, called in; and Examined.

Sir *Charles Cameron.*

5140. YOU are acting for the city of Glasgow in connection with this telephone matter?—Yes.

5141. The Telephone Committee or the authorities of Glasgow, in order to test the actual state of feeling among the telephone users in Glasgow with regard to telephones, took the step of submitting a statement for signature by those who approved of it?—Yes, they did.

5142. Would you please read the statement?—The statement is as follows: "Telephone Service. The House of Commons having remitted to a Select Committee to consider and report whether the provision now made for the telephone service in local areas is adequate, and whether it is expedient to supplement or improve this provision, either by the granting of licenses

Sir *Charles Cameron*—continued.

to local authorities or otherwise, we, the undersigned, users of telephones in Glasgow, desire to express our dissatisfaction with the present telephone service in the city, which we consider inefficient and expensive." That has been sent.

5143. Just allow me to get out the facts; I think you have a list of the telephone users in the book of the Glasgow district?—Yes; I have a copy of the book.

5144. You have reckoned up, and you find that there are 4,791 in the book?—Yes.

5145. Of these you find that 382 have more than one telephone?—Three hundred and eighty-two represent wires used by more than one individual.

5146. That reduces the number of persons having

Sir *Charles Cameron*—continued.

having telephones to 4,409?—Yes; so I make it from the book.

5147. And those sheets you have before you were exhibited in public places?—They were sent round by the Corporation messengers.

5148. To telephone users?—To telephone users.

5149. And the sending round occupied some three days, did it not?—About three and-a-half or four days.

5150. That statement has received 1,018 signatures, has it not?—Yes, 1,018.

5151. You have gone very carefully over those signatures, and compared them with the book to see that they are the signatures of telephone users?—Yes, I have.

5152. Do you find that there are 20 signatures given a second time, and two given thrice, probably men who have more telephones than one?—Yes.

Sir *Charles Cameron*—continued.

5153. You deduct, therefore, 22 for that reason?—Yes.

5154. That brings the number down to 996 out of the 4,409?—Yes,

5155. You also wish to state that there are 15 or 18 names that you cannot make out?—Yes.

5156. The signatures are not legible?—They are not quite such that I can make them out, so as to compare them with the book.

5157. But even deducting those, knocking those off too, because you have not been able to identify them, that would give you about 970 names that you have actually identified, names that you have checked from the book of telephone users, out of the 4,409 who have subscribed their names as evidence of dissatisfaction?—Yes, that is so.

Mr. JOHN CAMERON LAMB, C.B., C.M.G., called in; and further Examined.

*Chairman.*

5158. IN the first place you were asked, when you were in the witness chair before, for information upon one or two points, by various Members of the Committee. Would you just shortly state the information you have in answer to those applications?—Yes. In the first place, some Members of the Committee asked for information about foreign countries. I prepared a statement from information that we had in the office, and it was put in by Mr. Preece. On this statement there are one or two questions in regard to Germany. The statement says that the system there is a single wire system, but some of the Members of the Committee questioned it; I have therefore made an application to the German Administration, and they tell me that it is a fact that it is a single wire system throughout Germany. Then I have a correction to make, sir. These words occur in the fourth column opposite "Germany": "It is known that in the case of adjoining towns, such as Hamburg and Altona, the subscribers in the one place have to pay an additional subscription of 7*l.* 10*s.* a year if they wish to speak to those in the other." Well, that statement was due to a mistranslation, and I find that what has to be paid is not 7*l.* 10*s.* a year, but 2*l.* 10*s.* a year; that is to say, if a person living in Altona is a local subscriber, and only wishes to speak to people in Altona he pays 7*l.* 10*s.*; but if he wishes to speak to any one in the neighbouring city of Hamburg (which is practically one with Altona; there is absolutely no division between them; they are quite as much one as Manchester and Salford), he has then to pay the additional sum of 2*l.* 10*s.* a year. Then a question was raised as to wayleaves in Germany, and it was stated that it was not a fact that, in Germany, wayleaves were free. I have got here a translation of the actual words used by the German Administration in answering the question we put to them, and this

*Chairman*—continued.

is a literal translation: "The Railway Administrations, and the Administrations for the Construction of Roads, are under obligation to grant free the use of the ground occupied by railways and streets for laying aërial and underground telegraph lines. A right to use private land in the construction of telegraph lines is not possessed by the Imperial Administration of Posts and Telegraphs."

5159. Would that mean that they have got free wayleaves over the railways and the roads, but not over private property?—That is so; but in the next answer they go on to make a reference to private property. In the answer which I have quoted they have said that they have no rights; but in this next answer they go on to say what the facts are as to payments; and this is the answer: "In those cases in which the use of land not belonging to the State has been unavoidable, the respective owners have almost without exception given their consent without claiming compensation."

5160. That is to say, although there are no strict rights?—As a matter of fact, it is free.

5161. Whereas in this country we have to pay considerably for those wayleaves over private property?—Yes. Then it is stated here in this printed document which has been handed to the Committee, that in France the Commission on the Budget of the current year has reported against a reduction of rates for the present. That I have ascertained from the actual report of the Commission, which is here.

5162. A decision against reduction?—Against any reduction of rates.

Mr. *Snape.*

5163. What Commission was that?—It is the usual Commission appointed every year on the Budget of the year, to report to the French Legislative House whether the estimates that have been presented by the various departments

Mr. *Snape*—continued.

partments of the State ought to be passed or not.

5164. Then it is the Commission de Corps Legislatif?—Of the French Parliament.

*Chairman.*

5165. It is appointed every year to consider the estimates?—Yes. Then against "Germany" it is stated that the Postmaster General has declared in the Imperial German Parliament, in a discussion on the estimates for 1895–96, that it was impossible at present to reduce the rate there. Well, that, again, I have got from an official report of the speech of the Postmaster General of Germany. I mean to say that it is authentic. A question was raised in regard to Italy. The question, I think, was something like this: whether in Rome, where there is competition, the rates were not lower than in Milan, and other places where there was no competition. That is so, sir; but I think it ought to be remarked that under the present law competition is not allowed. The competition in Rome began before the law was passed, and the Italians have passed a law against competition; and that is the reason why there is only one company operating in each town outside Rome.

5166. Was that law passed in consequence of the belief which existed in the Italian Chamber that competition would be detrimental to the telephone service?—I am sorry I cannot answer that question; I can only state the fact that the competition in Rome began before this law was passed, and then the law was passed against competition; and that is why there is not competition in other towns.

Mr. *Tully.*

5167. Have they put any restrictions on the company with regard to the maximum dividend and the maximum charge to the subscriber?—That I am afraid I have not ascertained.

5168. Is not that one of the chief points?—I am afraid that information is not at our disposal; there is one other point, namely, that the larger company in Rome has the higher subscription; the company with 1,750 subscribers charges a subscriber 6*l.* 14*s.* a year; and the company with 600 subscribers charges 5*l.* 10*s.* a year. Then, I think, there have been questions raised as to whether greater facilities are not given in other countries than in this country; with regard to that point I find that in Norway everyone who wishes to telephone a message to a post office for onward transmission as a telegram has to pay an additional sum; either he has to pay or the telephone company has to pay; there is an additional charge; and in Sweden there is the same state of affairs; private telephone companies pay for the right of sending messages by telephone to the telegraph office a yearly subscription fee of 50 crowns for each wire to the telegraph office, and the subscriber pays for each message an additional toll of 10 ore.

*Chairman.*

5169. That is for a service which will be, under the agreement in this country, given free to the subscribers of the National Telephone Company?—Yes. By way of supplement to the statement which has been handed in, I may say that a law has recently been passed in Switzerland (and it will probably come into operation on the 1st of January next year) under which the terms of subscription will be modified, and any person who has 800 conversations in a year, or more, will pay substantially more than he does at present in the first and second years. They recently discovered that there was a deficit on their telegraph account, the telegraph and telephone being combined, and I can only suppose that they have adopted this new method of charge in view of that deficit.

5170. But it is a new basis of charge, which would mean an increased charge to the large users of the telephone?—To every man who speaks 800 times a year, or more.

Mr. *Tully.*

5171. Is not that practically 2½ calls per working day, the 800?—I have got it worked out exactly. This is how the thing works out: Under the old tariff, if a man had 800 conversations in a year, he paid 4*l.* 16*s.* for the first year, 4*l.* for the second year, and 3*l.* 4*s.* per annum afterwards. Under the new tariff he will pay 5*l.* 12*s.* for the first year, 4*l.* 8*s.* for the second year, 3*l.* 4*s.* for the next year and succeeding years; so that at the third year, and afterwards, it is the same as before.

*Chairman.*

5172. But for the first two years substantially a heavier charge?—Yes. Take another example. A man with 1,600 conversations pays under the present tariff 6*l.* 8*s.* for the first year, 5*l.* 12*s.* for the second, and 4*l.* 16*s.* for each succeeding year. Under the new tariff he will pay 7*l.* 4*s.* for the first year, 6*l.* for the second, and 4*l.* 16*s.* for each succeeding year. While these actual increases are taking place, we have the opinion of the Director General of Sweden that the present rates in that country are too low, and we have a recommendation in Norway, of a Committee appointed by the Government, that the rate for Christiania should be raised.

5173. Then the general effect of that is that in European countries there is a tendency to raise rather than diminish the rates charged to subscribers?—That is the point, sir.

Mr. *Tully.*

5174. Are not their rates about one-half the rates here?—In Paris, the rate of 16*l.* a year I should not regard as being lower than the rate in London, considering the service, especially as the subscribers there have to pay for their own telephones.

*Chairman.*

5175. Does that deal with all the points?—There is only one thing more that I think I ought to call special attention to in this statement, and that is that in Austria, Germany, and Hungary, there is a triple charge for urgent conversations,

*Chairman*—continued.

conversations, and as the business conversations are largely urgent, when you ask yourself what the charge in these countries is, you have really to say three times the charge given in this statement.

5176. And the urgent conversations have precedence over the other conversations which are charged for at the lower rate?—That is so.

5177. Therefore the low rate which has been quoted does not mean the immediate connection with the subscriber to whom you want to speak, but you have to wait until the urgent conversations have taken place over junction wires or whatever the wires may be?—That is so.

Mr. *Tully.*

5178. Is not that something on the plan of deferred messages?—It exactly corresponds with them; yes. And with reference to the question the Chairman has just put, the comparison between the proposed charges in this country and the charges in Austria, Germany, Holland, Hungary, and Roumania, is fairly favourable to this country, even without taking into account the triple charge; because I find that within 20 miles the charge here will be 3*d.*, while in Austria and Germany it is 6*d.*, in Holland it is nearly 10*d.*, in Hungary it is 1*s.* 8*d.*, and in Roumania it is 1*s.* 2*d.*; and even if you go up to 40 miles, here it would be 6*d.* against 10*d.* in Austria, a shilling in Germany, nearly 10*d.* in Holland, and so on. Then there were one or two questions asked in reference to an answer of Mr. Forbes. It was asked whether the number of telegrams given in the International statistics for France included messages sent through the pneumatic tubes. The answer is in the affirmative. The Director General has sent me the actual figures for 1894.

*Chairman.*

5179. It was only that one point, I think. It did include what are called "card telegrams"?—Yes; the point is that Mr. Forbes' deduction was sound. I was asked also to get information about the purchase of the telephones in France. I have written to the Director General, but I have not received a reply; I am sorry therefore I cannot present that information. I could give some extracts from newspapers if that was of any use.

5180. No, but I think if you get the information in the course of the next week or 10 days you might add it?—He is extremely courteous and friendly, but he may have some reason for not giving it. I believe the case is scarcely out of the Law Courts yet.

Mr. *Tully.*

5181. Are the telephones in France in the hands of a company or of the Government?—In the hands of the Government; the Government purchased them.

5182. Then it is the Government that charges the rate of 16*l.* in Paris?—That is so. Then I was asked whether I could give any further evidence as to the effect of the telephone on the telegraph, and I have obtained a report from the Postmaster of Liverpool, amongst other officers. If you thought well I could read that.

Mr. *Tully*—continued.

*Chairman.*

5183. If it is in the form of a report perhaps it might be put in, if you just give the effect of it?—It is very short.

5184. Then perhaps you had better read it?—This, I ought to explain, relates to the traffic within the Liverpool district, and within the area to which the Telephone Company will be confined around Liverpool. This is purely local. "It will be seen from the accompanying return that the local traffic increased every year until 1892, when the increase was only 33 over a week in the previous year. Since then the number of local telegrams has rapidly declined. It is known that during the past few years the telephone facilities have been largely developed in the Liverpool area, and the conversations between local renters are believed to be very numerous indeed. The number of local telegraph offices has been increased by 24 since 1886, and in ordinary course this increased accommodation would have developed the traffic. It is therefore obvious that not only the arrested development, but the serious decrease in telegrams is attributable to the rivalry of the Telephone Company. I may add that the National Telephone Company have now nearly 6,000 renters in the present Liverpool telephone district. Such an extension of telephone facilities must not only arrest the normal development of the local telegraphs, but as time goes on those facilities will become more and more appreciated, and the injury to the telegraph local traffic (the most remunerative portion of the telegraph business) must be very grave indeed. I am not aware of any other cause that has hindered the local telegraph service, which, I may remark, has for years had my special attention, and is exceptionally well managed." And these are the figures. The total number of local telegrams during a week in April 1885 was 1,390. The same week was taken every year, the figures running year by year in this way:—first year, 1,390; second year, 2,989; third year, 4,009; fourth year, 4,283; fifth year, 4,358; sixth year, 5,669; seventh year, 5,951; eighth year, 5,984 (that reaches the year 1892, to which the Postmaster refers in his report); next year 5,547, a reduction of 437; then 5,566; and then in the current year, 5,004; they have gone down from 5,984 to 5,004.

5185. Those are three years when there was more serious telephonic competition?—Yes. As regards inter-town telegraph business, he reports as follows: "Since December, 1890, a return has been kept for one week in each of the months of March, June, September, and December, the object of which has been to ascertain the amount of traffic from Liverpool to London, Manchester, Birmingham, and Leeds, and *vice versâ*, telegrams signalled to these towns for 'onward' transmission not being included." What he means

*Chairman*—continued.

means by that is, that it is absolutely the traffic between Liverpool and those towns, and does not in any way include messages that come to London, for instance, for transmission to Brighton or other towns beyond London. I will give shortly what the result is. The messages to and from London have gone down from 29,476 in 1891 (in a week) to 23,728 in 1895. In the case of Manchester they have gone down from 5,122 in the year 1891 to 3,842 in the year 1895. In the case of Leeds they have gone down from 795 to 684. And in the case of Birmingham they have gone down from 1,633 to 1,299. The percentage of decrease is as follows: London, 19; Manchester, 25; Leeds, 14; and Birmingham, 20. Then he goes on to say: "In the case of Belfast, where the telephones have not been competing, there has been an increase of 23 per cent."

5186. Between Liverpool and Belfast?—Yes; that is an example of what might be expected where there was no competition.

5187. Would that correspond roughly to the average development in the country, should you say?—I am sorry I have not worked that out; I think it would. I have similar testimony from Norway, but I do not know whether it is necessary to give it.

5188. What is the result of the evidence?—This is a tabular statement extracted from the report of the Committee appointed by the Government to consider the question whether the telephones in Norway should be transferred to the State, and I can simply put it in. (*The three documents were handed in.*)

5189. Does it show generally the same effect of the telephone upon the telegraph?—Yes, it fully supports from Norwegian experience what the Postmaster of Liverpool says with regard to our experience. I think I have now said something about all the questions on which members of the Committee wished me to give information. I do not remember anything more. I do not know whether you would wish me to say anything about what has been said by some of the witnesses.

5190. There has been some evidence given with regard to the statement made by the witnesses on behalf of the Post Office; have you anything to say upon those, or upon any points dealt with by those witnesses?—I think I should like to remark generally on the very wide divergence between the several estimates that have been given by the witnesses whose statements have been put in. For instance we had an estimate from the engineer of the London County Council of 400,000*l.* for London as compared with an estimate by another gentleman of 76,600*l.* Then we had some evidence given by General Webber with reference to London. I do not know that one need very much criticise the details of his estimate, because in the result he gave an opinion that a subscription of 16*l.* a year for the City of London (if any subscriber wished to communicate with all the other subscribers in the City of London) would not be unreasonable, and I do not think that that is a final result that we need regard as being in any way too low.

*Chairman*—continued.

5191. Did not General Webber go beyond that. I think he admitted that the present charge, which is 17*l.*, was not an unreasonable charge for a service extending over the whole district?—I think he did; and therefore, in regard to his conclusions, I should not say that his estimate of the proper charge to be made to the public was in any way under the mark.

5192. With regard to his small confined districts, you mean?—Yes.

Mr. *Tully.*

5193. Would not he mean connection with 50,000 subscribers under his system, and that they are only connected with 8,000 at present?—He suggested that he had provided in his scheme for 28,000 subscribers within the City of London.

5194. Then the 16*l.* would mean 50,000 subscribers?—He said, I think (I speak subject to correction) that a charge of 16*l.* a year would be reasonable within the City, but if a subscriber wished to speak beyond that a higher charge should be made.

5195. The number of subscribers he referred to was far greater, was it not?—That is so. I think if there were time to examine the details of the estimate it would be found that they were open to criticism. I could mention two salient points which would not take up very much time; the first is, that there is no provision in his plan for junction wires between the exchanges. I have seen the plans, and there is no provision for junction wires between the exchanges. I happen to know why there is no provision for such wires. The Duke of Marlborough saw me several times at the Post Office, and it was his desire that the Post Office should supply the junction wires. Estimates were prepared of the cost of these wires by the late engineer-in-chief, Mr. Graves, and were submitted to the Duke of Marlborough. No actual agreement was arrived at, but they were a subject of friendly conversation, and they appeared to be accepted by him as reasonable estimates. The estimate for junction wires for London generally was 178,000*l.*, and for the City proper the amount was about half that, or 89,000*l.* What I desire to point out is that that capital expenditure is not included in General Webber's estimates.

*Chairman.*

5196. Does that apply to the other estimates that were put in on behalf of the London County Council?—No, it does not.

5197. Only to General Webber's?—That is so. Mr. Binney, for instance, I think, clearly mentions junction wires.

Mr. *Tully.*

5198. General Webber said something about using those pipes that we were told were put in surreptitiously?—His plan provided for the use of those pipes to serve subscribers from the exchanges that he had devised; but those

Mr. *Tully*—continued.

pipes (laid in the trenches of the Electric Lighting Company) did not provide for communication by junction wire between the exchanges, by means of which alone the subscribers on one exchange could get into conversation with people on the other exchanges.

*Chairman.*

5199. As a matter of fact, as the pipes have come up, are they suitable for telephone purposes, telephone wires?— Well, I remember having a very prolonged discussion with our late engineer-in-chief on the subject, and he, after inspecting the pipes, gave it as his very decided opinion that they were not suitable, and he could not recommend the Post Office to take any means to get the use of them for its own purposes; his advice is concurred in by the present engineer-in-chief of the Post Office, Mr. Preece; and I must say that I myself (although I am not an engineer) should not like to take the responsibility of recommending that those conduits should be used. I have seen how they lie, and how difficult of access they would be, lying, as they do, in many cases absolutely under all the conduits of the electric-lighting cables. Of course, my evidence must be taken as that of a layman and not an expert; but I certainly should not like to recommend that they should be used. Then another point, sir, is, that General Webber has assumed that there would be 28,000 subscribers in the City. Well, recently there has been some information obtained by Mr. Salmon (who I think is a member of the Common Council) as to the number of tenancies in the City of London. I think that he obtained this information with reference to the statistics in the Imperial Census. His careful statistics show this: that there are only 27,827 separate tenancies in the City of London. That, I ought to say, excludes the Inner and the Middle Temple; but if they were included (I have not got the exact figure, but I know about what it is) it would only bring up the total number to a little more than 29,000.

Sir *James Fergusson.*

5200. May I ask, does that reckon such rabbit warrens as Mansion House Chambers as one tenement?—I have made particular inquiry by one of my officers, and he is assured that every separate office in such a building is counted as a tenancy.

*Chairman.*

5201. Then, according to that, excluding the Inner and Middle Temple, he assumes a larger number of telephones in the City than there are tenements of the kind you have described?—That is so. I do not make any comment on that.

5202. I do not think it is necessary; I think the Committee can come to a conclusion?—Yes.

5203. What is the population of the City during the day?—The working population of the City is about 300,000.

Mr. *Tully.*

5204. During the busy part of the day?—Yes, the working population during the busy part of the day. I am sorry I cannot give the exact figure; but I know it is a little more than 300,000; that is, the people who are at work in the City during the daytime, including employers and employed.

5205. Would that population be as large as the population of some of the foreign cities that have an immense number of telephones?—I think if the honourable Member will work out the proportion of users of telephones at the present moment to the population of 300,000, he will find that the proportion in London is greater than in many foreign cities.

*Chairman.*

5206. Mr. Berridge gave evidence that it is as you state; about 300,000?—Yes; and I think that if the number of subscribers in the City of London were worked out with reference to that, it would be found that there are more subscribers in proportion in the City of London than there are in many foreign cities. I ought, perhaps, to add that those statistics are supported by an independent count, which has been made by the same gentleman, of the number of employers in the City of London, which almost exactly corresponds.

Mr. *Tully.*

5207. There is no confusion between you and General Webber as to the area that you are speaking about, is there?—I do not think so; I think General Webber spoke clearly of the City of London proper.

5208. He calculated for more telephones than there are offices there to use them?—That is the conclusion.

*Chairman.*

5209. What is the next point under this head?—There has been a point raised to-day about the efficacy of Post Office competition. Well, I may mention one case in which the theory, at any rate, of Post Office competition was brought in with good effect. Some few years ago a community of commercial men in the City of London found that they were not being properly served by the then United Telephone Company; they came to the Post Office, and the Post Office said that, in accordance with the notice which appears every quarter in the Post Office Guide, it would be prepared to supply them with what they wanted if they would make a clear and definite request for it. Well, this assurance enabled them to go to the United Telephone Company, and get exactly what they wanted, and they came to us afterwards, and said they had got what they wanted, and therefore did not propose to trouble the Post Office.

5210. That is to say, under the threat of Post Office competition the United Telephone Company became reasonable, and gave them a service which satisfied them?—That is so.

*Chairman*—continued.

5211. Do you deduce from that that the National Telephone Company under similar circumstances might, under the same kind of pressure from the Post Office, become reasonable if in any case they were proved to be giving an inefficient service?—I think it is a fair deduction?—This is an actual case at any rate; it is not a theory.

5212. That is an actual specific case?—It is. There was one little point raised to-day as to whether municipalities would not be free from all payment for the use of their own streets. Mr. Forbes, I think, in reply said, that of course the municipality would have to pay for wayleave on private property; but there is this further thing that perhaps ought to be said: The Post Office does not pay wayleave for the use of streets or for putting its wires underground. I merely state this as information. The Post Office and the municipality would be in the same position.

Mr. *Tully.*

5213. That is to say, if the Post Office and municipality were competing?—Well, I rather put it as a statement of fact, that the Post Office now does not pay municipalities for the use of the streets.

*Chairman.*

5214. But the Post Office has to pay wayleaves for attachments to private property?—Yes. In going through the points on which I have been asked to give information, I omitted to mention one. I think the honourable Baronet the Member for Glasgow asked whether there was anything further that could be stated with reference to Mr. Raikes' policy. Since he asked that question I have furnished him with an extract from "The Times" giving a report of a speech, and that is all I can find of Mr. Raikes' public utterances. But I do know partly what the views of Mr. Raikes were, and if it were thought necessary I could state them.

5215. Are they borne out by his public statements, or are they different from them?—I think they are only borne out by his acts.

5216. If you can state them shortly, it may be as well?—He was at one time in favour of giving additional licences, and as a matter of fact he did give a licence to the Mutual Telephone Company, but I can state from positive knowledge that he was disappointed with the result. He was especially disappointed when he found that the Mutual Telephone Company changed its character, and had its articles of association altered to permit it to pay a dividend of 10 per cent., and thus (as he thought) ceased to be a mutual company. He was disappointed again when it came to his knowledge that the Mutual Telephone Company had proposed to sell itself to the National Telephone Company; a transaction, I believe, which never came off. In view of the result of his policy in giving this licence to the Mutual Telephone Company, he formed a different opinion. That opinion was that the Post Office should actively compete with the licencees.

Sir *Charles Cameron.*

5217. On that point you say he disapproved of the proposed intention of the Mutual Company to sell itself to the National, and that that did not come off. Do you know why that did not come off?—No; I have no knowledge. I am only speaking as to how Mr. Raikes' views were affected by events as they happened.

5218. Mr. Raikes disapproved of all the amalgamations, did not he?—He did. Finally, I am aware of this: that Mr. Raikes saw reason to abandon his policy of active competition, and my belief is that he formed the opinion that, at a convenient time, the State ought to take over the whole business. That is all the information I can give with reference to Mr. Raikes' views.

*Chairman.*

5219. He made no statement in public with regard to the former portion of that statement?—No, not that I can remember. I found myself unable to give a statement just now of the proportion of users in the City, but I can give it for the whole country. In Great Britain there is one subscriber to the telephone service out of every 520 people; in Germany there is one subscriber out of 600 people; and in France there is one subscriber out of every 1,670 people; which shows that, as regards the greater countries of Europe, Great Britain is fairly in the front.

Sir *Charles Cameron.*

5220. Can you continue that to some of the smaller countries?—I could work it out, but I have not got it. There is another matter to which it seems desirable to call attention, and that is that everywhere competition is giving way to one system; even in Scandinavia the tendency is to have one system.

*Chairman.*

5221. As a matter of fact, there are very few places in Europe where there is competition?—Very few. The statement that has been put in shows that the telephone is in the hands of the State already in the case of France, Germany, Austria, and Belgium, and that it is in process of acquisition in Sweden; that it is wholly in the hands of the State in Switzerland; and that in Norway a committee appointed by the Government has reported in favour of the same thing.

5222. Of the State taking it over?—Yes.

Sir *Charles Cameron.*

5223. When you say there is more or less a tendency to monopoly everywhere, that is State monopoly?—Even where it is not a State monopoly, there is the same tendency to the placing of the undertaking in the hands of one authority. In Italy, for instance, by law only one licence is given in each town.

5224. Is that monopoly confined to any single company?—I am sorry I cannot anwer the honourable Member about that.

*Chairman.*

5225. Then have you any general statement to make with regard to the question of rates in addition

*Chairman*—continued.

addition to what you have said already; I think you have mentioned that there is a tendency against the reduction of rates in foreign countries, and in certain instances in the direction of raising rates?—I think a great deal could be said about that, but, to state it shortly, I should say that the evidence which has been given with regard to low rates in foreign countries does not appear to be applicable to our case, because the circumstances are different; and that the evidence which has been given with regard to low rates in this country is the evidence of persons who have merely made estimates and have had no practical experience of the administration of the telephone. Not one of the gentlemen who has given an estimate has had six months' experience of practical administration; that is, administration taking into view every possible item of expense, not merely engineering expense, but the whole expense of management. In that view, and also seeing that we cannot entirely shut out the question that the State may have to take over the telephones in this country some day, I should say that prudence would point to considerable caution in regard to any general reduction of rates, or any policy which would bring about a reduction of rates. As a servant of the public, I certainly should not like to have a part in the taking over of a depreciated business, on which there might be a risk of loss to the general taxpayer. I say that prudence would point to the rates being maintained at a fair point, which would afford a certainty of profit, and while I should hope that some day, if the telephones did come into the hands of the State, it would be possible to reduce the rates, I should, as an administrator, like to proceed upon the ground of actual experience, and not on the ground of mere estimate.

5226. I think you have mentioned that in Sweden the Director General of Telegraphs had come to the conclusion that the rates had been lowered too much?—Yes; and an honourable Member, who, I am sorry to see, is not here asked whether that was not tainted evidence, because it was the evidence of a telegraph director; but in reply to that I think one might say it was the evidence of a man who was endeavouring to take the telephone business over, and therefore whose interest it was to put the best complexion upon the matter, and if he, in view of the public in Sweden, could actually declare that he proposed to raise rates, I should say that evidence from such a man was very strong indeed, considering that he was under the strong light of criticism of the public of Sweden, who must, of course, be watching the whole of his proceedings; and the same thing applies, I think, to the committee appointed by the Government in Norway: they also propose to increase the rates, and yet they are proposing what they regard as a popular measure for the taking over of the telephones by the State. If, in view of their desire that they should be taken over, and of their desire to make a good case for the transfer, they can nevertheless boldly declare that the rates ought to be raised, I should call that rather strong evidence.

*Chairman*—continued.

5227. There is one question I want to ask you with reference to estimates. You heard the evidence given by Mr. Preece with regard to the cost of laying down a system in London; do you concur in the estimate Mr. Preece produced?—Yes.

5228. And was that estimate the result of practical experience of the officers of the Department in actual work of a corresponding kind carried out by them?—That is so.

5229. And you say that an estimate of that kind is far more reliable than the estimate given by a gentleman of possibly some experience, but not of practical experience in carrying out work of the sort?—That is so, sir. I may perhaps say here that where General Webber's estimates were on the same lines exactly as the estimates of the Department, they agreed. For instance, he said that the cost of a light line in the country with poles and one wire was about 30*l.* a mile. There is nothing cheap in that; that is simply the ordinary estimate we should give of a light line of telegraph. I do not know that I have anything more to say. If there was more time I could say more, but I do not think it is necessary.

5230. You have dealt with the principal points that have arisen in the course of the inquiry?—I think so.

Sir *Charles Cameron.*

5231. You mentioned in one case the potentiality of the Post Office competition which had induced the United Company to grant facilities that were desired by a certain number of subscribers?—Yes.

5232. Do you recollect the Association of Telephone Users applying to you, or what afterwards became the Association of Telephone Users; I am not quite certain whether they had then been formed into a registered association; do you remember them waiting upon you after the time of the limited company?—Yes.

5233. It must have been in the time of the National Company?—Yes.

5234. They asked for an improved service?—Yes, I remember.

5235. The answer then was, or at all events, the potentiality of Post Office competition did not eventuate in anything else?—Speaking from memory, I think that those gentlemen got an answer very much like the answer that the other people had got; they were pointed to the notice which appears every quarter in the Post Office Guide.

5236. But, at all events, the step that they did take was to get a number of subscriptions to the New Telephone Company, and by the potentiality of external competition to achieve, if not everything they desired, at all events (we have been told) a considerable step in that direction?—Yes; I think after they saw us they came into communication with the Duke of Marlborough, and I can only suppose that they thought that the Duke of Marlborough might be able to do more for them than the Post Office. That is a matter

Sir *Charles Cameron*—continued.

matter of conjecture, of course; I can only suppose that that was their conclusion.

5237. If they had given you a certain number of subscribers, you would have started the exchange?—I think we should have been bound to do it.

5238. Have you a minimum number?—No.

5239. You judge every case on its own merits?—Quite so.

5240. Would 950 out of 3,450 dissatisfied subscribers be a sufficient inducement to the Post Office to start competition?—I think the honourable Baronet must kindly pardon my not answering that, because I am not here in the quality ——

5241. Of an administrator. I quite understand that, but I wished to know whether there was any rule you could express?—No, there is no rule; every case would be carefully considered by the Postmaster General on its merits.

5242. You told us about the danger of too low telephone rates, but assuming that the telephone in this country could be developed to the extent in our big towns, which is to be found in the big towns on the continent, such as Berlin, and so on; and assuming that it could be developed in the country, where it is absolutely undeveloped to the extent that it is found developed in some of the smaller countries, the potential business taken over by the Post Office would be to a very large extent undeveloped, and would it not be a very great feeder, or might it not be used as a very great feeder, to the telegraph service?—I think the telephone service is always, to a certain extent, a feeder, but in the general result it is a competitor.

5243. Yes; but it would be in the hands of the Post Office. Do not you consider that every post office that is established, even if it is successful, attracts a big current of letters from all parts, and greatly stimulates the postal work?—I have no doubt it does.

5244. I know that it has been the opinion of many eminent postal authorities that the telegraph was a feeder to the postal service, that it induced more letters?—That was Mr. Scudamore's opinion; but I do not think that if Mr. Scudamore were here, he would admit the same thing with regard to the telephone.

5245. It is stated, I know, that in many continental countries it is regarded as a handmaid to the telegraph, and if facilities are given for the interchange of telephone messages with the telegraph system, and the one plays into the other's hands, that proves a valuable feeder for the State. You do not hold that view?—I am quite prepared to say that, whatever the facts are, I should hold, and I think the Post Office would always hold, that the public ought to have the facility of the telephone whether it affects another facility or not. Any facility demanded by the public ought to be given, whether it has an adverse influence on the provision of some other facility or not.

5246. Telephones are telegraphs; we start from that proposition?—Yes.

5247. You are aware that in many countries where the State has the telegraph, there is co-operation with public authorities; for instance, in many countries you have got a system of

Sir *Charles Cameron*—continued.

parochial telephones where a wire is run in from a village to the trunk line at a certain expense on the part of the village, and is taken over by the State as soon as it pays. Do you know that?—We have a somewhat similar system in this country with regard to telegraphs.

5248. You have a guarantee system with regard to telegraphs?—Yes.

5249. But you are aware of that system. I could name a number of countries, France, Switzerland, and half-a-dozen other countries?—I think in France the localities contribute to the first cost.

5250. And that, in certain countries, such as Switzerland and Norway, has given rise to a very wide network of rural telephones?—Yes; I do not see in the least why that should not take place in this country.

5251. There has never been any attempt under the present system, where licences are so difficult to get, to bring about that system; you think it should be in the hands of the Post Office?—I think so, yes.

5252. I am entirely with you about the entire system being in the hands of the Post Office, but the Post Office has not made a movement to cover this territory that, so far as the telephones are concerned, has never been invaded?—The Post Office is every day extending the telephone into rural districts for telegraph purposes, and I see no reason why those telegraph lines should not be used for telephonic communication.

5253. In the hands of the Post Office, you could work the telephones and the telegraphs to a certain extent together, along the same wires, as was explained by the Postmaster General of New Zealand?—That is so. I think I ought to remark that here, where we have telegraph wires worked by the powerful currents necessary to operate the Wheatstone automatic instrument, it would be a somewhat difficult matter to work single telephone wires on the same poles; it would be impossible.

5254. You have found fault with Major General Webber's estimate, and other people's estimates, and so on, and I have no doubt you have very properly expressed your own view (the Post Office view) that those things would not pay?—Pardon me; I do not quarrel with the general's conclusion; at least, I do not quarrel with it in this sense: I do not think the estimated charge of 16*l.* in the City of London is low.

5255. At all events, you do not agree with many of his figures?—That is so.

5256. But from the broad point of public policy, is it not an advantage, for instance, to the public of Manchester, if the Manchester Ship Canal is made, whether it pays or not; or if an extra railway communication is opened up with any portion of the kingdom, whether it pays or not; the paying is a matter for the shareholders, is it not?—Well, I am afraid I do not agree with the honourable Member; I think that when money is wasted the nation must feel it in some form. I do not believe that any money can be wasted without the nation feeling it.

5257. Well, the nation must feel a good deal, then. At all events, any argument on that point would strike at the whole root of competition in everything;

Sir *Charles Cameron*—continued.

everything; railways, ships, trades, and everything else, would it not; you have certain men undercutting and ruining themselves, but still competition goes on?—Yes; but I think this is a different case. This business is distinctly declared by Parliament to be a monopoly, and has been conferred on the Postmaster General, and therefore I think that a very serious responsibility would rest on the Postmaster General in dealing with it, because he has to give an account of his stewardship some day.

5258. I should be very sorry that the Postmaster General should do a foolish thing?—No, but that is of the essence of the whole thing. If the Postmaster General encourages a policy under which the thing could not possibly pay, and there must be a great loss, that whole thing has to come back on his hands some day as a bad bargain.

5259. If a company or individuals persuade him that for 500,000*l.* he can do as much under improved methods as has been done for a million of pounds, and if he is allowed to do so, at the end of the time, would not the Postmaster General find himself with a choice of two systems, the best of which, or the cheapest of which, only he need acquire?—I do not agree with the honourable Member; I do not think he would find himself with the choice.

5260. At the present moment, supposing the 16 years were at an end, what would be the position of the Post Office; it would either have to buy up the single system that had occupied the field, or to prolong the time, would it not?—No, certainly not to prolong the time.

5261. Or to enter into competition beforehand?—No, not necessarily. Of course, I do not know what may happen at that time, but I should say the reasonable thing to happen would be this: that at a given date, which would give the Post Office sufficient time to supply a system of its own in the event of the negotiations falling through, the Post Office would approach the National Telephone Company and say, "What is your price for your plant?" It would ascertain by examination whether it was in a fair condition; and if the National Telephone Company were reasonable, the Post Office would pay a reasonable price, and in my opinion would be supported by public opinion in doing it. If, on the other hand, the National Telephone Company, feeling secure, and thinking the Post Office could not supply itself in any other way, held out for unreasonable terms, the Post Office would immediately proceed to supply itself with another system, and as soon as the licence expired would be able to bring it into operation.

*Chairman.*

5262. Or before?—Or before, if necessary.

5263. If the company was unreasonable?—Yes.

Sir *Charles Cameron.*

5264. That policy very considerably curtails the life of the Telephone Company in the event of a Postmaster, or of a Government, who might wish to acquire the telephone system, being in office?—It does not curtail it beyond the limit of the present licence now held by the company.

Sir *Charles Cameron*—continued.

Mr. *Tully.*

5265. I do not clearly understand this matter of the loss that the telephones have been to the telegraph service. Since you made your first statement here, there have been various explanations offered, and I should be obliged if you would make it clear how the telephone service affects the telegraph service?—Well, it is a very difficult matter to explain, and it is impossible to supply the honourable Member with exact figures; the accounts of the Post Office are not kept in such a way as to show what is due to each branch of the service in the way of expenditure. But what we are convinced of is this: that the telephone is more and more taking away the short-distance and direct traffic of the telegraphs, and leaving more and more to the telegraph service the long-distance and indirect telegraphing, which is the more expensive; therefore, what we are losing is the more profitable part of the business, and what we are getting by the increase that actually does take place is an increase in the less profitable part of our business; and we think that details such as were given in the report from the Postmaster of Liverpool, which I read to the Committee, support that view.

5266. The deficiency you stated up to the 31st March 1895 on the telegraph service was 140,000*l.*; how much of that would you say, roughly, is due to the competition of the telephone system?—I should like to be excused from saying that, because I really cannot tell.

5267. Would you say three-fourths, one-half, or one-fourth?—I am sorry I must say that I do not know; we know from the reports we have got from our practical officers that this easy part of our business is going away from us, and that the more difficult part of our business is slowly increasing.

5268. Supposing the telegraph service is losing very largely through the competition of the telephone system, do you think it would be good business for the Post Office to take over the telephone system?—Certainly.

5269. And you think that by stopping this loss, and taking over the telephone system, the revenue of the Post Office would resume its normal figures?—I think it might be made to do so; I think it would be more completely under control and treated then as one servcie.

5270. If this loss continued on the telegraph service, it would be really cheaper for the Post Office to take over the telephone system than to have this loss continuing and getting more and more in succeeding years?—Well, that depends on the price. If we could get it at a reasonable price, I should quite agree with the honourable Member.

5271. What would you say would be a reasonable price?—I think that is a matter that the honourable Member would have to leave to negotiation.

5272. You would not like to arrive at that basis by having competition, or a threat of competition, with the Telephone Company?—I think that would increase the difficulty and also the

Mr. *Tully*—continued.

the price, and it would do more than that; I think it would depreciate the business.

5273. It would depreciate the business of the Telephone Company?—Yes; and therefore the business which we should take over.

5274. Would not that be a means of arriving at a reasonable price?—I do not think so.

5275. So you cannot suggest what would be the best means of arriving at a reasonable price?—I should not like to do so in public; I should like to do that in personal negotiation.

5276. Then what you would say upon this will offer some guide in the matter?—I should not like to commit myself. I need not say to the honourable Member that I should try to get it for less than it was worth; and Mr. Forbes would hope to sell it for a good deal more than it was worth.

5277. We have got the idea that by competition you would get it at a reasonable price; you say the competition is not a thing that should be encouraged?—Yes, I feel that.

5278. If we have not then the remedy of competition, what remedy have we?—You have the possibility of competition, which is always a very strong thing, I think.

5279. That brings us back to the point from which we started?—No, I do not think so; I think there is a wide difference between competition and the possibility of it. I think we have proved by actual experience that the possibility of competition has produced certain good results, and, if it were necessary, that possibility, I think, would produce good results again.

5280. Yes, but we have so much evidence (the Post Office officials have given us so much evidence) to show that competition is a thing that should not be encouraged?—In the interest of the subscribers?

5281. In the interest of the public?—In the interest of the subscribers, it would certainly be inconvenient, and in the long run dear.

5282. And in the interest of the public, we have been told that competition is also a thing which is undesirable?—I think so, because it would lead to an enhancement in the price to be paid and to a depreciation of the business to be bought.

5283. Does not that come back to the same point, that there is really no remedy as against this company when competition ceases to be a

Mr. *Tully*—continued.

remedy?—I am afraid I cannot give any other answer than I have given.

5284. I think it was stated by Mr. Forbes, that the people who use the telephone system can have a hundred words at the rate of a half-penny per hundred words?—I think that was stated; I do not remember.

5285. And 100 words on the telegraph system would be 4*s.* 2*d.*?—Yes, it would be much dearer.

5286. If the telephone system became more developed, would not the rate of carrying messages for the public be a great deal cheaper?—That is by telephone, you mean?

5287. Yes?—The more the telephone is developed, the more a cheap instrument is placed at the disposal of the public, no doubt.

5288. In the case of press messages, for instance, would there be an advantage that the telephone should be developed more than it is?—I think for urgent press messages, in regard to which it was desired to secure great speed, the telephone would afford a means of meeting that demand of the press; but I doubt whether the telephone would provide such a service as the press now enjoy, under which a message is transmitted to hundreds of subscribers throughout the country, at what is practically little more than 2*d.* per 100 words, or 75 words, as the case may be; because, of course, that telephoning to which the honourable Member now refers would not be the mere telephoning through an exchange, but it would be the telephoning over trunk wires, and in that case, Mr. Forbes's estimate of the low price would not apply.

5289. If this telephone company manage to give a good service, and a cheap service, do not you think they will capture a great deal more of your telegraph business?—I think they will.

5290. And the continuous loss to the Post Office will increase every year, will it not?—That is so, and that is the reason why it is proposed to enter into this agreement, under which the Post Office is to do all the trunk wire business.

5291. Do not you think it would be accordingly more prudent that the Post Office should proceed as soon as practicable to take over the whole business?—That is not a question for me to answer, I think.

# APPENDIX.

## APPENDIX, No. 1.

PAPER handed in by Mr. *W. H. Preece*, C.B., F.R.S., 3 May 1895.

### THE TELEPHONE SERVICE IN

| COUNTRY. (1.) | Whether in Hands of Public Bodies or Private Companies. (2.) | System. (Single or Double Wires.) (3.) | Area. (4.) | Number of Subscribers. (5.) |
|---|---|---|---|---|
| AUSTRIA | In the hands of the State. (The purchase of the system in Vienna was completed in January last.) | Single wire. (If a double wire is erected for use in connection with trunk wires, the contribution towards cost of construction is increased by one-half.) | Not known | Vienna, about 8,500 |
| BELGIUM | All exchange systems (with the exception of those in three unimportant places) are in the hands of the State. The three in question will shortly be acquired. | Some wholly double and some wholly single. For converting a single wire into a metallic circuit the single wire rate is increased 50 per cent., but the additional charge must not exceed 4*l.* a year. | Not known | Brussels, more than 2,000<br>Antwerp, more than 1,500 |
| FRANCE | In the hands of the State since September 1889. | Double | Not known | Paris, more than 14,000 |
| GERMANY | Always in the hands of the State. | Single | Not known. (But it is known that in the case of adjoining towns, such as Hamburg and Altona, the subscribers in the one place have to pay an additional subscription of 7*l.* 10*s.* a year if they wish to speak to those in the other.) | Berlin, about 23,000<br>Dresden, about 3,000<br>Frankfort, about 3,000<br>Hamburg, about 9,000 |
| HUNGARY | With the exception of seven small exchanges in the hands of private individuals, the whole system is owned by the State. | Both single and double | Not known | Buda-Pest, about 2,800 |

## APPENDIX, No. 1.

PAPER handed in by Mr. *W. H. Preece*, C.B., F.R.S., 3 May 1895.

## CERTAIN FOREIGN COUNTRIES.

| Terms of Subscription. (Per Annum.) (6.) | | | | Statistics of Capital and Profit. (7.) | Trunk-wire Charges. (8.) |
|---|---|---|---|---|---|
| — | Less than 3 Kilometres. | 3 Kilometres (not quite 2 Miles). | 5 Kilometres (about 3 Miles). | Not known | Up to 50 kilometres (31 miles), 30 kreutzers (6*d.*).<br>From 50 to 100 kilometres (62 miles), 50 kreutzers (10*d.*).<br>From 100 to 150 kilometres (93 miles), 80 kreutzers (1*s.* 4*d.*).<br>Over 150 kilometres (93 miles), 1 gulden (1*s.* 8*d.*).<br>Between Vienna and Trieste, 1 gulden 50 kreutzer (2*s.* 6*d.*).<br>A triple charge is levied for urgent conversations. |
| | £. | £. | £. | | |
| Vienna - | 8 | 10 | 14 | | |
| Other places, annual subscription of 4*l.*, with contribution towards cost of construction. | | | | | |
| — | | Radius of 3 Kilometres (not quite 2 Miles). | Radius of 5 Kilometres (about 3 Miles). | Not known | 1 franc (10*d.*), to any part of the country. |
| | | £. | £. *s.* | | |
| Brussels and Antwerp - | | 10 | 14 – | | |
| Louvain - - - | | 5 | 7 10 | | |
| Underground Lines : | | | £. | Not known | 50 centimes (5*d.*) per 100 kilometres (62 miles). |
| In Paris - - - - - | | | 16 | | |
| In the Provinces - - - | | | 12 | | |
| Aerial lines, 8*l.* Subscribers using aerial lines also pay a contribution towards cost of first establishment. In all cases the subscribers provide telephones at their own cost. (The Commission on the Budget of 1895 has reported against any reductions in the charge for the present.) | | | | | |
| Within 5 kilometres (about 3 miles), 7*l.* 10*s.* On the 11th ultimo, in a debate in the Imperial German Parliament on the estimates for 1895–96, the Postmaster General declared that it was impossible at present to reduce this rate. | | | | Not known | Up to 30 kilometres (20 miles), 50 pfennigs (6*d.*).<br>Beyond 30 kilometres (20 miles), 1 mark (1*s.*).<br>A triple charge is levied for urgent conversations. |
| | | | £. | | |
| Buda-Pest - - - - - | | | 12 | Not known | 1 florin (1*s.* 8*d.*). |
| Other places - - - - - | | | 5 | | 3 florins (5*s.*) for an urgent conversation. |

THE TELEPHONE SERVICE IN

| COUNTRY. (1.) | Whether in Hands of Public Bodies or Private Companies. (2.) | System. (Single or Double Wires.) (3.) | Area. (4.) | Number of Subscribers. (5.) |
|---|---|---|---|---|
| ITALY | Private Companies | Single | Not known | Rome, about 1,800 one company.<br>Rome, about 600 the other company.<br>Milan, about 1,200 |
| NORWAY | Mainly private companies. A Committee appointed by the Government has recently reported in favour of State acquisition. | There are only a few double wires. | Not known | Up to 1885 there were two companies in Christiania, the International Bell Company, and the Société des Téléphones. The former had 995, and the latter 634 subscribers, while 230 belonged to both systems. Owing to the inconvenience of competition, the Municipality induced the two companies to amalgamate, and in 1892 the number of subscribers to the joint system was 3,287. |
| SWEDEN | Except within the district around Stockholm, the telephone system is wholly in the hands of the State; and even in that district the State has a competitive system. | Both. (In the Stockholm system the wires are double). | Stockholm. The company's system has a radius of 70 kilometres (43 miles.) The Director General of Telegraphs, Sweden, recently stated that he considered the large area at Stockholm unsatisfactory. | Stockholm (within radius of 70 kilometres):<br>Company, about 11,000<br>State 3,500<br>14,500 |
| SWITZERLAND | The State | Single, except in a few cases. | Not known | Geneva, about 2,500<br>Berne, about 1,000<br>Basel, about 2,000 |
| UNITED STATES | Private Companies | Both | Not known | Boston 6,488<br>Chicago 10,848<br>New York 10,396<br>Philadelphia 4,153<br>San Francisco 5,061<br>Washington 1,845 |

This Return has been prepared from the information in the hands of the Department. Part of the information was obtained some time ago, and the Return must, therefore, be regarded as subject to correction.

General Post Office, London,
April 1895.

CERTAIN FOREIGN COUNTRIES—*continued.*

| Terms of Subscription. (Per Annum.) (6.) | Statistics of Capital and Profit. (7.) | Trunk-wire Charges. (8.) |
|---|---|---|
| Rome, larger system, 6*l.* 14*s.* for 3 kilometres, and 9*l.* for 5 kilometres.<br>Smaller system, 5*l.* 10*s.* | Not known. | — |
| Christiania: Previous to amalgamation, Société des Téléphones, 2*l.* 4*s.*, subscriber paying for telephones and construction of line. International Bell Company, 2*l.* 15*s.* Amalgamated Company, 4*l.* 8*s.*, within 1½ kilometres of central station. Beyond that distance a higher charge is made. (The Committee referred to in Column 2 of this Return, has recommended that the rate of subscription for Christiania should be fixed at 5*l.* 10*s.*). | In 1893 the British Consul General reported that the Capital of the Christiania Telephone Company was about 83,333*l.*, and that a dividend at the rate of 5 per cent. was paid. (*See* Report No. 290 of 1893 on Telephone Systems of Norway and Sweden). | Between Christiania and its suburbs, 20 to 30 centimes (2*d.* to 3*d.*).<br>Between Christiania and Gjoewik, 30 centimes (3*d.*).<br>Between Christiania and Drammen, Moss, Droebak, Holnefoss, 62½ centimes (6½*d.*). |
| Stockholm (within radius of 4½ kilometres):<br>Company, 4*l.* 8*s.* to 5*l.* 10*s.*<br>State, 4*l.* 8*s.*<br>With contribution towards cost of construction in both cases. | Not known - - - | Up to 100 kilometres (62 miles), 18¾ centimes (2*d.*).<br>Up to 250 kilometres (155 miles), 37½ centimes (4*d.*).<br>Up to 600 kilometres (372 miles), 62½ centimes (6½*d.*).<br>Up to 900 kilometres (559 miles) (10*d.*).<br>Beyond 900 kilometres, 1 franc 25 centimes (1*s.* 0½*d.*). |
| The charge within a radius of 2 kilometres (1·2 miles) is 120 francs (4*l.* 16*s.*) for the first year, 100 francs (4*l.*) for the second year, and 80 francs (3*l.* 4*s.*) for the following years. For every additional 100 metres (328 feet) a charge of 3 francs (2*s.* 6*d.*) is made. For every 100 conversations (or part of 100) in excess of 800, a further charge of 5 francs (4*s.* 2*d.*) is made. | Not known - - - | Up to 50 kilometres (31 miles), 30 centimes (3*d.*).<br>From 50 to 100 kilometres (62 miles), 50 centimes (5*d.*).<br>Over 100 kilometres (62 miles), 75 centimes (7½*d.*). |
| | Not known - - - | Between New York and Chicago, 9 dollars (1*l.* 17*s.* 6*d.*). |

## APPENDIX, No. 2.

PAPER handed in by Mr. *W. H. Preece*, F.R.S., 7 May 1895.

## CITY POPULATION COMPARED WITH CITY SUBSCRIBERS.

COMPARATIVE STATEMENT, 1 January 1895.

| | Population. | Subscribers in Exchange. | Average Number of Inhabitants to each Subscriber. |
|---|---|---|---|
| New York | 1,515,301 | 10,396 | 145·7 |
| Chicago | 1,099,850 | 10,848 | 101·3 |
| Philadelphia | 1,046,964 | 4,153 | 252·1 |
| Brooklyn | 806,343 | 4,652 | 173·3 |
| St. Louis | 451,770 | 3,972 | 113·7 |
| Boston | 448,477 | * 6,488 | 69·1 |
| Baltimore | 434,439 | 2,550 | 170·4 |
| Cincinnati and Covington | 334,279 | 4,095 | 81·6 |
| San Francisco | 298,997 | 5,061 | 59·0 |
| Cleveland | 261,353 | 3,453 | 75·6 |
| Buffalo | 255,664 | 2,652 | 96·4 |
| New Orleans | 242,039 | 1,620 | 149·4 |
| Pittsburgh | 238,617 | 3,487 | 68·4 |
| Washington | 230,392 | 1,845 | 120·7 |
| Detroit | 205,876 | 4,277 | 48·1 |
| Milwaukee | 204,468 | 2,457 | 83·2 |
| Newark | 181,830 | 1,161 | 156·6 |
| Minneapolis | 164,738 | 2,148 | 76·6 |
| Jersey City | 163,003 | 758 | 215·0 |
| Louisville | 161,129 | 2,497 | 64·5 |
| Kansas City | 157,984 | 2,702 | 58·4 |
| Omaha | 140,452 | 1,775 | 79·1 |
| St. Paul, Branch of Minneapolis | 133,156 | 1,505 | 88·4 |
| Providence | 132,146 | 2,979 | 44·3 |

* Does not include express subscribers; with those there are 64 inhabitants to each subscriber in Boston.

## APPENDIX, No. 3.

PAPER handed in by Mr. *Lamb*, 28 May 1895.

STATEMENT showing the Number of TELEGRAMS passing within the proposed Liverpool Telephone Area during a Week in April.

| YEAR. | Telegrams passing between Offices in | | | TOTALS. |
|---|---|---|---|---|
| | Liverpool District (including Liverpool Head, District, Branch, and Sub-offices). | Liverpool District and Birkenhead District. | Birkenhead District (including Birkenhead Head, Branch, and Sub-offices). | |

## EFFECT OF TELEPHONE ON TELEGRAPH.

### LIVERPOOL.

EXTRACT from Report of Postmaster as to Effect of Telephone Competition on Inter-town Telegraph Business.

Since December 1890 a return has been kept for one week in each of the months of March, June, September, and December, the object of which has been to ascertain the amount of traffic from Liverpool to London, Manchester, Birmingham, and Leeds, and *vice versâ*, telegrams signalled to these towns for "onward" transmission not being included. The result is as follows:—

| One Week in March. | Number of Telegrams. | | | |
|---|---|---|---|---|
| | London. | Manchester. | Leeds. | Birmingham. |
| 1891 | 29,476 | 5,122 | 795 | 1,633 |
| 1892 | 25,555 | 4,387 | *843 | 1,487 |
| 1893 | 24,302 | *4,586 | 813 | 1,455 |
| 1894 | 23,217 | 4,286 | 778 | 1,348 |
| 1895 | *23,728 | 3,842 | 684 | 1,299 |

It will be seen that, except in the few cases marked *, the whole return shows a continuous decrease, the percentages of the reduction between March 1891 and March 1895 being:—

| | London. | Manchester. | Leeds. | Birmingham. |
|---|---|---|---|---|
| Percentage of decrease in four years | 19 | 25 | 14 | 20 |

The general conclusion is, I think, indisputable, that the competition of the telephones has produced a decrease in the number of telegrams, where heretofore I had been accustomed to look for a regular and steady increase, although to some extent the depression in trade may have interfered with the continuous development.

In the case of Belfast, where the telephones have not been competing, there has been an increase of 23 per cent. In the case of other towns in which telephones have for some time been in full working, the decrease generally has been 20 per cent.

INFLUENCE ON TELEGRAPHS IN NORWAY.

| | Number of Telegrams. | | | | | Telephone Line established. | Decrease in 1892, as compared with Year previous to establishment of Telephone Line. |

## APPENDIX, No. 4.

PAPER handed in by Mr. *W. H. Dickinson*, 26 April 1895.

## LONDON COUNTY COUNCIL.

SUMMARY of the Engineer's Report to the Highways Committee on Cost of Telephone Service for London (1895).

THE question of establishing an independent municipal telephone service in London has been under consideration for some time, and estimates have been prepared of the capital cost of establishing a system, and also of the annual expenditure necessary to maintain and work it.

The actual capital expenditure which it is estimated will have to be incurred by the Council in providing the necessary equipments for 10,000 subscribers, including exchanges and their fittings, wiring and instruments, and junction wires between the exchanges, is about 360,000*l*., or to allow for special contingencies, this has been taken at 400,000*l*.

This estimate is for overhead communication, excepting the junction wires between the exchanges, which would be laid underground, and also certain portions of the main routes, where the lines for a large number of the subscribers could be carried together for some distance, which would also be laid underground.

A complete metallic circuit, and instruments of the most approved description, have been estimated for.

It has been assumed that with a number of exchanges, varying between 12 and 20 (the exact number cannot be fixed until the details of the scheme are laid down, and the actual route selected), the largest exchanges being fitted for from 2,000 to 3,000 subscribers, the smallest probably for about 100, the exchanges would provide for a total number of subscribers in excess of the 10,000 alluded to, as it is assumed that with a cheapened and improved service the number would considerably increase.

The Council would probably use for the purpose of exchanges some of its fire brigade stations, several of which are conveniently situated, and this would have the result of reducing the cost of establishing the work as well as of assisting the communication of information as to fires to the various fire brigade stations.

The average distance of each subscriber from an exchange has been assumed for the purpose of this estimate at half a mile. This is a good deal more than sufficient for the central portion of the area, but in the outlying districts the average distance might be somewhat greater, although there the cost of the work would probably be somewhat less.

The cost of working and maintenance has been estimated at a sum not exceeding 90,000*l*. per annum, including a very liberal amount for contingencies, and this estimate provides for a very much higher rate of wages for the operators and clerks employed than that which it is believed is now paid by the Telephone Company.

It also includes interest on and redemption of capital. The capital outlay would, as is usual in such cases, be provided by raising money by loan for a term of 25 years, and the annual expenditure of 90,000*l*. includes 23,000*l*. under this head.

It would be possible to carry the lines underground to a greater extent than has been estimated for, but this, of course, would be at an increase of first cost, although no doubt reducing the cost of maintenance.

If the rate of maintenance of wires inserted in the agreement between the Post Office and the Telephone Company of 30*s*. per mile for overhead wires be taken, the annual expenditure would be reduced by about 5,000*l*.

The estimated wayleaves rental is somewhat uncertain. It is taken at 10*s*. per subscriber per annum, but it must be borne in mind that each subscriber provides one support for wires free of charge, for it would be a condition of supply, as it is with the Telephone Company, that each subscriber should do so, and this gives a very large number of supports free of rental.

Fifteen per centum has been added for supervision and establishment charges, including rent and insurance. This is probably amply sufficient, and a further 15 per cent. on the total has been added to cover contingencies.

The Post Office royalty has not been included, except so far as it may be covered by the contingencies. If this be insufficient to meet it and other charges, it will, of course, have to be added to the rent charged to subscribers, but it will be seen from the details that a general rental of 10*l*. should be quite sufficient to leave a balance on the right side.

The practice of the Telephone Company of charging a higher rate for lines more than a mile in length, *i.e.*, subscribers more than a mile distant from an exchange, would probably be adopted.

In estimating the length of subscribers' lines it must not be forgotten that in the City and other central parts many subscribers are practically under one roof, and this largely reduces the length of out-door lines, and enables a large number of lines to be run at the same time, thus reducing the cost.

---

*Note.*—It should be stated that the following estimates have been taken out at very full figures, the intention being not to show the lowest amount for which the work can be done, but to give a safe figure to cover all possible contingencies. Full prices have been put down for each item, and in addition to this, it will be seen there is a large allowance for contingencies, which would probably not be required, and in both estimates the rates of wages have been taken at a figure much above that paid by the Telephone Company; indeed, in the maintenance estimate operators' wages have been estimated at rates from 50 per cent. to 100 per cent. above those believed to be paid by the Telephone Company. There is practically no doubt that the work could be done at rates which would allow of an all round charge of 8*l*. per annum to each subscriber.

The City is supposed to be included.

## Capital Estimate per Subscriber.

(Average Distance from Exchange, Half a Mile.)

| | £. |
|---|---|
| Wire, cable, poles, &c., and fixing | 16 |
| Subscriber's instrument, house wires, and fixing | 5 |
| Proportion of exchange trunks, say | 5 |
| | 26 |
| Contingencies, say | 4 |
| | 30 |
| Exchanges complete, including contingencies, say | 6 |
| Total Expenditure per Subscriber | £ 36 |

or, for 10,000 subscribers, 10,000 × 36 = 360,000*l.*, say 400,000*l.*

## Maintenance Estimate.

10,000 Subscribers (8 +), say 14 Exchanges.

| | £. | £. |
|---|---|---|
| Interest on and redemption of capital | | 23,000 |
| Maintenance of subscribers' wires, at 2*l.* per mile = 2*l.* per subscriber per annum | 20,000 | |
| Maintenance of instruments and exchange trunks | 4,000 | |
| Operators, at 25*s.* per subscriber per annum | 12,500 | |
| Clerks in charge and assistants | 3,000 | |
| Say | | 40,000 |
| Wayleave rentals, at 10*s.* per subscriber per annum | | 5,000 |
| | | 68,000 |
| Supervision and establishment charges, rent, and insurance, say 15 per cent., say | | 10,000 |
| | | 78,000 |
| Contingencies, 15 per cent., say | | 12,000 |
| | | £ 90,000 |

*Alexander R. Binnie*,
Chief Engineer.

## APPENDIX, No. 5.

### PAPER handed in by Mr. *W. H. Dickinson*, 26 April 1895.

**REPORT on and ESTIMATE for supplying the Administrative County of London with a complete Telephonic System for 10,000 Subscribers.**

**ESTIMATE for supplying London with a complete Telephonic System for 10,000 Subscribers.**

110, Cannon-street, London, E.C., 2 April 1895.

HAVING very carefully gone into the whole question of establishing a Telephonic Exchange system throughout the Administrative County of London, I beg herewith to present my Report.

It is almost unnecessary to state that my Estimate is for a metallic circuit system, and I may mention that the Instruments for which I have quoted are of the latest and best pattern.

The first thing to be decided is whether the wire should be overhead or underground.

There is, I take it, no question but that it would be a physical impossibility to erect an overhead system of bare wires similar to the greater portion of The National Telephone Company's system, that company's wires forming such a net-work in places as almost to prevent a single wire being run, and quite to prevent the running of spans consisting of a large number of wires.

Undoubtedly, from the point of efficiency, a system entirely underground would be the best for many reasons, and although this would entail an expenditure not to be lightly entertained, I do think that in undertaking the wiring of such a City as London, it would in the long run be undoubtedly the best policy to adopt; I am also of the opinion that had the National Telephone Company put their wires underground originally, they would have been money in pocket at the present time, and what is more important from the public point of view, they would have been in possession of a service, to a very large extent, free from the many "faults" which have not only caused the dissatisfaction prevailing with the existing service, but prevented the Telephone being as universally used as one might expect in such a City as London.

I have not attempted here to arrive at the cost of a system entirely underground, but understanding that the Council would, in the event of their obtaining a licence, adopt an aerial system, I have estimated that the bulk of the wires would be run in overhead cables; while, at the same time, estimating for putting all the main junction wire routes underground.

Taking it for granted that at the ordinary tariff rate, the exchange wires would not exceed one mile in length, it would be found that the average length per subscriber would be not much more than 400 or 500 yards, but, to be on the safe side, I have taken the average lengths all through to be half a mile.

To estimate for such a large system, covering so large an area as the County of London, is a very difficult matter, as the knowledge of the position of subscribers and exchanges would alone enable a close estimate to be made, but after looking at the positions of the subscribers to the existing system, I have estimated that about 15 exchanges would be necessary.

I am aware that for a larger number of subscribers than now exist, this is a smaller number of exchanges, but I would point out that the policy, and rightly I think, of the National Company, is to work with as few exchanges as possible, without unreasonably increasing the length of subscribers' wires.

In support of this statement, I may mention that into their new exchange in Lime-street, in which there are now working about 23,000 subscribers, have been diverted, the subscribers originally working into the following exchanges: Cornhill, Leadenhall-street, Mincing-lane, and East India Avenue.

A new exchange is now in course of construction in Queen Victoria-street, which is to take subscribers now working into the existing Queen Victoria-street Exchange, and also those at Coleman-street Exchange.

Another is being constructed in Holborn Circus, to accommodate the subscribers now working into the Chancery-lane and Smithfield Exchanges.

I reckon that the proposed exchanges should give accommodation for the following number of subscribers:—

| | | |
|---|---|---|
| 2 | for | 3,000 each. |
| 1 | „ | 1,000. |
| 4 | „ | 600 each. |
| 4 | „ | 100 each. |
| 4 | „ | 50 each. |

It would probably be found, on the completion of canvassing, that this arrangement might be subject to variation, but inasmuch as all figures must necessarily be hypothetical, it will, I think, form a good working basis, and even if it were necessary to divide up the 10,000 subscribers in a different way, it would not make much difference in the cost.

As it is not at all likely that a start would be made with as many as 10,000 subscribers, I have for the present, reckoned the principal exchanges as accommodating 2,000 subscribers, and I have estimated that for that number it would be necessary to branch out from the exchange in 40 different directions, with 50 pair cables; this, for such an exchange, would mean 20 miles of cable pole route, and taking into consideration the number of subscribers which could be reached by single spans from the exchange, this would allow for branching off from these 40 main routes where necessary.

I have estimated that 660 yards, or three-eighths of a mile, per subscriber, might be run in cable, and 220 yards in open wire.

The aerial cables would be of the type now manufactured specially for metallic circuit telephone work; the bare wires would be hard-drawn copper of high conductivity or silicium bronze.

The underground cables for the junction wires would be those specially made for such work, lead covered and dry core.

The switch-boards would be of the latest multiple pattern, and similar to that recently erected by the National Telephone Company, at their new exchange in Lime-street, which, I think, it is safe to state, is the most perfect switch-board in existence.

On the accompanying sheets I have, for the guidance of the Council, shown how I have arrived at the various items composing my estimate, and I may add that where the figures are for apparatus they are from estimates purposely obtained, and thoroughly reliable; and the estimates for labour are based on experience now covering a considerable number of years.

It may, perhaps, be thought that my estimate for procuring wayleaves (500*l.*) is too low, but I am convinced that the National Telephone Company do not secure theirs in the most economical way, and I may further state that they often pay extravagant rentals for them; independently, however, altogether of this, I take it that the Council in the event of their obtaining a license, would secure compulsory powers.

In conclusion, I give a summary of my figures, the particulars of which will be found on the accompanying sheets :—

SUMMARY.

| | £. |
|---|---|
| Material for subscribers' wires | 126,875 |
| Switch-boards, including test-boards and fitting up | 42,308 |
| Material for junction wires | 34,475 |
| Labour on erection of subscribers' wires | 26,774 |
| Labour on junction wires | 44,163 |
| Outfits of tools for say 20 gangs | 800 |
| For alterations and additions to exchange premises | 10,000 |
| | £. 285,395 |
| Add 25 per cent. for supervision and contingencies | 71,348 |
| Total | £. 356,743 |

I will now give the particulars of the annual expenditure, which I estimate at 75,898*l.*

| | £. |
|---|---|
| Sinking fund and interest | 19,675 |
| Wages of exchange operators | 16,713 |
| Wayleave rentals | 5,000 |
| Maintenance | 15,000 |
| Rent of offices, &c. | 1,000 |
| | £. 57,388 |
| Add 15 per cent. supervision | 8,610 |
| | £. 65,998 |
| Add 15 per cent. for contingencies | 9,900 |
| Total annual expenditure | £. 75,898 |

According to the above figures, London could be supplied at a rental of 10*l.* per subscriber, giving a gross revenue of 100,000*l.*, and after deducting Post Office royalty would leave a net revenue of 90,000*l.*

(signed) *Jno. L. Newland.*

To the Engineer, London County Council,
42, Cranbourne-street, W.C.

## APPENDIX, No. 6.

PAPER handed in by Sir *Edward Carbutt*, Bart., 26 April 1895.

### THE LONDON CHAMBER OF COMMERCE, INCORPORATED.

Botolph House, Eastcheap, London, E.C.,
22 April 1895.

### TELEPHONE SERVICE.

RESOLUTIONS ADOPTED.

1. *Acquisition of Telephones by the Government.*—"That this Chamber, whilst favouring private enterprise, is of opinion that if greater development of the telephone service, which the commercial community demands, can be better secured by the State acquiring and working the whole system of telephones, then this Chamber would approve the adoption of such a course."

2. *Validity of Telephone Agreement.*—"That the late Chancellor of the Exchequer and the present Chancellor of the Exchequer having, in their places in Parliament, stated that the agreement between Her Majesty's Post Office and the National Telephone Company was a binding agreement, it would be useless and a waste of time on the part of this Committee re-opening the question at present."

3. *Competing Systems.*—"That properly controlled competition should be encouraged, providing that inter-communication between different systems covering the same area can be satisfactorily arranged, and subject to the Post Office authorities deciding, after due and adequate inquiry, that the public can be better and more economically served than by the existing arrangements."

4. *Standard Regulations.*—"That in the opinion of this Chamber it is desirable that standard regulations should be drawn up by a Government Department for the guidance of local authorities in determining the conditions to be imposed by them as a preliminary to their consent being given to telephone companies obtaining statutory powers."

5. *Varying Rates for Limited Services.*—"That the desirability of developing the principle of varying rates for limited services should be emphasized by the evidence before the Select Committee."

6. *Unprofitable Areas.*—"That in granting licenses, precaution should be taken to avoid the neglect of telephone service in relatively unprofitable areas."

7. *Trunk Line Tariffs.*—"That it is desirable evidence should be submitted to the Select Committee comparing the proposed Post Office trunk line tariffs with those of other countries, and as to the excessive rates proposed to be charged for trunk lines in the United Kingdom, as set forth in the Treasury Minute of May 1892."

## APPENDIX, No. 7.

PAPER handed in by Major General *C. E. Webber*, C.B., R.E., 14 May 1895.

## THE DEVELOPMENT OF THE TELEPHONE.

The following is a reprint of two letters to the "Times," which appeared in 1892:—

From the late Duke of *Marlborough*, dated 20th August 1892.

To the Editor of the "Times."

Sir,

You have on several occasions done me the favour of inserting letters on the question of the development of the telephone in this country, and I venture to make one more appeal for space in your columns for a few further remarks on this subject.

There seems to be a misconception in certain quarters of the Press that the arrangements which have been come to between the two great telephone companies, as the result of their mutual agreement, are not likely to bear any immediate useful fruits in the public interest. It will not be long before the misconception is cleared up by the efforts which these companies are about to make to introduce, not only in this metropolis, but also in all the other large towns of England, a system of telephony more perfect even than any which exists in other European countries. The public have been led to suppose that the competition of these two companies among themselves might have produced this result in a more satisfactory manner, since competition must have led to rate-cutting between these two rivals in this industry. A little consideration of the matter would, however, show that, though a lower scale of charge might have been produced by competition, the eventual cost to the public and also to the shareholders would have been considerably greater. I need not instance the disastrous effects of rate-cutting and competition generally, as they must be very well known. We have some notorious instances of the waste of capital and the cost to shareholders of rate-cutting enterprises in the matter of American railways, and with regard to the telephone the consequences would have been even more disastrous. The establishment of two completely independent rival systems of telephony, say, in the metropolis, would mean that when the amalgamation eventually took place on the surrender of one of the rivals the victor would become possessed of a system which would be no earthly use to amalgamate electrically with the other. The whole system would thus be crystallised into a bad system of distribution which could not be altered, and the public would therefore be, electrically speaking, inefficiently served.

As to the cost to shareholders of a competition, that speaks for itself; and as to subscribers, though they might appear to have the advantage of lower rates, they would have great inefficiency, and they would also be compelled to pay two telephone subscriptions instead of one, and have two sets of instruments in their business premises or homes. All this will now be avoided by the working arrangement that has been come to between the two telephone companies. The area of England is so large that the demand for capital expenditure will be so great that the apportionment out of areas should present no insuperable difficulty to the respective companies. As to commercial arrangements, there is no reason to see that these should present any insuperable obstacle to a harmonious scheme of development, considering the fact that both companies are in harmony with the General Post Office, and are willing and ready to assist in the development of the great trunk system and inter-trunk connection throughout the country which the Government is commencing. It is not at all improbable that the demand for the use of the telephone throughout this country will increase to an extent little anticipated, and that, in the course of a very few years, instead of 40,000 subscribers, as there are at present, the number will reach nearer 200,000, owing to the demand which will be created to speak over the Government trunk systems. We have as yet had no experience of the use of the telephone in England, but, with the knowledge which is at present possessed by electricians in this country and abroad, the two companies are now in a position, acting together on a settled plan, to establish systems of distribution on the twin-wire principle throughout the large towns of England which will practically result in the establishment of a new industry. By the Act which was passed last Session, the Government taking all the receipts on these trunk lines, the profits of distribution alone are left to the companies. The organisation, however, which it represents to carry out this work efficiently is enormous, and would require the creation of a new public department if the country were to ever undertake the working of the system itself.

As to the matter of rates, this question produces some difficulty to determine at present, owing to the Government having established a system of telephone areas which will necessitate sound consideration on the part of the companies before establishing their new scale of charge. The first requirement to be met is undoubtedly efficiency. This applies not only to private service to subscribers' houses, but also with regard to the connections which are now to be made with the post offices throughout the country, and the establishment of call offices, which should be located in every town in all convenient situations. In the matter of price it must be remembered that there will be great disadvantage in having the rate so low that the demand would become larger than it would be possible to meet conveniently from an electrical point of view. If every householder throughout the country possessed a telephone, the amount of unnecessary talking which would take place is somewhat inconceivable, and in some ways it is better that the price should be one which should have some relation to the purposes of the user. For the general convenience of the public, call offices should be largely multiplied, so that no one should be deprived from the use of the telephone from the charge being too high for a private instrument.

I observe in your to-day's issue the publication of the statistics of the telephone companies in the United States, from which it appears that the number of subscribers has grown between 1880 and 1890 from 48,414 to 227,357, and that the net earnings in the year 1890 from this industry represents 5,260,712 dollars on a capital expenditure of 14,605,787 dollars. With regard to Sweden, which is probably the European country which has developed the telephone business more completely than any other, the system of Government trunks and local exchanges has arrived at a wonderful state of development. From what I have seen of the working of the telephone in that country the facility with which persons in one town converse with those in another is quite remarkable. The subscriber calls up the Stockholm exchange, say, and requests to have a conversation arranged with either Malmö or Gottenburg. The trunk operators communicate together by comparing the lists of persons who have appointments, and the operator at Stockholm telephones back to the subscriber the hour at which the conversation required has been negotiated. In the busy time of the day it may take some two or three hours before the conversation can take place; at other times half an hour is sufficient, and even less. It is easy, therefore, to see, when this system is properly applied in England by the action which will now be taken up by the General Post Office in laying inter-trunk wires all over the country and by the action of the telephone companies establishing an efficient distribution in all telephone areas, that the development which has taken place in America can be easily equalled by that which must come about in this country in a remarkably short time. England is an ideal country for the development of the telephone. It is inhabited by 36,000,000 of people, all living in a small area, and there is no town so distantly situated from another that they cannot be put into telephonic communication. The companies have thoroughly realised the situation, both from the point of view of the public demand and from the point of view of electrical knowledge, and it is certain that a new era is about to commence in this important industry which will largely change business relations throughout the country. To be able to hold a conversation of a thoroughly audible character between Glasgow and London may save several letters, telegrams, and also a railway journey. The price at which this boon has to be paid for is no measure of the value to the business man in time and labour. In large cities, such as London, the saving of time and expense in journeys in cabs,

cabs, in making appointments for interviews, and the sending of letters, is often enormous. All this development has been impossible up to now. The facilities which the telephone companies possessed were absolutely insufficient to carry out a single-wire system in an efficient manner. The powers which the Post Office now possess will be conceded by the Department to the telephone companies under certain conditions, and it is confidently believed that these powers will be sufficient to enable the companies to establish underground twin-wire system, in all large towns. No doubt, if Parliament would have treated the telephone companies in the same liberal manner that the electric light companies have been treated, there would be less expense and less difficulty in laying the telephone dsstribution system. It is hoped, however, that these difficulties, which still exist, will be all successfully surmounted, and that before long London will have a telephone system laid underground capable of serving 50,000 subscribers in the metropolis alone ; while the other large towns of England will be equally well engineered from the telephonic point of view.

As there seems to have been some misconception in the public mind as to the attitude which the companies have assumed towards one another, and also as to the relation of the companies to the scheme which has been formed by the Post Office, I shall be very glad if, by the insertion of this letter, the public may see that the Act which was passed last Session regarding the telephone industry and the action of the companies themselves is likely to bear immediate and important fruits.

I remain, &c.
(signed) *Marlborough*, Chairman,
Blenheim Palace. New Telephone Company, 110, Cannon-street, London.

---

From the late Duke of *Marlborough*, dated 6th September 1892.

To the Editor of the "Times."

Sir,

My friend, Mr. Faithfull Begg, must not put on his tilting suit and send me another challenge through your columns, otherwise I must take up my lance and call upon my lieges to sound the encounter in the lists. We are not where we were last year when our last tournament took place and Mr. Begg appeared on the scene as the champion of the National Telephone Company. Then the lion roared at the lamb and pretended to treat that humble animal with contempt and devour him. To-day the lion is good enough to lie down with its despised brother, and is only too pleased to have been able to construct a happy family ! Now, is Mr. Faithfull Begg under the impression that the general public are so obtuse that they will not see that this phenomenal friendship which has come into existence between the lion and the lamb must have some reason connected with it which points to the fact that the inferiority of power and strength on the part of the lamb was more apparent than real ; otherwise, why should this noble animal, which pretended to possess the whole of England, Scotland, and Ireland as its happy hunting-ground, have condescended to kindly make place for the weaker party ? This very unnecessary attempt to roar on the part of Mr. Begg on behalf of his lion forces me to say something more on behalf of the lamb. We, Sir, the New Telephone Company, sympathized with, and did all in our power to endorse the policy of her Majesty's Government in the matter of the Telephone Bill, which was safely piloted through Parliament last Session by the ability of Sir James Fergusson. That Bill did two things which the lion would have been very glad to have seen left alone. It gave absolute and complete facilities for establishing the twin-wire telephone system all over England, while it conceded these advantages only on the companies giving up their trunk wires. Well, Sir, the New Telephone Company may as well admit that their trunk system was not a very extensive one, and, though the company had the power under their various licences to have erected any amount of trunk lines, they had not done so, nor had the public come forward at that time to give them command of a large capital to do this work. We were, therefore, not adverse to giving up this right if we could obtain complete facilities for establishing a twin system of telephones in all telephone areas. If the lion had not, in a totally unprovoked manner, roared at the lamb, I should not say these things, but, as the truth had better be told, the enemy, "our present friends," were placed in an awkward position. Their entire system all over England is a single-wire system, which is absolutely and totally useless to talk over these Government trunks on, except in audible whispers, mixed with bad language to the offending instrument. The lion thus observed that the lamb might possibly at a not distant day grow up to be a dangerous rival lion, who might divide the British Isles with the older animal. Prudent counsels came into play. Private friendships and mutual appreciation between individuals connected with both interests promoted peace. There was no desire on my part, so far as my influence in these matters had any weight, to rush into a furious contest, and perhaps have to work myself into fiddle-strings to carry on the contest which was inevitable, and of which I sketched the consequences to the shareholders of the National and the public generally in my former letter. Mr. Begg has unadvisably, I venture to think, attempted to roar at me in his present letter, as he thinks thereby to hide the unpalatable fact that the lion has had to climb down along a very comfortable road we have made for him, and along which we propose to proceed together, if possible, as very good business friends.

Mr. Begg suggests that I had bleated a good deal about a 10*l.* telephone. No doubt I have. Had we gone into rate-cutting as between the two companies we would probably have come to this, and I still maintain that it is quite possible that, as the industry increases, a considerably lower rate may be practicable. But, though I did say a good deal more about a lower rate, I said a great deal also about efficiency. It is no doubt convenient to Mr. Begg to avoid allusion to this question. Now, I venture to believe I know as much about the telephone as any of the gentlemen connected with the Old National Company, and perhaps a good deal more, or the New Telephone Company would not to day be a going concern. Mr. Begg will have the pleasure of seeing that the magic "those into whose hands the management had at last fallen" are not entirely the same persons as he entered the lists for a year ago, and that the telephone is not now going to remain a marvellous and most invaluable invention kept in abeyance and undeveloped to suit private interests, but is going to become, in a very few years, a marvellous institution, which will confer on the public, not perhaps at once, Mr. Begg's desired 10*l.* telephone, but a most perfect instrument, which can be placed at the disposal of some 50,000 subscribers to begin with in London, while plans will be arranged so as to admit of even doubling this amount if found desirable. Under this system the network of Government trunks will become really effective as soon as the New Telephone Company and the National have been able to grapple the large country towns and convert old single-wire overhead tackle into good underground twin-wire cable systems. What the public do not understand, but which experts comprehend, is the fact that the entire telephone system throughout all the large towns of England has to be re-done from end to end before a trunk system can be made to work efficiently. No wonder, then, the two telephone companies have adopted the very reasonable course of endeavouring to carry out this work in harmony, instead of wasting their energies in fighting rival systems in every town to the discomfort and confusion of subscribers. In order to bring about these results a reasonable time must be given to the companies, but it is foolish for the public to suppose, as some persons would wish to lead opinion, that the New Telephone Company is in any way a dependency of the National Company, or that the National Company have swallowed up the New. It is no concern of anybody's, except the shareholders in the two companies, what the commercial arrangements and division of work will be between the two corporations. All the public are concerned with at present is, When are we going to have a first-rate telephone system throughout England ? And the answer I give is, Immediately, so soon as wire and telephones can be erected. Their next legitimate inquiry is, What is it going to cost ? And my answer is, The companies do not intend to throw away the dividends of their shareholders in order to give Mr. Faithfull Begg the 10*l.* telephone he is pining for, but there is no doubt that the telephone companies will reduce their charges as their business extends, and that meanwhile the public must not expect all their mercies to come at one moment.

Yours, &c.
Blenheim, Woodstock. (signed) *Marlborough.*

## APPENDIX, No. 8.

PAPER handed in by Major General *C. E. Webber*, C.B., R.E., 14 May 1895.

Subscription Lists will be opened on Friday, the 29th July 1892, and closed at or before four o clock on the same day.

### THE NEW TELEPHONE COMPANY, LIMITED.

Holding a License from Her Majesty's Postmaster-General to establish Telephone Exchanges throughout the United Kingdom.

Nominal Capital, 750,000*l.*, divided into 74,700 Ordinary Shares of 10*l.* each ; and 3,000 Founders' Shares of 1*l.* each (the latter already subscribed), entitled to one-half of the surplus profits after the payment of a dividend of 7 per cent. on the Ordinary Shares.

Of the 74,700 Ordinary Shares, 15,000*l.* in shares were issued on the formation of the Company in 1885. The present issue is for the balance, viz., 73,200 shares, of which one-third (the largest number allowed by the rules of the Stock Exchange) is to be subscribed for at par by the National Telephone Company, Limited, under the agreement hereafter referred to.

Messrs. N. M. Rothschild and Sons are authorised on behalf of the New Telephone Company, Limited, to receive subscriptions for the remaining 48,800 Ordinary Shares of 10*l.* each at par. Payable 1*l.* on application, 1*l.* on allotment, 2*l.* three months after allotment, and the balance as required at intervals of not less than four months. No call at any time to exceed 2*l.*

*Board of Directors:*

His Grace the Duke of Marlborough, Chairman.
*J. S. Forbes, Esq., President of the National Telephone Company, Limited.
*Eli Heyworth, Esq., Director of the National Telephone Company, Limited.
*Colonel R. Raynsford Jackson, Vice-President of the National Telephone Company, Limited.
C. T. Praed, Esq., Director of Lloyd's Bank, Limited.
Sir Albert Kaye Rollit, M.P.
*S. H. Sands, Esq., Director of the National Telephone Company, Limited.
R. W. Wallace, Esq., Director of the Westminster Electric Supply Corporation, Limited.

* Nominated by the National Telephone Company, Limited.

*Bankers:* Lloyd's Bank, Limited.

*Brokers:* Messrs. Foster and Braithwaite, 27, Austin Friars, E.C.

*Solicitors:*

Messrs. Dawes & Sons, 9, Angel-court, E.C. | Messrs. Renshaw, Kekewich & Co., 2, Suffolk-lane. E.C.

*Secretary pro tem.:* W. S. Ogle, Esq.

*Temporary Offices:* 110, Cannon-street, E.C.

#### PROSPECTUS.

THE New Telephone Company, Limited, was incorporated in 1884, and is the possessor of a license granted by the Postmaster General for the establishment of telephone exchanges and communications in the metropolis and throughout the United Kingdom, but the Company has been unable to develop its undertaking until the Telegraphs Act of 1892, which received the Royal Assent on the 28th June last, placed it in a position to deal satisfactorily with the telephonic requirements of the country. This measure provides for the expenditure of 1,000,000*l.* sterling of public money on trunk lines, with the view of co-operating with the companies in the expansion of the telephonic communication of the country.

The National Telephone Company, Limited, has entered into an agreement with this Company, by which it is provided, among other things, that the subscribers on the one system shall be able to communicate with those on the other system ; and the object of the companies will be so to combine their efforts as to work in harmony with the new policy adopted by Her Majesty's Government in providing telephonic facilities for as many subscribers as possible throughout the United Kingdom.

Hitherto the number of subscribers to the telephone in Great Britain and Ireland has been small. For example, in the United States of America, with a population of 62½ millions, there are said to be 245,000 subscribers ; at this rate there should be in the United Kingdom about 145,000 subscribers, instead of about 50,000. In Berlin, where the population is one and a-half million, there are upwards of 17,000 subscribers, and at this rate the number in London should be increased from about 8,800 to over 50,000.

It is intended, therefore, to supply plant on the double-wire (metallic circuit) system to accommodate 10,000 metropolitan subscribers with Central Exchange switchboards and other apparatus capable of working 25,000 London connections. The system to be adopted by the Company will comprise all substantial improvements in telephony, and especially the metallic circuit, which will be available for connection with the Government Trunk system.

The capital outlay for supplying the first 10,000 subscribers in London, and upwards of the same number in the Provinces, including 1,400 private lines and about 400 call offices for public use, for developing the Manchester and Bolton Exchanges, and for opening others in some of the principal provincial towns, has been carefully considered by Mr. A. R. Bennett, acting as the chief engineer and general manager of the Company. His estimates have been checked

checked and approved by Silvanus P. Thompson, D.Sc., F.R.S., and A. B. W. Kennedy, F.R.S., M.I.C.E., Vice-President of the Institution of Mechanical Engineers. It is estimated that 750,000*l.* should suffice for these purposes, and on this basis the net revenue of the Company should be sufficient to show divisible profits equal, at a moderate calculation, to 12 per cent. per annum on the capital, while the additional facilities of the Telegraphs Act, 1892, may be expected to open up new sources of revenue, and thus increase the profits of the Company.

With a view to the development of the Company's business in the manufacturing districts of Lancashire and Yorkshire, and pending the passing of the Telegraphs Act, 1892, the Pioneer Telephone Company was formed for the acquisition and extension of the Mutual Telephone Company, Limited, at Manchester; this business the New Company has taken over, and has now 1,200 exchange instruments in operation there, with several hundred new subscribers waiting to be added. The Pioneer Company has also made an agreement with the City of London Electric Lighting Company, Limited, for a system of underground tubes, and agreements referred to below have been made with other Electric Lighting Companies for similar facilities. All these agreements are subject to the provisions of the Telegraphs Act, 1892. The tubes, the right to use which has been thus provisionally acquired, will be capable of containing such wires as are necessary to develop an extensive telephone system in London. The above arrangements, and the steps already taken by the Pioneer Company, will, it is expected, place this Company in a position to enter upon a dividend-earning stage at a comparatively early date.

The New Telephone Company has agreed to take over from the Pioneer Company the business and works of the Mutual Company, and the balance of the unexpended capital of the Pioneer Company, together with its various leases, contracts and other assets, at the sum of 90,000*l.*, out of which the Pioneer Company will pay the expenses of this issue.

The following Contracts have been entered into, viz. :—

1. Between the Right Honourable George John Shaw Lefevre, M.P., Her Majesty's Postmaster-General, and the New Telephone Company, Limited, dated 16th June 1885.

2. Between the National Telephone Company, Limited, and the New Telephone Company, Limited, dated 14th July 1892.

3. Between the Mutual Telephone Company, Limited, and the Electric and General Investment Company, Limited, dated 1st January 1892.

4. Between the City of London Electric Lighting Company, Limited, and the Pioneer Telephone Company, Limited, dated 31st March 1892.

5. Between the Westminster Electric Supply Corporation, Limited, and the New Telephone Company, Limited, dated 22nd March 1892.

6. Between the Metropolitan Electric Supply Company, Limited, and the New Telephone Company, Limited, dated 11th April 1892.

7. Between the Kensington and Knightsbridge Electric Railway Company, Limited, and the New Telephone Company, Limited, dated 21st July 1892.

8. Between the Telephone Subscribers' Protection Association, Limited, and the New Telephone Company, Limited, dated 25th April 1892.

9. Between the Pioneer Telephone Company, Limited, and the New Telephone Company, Limited, dated 22nd March 1892, and agreement supplemental thereto, dated 27th July 1892.

10. Between the Notting Hill Electric Lighting Company, Limited, and the New Telephone Company, Limited, dated 21st July 1892.

There are numerous other contracts relating to the engagement of employés, the use of telephones in connection with the business at Manchester, Bolton, and other towns, leases of premises in London and other places, and arrangements in connection with this issue, and subscribers shall be deemed to have notice of them, and to have waived any fuller compliance with Section 38 of the Companies Act, 1867, than is herein contained, and to have agreed with the Company as Trustee for the Directors and other persons liable not to make any claim whatever, or take any proceedings under the said section, or under the Directors' Liability Act, 1890, and for avoidance of their contracts in respect of any non-compliance with the said section, or of any misstatement in the prospectus made by the Directors in the belief that it was true.

In due course, application will be made to the Stock Exchange for an official quotation.

Copies of the Memorandum and Articles of Association, and the Contracts above enumerated, can be seen at the offices of the Solicitors, and Prospectuses and Forms of Application may be obtained at Messrs. N. M. Rothschild and Sons, at New Court, St. Swithin's-lane, E.C., and at Lloyd's Bank, Limited, Lombard-street, and other Branches, and of the Stockbrokers of the Company.

27 July 1892.

---

MEMORANDUM OF ASSOCIATION OF THE NEW TELEPHONE COMPANY, LIMITED.

1. THE name of the Company is the "New Telephone Company, Limited."

2. The Registered Office of the Company will be situate in England.

3. The objects for which the Company is established are :—

(*a*) To acquire by purchase (either for cash or shares in the Company or partly for cash and partly for shares as may be determined on) or to lease or otherwise acquire rights in the several inventions for improvements in electrical apparatus for the transmission and reproduction of sound, and the several letters patent for Great Britain for the same, granted to Silvanus Phillips Thompson or to the said Silvanus Phillips Thompson and Phillip Jolin jointly, and all extensions therefrom, and all letters patent, whether in Great Britain or elsewhere, which may be granted to him or them jointly for the same inventions or for improvements of the same, and to construct and carry the same into operation.

(*b*) To acquire either wholly or partially, and either by original application or by assignment or otherwise, any letters patent, licenses, rights, privileges, monopolies, secrets, or systems for the use, sale, or manufacture of or otherwise relating to any telephone or telegraphic apparatus, electrical, magnetic, hydraulic, or mechanical apparatus, or any other invention, instrument, or apparatus, which may be directly or indirectly connected therewith or with electricity, magnetism, or acoustics, and capable of being used for any of the Company's purposes, and to experiment with, develop and work any such patent, licence, right, privilege, monopoly, secret, system, apparatus, invention, or instrument.

(*c*) To transmit or contract ~~for the transmission of messages for any state,~~ government, person, corporation or association, by means of telephones or other lawful means, and either in consideration of a payment for each message, or under any contract, or upon any other terms whatsoever, and generally to establish, maintain, and conduct any system of telephonic or other lawful communication between any individuals or classes, or sets of persons, states, governments, corporations, or associations, upon any terms whatsoever.

(*d*) To take and work any licence for the use of any invention, instrument or appliance, or for the exercise of any method or process of manufacture or construction, which may be used by the Company in their business, and to work any invention, instrument, appliance or process after the expiration of a patent or protection.

(*e*) To manufacture, construct, erect, maintain, lay down, use, sell, let on hire, or otherwise deal with, dispose of, and buy, take on hire, or otherwise acquire, and generally to deal in telephones and all machinery, apparatus, works, articles and things connected with the establishing, working, or maintenance of telephonic communication, and every description of electrical, magnetic, hydraulic or mechanical apparatus, or which may be either directly or indirectly conducive to any of the objects of the Company, upon any terms whatsoever.

(*f*) For the purposes of the Company, or any of them, to purchase, take on lease, or in exchange, hire, or otherwise acquire, any real or personal property, or any interest therein, or any wayleaves, easements, rights or privileges therein, and to remove, erect, improve, maintain or otherwise deal with any building or buildings thereon, and in particular to acquire any buildings, ships, barges and other vessels, machinery, rolling stock, plant, stock-in-trade, patents, licenses and trade marks ; and to establish offices, and construct works for the purposes of the Company, and provide buildings and other accommodation for the purpose of enabling users or owners of lines and apparatus, their servants and agents, to communicate with each other.

(*g*) To purchase, or acquire, or to carry on, and administer as principals or agents, the whole or any part of the business or property of any person, firm or Company, or association, carrying on any business comprised in the authorised objects for the time being of this Company, and in connection with any purchase to undertake any part of the liabilities of the vendor, and generally to make and carry into effect any arrangement with any government or authorities supreme, municipal, local or otherwise, or any other person, corporation or body for the use or working of any patent, or other rights or systems acquired by the Company, or for uniting or amalgamating, either in whole or in part, the business of the Company with that of any other Company, corporation, partnership, firm or person for the time being engaged in and carrying on any trade or business of a nature or character similar to any trade or business which the company may be authorised to carry on, or any other business which may be incidental or conducive to the carrying on of the business of the Company, and to lend money to and guarantee the performance of any contract made by any such persons or Company.

(*h*) To subscribe for or otherwise acquire and hold or dispose or the whole or any part of the Shares or Debentures or other interests of and in any company, corporation, partnership, firm or person carrying on or formed with the view of carrying on any business comprised in the objects of this Company, and to assist in the formation of any such company, corporation, partnership or firm or any other company which may be promoted for the purpose of acquiring all or any of the profits and liabilities of this Company, or of advancing directly or indirectly the objects or interests thereof.

(*i*) To sell or otherwise dispose of for such consideration as the Company may think fit, and in particular for cash, shares, stock, or securities of any other company, the whole or any part of the Company's assets.

(*j*) To obtain from any such state, government, or authority as aforesaid any rights, concessions and privileges, which the Company may think conducive to its objects, or any of them, and (if thought fit) to obtain any Act of Parliament for the dissolution of the Company and the incorporation of its members as a new Company, for any of the objects specified in this Memorandum, or for effecting any other alteration in the constitution of the Company.

(*k*) To make all deposits of money or securities, and to do all things necessary for the compliance with the laws or regulations of any Foreign or Colonial Government in places where the Company may be desirous of transacting its business, and for such purpose, if necessary, to procure the Company to be constituted or incorporated as a corporation or synonymous society and to form and carry on or conduct its business through any subsidiary company.

(*l*) To receive money on deposit, at interest or otherwise, and to invest the moneys of the Company not immediately required, upon such securities as may from time to time be determined.

(*m*) To raise money in such manner as the Company shall think fit, and in particular by the issue of Debentures, charged upon all or any of the Company's property (both present and future), including its uncalled capital, and generally to sell, improve, manage, develop, lease, work, mortgage (with or without power of sale), dispose of, or otherwise deal with all or any part of the property of the Company ; and to make, accept, endorse, and execute promissory notes, bills of exchange, and other negotiable instruments.

(*n*) To do all or any of the above things for the time being authorised, and so far as the patent rights of others will admit, in any part of the world, and either singly or in partnership, or conjunction with any person, company, or association, and either as principals, agents, contractors or otherwise, and in carrying on business abroad, to do so in accordance with the custom of foreign companies.

(*o*) To do all such other things as are incidental or conducive to the attainment of the above objects, or any of them.

(*p*) And it is hereby declared that the word " Company " in this Memorandum, except where used in reference to this Company, shall be deemed to include any partnership or other body of persons, whether corporate or incorporate, and whether domiciled in the United Kingdom or elsewhere, and that the objects specified in each paragraph of this clause shall, except where otherwise expressed in such paragraph, be deemed independent objects of the Company, and not liable to be limited by references to any other paragraph.

4. The liability of the members is limited.

5. The Capital of the Company is One Hundred and Twenty Thousand Pounds, divided into Twenty-four Thousand Shares of Five Pounds each, with power to increase such Capital, and to attach to any portion of such Capital, original or increased, such preference and guarantee, or other special privileges or incidents, as may be determined by or in conformity with the Articles and Regulations of the Company from time to time existing.

20 November 1884.

The Capital has since been increased to Seven Hundred and Fifty Thousand Pounds by Special Resolution passed 6th and confirmed 23rd November 1891.

## APPENDIX, No. 9.

PAPER handed in by Mr. *W. H. Dickinson.*

## LONDON COUNTY COUNCIL.

Sir, Spring Gardens, S.W., 6 May 1895.

You are probably aware that a Select Committee on Telephone Service has been appointed, "to consider and report whether the provision now made for the telephone service in" London and other "areas is adequate, and whether it is expedient to supplement or improve this provision either by the granting of licences to local authorities or otherwise."

The Highways Committee of the London County Council, to whom the duty of procuring evidence on this matter is referred, being of opinion that telephone service in the metropolis should be rendered cheaper and more efficient, have submitted their views to this effect to the Select Committee, and similar evidence has been tendered by the Commissioners of Sewers of the City of London.

The Committee of the Council are anxious to know accurately what is the opinion of the users of telephones in London as regards efficiency, and I am therefore directed to ask if you will kindly answer the undermentioned questions on the accompanying form of reply, and return it to me at your earliest convenience.

Yours, &c.
(signed) *H. De la Hooke,*
Clerk of the Council.

(*a*) Is the existing telephone service of the National Telephone Company efficient, and satisfactory to you?

(*b*) If it is not satisfactory, in what respects is it unsatisfactory?

(*c*) What suggestions (if any) would you make for the improvement of the service?

To the Clerk of the London County Council, Spring Gardens, S.W.

Sir, May 1895.

As a subscriber to the National Telephone Company in the London district, I subjoin answers to the questions put to me in your letter of the 6th instant :—

(*a*) Is the existing telephone service of the National Telephone Company efficient, and satisfactory to you?

(*b*) If it is not satisfactory, in what respects is it unsatisfactory?

(*c*) What suggestions (if any) would you make for the improvement of the service?

## THE NATIONAL TELEPHONE COMPANY, LIMITED.

THE underwritten Memorandum has been sent to the Company's London Exchange subscribers, with the following results :—

### MEMORANDUM.

I (or we) do not approve of the telephone service of the metropolis being undertaken by the London County Council, and am (or are) satisfied that the service given by the National Telephone Company is reasonable, having regard to the efforts which are being made by the company to improve it by the adoption of the twin-wire system.

## APPENDIX, No. 11.

PAPER handed in by Mr. *James Staats Forbes*, 21 May 1895.

## NATIONAL TELEPHONE COMPANY.

### Telephone Chronology.

| | Dated. | Expired. |
|---|---|---|
| Bell's Patent, 4765 | 9 Dec. - 1876 | 9 Dec. - 1890 |
| Edison's Patent, 2909 | 30 July - 1877 | 30 July - 1891 |
| Bell and Edison Companies, amalgamated as United Company | | 13 May - 1880 |
| United Company started business | | 13 May - 1880 |
| Judgment in Post Office action, declaring a telephone to be a telegraph, and therefore covered by Post Office monopoly | | 20 Dec. - 1880 |
| First license to United Company | | 11 April - 1881 |
| Second license to United Company | | 29 Nov. - 1884 |

United Company only commenced business after Bell's Patent had run three years and four months. And they worked under agreement and the first license from 13th May 1880 to 1st December 1884; four years and six months.

Besides United, several other licenses had been granted.

Amalgamation of the United, Lancashire and Cheshire, and National Companies took place 1st May 1889, under the name of National Company.

Other affiliated companies have since been gradually absorbed in accordance with the conditions of the agreement with the Post Office, negotiated in 1892.

As effect of amalgamation, and in view of the approaching expiration of the patents:—

1st May 1890, subscription in Manchester, Liverpool, and Warrington, reduced from 20*l.* to 15*l.*

1st January 1891, general reduction of rates in the provinces from 15*l.* and 12*l.* to 10*l.*, involving an immediate loss of revenue of 55,000*l.* per annum on the then number of subscribers.

### Development of National Company up to April 1895.

| | |
|---|---|
| Number of towns and places supplied | 537 |
| Number of exchanges open | 593 |
| Number of subscribers' lines | 75,216 |
| Number of telephones in use | 86,032 |
| Present ratio of effective calls per annum | 139,639,032 |
| Equivalent to (at the least) messages | 279,278,064 |
| Average annual payment per line | 9*l.* 2*s.* 2*d.* |
| Average cost to subscribers per message | ·58 of a penny |
| Estimated minimum average number of words per message | 100 |
| Average annual payment as above | 9*l.* 2*s.* 2*d.* |
| Average per week | 3*s.* 6*d.* |
| Average per day (Sunday included) | 6*d.* |

Every subscriber can, therefore, at his discretion, have the use of the telephone day and (in most places) night, for the price of a sixpenny telegram.

And whereas 100 words by telegraph would cost 4*s.* 2*d.*, the average cost per message (minimum 100 words) by telephone is ·58 of a penny.

COMPARISON of Charges with those of other European Countries.

The average annual charge per line is 9*l.* 2*s.* 2*d.*

What could this charge be on the assumption that the National Company were relieved from those direct and extraneous charges not pressing, or very slightly pressing, upon State telephones abroad?

These are—A. Royalty, way-leaves, rates, and taxes.
B. Greater relative scales of salaries, wages, and rents of premises.

In the year ending 31st December 1894, the working expenses of the National Company amounted to 456,809*l.* 15*s.* 4*d.*, or 62 per cent. of the telephone revenue.

The charges under A. amounted to 147,938*l.* 10*s.* 1*d.*=20·00 per cent.

The charges under B. amounted to 214,123*l.*

| | £. | £. |
|---|---|---|
| 1. Line and instrument repairs - - 93,537*l.* | | |
| In this amount wages stand for 72·87 per cent. of the whole= - - | 68,157 | |
| The wages paid in Great Britain to the people employed in this category are 33 per cent. higher than abroad= - - - - - | | 22,719 |
| 2. Salaries of officers, clerks, head office expenses, and rents of premises - | 120,586 | |
| The salaries, wages, and rents paid in respect to the second category are at least 30 per cent higher than abroad= - - - - - - | | 36,160 |
| So that - - - - - -

The modern Boards at Glasgow have cost upwards of 19,000*l.*, and further extensions are in progress; the work of completing metallic circuiting the entire metropolitan system has, during the past three years, been most actively pushed forward, about 75 per cent. of the work is completed, and it is anticipated that the whole will be finished at the end of the present year. The cost of this work will be about 200,000*l.*

| London | ·94 | 2,944 |
| Average of United Kingdom | ·73 | 3,595 |

The number of Messages is arrived at by treating each Subscriber's Call when put through as being two Messages, *i.e.*, question and reply.

The Messages are "Exchange" line Messages only, as the Company has no means of ascertaining the number of "Private" line Messages, which would be additional to the above figures. The number of complaints in Glasgow was greatly increased by a change of working, which was effected early in 1894. The complaints include the Private lines as well as the Exchange lines.

## APPENDIX, No. 12.

PAPER handed in by Mr. *James Staats Forbes*, 24 May 1895.

## THE TELEPHONE COMPANY, LIMITED.

### General Statement of Tariffs.

### I.—Metropolitan Area.

ON A FIVE YEARS' AGREEMENT.

| | £. | s. |
|---|---|---|
| First connection | 17 | – |
| Second and additional connections | 12 | 15 |
| Private houses | 10 | – |

ON A YEARLY AGREEMENT.

| | £. | s. |
|---|---|---|
| First connection | 20 | – |
| Second and additional connections | 15 | – |
| Private houses | 12 | – |

These tariffs include free speaking throughout an area of 630 square miles, which comprises the towns of Dartford, Reigate, Redhill, Croydon, Epsom, Richmond, and Kingston, on the south side of the Thames, and Tilbury, Woodford, Romford, Epping, West Ham, Harrow, Ealing, and Hampton Court, on the north side of the Thames.

### II.—Great Towns.

Such as Manchester, Liverpool, Blackburn, Leeds, Bradford, Dundee, Edinburgh, Birmingham, Dublin, Belfast, &c., &c.

These tariffs apply to all subscribers [with some exceptions due to local physical, or other special conditions] whose premises are situated within a radius of one mile of the nearest exchange, the extra charge for each additional half-mile being an additional 2*l.* 10*s.* per annum.

ON A FIVE YEARS' AGREEMENT.

| | £. | s. |
|---|---|---|
| First connection | 10 | – |
| Second and additional connections | 8 | 10 |

The area or radius for free speaking varies greatly, according to local conditions. As examples of these areas the Manchester area includes the city of Manchester, the county borough of Salford, the municipal borough of Eccles, and the urban districts of Altrincham, Bowdon, Stretford, Wilmslow, and Cheadle-and-Gatley, including Handforth, and extends for 150 square miles.

The Liverpool free area includes the city of Liverpool, the county boroughs of Birkenhead and Bootle, and the urban districts of Walton-on-the-Hill, West Derby, Wallasey, Much Woolton, Childwall, West Kirby and Hoylake, Neston and Parkgate, Bromborough, Lower Bedington, Wavertree, and Huyton, and extends for 158 square miles.

The Blackburn free area includes the county borough of Blackburn, the municipal boroughs of Clitheroe, Chorley, Darwen, and Accrington, and the urban districts of Clayton-le-Moors, Church, Oswaldtwistle, Longridge, Rishton, Withnell, and Adlington, and extends for 139 square miles.

The Leeds free area includes the city of Leeds, the municipal borough of Morley, and the urban districts of Drighlington, Tong, Gildersome, Methley, Ilkley, Otley, Rawdon, and Guisley, and extends for 164 square miles.

The Bradford free area includes the county borough of Bradford, the municipal borough of Keighley, and the urban districts of Bingley, Calverley, Skipton, Haworth, Shipley, Thornton, Baildon, Ilkley, Otley, Rawdon, and Guiseley, and extends for 183 square miles.

The Dundee free area includes the Royal and Parliamentary burgh of Dundee, and the police burghs of Broughty Ferry and Carnoustie, and extends for 46 square miles.

The Edinburgh free area includes the Royal and Parliamentary burgh of Edinburgh, the Parliamentary burghs of Leith, Portobello, and Musselburgh, and the police burghs of Dalkeith, Lasswade, and Loanhead, and extends for 84 square miles.

The Birmingham free area includes the city of Birmingham, and the county borough of West Bromwich, the municipal borough of Sutton Coldfield, and the urban districts of Bromsgrove (town and country), and Oldbury, including Knowle, and extends for 175 square miles.

The Dublin free area includes the city of Dublin, and the townships of Bray, Clontarf, Kingstown, and Blackrock, and extends for 211 square miles.

The Belfast free area includes the city of Belfast, the townships of Carrickfergus, Newtownards, Bangor, Dromore, Lurgan, and Portadown, including Larne and Comber, and extends for 543 square miles.

### III.—Large Towns.

Such as Norwich, Exeter, Chester, Bath, Chelmsford, Ipswich, Colchester, Worcester, Wolverhampton, Stafford, and Lincoln.

First Connections.

| | £. | s. |
|---|---|---|
| Within ½-mile of the Exchange | 8 | – |
| Within ¾ " " " | 9 | – |
| Within 1 " " " | 10 | – |

SECOND CONNECTIONS.

| | £. | s. |
|---|---|---|
| Within ½-mile of the Exchange | 6 | 15 |
| Within ¾ „ „ „ | 7 | 13 |
| Within 1 „ „ „ | 8 | 10 |

With a charge of 2*l.* 10*s.* for every additional half-mile.

The Norwich free area includes the city of Norwich, and extends for 53 square miles.

The Exeter free area includes the city of Exeter, and the urban districts of Crediton and Exmouth, and extends for 141 square miles.

The Chester free area includes the city of Chester, and extends for 67 square miles.

The Bath free area includes the city of Bath, and extends for 49 square miles.

The Chelmsford free area includes the municipal boroughs of Chelmsford and Maldon, and the urban district of Witham, and extends for 167 square miles.

The Ipswich free area includes the county borough of Ipswich, and the urban districts of Stowmarket, Felixstowe, and Walton, and extends for 62 square miles.

The Colchester free area includes the municipal borough of Colchester, including Nayland, Wyvenhoe, and Brightlingsea, and extends for 164 square miles.

The Worcester free area includes the city of Worcester, the municipal borough of Droitwich, and the urban district of Malvern, and extends for 66 square miles.

The Wolverhampton free area includes the county borough of Wolverhampton, and the urban districts of Bilston, Tettenhall, and Sedgeley, including Bushbury, and extends for 32 square miles.

The Stafford free area includes the municipal borough of Stafford, Brocton, Penkridge, and Dunston, an extends for 24 square miles.

The Lincoln free area includes the city of Lincoln, and extends for 36 square miles.

## IV.—SMALL OUTLYING AND ISOLATED TOWNS.

### Elgin, Oban, &c.

FIRST CONNECTIONS.

| | £. | s. |
|---|---|---|
| Within ½-mile of the Exchange | 6 | 10 |
| Within 1 „ „ „ | 8 | – |

2*l.* 10*s.* each additional half-mile.

Oxford-court, 22 March 1895.

## APPENDIX, No. 13.

| Dame-street Exchange (Dublin) | 973 | 8,392 | 8 | - - ·66 |

*N.B.*—The number of messages is arrived at by treating each effective call by a subscriber as being two messages, that is, a question and a reply, though from the nature of the case many questions and replies pass in the course of a conversation. Only effective calls are dealt with in this return, that is to say, calls by subscribers which are effectively put through so as to enable them to speak to their correspondents.

The number of messages is based upon a return of the calls for the week ending 28th March 1895, and dividing the total number by seven, the Sunday is therefore included.

No messages involving the use of a "trunk" line are included in this return.

## THE NATIONAL TELEPHONE COMPANY, LIMITED.

## THE NATIONAL TELEPHONE COMPANY, LIMITED,

STATEMENT as to Relations between the COMPANY and the ASSOCIATION for the Protection of Telephone Subscribers in *London*.

AFTER the decision had been arrived at that the proposals of the New Telephone Company for working a separate Telephone system in London under the conditions set forth in the agreement between the New Telephone Company and the Association for the Protection of Telephone Subscribers, dated 25th April, 1892, could not, with advantage to the public, or with any prospect of financial success to the New Telephone Company, be given effect to, and that in the interests of all parties concerned it was expedient, in order to secure a more efficient service than then existed, to remodel the plant of the National Telephone Company on the metallic circuit principle, negotiations took place between the representatives of the Association and of the National Telephone Company, with the result, that certain assurances which were given by the National Telephone Company, accompanied by certain modifications of tariff, were accepted by the Association as a fulfilment of the obligations of the New Telephone Company to the Association, as set forth in the said agreement.

The Assurances referred to were, that the National Telephone Company would continue the work, then in progress, of remodelling its London system upon the metallic circuit principle, and that work has been pushed forward with the utmost vigour, in redemption of the pledges given upon the conclusion of these arrangements.

The following letter, signed by the representatives of the Association, was sent to the London Press, and appeared in the "Times" of the 20th March, 1893 :—

To the Editor of the "Times."

Sir,

WE hope that you will allow us to inform the telephone users of London through the medium of your journal that, as the direct result of the pressure brought to bear upon the National Telephone Company by the Association for the Protection of Telephone Subscribers, the prices of private-house telephones in London, giving communication over the whole metropolitan area, will be almost immediately reduced from 20*l.* a year to 10*l.* a year, subject only to the condition that they are taken upon a five years' contract. The price of business telephones will remain as at present, but since the National Company have promised immediately to instal the twin-wire system, which will make speaking on the telephone clear and easy, the chief objection to entering upon five years' contracts for business telephones and taking the discount of 3*l.* per annum then allowed vanishes. Had the New Telephone Company continued to have an independent existence, our Association had great hopes of obtaining an even better telephone service than has now been secured to users; but, on the other hand, it must be remembered that these benefits would have been seriously discounted by the fact that it would have been two or three years before the New Telephone Company would have been in full working order, while the present advantages will be secured immediately.

Yours, &c.,
(signed) *C. R. Haig.*
*A. H. Hastie.*

65, Lincoln's-inn Fields, W.C., 17 March.

## THE NATIONAL TELEPHONE COMPANY, LIMITED.

STATEMENT regarding NEW and CEASED SUBSCRIBERS, SPARE WIRE, &c., Year ending 31st December, 1894.

### UNITED KINGDOM (INCLUDING THE METROPOLIS).

| | |
|---|---|
| Number of New Subscribers to the Company's system during the year ending 31st December 1894 | 12,502 |

[*N.B.*—In this Index the Figures following the Names of the Witnesses, and those in the Analysis of Evidence of each Witness, refer to the Questions in the Evidence; the Figures following App. refer to the Pages in the Appendix; and the Numerals following *Rep.* to the Pages in the Report and Proceedings of the Committee.]

## A.

*ABERDEEN.* Explanation that at Aberdeen the municipal subscription to the telephone amounts to 200*l.*; *Bisset* 1020–1022——Experience to the effect that the telephone service is very bad, *ib.* 1023. 1041–1043.

Evidence respecting the number of subscribers and the charges of the National Telephone Company; great increase in the number of subscribers by the reduction to 8*l.* 10*s.* on the rental, *Bisset* 1024–1027. 1079–1081——Explanation of the terms of agreement by which the National Company were permitted to carry on business, *ib.* 1030–1035. 1038, 1039——Entire willingness of Aberdeen if in possession of the telephones to hand them over to Government on equitable terms, *ib.* 1048, 1049. 1086, 1087.

Personal experience of witness that the service of the National Telephone Company is very efficient, *Crombie* 2382–2389. 2394–2399 —— Reference to the difficulties of the Telephone Company in regard to wayleaves, *ib.* 2389–2393——Evidence showing that the charge to subscribers has been reduced from 15*l.* to 8*l.* 10*s.*; *ib.* 2400–2402. 2407–2409——Dissent from certain evidence given by Mr. Bisset, *ib.* 2405–2406. 2422–2426.

Average number of complaints for the year 1894; *App.* 319——Statement showing the number of lines and the increase in each of the last five years, *ib.*——Number of local messages passing through the exchange on 3rd April 1895, *ib.* 323.

*Amalgamation of Companies.* Expression of disapproval by Mr. Raikes with reference to the amalgamation of so many telephone companies, *Lamb* 62, 63. 83, 84. 264–272.

Reasons which led to the amalgamation in 1889 of the three largest companies, viz.: The United, the Lancashire and Cheshire, and the National, under the name of the "National Telephone Company," *Forbes* 4183–4189——Evidence showing how 13 companies, who by the operation of the patents were limited to certain areas, were acquired by the National under the agreement of 1892; *ib.* 4183–4199.

Statement that the first advantage of amalgamation was a general reduction of the rates of subscription, *Forbes* 4199 —— Information respecting the smaller companies which had been absorbed by the original National Company, *ib.* 4791–4799.

Summary showing the amalgamations with the National Company, *App.* 316.

*See* also *Cost* (*Capital Outlay*). *National Telephone Company.* *New Telephone Company.* *United Telephone Company.*

*Anderson, Kinloch.* (Analysis of his Evidence.)—Is a magistrate of the City of Edinburgh, and a member of the Corporation, 1004.

Corroboration generally of the evidence given by Sir James Russell, 1005—— Importance attached by the Corporation of Edinburgh to the control of the streets, 1006, 1007——Conclusion that the municipality, if it obtained a licence, would give up the undertaking to the State on equitable terms, 1009——Statement in favour of competition, 1010–1012——Suggestion that the municipal area might include Portobello, Musselburgh, &c., 1013–1016.

Report, 1895—*continued.*

*Association for the Protection of Telephone Subscribers.* Statement as to the relations between the National Company and the Association for the Protection of Telephone Subscribers in London, *App.* 328.

*Austria.* Paper containing information respecting the telephone service, the system in operation, number of subscribers, terms of subscription, trunk-wire charges, &c., *App.* 296, 297.

B.

*Bates, H. Montague.* (Analysis of his Evidence.)—Is principal clerk to the Commissioners of Sewers of the City of London; has had eleven years experience of the working of telephones, 1952–1955.

Statement in regard to the unsatisfactory nature of the present service; belief that it is largely due to the use of the single wire system, 1956–1967——Reference to an application made to the Commissioners of Sewers for their consent to apply for a licence to establish a double-wire service at a charge of 8*l.* per user per annum; resolution of the Commissioners, provided this charge could be guaranteed, to consent to certain tubes laid by the City of London Electric Lighting Company being used for telephonic purposes, 1968–1974. 1977–1996.

*Belgium.* Return respecting the telephone service, the number of subscribers and terms of subscription, trunk-wire charges, &c., *App.* 296, 297.

*Bell's Patent.* Establishment of a company in 1878 for the purpose of acquiring and working Bell's patent: subsequent amalgamation of this company with the Edison Company as "The United Telephone Company," *Lamb* 9–13——Explanation as regards the Bell Company that there was at first no suggestion of an exchange system, *ib.* 9.

*Berridge, George.* (Analysis of his Evidence.)—Witness is Chairman of the Streets Committee of the Commissioners of Sewers of the City of London, 1997–2000. 2039, 2040.

Evidence respecting the inefficiency of the telephone service in the metropolis, 2001–2007. 2041-2049. 2053, 2054. 2075–2088——Excessive rate of subscription; witness is now paying 17*l.* per annum, 2008–2023——Reference to the tubes laid by the Electric Lighting Company; negotiations still pending as to the terms upon which they should be used, 2025–2027. 2034–2036.

Belief that the City Commissioners of Sewers have not contemplated starting a telephone, 2028. 2089——Reason of the Commissioners for desiring that the telephones should be in the hands of municipalities, 2028–2031——Opinion that competing systems would not prove very inconvenient, 2032, 2033. 2062–2066. 2090–2096, 2101–2103——Evidence as to the offer of Mr. Foster to introduce a company which would supply a good service for 8*l.* per annum, 2036–2038. 2050–2052.

Information respecting the system and charges of the New Telephone Company, 2055–2060——Explanations in regard to the day and night population of the area over which the Commissioners of Sewers have authority, 2067–2074——Personal opinion that the Commissioners would not grant the London County Council control over their streets, 2097–2100.

*Beveridge, William.* (Analysis of his Evidence.)—Statement on the part of the Corporation of Glasgow that the result of an inquiry in regard to the efficiency or inefficiency of the present service was about 970 expressions of dissatisfaction out of 4,409, the total number of subscribers, 5140–5157.

*Binnie, Alexander B.* Summary of report by Mr. Binnie, together with estimate, as to the cost of supplying London with a telephone service and as to the annual expenditure in maintenance, *App.* 303, 304.

*Bisset, George.* (Analysis of his Evidence.)—Is City Treasurer of Aberdeen and Chairman of the Finance Committee of the Town Council, 1017–1019.

Statement that the municipal subscription to the telephone amounts to 200*l.*; 1020–1022——Experience that the telephone service is very bad, 1023. 1041–1043——Evidence respecting the number of subscribers and the charges of the National Telephone Company; the reduced rental of 8*l.* 10*s.* caused a great increase in the number of subscribers, 1024-1027. 1079–1081.

Information showing that the Corporation disapprove of competition, but are willing to purchase the business of the National Telephone Company, 1030. 1035. 1061–1064. 1071–1074. 1082–1085——Explanation of the terms of agreement by which the National Company were permitted to carry on business in Aberdeen, 1030–1035. 1038, 1039——Objection to private companies having authority over the streets, 1036, 1037.

Evidence

Report, 1895—*continued.*

*Bisset, George.* (Analysis of his Evidence)—*continued.*

Evidence respecting the present financial condition of the National Telephone Company; comment upon its excessive capital, 1045, 1046——Desirability of placing the telephones in the hands of municipalities in preference to the State, 1047. 1051–1060. 1089–1091.

Entire willingness of Aberdeen, if they obtained the telephones, to hand them over to Government on equitable terms, 1048, 1049. 1086, 1087——Consideration of the effect of telephones on the post office revenue; opinion that public convenience should be considered before revenue, 1065–1070.

*Buffalo* (*United States*). Reference to a toll instituted at Buffalo in place of an annual subscription, *Preece* 2691. 2721–2727.

C.

*Calls and Call Offices.* Desirability of the telephone system being brought more within the reach of people who at present cannot afford it, by the establishment of a number of call offices where the telephone could be used for a small fee; conclusion hereon that very considerable benefits would accrue to the public under the agreements made by the Postmaster General, *Clare* 1187-1193. 1202–1211. 1252–1259. 1360–1363 —— Particulars of the "Law" system of calling now in operation at Glasgow; belief that it may be a cause of difficulty, *Preece* 2571–2575.

Total of 139,639,032 as the present ratio of effective calls per annum, *Forbes* 4205.

*See* also *Exchanges. Messages.*

*Capital of Companies.* See *Cost* (*Capital Outlay*).

*Carbutt, Sir Edward H.* (Analysis of his Evidence.)—Is a Member of the Council of the London Chamber of Commerce, and appears in support of the resolutions passed by a special committee of that Chamber; names of the members of the Chamber who formed the committee, 1786–1791. 1840–1846.

Necessity for properly controlled competition, 1791. 1847–1849. 1856–1858—— Grounds for desiring that small areas should be formed, and that the charges should vary according to the character of the area; reference hereon to experiments made at Kensington and Croydon in regard to varying rates, 1791–1794. 1832–1838. 1859-1861. 1890-1895.

Belief that it would prove advantageous to start numerous small companies in agricultural districts under similar powers to those applied for in the Light Railways Bill, 1794–1799. 1826–1831. 1871–1874——Suggestion that the London system should be purchased by the Government, 1799, 1800. 1874–1876——Desirability of having standard regulations which should be applicable to all towns, 1800–1804.

Necessity for precautions being taken against the possible neglect of unprofitable areas; opinion that this could be controlled by the Postmaster General when granting licenses, 1804–1825. 1850–1856 —— Personal opinion that were the London County Council to supply the profitable area of Central London they would also have to include the unprofitable fringe around it, even though it entailed an increased charge to subscribers, 1862–1870. 1879-1884.

Question as to the difficulties in regard to inter-communication between different systems which would arise in the event of competition, 1896–1907——Examination upon the question whether new companies would not be handicapped in their competition with the National Telephone Company if they were compelled to include unprofitable areas in their system; belief that the benefits accruing from a smaller capital would compensate for any such disadvantage, 1908–1918.

*Charges to Subscribers.* See *Rates and Charges.*

*Chicago.* Belief that the first establishment of a telephone exchange was at Chicago in 1878; *Lamb* 9, 10 —— Particulars respecting the enormous use made of the telephone in Chicago, *Preece* 2634-2645. 2680, 2681.

*Chisholm, Samuel.* (Analysis of his Evidence.)—Has been in business in Glasgow for many years; is a Magistrate of the City and a Member of the Glasgow Town Council, 411-413.

Reference to a motion brought forward at a special committee of the Town Council of Glasgow in 1893, requesting the Postmaster General for a license to inaugurate an efficient telephone service; no definite reply has yet been received to the application, 414-423. 465–473. 530, 531. 604–609. 645–647 —— Evidence showing that the unsatisfactory nature of the service of the National Telephone Company was the primary reason for the application, 424–433. 544–557. 621–634.

Report, 1895—*continued.*

*Chisholm, Samuel.* (Analysis of his Evidence)—*continued.*

Belief that it would be impracticable for the National Telephone Company to introduce a twin-wire system, 434–437. 440–442. 444, 445 ——Objection of the telephone companies to the use of electric traction for trams, 438, 439.

Opinion that any undertaking requiring the control of the streets should be in the hands of the municipality, 443. 671–676——Statement that the municipality could afford to work the telephones at cost price, 446–448.

Information showing that threatened competition caused the National Telephone subscription, which was formerly 20*l.* per annum, to be reduced, to 10*l.*, and that this reduction has nearly trebled the number of subscribers, 449–461. 514–517. 576–584. 587–589——Result of inquiries in regard to the much smaller charges that prevail in continental cities, notably Stockholm, 462, 463. 565–575.

Estimates obtained by the Corporation showing that an efficient service could be supplied at an annual charge of 5*l.* for each subscriber, 464. 490–494. 667–670——Cognisance of witness as to the agreement entered into between the Post Office and the telephone companies, 465–468. 521, 522.

Reference to speeches made in the House by Mr. Goschen and Sir James Fergusson which led the Corporation to believe that licenses would be granted to municipalities, 475–478. 677–680——Evidence showing that the Corporation pays over 1,600*l.* per annum to the telephone exchange, 479–481. 486–489——Belief that were a license granted to the Corporation they would be prepared at any future time to hand it over to the Government on the most reasonable terms, 482–485. 612–615.

Examination as to the power which the present agreement confers on the Postmaster General in the matter of underground wires, 500–513. 558–562——Unsatisfactory nature of the agreement, owing to the want of protection to the public in regard to charges, 518-520——Attention of witness called to a memorandum circulated by the Corporation in reference to the agreement; opinion that it probably expressed the views of the Corporation at the time, 523–529. 635, 636. 644.

Willingness to risk the possible inconvenience which might arise from a double set of exchanges, 532-539. 563, 564. 656, 657. 659, 660——Explanation that the Corporation are only applying for the licenses for a local area, 540–543. 618–620. 663–666——Grounds for the opinion that an increase in the number of telephone subscribers would not affect the postal or telegraph revenue of the Post Office, 593–603.

Reference to the distinct statement of the Treasury Minute in favour of competition, 637–641——Necessity of obtaining Parliamentary sanction before opening exchanges, 648–651——Improbability of the Corporation of Glasgow buying up the telephone company, 652, 653.

*Chronology of the Telephone.* Paper explanatory of telephone chronology in this country since the time of the Bell & Edison patents, *App.* 316.

*Circuits.* Description of the instruments necessary to make a complete telephone circuit, *Preece* 2557——Variation in regard to the number of lines that can be undertaken by one operator; five circuits a fair average for a busy trunk line, *ib.* 2685, 2686.

*See* also *Metallic Circuits.*

*Clare, Harcourt Everard.* (Analysis of his Evidence.)—Witness is Deputy Town Clerk of Liverpool, and has had the control of the Parliamentary business of the Liverpool Corporation for the last fourteen years; appears, with the town clerk of Leeds, on behalf of the Municipal Corporations Association, 1145–1148. 1212.

View of the Municipal Corporations Association that, as the telephonic system is now an absolute commercial necessity, and a great convenience for private and domestic purposes, it is most important that inter-communication between large centres of commerce should be made as easy and cheap as possible, 1149–1151. 1222, *et seq.*; 1355–1359. 1458 *et seq.*——Grounds for the opinion that the whole telephonic system must be considered as a national undertaking, and should be taken over by the Government, 1151–1157. 1233–1235. 1429–1431. 1464, 1465.

Anticipation that if the Government take over the whole system a considerable reduction in the charges might be made by working it at something like cost price, and that developments would take place, in the interests of the public, that might not pay at once, 1152, 1153——Doubt as to any public benefit arising from the Government taking over the trunk wire system only, unless the number of trunk lines be increased, 1153-1155.

Evidence in support of the conclusion that if the whole system be not taken over by the Government all the local exchanges should be under one control, otherwise there would be confusion and extra charges, 1155–1157. 1208–1210. 1283–1299. 1352–1355. 1463 *et seq.*——Conclusions of the Municipal Corporations Association that the idea of municipalising the local exchanges is impracticable and wrong in principle; undesirability

*Clare, Harcourt Everard.* (Analysis of his Evidence)—*continued.*

undesirability of the rates being pledged for carrying on a business undertaking which must result in a loss, and which is not used by the large majority of ratepayers, 1157–1167. 1260–1299. 1304 *et seq.*; 1408 *et seq.*; 1424–1443. 1460 *et seq.*

Impossibility of any other company successfully competing with the National Telephone Company; probability that any such attempt at competition would only result in increased charges, 1158, 1159. 1242–1255——Inclusion in the Municipal Corporations Association of practically all the corporations in England outside London, 1163–1167.

General satisfaction with the telephone system in the Liverpool area; conviction, however, that telephones will never be as cheap or efficient as they ought to be while the telephone company is not endowed with the powers necessary to maintain their undertaking in a proper way over private property, 1168 *et seq.*; 1306 *et seq.*——Desirability, in the event of the telephone company being given compulsory powers to maintain their works, of the corporation having absolute discretion as to whether the system shall be an overhead or underground one, 1168 *et seq.*

Necessity of an Act of Parliament empowering corporations to break up the streets for the purpose of putting down underground telephone wires; practical agreement of all the corporations to withhold their consent to the exercise of way-leave powers under the Act of 1892; 1172–1179. 1300–1303. 1348–1352. 1401 *et seq.*——Suggestion that, after having fixed the powers to be given to the telephone company, the fair maximum dividend that the company may pay on their capital, and the maximum charges in conjunction with maximum dividends, should be considered, 1180–1187. 1197–1201.

Advisability of provisions to prevent the company unfairly favouring one exchange area at the expense of others, and of giving undue preference as between one subscriber and another, 1180–1187——Possibility of classifying the different local exchange areas and fixing the maximum charge in each class, 1185, 1186. 1467.

Desirability of the telephone system being brought more within the reach of people who at present cannot afford it, by the establishment of a number of call offices where the telephone could be used for a small fee; conclusion hereon that very considerable benefits will accrue to the public under the agreement made by the Postmaster General, 1187–1193. 1202–1211. 1252–1259. 1360–1363——Grounds for the contention that the telephone company, or the authority controlling the telephone system, should be given a permanent existence, with extended powers to maintain the undertaking on a cheap and efficient basis, 1194–1221. 1235–1241.

Opinion that the only alternative to buying out the companies, which course is not recommended, is to leave the present supply of telephonic convenience in the hands of the National Telephone Company, but under altered conditions, 1213–1221.

Evidence to the effect that the telephone is doing a great deal of the work that would otherwise have been done by the telegraph, the telegraph business between Liverpool and Manchester having been practically ousted by the telephone, 1231, 1232.

No doubt that part of the net loss of 240,000*l.* a-year incurred by the Post Office on the telegraph business is due to the competition of the telephones; contention, however, that part of the loss is also due to press messages being carried at a lower rate than other telegrams, 1306 *et seq.*; 1430, 1431——Grounds of objection to the proposal that the municipalities should compete with the National Telephone Company, such a course involving the duplication of wires throughout the area; probability that the lower prices produced by the competition would not be maintained very long, 1307 *et seq.*; 1368 *et seq.*

Suggestion that if an arrangement be made empowering the Postmaster General to take over the telephone system from the National Company when he thought fit to do so, some reasonable method of arriving at the price should be specified in the Act, 1339-1347. 1432——Practical concurrence of witness in the proposed agreement with the Postmaster General, except as regards that part which relates to breaking up the streets; objection to the Postmaster General throwing on the corporations the necessity of protecting the public against his own licensees, 1364 *et seq.*

Evidence to the effect that witness is not aware of any complaints as to the telephonic communication between Newcastle and Liverpool, nor between Manchester and Liverpool; there was never any competition between telephone companies at Liverpool, 1377–1403. 1444–1450——Agreement of witness with the statement that although the associated corporations did not appear before the Committee of 1892 their suggestions as to vetoing the exercise of the powers of the National Telephone Company were adopted by the Committee, 1417–1423.

Report, 1895—*continued.*

*Clare, Harcourt Everard.* (Analysis of his Evidence)—*continued.*

Opinion that the additional facilities for telephonic communication that the Postmaster General proposes to give if the agreement be carried out will undoubtedly be a benefit to the public; great convenience of the arrangement by which telegrams can be telephoned at some post offices, 1451–1457—— Non-objection to competition being allowed in Scotch areas if the corporations demand it, provided the result be not detrimental to telephone subscribers in Liverpool; belief, however, that such competition would be detrimental to the whole country, 1468–1472.

Statement that so far as witness is aware no English corporation has asked for, or desires to have, a telephone licence, 1473——Belief that the Municipal Corporations Association would endorse the opinion expressed by witness that no powers should be conferred on corporations to construct telephones, 1474–1479.

*Colquhoun, James, LL.D.* (Analysis of his Evidence.)—Is a Solicitor at Glasgow, a Member of the Town Council, and a Police Court Judge, 682–684.

Statement respecting the general dissatisfaction in Glasgow at the inefficiency of the telephone service, 686–689. 824–835——Particulars as to the original telephone services in Glasgow, 690–697. 701–703——Examination in regard to the charges of the National Telephone Company; belief that the present reduced charge of 10*l.* per annum was the result of threatened competition, 697–700. 704–710. 759–761—— Opinion that competition would be advantageous, 710, 711. 877–880.

Difficulty between the corporation and the National Telephone Company respecting the institution of electric trams, 712–716. 836–841——Advantageous financial position of the Corporation, 717–719. 764–768——Grounds for the opinion that the telephone service should be in the hands of either the State or of the municipalities, 721. 769–775. 815. 822, 823. 868, 869——Necessity, in the case of the telephones being the monopoly of a private company, that there should be conditions as to price, &c., 721. 754–757. 812–814.

Willingness of the corporation to enter into competition with the National Company, and also to work amicably with them, 722–729. 847–853——Contention that the Postmaster General should be entitled to take over the telephones from municipalities at a fair value without any payment for goodwill, 731–733. 883, 884. 887–889—— Detailed evidence as to the powers of the Postmaster General and his licensees in respect of wayleaves, 734–753. 845, 846. 856–863——Estimate by Mr. Provand that a rental of 5*l.* per annum would repay the corporation, 762. 842–844.

Details respecting the capital and profits of the National Telephone Company; strong comments thereupon, 765–767. 803–809. 877——Improbability, as regards Glasgow, of the National Company's interests being purchased by the corporation, 776. 794–797. 864–867——Description of the extent and working of the three telephone companies in Stockholm, 777–788. 816–821——Attention of witness called to the document issued by the Telephone Committee in Glasgow in regard to the telephone agreement; reason for the views of the committee being modified, 789–792.

Question as to the policy indicated by the observations made by Mr. Goschen and Sir James Fergusson in respect of the grant of licences to municipalities, 798–800 ——Opinion that the Treasury Minute is suggestive of competition, 802——View that telephones do not affect the telegraphic revenue, 809, 810——Grounds for believing that the granting of municipal licences would facilitate the acquisition of all telephones by the State, 870–876. 880–882. 890, 891.

*COMPETITION:*

Grounds for the conclusion that competing systems in one area invariably become absorbed one in the other and result in inconvenience and expense to the public; illustrations in the case of competing companies in Stockholm and Dundee, *Lamb* 104–114. 192, 193. 275. 279–286. 314–319. 359, 360——Statement that there is nothing in the agreement with the companies which would restrict the power of the Postmaster General to grant competing licences, *Sir R. Hunter* 400–406. 410.

Reference to the distinct statement of the Treasury Minute in favour of competition, *Chisholm* 637–641——Opinion that the Treasury Minute is suggestive of competition, *Colquhoun* 802.

Impossibility of any other company successfully competing with the National Telephone Company; probability that any such attempt at competition would only result in increased charges, *Clare* 1158, 1159. 1242–1255——Grounds of objection to the proposal that the municipalities should compete with the National Company, such a course involving the duplication of wires throughout the area; probability that the lower prices produced by the competition would not be maintained very long, *ib.* 1307 *et seq.*; 1368 *et seq.*——Non-objection to competition being allowed in Scotch areas if the corporations demand it, provided the result be not detrimental to telephone subscribers in Liverpool;

*Competition*—continued.

Liverpool; belief, however, that such competition would be detrimental to the whole country, *Clare* 1468–1472.

Grounds for the opinion that competition on the part of municipalities would only be justifiable in the event of the State not taking over the whole telephone system and in the absence of such conditions as would compel the existing company to give a better service at revised rates, *Harrison* 1483–1491. 1531–1541. 1559–1561. 1575 *et seq.* ——Suggestion that a thorough competition such as that of a municipality would reduce the charges and enable the Government to take over the telephones at a reasonable sum, *Dickinson* 1625–1628. 1647–1652. 1677–1680. 1684–1690. 1773–1775.

Necessity in London for properly controlled competition, *Carbutt* 1791. 1847–1849. 1856–1858——Question as to the difficulties in regard to inter-communication between different systems which would arise in the event of competition, *ib.* 1896–1907—— Examination as to whether new companies would not be handicapped in their competition with the National Telephone Company if they were compelled to include unprofitable areas in their system; belief that the benefits accruing from a smaller capital would compensate for any such disadvantage, *ib.* 1908–1918.

Examination as to the difficulties of inter-communication in the event of competition between two systems; they have not been discussed by the Committee of the London Chamber, *Flood-Page* 1940–1947——Opinion that competing systems would not prove very inconvenient, *Berridge* 2032, 2033. 2062–2066. 2090–2096. 2101–2103.

Strong opinion against competition, *Riach* 2267, 2268; *Crombie* 2402–2404. 2411–2419——Disapproval of competition except as a means of reducing an extravagant price, *Moncur* 2314. 2350.

Belief that competing systems in one area would necessitate an increase of exchange and consequently increased delay, *Preece* 2675–2680——Opinion that inter-communication between competing systems would not cause engineering difficulties, *ib.* 3003–3006 ——Conclusion as to the impracticability of competition in any form, *ib.* 3055. 3135, 3136.

Grounds for the suggestion that limited competition would prove a great stimulus to invention, as it has done in the case of electric light, and that when telephony arrives at a more perfect condition the whole system might pass into the hands of the State, *Crompton* 3193–3209. 3216–3221. 3229–3231. 3243–3258.

Belief that limited competition would bring about a more effective service, but that the simplest solution would be the nationalisation of all telephones, *Thompson* 3279–3283. 3296——Further opinion that municipal telephones would be the best form of competition, *ib.* 3332–3342. 3390–3392——Suggestion that in the case of competing exchanges, the work might be simplified by having a directory inclusive of the names of subscribers to all companies, *ib.* 3394–3401.

Examination as to the efforts made on the expiration of the patent rights in 1890, to bring about competition, the Pioneer Telephone Company having been formed in 1892 with the object of raising capital for a projected company, to be called the New Telephone Company, *Webber* 3424–3428——Opinion that both town and county councils are perfectly competent to undertake the telephone service, but that competition in any form is necessary in default of purchase by the State, *ib.* 3584–3592. 3618. 3824. 3868–3873. 3957–3973——Denial that reasonable competition has ever existed, *ib.* 3961–3963.

Belief that under the agreement of the Post Office authorities in this country are absolutely free to grant competing licenses, *Forbes* 4640–4644——Question as to what would be the action of the National Company if the Post Office were to grant competing license to new companies or to municipalities, *ib.* 4680–4691——Belief that competition reduces rates temporarily only, and probably ends in making them heavier than they were originally, *ib.* 4899–4902.

Instances given of a case in which the threatened competition of the Post Office effected a satisfactory service, *Lamb* 5209–5212. 5231–5241. 5278, 5279——Grounds for the contention that competition should not be allowed, and that the telephone system should be in the hands of the Post Office, *ib.* 5254–5259. 5268–5283. 5289–5291.

*See* also *Foreign Countries. Licenses. Local or Municipal Authorities. Post Office.*

*Cost (Capital Outlay):*

Estimates given by three gentlemen to the effect that the best telephonic system could be provided for the County of London for 10,000 subscribers, at a subscription not exceeding 10*l.* per annum, *Dickinson* 1612–1622. 1634–1644. 1674–1676. 1726–1738. 1781–1784.

Report, 1895 – *continued.*

*Cost* (*Capital Outlay*)—continued.

Estimate that an underground system for London would average 55*l.* per subscriber, *Preece* 2715, 2716——Admission that if a company started with unwatered stock, it would benefit subscribers, *ib.* 2933–2947. 2982-3002. 3007–3012——Evidence showing that with a multiple board the capital cost increases as the square of the number of subscribers, *ib.* 2933–2947. 2982–3002. 3007–3012——Admission that if a company started with unwatered stock subscribers would benefit, *ib.* 3013–3016.

Evidence showing that a complete twin-wire underground service could be provided for 28,000 subscribers at a capital outlry of 14*l.* 2*s.* 6*d.* each, *Webber* 3464–3472. 3624, 3625. 3652–3661. 3751–3754. 3836–3839. 3928–3936.

Comparison of an estimate proposed by the New Telephone Company (and signed by witness) with that put forward by the London County Council; explanation that the estimate signed by witness proved on examination to be illusory, *Forbes* 4481–4494. 4499–4527——Information as to the capital of the various companies now amalgamated under the National Telephone Company, and the sum paid for their purchase, showing an amount of 1,229,000*l.* "watered" capital, *ib.* 4781–4790.

Examination as to whether the sum of 700,000*l.* invested in the purchase of the New Company is not unproductive capital; justification of the transaction, *Forbes* 4839–4867——Question raised as to whether the expenditure of the National Telephone Company does not coincide with the estimate given in the prospectus of the New Telephone Company; belief that such an estimate could not be realised, *ib.* 4903–4934——Evidence showing that there was no watering of capital when the United and the Bell and Edison Companies amalgamated, *ib.* 5106–5109. 5112——Inaccuracy of a table put in by Mr. Benn respecting Mr. Burdett's view of the capital of the National Company; under-statement of the number of subscribers, *ib.* 5112–5114.

Consideration of the wide divergency between the several estimates that have been suggested for an efficient telephone system; belief that the estimate of a 16*l.* subscription is not too low, *Lamb* 5189–5208. 5225. 5227–5230. 5254, 5255.

*Cost of Working.* Statement that the expenses of administration increase enormously with the number of subscribers, *Lamb* 209. 369–374——Examination as to the increase of charge under the new arrangement with the National Company; comparison of the company's scale, and that of the Post Office, *ib.* 235–249.

Information as to the circumstances which cause an increase of cost; opinion that the number of operators attendant on an increased number of subscribers is the basis of cost, but that it is also affected by local circumstances, *Preece* 2687–2708.

Evidence respecting the salaries of the telephone clerks, superintendents, and wiremen; opinion that the cost of skilled labour is at least thirty-three per cent. higher than in most European countries, *Forbes* 4645–4655——Experience that in any given area after a certain point, an increase in the number of subscribers necessitates increased expense; statement to be prepared showing the manner in which the extra expense is incurred, *ib.* 4953–4955. 5063–5068. 5077–5085——Further information in regard to the working expenses of the company and the profit realised, *ib.* 5042–5051.

*Crombie, James.* (Analysis of his Evidence.)—Has carried on the business of a merchant and shipowner in Aberdeen for nearly fifty years; is agent of Messrs. Langlands, shipowners of Glasgow, &c., 2378–2381. 2410.

Personal experience that the service of the National Telephone Company is very efficient, 2382–2389. 2394–2399——Reference to the difficulties of the National Telephone Company in regard to wayleaves, 2389–2393——Evidence showing that the charge to subscribers in Aberdeen has been reduced from 15*l.* to 8*l.* 10*s.*; 2400–2402. 2407–2409.

Strong opinion against competition, 2402–2404. 2411–2419——Explanation that witness does not agree with certain evidence given by Mr. Bisset, 2405, 2406. 2422–2426——Belief that if a change be necessary nationalisation would be preferable to municipilisation, 2407.

*Crompton, R. E.* (Analysis of his Evidence.)—Is President of the Institute of Electrical Engineers; represents the Institute with regard to the telephone question, 3187, 3188. 3225.

Belief that the existing telephone monopoly has deadened the interest of the electrical profession in England, 3191–3193. 3226–3228. 3243. 3266–3269——Grounds for the suggestion that limited competition would prove a great stimulus to invention, as it has done in the case of electric light, and that when telephony arrives at a more perfect condition the whole system might pass into hands of the State, 3193–3209. 3216–3221. 3229–3231. 3243-3258.

Report, 1895—*continued*.

*Crompton, R. E.* (Analysis of his Evidence)—*continued*.

Examination in support of the opinion that England compares unfavourably with other countries in the absence of telephonic service amongst the poorer classes in villages and towns; practicability of intelligent young men starting small local exchanges, 3209-3215. 3222-3224. 3230-3242. 3259-3265.

*Curves.* Copies of curves handed in, showing how unequally the work is spread over the different hours of the day, *Preece* 2650–2666. 2670, 2671.

D.

*Deferred Messages.* Proposal that smaller charges might be made for deferred messages sent over the trunk wires at certain less busy hours of the day, *Webber* 3626–3632.

*Delay.* Evidence showing that the great delay occasioned by the number of operations necessitated when two or more exchanges are involved is partially removed when subscribers are in direct communication with the Post Office, *Preece* 2763–2768. 3112–3130. 3137–3149——Conclusion that a multiplicity of exchanges causes delay in transmission, *Forbes* 4460, 4461. 4636–4639.

Statement of the number of local messages passing through the exchanges at Glasgow, Aberdeen, Edinburgh, and at Queen Victoria-street Exchange (London) on 3rd April 1895, showing the time occupied and the reasons for delay in making connections, *App.* 323.

*Dickinson, Willoughby Hyett.* (Analysis of his Evidence.)—Witness, as Deputy Chairman of the London County Council, explains the action taken by the Council in regard to the telephone service in London; unsuccessful attempt of the Council to stop the Telegraph Bill of 1892, after the withdrawal of the Telephone Bill, which they had petitioned against, 1593–1596.

Opinion of the Committee of the Council that the agreement between the Post Office and the National Telephone Company places the company in too strong a position, giving it a practical monopoly over the whole kingdom, to the very great prejudice of the public, 1596.

[Second examination.]—Further evidence showing the grounds upon which the London County Council conclude that the Agreement will materially strengthen the position of the Telephone Company, 1597, 1598——Belief that the Council have no veto in regard to the connection of exchanges, 1598-1601——Tendency of the Agreement to increase the charges for messages on trunk wires; cases illustrative of those charges, 1601, 1602.

Objections to the clause of the Agreement which deals with terminal charges, 1602–1606. 1629–1633. 1653–1662. 1739–1749——Detailed information to the effect that the telephone system of London is unsatisfactory and that the charges are far in excess of those of Continental cities, 1606–1612. 1702–1711. 1750–1760.

Estimates given by three gentlemen showing that the best telephonic system could be provided for the county of London for 10,000 subscribers at a subscription not exceeding 10*l*. per annum, 1612–1622. 1634–1644. 1674–1676. 1726–1738. 1781–1784.

Full particulars showing that the high charges of the Telephone Company are due to its very large capital, the result of the process of amalgamation, 1623-1625.

Suggestion that a thorough competition such as that of a municipality would reduce the charges and enable the Government to take over the telephones at a reasonable sum, 1625–1628. 1647–1652. 1677–1680. 1684–1690. 1773–1775——Inexpediency of conferring any greater powers on the National Company, 1645, 1646 —— Personal opinion of witness that the telephones for the County of London should be in the hands of the London County Council, 1655–1673. 1681–1684.

Examination as to the increased expense of a large area; view of witness that the system for London need not be complicated with the question of area, 1690–1700 —— Desirability of the telephones being in the hands of the Government, 1712–1715. 1772 ——Reference to the three recommendations of the County Council in regard to the telephone service; they were adopted by both the late and the present County Council, 1714, 1715. 1761–1771.

Probability that increased telephonic service in London will prove detrimental to telegraphic communication, 1720–1725——Opinion that were licenses granted to municipalities, they should be for a term of years and not for a permanency, 1772. 1776–1780.

[Third examination.]—Information respecting the result of a circular issued by the London County Council on the 6th of May 1895, and sent to all the subscribers of the National Telephone Company, with the view of ascertaining their opinion as to the

Report, 1895—*continued.*

*Dickinson, Willoughby Hyett.* (Analysis of his Evidence)—*continued.*

efficiency of the service; about the same time a circular was issued by the National Telephone Company which has rather complicated the replies received, 4135–4148. 4154–4159.

Examination as to the estimates of the County Council for supplying a telephone service for London at a rental of 10*l.* per subscriber, 4153.

*Double-wire System.* Statement showing for several foreign countries the extent to which the double-wire system is in operation, *App.* 296–299.

*Dow, John Archibald.* (Analysis of his Evidence.)—Is a coal master in Glasgow, and is a partner in the Hamilton Coal Company, 2104–2106.

Evidence showing that for the last eleven years witness has been a constant user of the telephone supplied by the National Telephone Company in Glasgow and has found it satisfactory, 2107–2114. 2123–2129. 2152–2164——Grounds for objecting to the grant of licenses to municipalities; opinion that the telephone should be nationalised rather than municipalised, 2115–2120. 2130–2151——Statement as to the cost of the service in Glasgow, 2121, 2122.

*Draft Report.* Draft Report, as proposed by the Chairman, adopted by the Committee, *Rep.* viii.

*Dundee.* Detailed evidence showing how competition in 1884 reduced the charges from 20*l.* to 5*l.*, and resulted in Dundee being the best telephoned town in the country, *Sir J. Leng* 1097–1110——Comparison of the rate of increase in the number of subscribers in Glasgow and Dundee; explanation that an amalgamation of companies in Dundee brought about an increased rental which for a time caused a reduction in the number of subscribers, *ib.* 1111–1121. 1123–1126.

Considerations of certain difficulties in the case of outlying districts; belief that such districts might eventually be brought within the municipal area, *Sir J. Leng* 1132–1144.

Result of witness' experience that the service of the National Telephone Company at Dundee is very efficient, *Moncur* 2296–2299——Objection to the municipalisation of the telephone service, *ib.* 2300–2302. 2343–2349——Grounds for believing that the present amalgamated service is better than when competition existed, *ib.* 2303–2307. 2333–2343. 2351–2362.

Detailed information as to the effect of the competition of the Dundee and District Telephone Company on the charges of the National Telephone Company, *Moncur* 2308–2313——Evidence respecting the diminution of the dividends paid by the Dundee and District Telephone Company, *ib.* 2315–2321. 2327, 2328. 2363–2371.

Information respecting the result of competition in Dundee; statement to the effect that this competion lowered the charges, but that the Dundee Company built a flimsy structure with a view to ultimate sale, *Forbes* 4692–4711.

Statement of the number of lines and the increase in each of the last five years, *App.* 319.

Average number of complaints for the year 1894; *App.* 319.

Comparative statistics relating to the National Company and the Dundee Company respectively, *App.* 329.

E.

*EDINBURGH:*

Statement that the Corporation of Edinburgh is a considerable telephone user, *Sir J. Russell* 895–899——Evidence respecting the number of telephone subscribers and the rentals charged; reduction of the charge to 10*l.* per annum, *ib.* 900–902. 906, 907——Belief that the Edinburgh telephone service, although imperfect, is not so unsatisfactory as that of Glasgow, *ib.* 903–905.

Particulars as to the various controversies that have arisen between the telephone companies and the corporation respecting overhead wires, electric trams, &c., *Sir J. Russell* 905–921. 938. 969–976——Objection of the corporation to any interference with the streets, *ib.* 922–924. 978–980——Resolution of the Edinburgh Committee to apply for a telephone license should one be obtained by Glasgow, *ib.* 925–927. 977.

Evidence in support of the suggestion that Edinburgh and Leith should count as one area, *Sir J. Russell* 933-936. 952-957. 982–991——Statement that no dispute has ever arisen between the Post Office and the corporation in regard to wayleaves, *ib.* 967, 968.

Corroboration generally of the evidence given by Sir James Russell, *Anderson* 1005——Importance attached by the corporation to the control of the streets, *ib.* 1006, 1007

Report, 1895—*continued.*

*EDINBURGH*—continued.

1007——Conclusion that the municipality, if it obtained a licence, would give up the undertaking to the State on equitable terms, *Anderson* 1009.

Approval of competition in the case of Edinburgh, as between the municipality and the Telephone Company, *Anderson* 1010–1012——Suggestion that the municipal area might include Portobello, Musselburgh, &c., *ib.* 1013–1016.

Information showing that the corporation disapprove of competition, but are willing to purchase the business of the National Telephone Company, *Bisset* 1030. 1035. 1061–1064. 1071–1074. 1082–1085.

Evidence respecting the offices, &c., owned by witness, and the nature of the wires connecting them, *Waldie* 2228–2232——Experience of eighteen years that the system of the National Telephone Company is very satisfactory, *ib.* 2233–2239.

Experience of witness that the service in Edinburgh is very satisfactory, and is yearly improving, *Reach* 2249–2252. 2258–2264. 2288, 2289.

Statement of the number of lines and the increase in each of the last five years, *App.* 319.

Average number of complaints by subscribers for the year 1894; *App.* 319.

Number of local messages passing through the Exchange on 3rd April 1895; *App.* 323.

*Edison Company.* Explanation that the Edison Telephone Company of London was established in 1878, and purposed instituting telephone exchanges, *Lamb* 9, 10——Subsequent amalgamation of the Bell and Edison companies, under the title of "The United Telephone Company," *ib.* 9–13.

*Efficiency of Service.* Bar to the development and greater efficiency of the telephone system through the action of the Post Office for the protection of its revenue, *Webber* 3418——Letters written by the late Duke of Marlborough in 1882 handed in, as exemplifying the inefficiency of the telephone service at that period, *ib.* 3418–3420.

Information respecting the result of a circular issued by the London County Council on the 6th of May 1895, and sent to all the subscribers of the National Telephone Company with the view of ascertaining their opinion as to the efficiency of the service; about the same time a circular was issued by the National Telephone Company, which has rather complicated the replies received, *Dickinson* 4135–4148. 4154–4159.

Examination as to a recent circular issued by the National Company to its subscribers; conclusion that the general tenure of the replies received was favourable to the company as regards the efficiency of the service, *Forbes* 4160. 4162–4174——Return submitted giving the average number of complaints received from different towns in the United Kingdom for the year 1894; *ib.* 4318–4321——Evidence respecting the improvements which are being carried out by the National Company, *ib.* 4935–4942.

Extremely large proportion of the London Exchange subscribers who are satisfied with the service as given by the National Company, *App.* 315.

Statement of the number of complaints by subscribers in the principal towns of England and Scotland in 1894; *App.* 319.

*See* also *Aberdeen. Delay. Dundee. Edinburgh. Exchanges. Glasgow. Liverpool. Local or Municipal Authorities. London.*

*Electric Tramways.* Objection of the telephone companies, as at Glasgow, to the use of electric traction for trams, *Chisholm* 438, 439——Difficulty between the Corporation of Glasgow and the National Telephone Company respecting the institution of electric trams, *Colquhoun* 712–716. 836–841——Explanation with reference to the objection of the National Company to the introduction of electric tramways in Glasgow, *Forbes* 4993, 4994.

*Engineering Expenses.* Statement that engineering expenses average 3*l.* per subscriber, *Preece* 2709–2714——Reference to the want of encouragement for young men to enter upon the telephone branch of the profession, *Thompson* 3283–3286. 3291–3295. 3311.

*Establishment of Telephones.* Detailed statement respecting the institution and early history of the telephone and its establishment in this country, *Lamb* 4 *et seq.*

*EXCHANGES:*

Belief that the first telephone exchange was established at Chicago in 1878; *Lamb* 9——Evidence respecting the successful litigation entered into by the Post Office on account of the proposal to establish exchanges on the part of the Edison Company and of the United Telephone Company, *ib.* 11–13——Permission given by the Postmaster General in 1881 for the connection by the telephone companies of their exchanges with post offices, *ib.* 30, 31.

Report, 1895—*continued.*

*EXCHANGES*—continued.

Explanations in regard to the connection of exchanges by means of underground wires; statement that according to the Treasury Minute the Postmaster General is to assist the companies in this matter, *Sir R. Hunter* 380–382. 389, 390——Necessity of obtaining Parliamentary sanction before opening exchanges, *Chisholm* 648–451——Belief that the London County Council have no veto in regard to the connection of exchanges, *Dickinson* 1598–1601.

Explanation of the three classes of operation at an exchange, *Preece* 2654— —Information as to the number of operations necessary for each call at an exchange; statement that trunk-working involves sometimes sixteen operations, *ib.* 2664–2666. 2674——Evidence showing the necessity for limiting the size of exchanges, *ib.* 3183-3186.

Probability that two systems of exchange in one area would prove a convenience to subscribers, *Webber* 3601 ——Disapproval of the centralisation of exchanges on the ground of loss of time, *Ward* 4040–4043. 4084, 4085. 4129–4131——Total of 593 exchanges open at the end of April last, *Forbes* 4205.

*Extension of Telephones.* Question regarding the effect on the Post Office revenue of the expenses attendant on the extension of offices; statement that the Act of 1892 provided 1,000,000*l.* for telephone extension, *Lamb* 70–73. 132–143. 362, 363——Objection to the extension of trunk wires to outlying districts where the service would be infinitesimal to repay the outlay, *Provand* 2496–2498——Examination as to the possibility of young professional men starting small local exchanges; belief that they could do so if supported by local bodies, *Thompson* 3304-3310. 3312.

*See* also *Rural Districts.*

F.

*Flood-Page, Major S.* (Analysis of his Evidence.)—Is a director of the Edison and Swan United Electric Light Company, Limited; is a member of the sub-special committee of the London Chamber of Commerce, 1921–1923.

Statement that, prior to the telephone resolutions being drawn up by the special committee, there was a great divergence of views amongst the members of the committee, 1924–1927——Explanation of the views of the committee in regard to competition, 1928–1930——Necessity for a standard of regulations to be drawn up by a Government Department for the guidance of local authorities, 1930–1933.

Evidence showing that varying rates for limited services are in force at present at Kensington, Croydon, and other places, 1934, 1935. 1949–1951——Statement in regard to unprofitable areas; opinion that everyone in a district should have the best possible telephonic accommodation, 1935–1939——Examination as to the difficulties of inter-communication in the event of competition between two systems; statement that they have not been discussed by the committee of the London Chamber, 1940–1947.

*Forbes, James Staats.* (Analysis of his Evidence.)—Witness is President of the National Telephone Company, 4161.

Examination as to a recent circular issued by the company with reference to the efficiency of the service; conclusion that the general tenour of the replies received was favourable to the company, 4160. 4162–4174——Table of telephone chronology handed in; explanation hereon of the circumstances which led to the formation of the United Company, 4175——Reference to the rights accorded to the Post Office as the result of the judgment in the Post Office action of 1880; 4175.

Information as to the licenses granted by the Post Office to the United Company; belief that the first license of 1881 tended to suppress the development of the telephone, 4175-4180——Necessity for companies licensed by the Post Office in 1881 and previous to the expiration of the patents, to obtain a license also from the patentee, 4180–4183——Reasons which led to the amalgamation in 1889 of the three largest companies, viz., the United, the Lancashire and Cheshire, and the National, under the name of the National Company, 4183–4189.

Evidence showing how thirteen companies, who, by the operation of the patents were limited to certain areas, were acquired by the National under the agreement of 1892; 4183–4199——Statement that the first advantage of amalgamation was a general reduction of the rates of subscription, 4199.

Detailed information as to the numerical progress of the company consequent on the smaller companies being amalgamated; estimate that from 1890 to 1894 the subscribers have increased by 45,647 and that the ratio of effective calls per annum is 139,639,032;

Report, 1895—*continued.*

*Forbes, James Staats.* (Analysis of his Evidence)—*continued.*

139,639,032 ; 4200–4208. 4259–4263——Grounds for the opinion that the average annual payment of 9*l.* 2*s.* 2*d.* per line is far from exorbitant ; contention that it is unfair to compare this charge with those of other European cities, notably Stockholm and Berlin, owing to the heavier charges in England for way-leaves, rates and taxes, labour, &c., 4226-4245.

Opinion that the telephone is not so much used in England as in other European countries, partly on account of the enormous use made of the telegraph in England and partly owing to commissariat arrangements, 4247. 4265, 4266——Details given of statistics prepared by Dr. Von Stephean, the Postmaster General of Germany, showing the percentage of the population in different countries using the telegraph and telephone services, 4247–4264——Reference to the estimate for the County Council by Mr. Newland and also to the cost of installation suggested by General Webber ; belief that such estimates are impossible, 4266–4276.

Admission that the complaints respecting the single-wire system are well founded, 4276–4288——Document handed in showing the plant working and ready for the metallic circuit, which will be completed in London by the end of the year, 4277–4281. 4288. 4322–4326——Probability that many of the complaints have been due to the disturbance arising from the change of systems, 4280.

Admission that the service in Glasgow is not as good as it might be ; assurance that a metallic circuit will be supplied provided the local authorities render assistance, 4282-4288. 4318——Detailed information in respect of the Mutual Company at Manchester, showing that the inevitable result of competition in any particular area is combination, 4288–4308.

Evidence respecting the inconvenience caused by the competition of the Globe Company in London ; photographs handed in, illustrating the operations involved when the lines were being placed, 4308–4315——Return submitted, giving the average number of complaints received from different towns in the United Kingdom for the year 1894 ; 4318-4321.

Information as to the working and cost of the telephone service in Holland ; the annual subscription varies from 9*l.* to 20*l.* ; 4326–4333. 4340-4344——Practice in Holland for municipalities to license the telephone company as to the area in which they can carry on business, 4333–4339.

[Second Examination.]—Further details showing the short time occupied in placing subscribers in effective communication in Glasgow, Aberdeen, Edinburgh, &c. ; document containing statistics, hereon handed in, 4345–4356. 4407——Explanation of a certain document as to the number of local daily messages at certain important exchanges, showing the average cost to the subscriber to be in some instances under one farthing per message, 4356–4370.

Reference to document (handed in), illustrating the effect of the telephone service on that of the telegraph in various European cities, 4370–4376. 4408——Statement in regard to the number of lines and the population at various centres, on 1st January 1895, showing that London makes less use of the telephone than many provincial towns ; document hereon handed in, 4376–4378.

Consideration of the feeling expressed in various suburban centres in favour of subscriptions for local areas ; detailed statement showing that experiments made at Croydon, Kensington, Kingston, &c., resulted in there being more subscribers to the London exchange than to the local ones, 4378–4396. 4401. 4408 ——Opinion that working men will not use the telephone to any extent, but that it will benefit small tradesmen, 4386–4397——Belief that the agreement between the National Telephone Company and the Post Office will encourage the multiplication of call offices and consequently increase the spread of the telephonic system, 4397–4401. 4559–4575.

Evidence respecting the "private house" wires ; there are 492 private house subscribers in London, 4401-4407——Comparative statement handed in as to the number of subscribers to the Post Office and the National Telephone Company, respectively, showing that the latter has made the greater progress, 4409-4415. 4680–4682.

Detailed explanation of the complaint brought against the National Telephone Company on taking over the New Company's service for not fulfilling the pledges given by the latter ; document handed in on this point, 4415–4420. 4499-4528.

Statement that the new metallic circuit system for London will be completed by the end of the year, 4421–4425——Discussion of document, referring to the estimates, put in on behalf of the London County Council ; opinion that these estimates make no allowance for the waste caused by loss of subscribers, &c., 4425–4450. 4456–4480 ——Information as to the descending scale of charge to subscribers who enter into a five years' agreement with the company, 4451–4455. 4529–4530.

Evidence showing the reasons which have led to the new metallic circuit being placed overhead, 4457–4460——Opinion that a multiplicity of exchanges causes delay in

Report, 1895—*continued.*

*Forbes, James Staats.* (Analysis of his Evidence)—*continued.*

transmission, 4460, 4461. 4636–4639——Explanation of the powers held by the local authorities over the streets, 4467–4474.

Comparison of an estimate proposed by the New Company and signed by witness, with that put forward by the London County Council; explanation that the estimate signed by witness proved on examination to be illusory, 4481–4494. 4499–4527.

Examination as to whether a municipality would not be in a better position than a private company to meet the difficulties arising in the formation of a telephone service, 4495–4498. 4684–4691——Discussion respecting the efficiency of the telephone service in Stockholm, where there is a strong competition between the General Telephone Company and the Post Office, as compared with that of London; grounds for the opinion that there can be no comparison between the two places, 4531–4639. 4656–4663.

Belief that under the agreement the Post Office authorities in this country are absolutely free to grant competing licenses, 4640–4644——Evidence respecting the salaries of the telephone clerks, superintendents, and wire men; opinion that the cost of skilled labour is at least 33 per cent. higher than in most European countries, 4645–4655.

Details as to the "Reserve" Fund of the National Telephone Company, which now stands at 300,000*l.*; 4664–4679——Question as to what would be the action of the National Company if the Post Office were to grant competing licenses to new companies or to municipalities, 4680–4691——Information respecting the result of competition in Dundee; statement that this competition lowered the charges, but that the Dundee Company built a flimsy structure with a view to ultimate sale, 4692–4711.

Examination as to the charges and working of the Mutual Company in Manchester; opinion that subscribers to the Mutual found the service so unsatisfactory that they joined the National Telephone Company, although the subscription was higher, 4712–4736——Objection of witness to give evidence respecting the contract between the Mutual Company of Manchester and the New Telephone Company as it might prejudice the National Company in possible litigation hereafter, 4737–4758.

[Third Examination.] Document handed in containing an agreement between the Mutual Telephone Company and the Electric and General Investment Company, which ultimately came into possession of the New Telephone Company; by this agreement the New Company were bound, under a penalty of 15,000*l.*, to carry out the policy of the Mutual, 4759–4769——Evidence showing that the New Company is now in process of liquidation, a considerable portion of its shares having been purchased by the National Company, 4769–4780. 4823. 4828–4831. 4833–4839. 5104, 5105.

Information as to the capital of the various companies now amalgamated under the National Telephone Company and the sum paid for their purchase showing an amount of 1,292,000*l.* "watered" capital, 4781–4790——Evidence respecting the smaller companies which had been absorbed by the original National Company, 4791–4799.

Particulars in regard to the companies bought up by the New Telephone Company and the expenditure incurred thereby, 4800–4817. 5032, 5033.——Reference to an agreement entered into between the New and the National Companies in 1892 by which the two companies were to work their respective systems without rivalry, 4818–4832. 4868–4871——Examination as to whether the sum of 700,000*l.* invested in the purchase of the New Company is not unproductive capital; justification of the transaction, 4839–4867.

Discussion respecting the obligations of the Post Office in 1911 in regard to telephones; opinion that according to the licence the Post Office is not compelled to purchase the National Company's system, 4872–4879. 5087–5098.——Attention of witness called to the fact that there are telephones in Holland which give a service for a subscription of 2*l.* per annum, 4881–4892——Enumeration of some of the National Company's charges in various towns, 4897, 4898.

Belief that competition reduces rates temporarily only, and probably ends in making them heavier than they were originally, 4899–4902——Question raised as to whether the expenditure of the National Telephone Company does not coincide with the estimate given in the prospectus of the New Telephone Company; belief that such an estimate could not be realised, 4903–4934.

Evidence respecting the improvements which are being carried out by the National Company, 4935–4942——Consideration of the difficulties arising from the expiration of the license in 1911; opinion that it will be to the interest of the company to develop business as rapidly as possible, 4943–4955. 5025–5027.

Experience that, in any given area, after a certain point, an increase in the number of subscribers necessitates increased expense; statement to be prepared showing the manner

Report, 1895—*continued.*

*Forbes, James Staats.* (Analysis of his Evidence)—*continued.*

manner in which this extra expense is incurred, 4953–4955. 5063–5068. 5077–5085 ——Probability that on the completion of the trunk system the telephone will seriously affect the telegraph revenue, 4956–4961.

Reference to the means adopted by the National Company when competing with the Post Office at Plymouth, 4965–4969.——Admission that the 64,000*l.* per annum which has to be paid as interest on the "watered" capital is obtained from the subscriptions, 4974–4980 ——Grounds for objecting to telephones being worked by corporations, 4980–4992. 5012–5018. 5052–5060.

Reference to the objection of the National Company to the introduction of electric tramways in Glasgow, 4993, 4994.——Difficulties experienced by the company owing to the lack of definite powers in regard to way-leaves, &c. 4995–5000 ——Opinion that if the public are dissatisfied with the present service they can appeal to the Post Office, 5001–5011. 5028–5030.

Evidence respecting the date and conditions of the agreement between the Government and the National Company, 5018–5024.——Particulars in connection with certain pipes laid in the City surreptitiously when the electric lighting pipes were laid, 5031–5033 ——Examination in regard to the Post Office competition in Newcastle; belief that for a consideration the National Company would agree to a connection between the exchanges, 5034–5041.

Further information in regard to the working expenses of the company and the profit realised, 5042–5051 ——Suggestion that an increase of subscribers is due more to an increased knowledge of the value of the telephone than to a reduction of price, 5061–5063.

Conclusion that a telephonic supply is a business necessity, and is not likely to be much used by small tradesmen, 5069–5076 ——Probability that the purchase of telephones by the Post Office and the institution of a cheaper service would entail a loss on both the telephone and telegraph revenues, 5099–5103.

Evidence showing that there was no "watering" of capital when the United and the Bell and Edison Companies amalgamated, 5106–5109. 5112.——Statement that the competition of the Mutual Company in Manchester did not cause any reduction in the rates of the National Company, 5109–5111——Inaccuracy of a table put in by Mr. Benn respecting Mr. Burdett's view of the capital of the National Company; under-statement of the number of subscribers, 5112–5114.

*Foreign Countries.* Opinion that the facilities of the telephone service on the Continent greatly surpass those of this country, *Provand* 2476–2479——Table prepared by Mr. Lamb handed in containing information in regard to the systems adopted in other countries, together with the tariffs and the results obtained; attention directed to the three distinct bases on which such tariffs are formed, *Preece* 2717–2727——Further evidence respecting the three systems of tariff in use in American and European towns, *ib.* 2752–2755.

Opinion that the telephone is not so much used in England as in other European countries, partly on account of the enormous use of the telegraph in England, and partly owing to commissariat arrangements, *Forbes* 4247. 4265, 4266——Decision of the Concessioné Commission in France, and also of the Postmaster General of Germany, against any reduction of telephone rates, *Lamb* 5161–5165. 5181, 5182.

Grounds for the conclusion that there is a general tendency in European countries to raise rather than diminish the rates to subscribers, *Lamb* 5169–5174. 5226.—— Reference to the practice in Austria, Germany, and Hungary of making a triple charge for urgent messages, *ib.* 5175–5178——General tendency in European countries against competition, *ib.* 5220–5224.

Paper handed in by Mr. Preece containing information respecting the telephone service in various foreign countries, showing whether the service is in the hands of the State, the number of subscribers, terms of subscription, charges, &c., *App.*296–299.

Paper explanatory of foreign telephone tariffs, *App.* 320.

Comparative statement of telegraphic service of certain foreign countries, with ratio per head of population, *App.* 325.

*See* also *France. Germany. Sweden. United States.*

*France.* Evidence as to the great development of telephonic service in France, especially since the telephones were acquired by the State in 1889; *Preece* 2646–2653.

Confirmation of certain evidence as to the number of telegrams given in the International Statistics for France, *Lamb* 5178, 5179.

Paper containing information respecting the telephone service, the system in operation, number of subscribers, terms of subscription, trunk-wire charges, &c., *App.* 296, 297.

G.

*Germany.* Details given of statistics prepared by Dr. Von Stephean, the Postmaster General of Germany, showing the percentage of the population in different countries using the telegraph and telephone services, *Forbes* 4247–4264——Evidence respecting the telephone service in Germany; explanation that it is a single-wire system, and that wayleaves are practically free, *Lamb* 5158–5161.

Paper containing information respecting the telephone service, the system in operation, number of subscribers, terms of subscriptions, trunk-wire charges, &c., *App.* 296, 297.

*Glasgow:*

Evidence respecting the technical difficulty that might arise, in connection with the opening of the streets, in the event of Glasgow desiring improved telephonic communication, *Sir R. Hunter* 383–389.

Reference to a motion brought forward at a special committee of the Town Council of Glasgow in 1893, requesting the Postmaster General for a license to inaugurate an efficient telephone service; no definite reply has yet been received to this application, *Chisholm* 414–423. 465–473. 530, 531. 604–609. 645–647——Evidence showing that the unsatisfactory nature of the service of the National Telephone Company was the primary reason for the application, *ib.* 424–433. 544–557. 621–634.

Belief that it would be impracticable for the National Company to introduce a twin-wire system in Glasgow, *Chisholm* 434–437. 440–442. 444, 445 —— Statement that the municipality could afford to work the telephone at cost price, *ib.* 446–448.

Information showing that threatened competition caused the National Telephone subscription, which was formerly 20*l.* per annum, to be reduced to 10*l.*, and that this reduction has nearly trebled the number of subscribers, *Chisholm* 449–461. 514–517. 576–584. 587–589——Estimate obtained by the Corporation showing that an efficient service could be supplied at an annual charge of 5*l.* for each subscriber, *ib.* 464. 490–494. 667–670——Cognisance of witness as to the agreement entered into between the Post Office and the telephone companies, *ib.* 465–468. 521, 522.

Evidence showing that the Corporation pays over 1,600*l.* per annum to the telephone exchange, *Chisholm*, 479–481. 486–489——Belief that were a license granted to the Corporation they would be prepared at any future time to hand it over to the Government on the most reasonable terms, *ib.* 482–485. 612–615——Willingness to risk the possible inconvenience which might arise from a double set of exchanges, *ib.* 532–539. 563, 564. 656, 657. 659, 660.

Explanation that the Corporation are only applying for the licenses for a local area, *Chisholm* 540–543. 618–620. 663–666 —— Improbability of the Corporation buying up the Telephone Company, *ib.* 652, 653.

Statement respecting the general dissatisfaction at the inefficiency of the telephone service, *ib.* 686–689. 824. 835 ——Particulars as to the original telephone services in Glasgow, *ib.* 690–697. 701–703 ——Examination in regard to the charges of the National Telephone Company; belief that the present reduced charge of 10*l.* per annum was the result of threatened competition, *ib.* 697–700. 704–710. 759–761.

Opinion that competition would be advantageous in the case of Glasgow, *Colquhoun* 710, 711. 877–880 ——Advantageous financial position of the Corporation, *ib.* 717–719. 764–768 ——Willingness of the Corporation to enter into competition with the National Company, and also to work amicably with them, *ib.* 722–729. 847–853.

Estimate by Mr. Provand that a rental of 5*l.* per annum would repay the Corporation, *Colquhoun* 762. 842–844——Improbability of the National Company's interest being purchased by the Corporation, *ib.* 776. 794–797. 864–867——Attention of witness called to the document issued by the telephone committee in Glasgow in regard to the telephone agreement; reason for the views of the Committee being modified, *ib.* 789–792.

Evidence showing that for the last 11 years witness has been a constant user of the telephone supplied by the National Telephone Company in Glasgow, and has found it satisfactory, *Daw* 2107–2114. 2123–2129. 2152–2164 ——Statement as to the cost of the service, *ib.* 2121, 2122.

Evidence to the effect that witness has used the telephone regularly for years, and that it has given satisfaction, *Kay* 2169–2172. 2174, 2175. 2177–2183.

Reference to a complaint made by Messrs. J. M. Stevenson & Co., of Glasgow, and to Mr. Morley's reply, that the Post Office did not intend reducing their prices, *Provand* 2435–2440. 2470–2476 —— Conclusion that the telephone service of Glasgow will never be good whilst the single-wire system is in operation, *ib.* 2501–2504 ——Information

Report, 1895—*continued.*

*GLASGOW*—continued.

tion as to the heavy charges of the National Company in Glagow; the agreement does not in any way restrain these charges, *Provand* 2505, 2506.

Denial of statement that the Post Office has declined to grant a license to Glasgow, *Preece* 2856–2862——Admission that the service in Glasgow is not so good as it might be; assurance that a metallic circuit will be supplied provided the local authorities render assistance, *Forbes* 4282–4288. 4318.

Explanation that the result of an inquiry in regard to the inefficiency of the present service was about 970 expressions of dissatisfaction out of 4,409 the total number of subscribers, *Beveridge* 5141–5157.

Statement showing the number lines and the increase in each of the last five years, *App.* 319——Average number of complaints for the year 1894, *ib.*

Statements of the number of local messages passing through the Exchange on 3rd April 1895, *App.* 323.

H.

*Harrison, John.* (Analysis of his Evidence.)—Witness is Town Clerk of Leeds; appears, with the Deputy Town Clerk of Liverpool, on behalf of the Municipal Corporations Association, 1480, 1481. 1536.

General agreement of witness with the evidence given by Mr. Clare, 1482 *et seq.*—— Contention that competition on the part of municipalities would only be justifiable in the event of the State not taking over the whole telephone system, and in the absence of such conditions as would compel the existing company to give a better service at revised rates, 1483–1491. 1531–1541. 1559-1561. 1575 *et seq.*

Opposition of witness to any proposal that would put difficulties in the way of the State acquiring the telephone system, 1492——Power of the corporations under the provisions of the Act of 1892, to exclude the operations of the telephone company, or to fix the terms upon which the streets shall be opened up for putting twin wires underground; desirability of the corporations having complete control against everybody their own streets, 1493-1498. 1540, 1541. 1550–1558. 1581–1591.

Resolution of the Municipal Corporations' Association that the corporations of England should as a body oppose the exercise of the rights to be conferred on the telephone company by the Postmaster General with regard to underground wayleaves, 1499 *et seq.*; 1581–1591.——Opinion that something on the basis of the agreement made some time ago by the Leeds Corporation with the telephone company would be reasonable solution of the underground wayleave difficulty, 1499 *et seq.*

Great dissatisfaction with the telephone service in Leeds, there being great delay, disturbances whilst speaking, cross-talk, &c.; belief that the service would be improved if there were a return current by return wires, 1516-1526. 1587, 1588——Disagreement of witness with Mr. Clare as to the comparatively minor importance of the extra-mural telephony, the wires within the local exchange area being of even more importance than the trunk wires, 1527–1530.

Desirability of the municipalities having the right to work the telephone in cases where the telephone company fails to give a cheap and effective service; strong opposition, however, to its being made imperative upon a corporation to take over the telephone, 1542–1549. 1562 *et seq.*——Concurrence of witness in the suggestion that an arrangement similar to that made by the Manchester Corporation with the telephone company would be preferable to the corporation assuming charge of the telephone system, provided the charge were fair and the service effective, 1568 *et seq.*

*Holland.* Information as to the working and cost of the telephone service in Holland; the annual subscription varies from 9*l.* to 20*l.*, *Forbes* 4326-4333. 4340–4344—— Practice in Holland for municipalities to licence the telephone company as to the area in which they can carry on business, *ib.* 4333-4339——Attention of witness called to the fact that there are telephones in Holland which give a service for a subscription of 2*l.* per annum, *ib.* 4881–4892.

*Hungary.* Return respecting the telephone service, the number of subscribers and terms of subscription, trunk-wire charges, &c., *App.* 296, 297.

*Hunter, Sir Robert.* (Analysis of his Evidence.)—As Solicitor to the Post Office witness submits explanations in regard to the connection of exchanges by means of underground wires; according to the Treasury Minute the Postmaster General is to assist the companies in this matter, 380-382. 389, 390.

Evidence respecting the technical difficulty that might arise in connection with street opening, in the event of Glasgow desiring improved communication, 383-389——

Report, 1895—*continued.*

*Hunter, Sir Robert.* (Analysis of his Evidence)—*continued.*

Reference to the practice in Manchester in regard to the laying down of wires, 391-393.

Information as to the power of appeal in the event of any local authority withholding its consent as regards overhead wayleaves, crossing streets, &c., 394–399—— Explanation that there is nothing in the agreement with the telephone companies which would restrict the power of the Postmaster General to grant competing licenses, 400-406. 410——Question as to whether the existence of two companies affects the binding nature of the agreement; an agreement will be entered into with both the "New" and the "National" Companies, 407–409.

I.

*Insulation.* Improvement of the defect of retardation in underground wires by the introduction of paper insulation in the place of gutta-percha, *Preece* 2592–2595. 2604, 2605.

*Inter-communication of Subscribers.* Examination as to the operation of placing subscribers in communication one with the other; description also of a system of visual signals in use at the Post Office, *Preece* 2571. 2576–2583—— Probability that competing companies would arrange amicably for inter-communication between their subscribers, *Webber* 3874–3880.

*Ireland.* Statement showing the number of lines, and the population at several important centres on 31st December 1894, *App.* 325.

*Iron Conductors.* Replacement of the old iron conductors by those of copper or bronze on account of the magnetism engendered in iron, *Preece* 2584–2586.

*Italy.* Information in regard to the telephone service in Italy; prohibition of competition in that country, *Lamb* 5165–5168.

Paper containing information respecting the telephone service, the system in operation, number of subscribers, terms of subscription, &c., *App.* 298, 299.

K.

*Kay, Robert.* (Analysis of his Evidence.)—Is Traffic Superintendent of the Glasgow Tramway and Omnibus Company; gives evidence at the request of the Telephone Company, 2165–2168. 2184–2194. 2206–2213.

Evidence showing that witness has used the telephone regularly for six years, and that it has given satisfaction, 2169–2172. 2174, 2175. 2177–2183——Objection to municipal licenses on account of the inconvenience which would arise from a restricted area, and of the expenses attendant on a double subscription, 2173. 2176. 2195–2205. 2214–2222.

L.

*Lamb, John Cameron,* C.B., C.M.G. (Analysis of his Evidence.)—Is Assistant Secretary to the Post Office, and is in charge of the Telegraph Department, 1–3.

Information respecting the institution and early history of the telephone; first introduction of telephones into England in 1876 and 1877, the Edison Telephone Company of London having been established in 1878, and having purposed instituting telephone exchanges, 4–10——Successful litigation entered into by the Post Office on account of the proposal of the Edison Company and the United Telephone Company to establish exchanges; reference hereon to the amalgamation of the Bell and Edison Companies under the latter title, 9–13.

Particulars as to the licenses granted by the Post Office to the United Telephone Company under the Telegraph Act of 1869; 13–19. 21–24——Explanation that the United Company allowed subsidiary companies the use of its patent apparatus in parts of the country other than London, provided licenses were obtained from the Post Office, 19. 25–30. 40, 41——Practical monopoly of telephone apparatus held by the United Company, 20.

Permission given by the Postmaster General in 1881 for the connection by the companies of their exchanges with post offices, 30, 31——Establishment of exchanges by the Post Office in several towns, including Cardiff and Newport, 31. 38–40. 326, 327.

Report, 1895—*continued.*

*Lamb, John Cameron*, C.B., C.M.G. (Analysis of his Evidence)—*continued.*

Details respecting the negotiations entered into between the companies and the Post Office in regard to the construction of trunk wires, 32–37——Statement that several licenses were granted to different companies by the Postmaster General in 1882 for the establishment of exchanges even in towns where the Post Office had previously held the monopoly, 41. 168. 272, 273.

Reference to the attacks made in the House of Commons in 1884 on the policy of the Department, and to the explanations given by Mr. Fawcett, 41. 291–293——Particulars respecting the new arrangements sanctioned by the Treasury in 1884, which led to the substitution of new licenses for the old ones held by the companies, 41–54——Evidence showing that at present thirteen licenses are in existence, but that they are practically held by one company, the "National," 55–60. 198, 199.

Reasons which led the late Government to consider the advisability of making fresh arrangements with the telephone companies, 61. 64——Expression of disapproval by Mr. Raikes with reference to the amalgamation of so many companies, 62, 63. 83, 84. 264–272.

Detailed statement to the effect that the revenue of the telephone companies from 1886 to 1891 showed an increase of 204,000*l.*, whilst the net telegraph revenue presented a corresponding diminution, 65–68. 74–82. 120–122——Examination as to the causes of the diminished telegraph revenue; belief that it is largely due to the telephones, and is also affected by the increase in the pay of the telegraphists, 69. 115–117. 123–129. 131. 144–159. 361——Question regarding the effect on the revenue of the expenses attendant on the extension of offices; the Act of 1892 provided 1,000,000*l.* for telephone extension, 70–73. 132–143. 362, 363.

Explanation of the policy decided upon by the late Government, as set forth in a Treasury Minute of May 1892; one of the features was the acquisition of the trunk wires by the Post Office, 85–89. 168–174. 364–366——Reference to the Telegraph Act of 1892, authorising the raising of a certain sum to defray the expenses of the acquisition of the trunk wires from the companies, 88. 90–94——Statement that an agreement was made with the "New" and the "National" Companies in August 1892; detailed explanation of the heads of this arrangement, 89. 101–103. 198, 199. 309–313. 345–348. 350, 351.

Belief that the taking over by the State of the trunk wires is a step towards acquiring the telephones generally, 103. 219——Description of the trunk wires, showing the places connected by them; chart of the backbone system handed in, 94–100. 130.

Grounds for concluding that competing systems in one area invariably become absorbed one in the other, and result in inconvenience and expense to the public; illustrations in the case of competing companies in Stockholm and Dundee, 104–114. 192. 195. 275. 279–286. 314–319. 359, 360——Opinion that the loss occasioned by the introduction of sixpenny telegrams cannot influence the present discussion, 160–167. 304–307.

Examination as to whether the heads of arrangement were entered into in full view of competition; belief that they tended against competition, but that the Post Office retained the right of granting competing licenses, 175–186. 191. 250–263. 274. 276–278. 349——Reference to a contract between the New Telephone Company and the Telephone Defence Users Association, 187–190. 287–290.

Comparison of the charges in Stockholm with those of the National Telegraph Company, showing that the latter are more than treble the former, 193–195. 200–204. 352–358. 367, 368——Particulars respecting the number of subscribers, and the area covered by the telephone in Christiana, 204–208. 210–213.

Statement that the expense increases enormously with the number of subscribers, 209. 369–374——Discussion as to whether the policy of the Government in acquiring the trunk wires has not resulted in a decided benefit to the companies at the cost of the public, 214–234.

Examination as to the increase of charge under the new arrangement; comparison of the company's scale and that of the Post Office, 235–249——Explanation of the powers of the Postmaster General in regard to way-leave, 294–303.

Information respecting the charges for private telephone wires in London, 322–324——Statement to the effect that both the Post Office and the National Telephone Company work exchanges at Newcastle, 326–344.

[Second Examination.]—Evidence as to the telephone service in Germany; explanation that it is a single wire system, and that way-leaves are practically free, 5158–5161——Decision of the Concessioné Commission in France, and also of the Postmaster General of Germany, against any reduction of telephone rates, 5161–5165. 5181, 5182——Information in regard to the telephone service in Italy; prohibition of competition in that country, 5165–5168.

Report, 1895—*continued.*

*Lamb, John Cameron,* C.B., C.M.G. (Analysis of his Evidence)—*continued.*

Practice in Norway and Sweden to charge an additional sum for a telephonic message when it is subsequently to be transmitted as a telegram, 5168, 5169——Increase to be made in the terms of subscription to large users in Switzerland; general tendency in European countries, as in Norway and Sweden, to raise rather than diminish the rates to subscribers, 5169–5174. 5226——Reference to the practice in Austria, Germany, and Hungary of making a triple charge for urgent messages, 5175–5178.

Confirmation of Mr. Forbes' evidence as to the number of telegrams given in the International Statistics for France, 5178, 5179——Report read from the Postmaster of Liverpool, showing how the extended telephone facilities have arrested the normal development of the local telegraphs; report handed in, together with a statement from Norway of a similar nature, 5182–5189. 5265–5267.

Consideration of the wide divergence between the several estimates that have been suggested for an efficient telephone system; belief that the estimate of a 16*l.* subscription is not too low, 5189–5208. 5225. 5227–5230. 5254, 5255——Opinion that the pipes laid by the Electric Lighting Company are unsuitable for telephonic purposes, 5199——Instance given of a case in which the threatened competition of the Post Office effected a satisfactory service, 5209–5212. 5231–5241. 5278, 5279.

Statement that the Post Office does not pay way-leave for the use of the streets, 5212–5214——Consideration of the policy of Mr. Raikes in regard to telephones, 5214–5219——General tendency in European countries against competition, 5220–5224——Necessity for prudence respecting any general reduction of telephone rates, 5225.

Discussion as to whether a larger development of the telephone would not assist the telegraph service; opinion that the telephone generally results in becoming a competitor, 5242–5253——Grounds for contending that competition should not be allowed, and that the telephone system should be in the hands of the Post Office, 5254–5259. 5268–5283. 5289–5291.

Suggestions as to the policy of the Post Office on the expiration of the National Telephone Company's license, 5260–5264——Comparison of the prices of the telephonic and the telegraphic services, 5284–5288.

*Leeds.* Great dissatisfaction with the telephone service in Leeds, there being great delay, disturbances whilst speaking, cross-talk, &c.; belief that the service would be improved if there were a return current by return wires, *Harrison* 1516–1526. 1587, 1588.

*Leng, Sir John* (Member of the House). (Analysis of his Evidence.)—Appears in support of the evidence of witnesses from Glasgow and Edinburgh; but is prepared to speak more especially of the peculiar experiences of Dundee in regard to competition, 1096.

Detailed evidence showing how competition at Dundee in 1884 reduced the charges from 20*l.* to 5*l.*, and resulted in Dundee being the best telephoned town in the country, 1097–1110——Comparison of the rate of increase in the number of subscribers in Glasgow and Dundee; explanation hereon that an amalgamation of companies in Dundee brought about an increased rental, which, for a time, caused a reduction in the number of subscribers, 1111–1121. 1123–1126.

Experience at Dundee as to the defects of the single wire system, 1127–1131——Consideration of certain difficulties in making provision for outlying districts; belief that such districts might eventually be brought within the municipal area, 1132–1144.

*Licenses.* Explanations on the part of the Post Office respecting the grant of licenses to the United Telephone Company, *Lamb* 13–19. 21–24——Particulars respecting the new arrangements sanctioned by the Treasury in 1884, which led to the substitution of new houses for the old one held by the companies, *ib.* 41–54——Evidence showing that at present thirteen licenses are in existence, but that they are practically held by the National Telephone Company, *ib.* 55–60. 198, 199.

Opinion that were houses granted to municipalities they should be for a term of years, and not for a permanency, *Dickinson* 1772. 1776–1780——Very restricted areas for which the first license, in April 1881, was granted by the Post Office; several restrictions in the license, *Forbes* 4175–4178——Necessity for companies licensed by the Post Office in 1881, and previous to the expiration of the patents, to obtain a license also from the patentee, *ib.* 4180–4183.

*See* also *Competition. Post Office.*

*Liverpool.* General satisfaction with the telephone system in the Liverpool area; conviction, however, that telephones will never be as cheap or efficient as they ought to be while the telephone company is not endowed with the power necessary to maintain their

Report, 1895—*continued.*

*Liverpool*—continued.

their undertaking in a proper way over private property, *Clare* 1168 *et seq.*; 1306 *et seq.* ——Desirability, in the event of the telephone company being given compulsory power to maintain their works, of the Corporation having absolute discretion as to whether the system shall be an overhead or underground one, *ib.* 1168 *et seq.*

Evidence to the effect that witness is not aware of any complaints as to the telephonic communication between Newcastle and Liverpool, nor between Manchester and Liverpool; there was never any competition between telephone companies at Liverpool, *Clare* 1377–1403. 1444–1450.

Statement submitted by Mr. Lamb, showing the number of telegrams passing within the proposed Liverpool telephone area during a week in April in each year since 1885, *App.* 301.

Extract from report of postmaster as to the effect of telephone competition on inter-town telegraph business, *App.* 301.

*Local Areas.* Conclusion that the most important use of telephones is for local areas, *Sir J. Russell* 933–936. 952–957. 982–991——Grounds for desiring that small areas should be formed, and that the charges should vary according to the character of the area; reference hereon to experiments made at Kensington and Croydon in regard to varying rates, *Carbutt* 1791–1795. 1832–1838. 1859–1861. 1890–1896——Necessity of precautions being taken against the possible neglect of unprofitable areas; opinion that this could be controlled by the Postmaster General when granting licences, *ib.* 1804–1825. 1850–1856.

Statement in regard to unprofitable areas; opinion that every one in a district should have the best possible telephonic accommodation, *Flood-Page* 1935–1939——Very restricted local areas for which the first licence, in April 1881, was granted by the Post Office, *Forbes* 4175–4178.

Consideration of the feeling expressed in various suburban centres in favour of subscriptions for local areas; detailed statement showing that experiments made at Croydon, Kensington, Kingston, &c., resulted in there being more subscribers to the London exchange than to the local one, *Forbes* 4378–4396. 4401–4408.

*Local or Municipal Authorities:*

Information as to the power of appeal in the event of any local authority withholding its consent as regards overhead wayleaves, crossing streets, &c., *Sir R. Hunter* 394–399.

Opinion that any undertaking requiring the control of the streets should be in the hands of the municipality, *Chisholm* 443. 671–676——Reference to speeches made in the House by Mr. Goschen and Sir James Fergusson which led the Corporation of Glasgow to believe that licences would be granted to municipalities, *ib.* 475–478. 677–680.

Grounds for the opinion that the telephone service should be in the hands of either the State or of the municipalities, *Colquhoun* 721. 769–775. 315. 822, 823. 868, 869. ——Contention that the Postmaster General should be entitled to take over the telephones from municipalities at a fair value, without any payment for goodwill, *ib.* 731–733. 883, 884. 887–889.

Question as to the policy indicated by the observations made by Mr. Goschen and Sir James Fergusson in respect of the grant of licences to municipalities, *Colquhoun* 798–800——Grounds for believing that the granting of municipal licences would facilitate the acquisition of all telephones by the State, *ib.* 870–876. 880–882. 890, 891.

Argument in support of the conclusion that the telephones should be in the hands of the municipalities, *Sir J. Russell* 928–932. 939, 940. 951. 958–966. 992–1003——Improbability of difficulties arising in connection with the future transfer of telephones from local authorities to the State, *ib.* 932.

Desirability of placing the telephones in the hands of municipalities in preference to the State, *Bisset* 1047. 1051–1060. 1089–1091——Evidence in support of the conclusions that if the whole system be not taken over by the Government, all the local exchanges should be under one control, otherwise there would be confusion and extra charges, *Clare* 1135–1157. 1208–1210. 1283–1299. 1352–1355. 1463 *et seq.*——Statement that, so far as witness is aware, no English corporation has asked for, or desires, to have a telephone licence, *ib.* 1473.

Desirability of the municipalities having the right to work the telephone in cases where the telephone company fails to give a cheap and effective service; strong opposition, however, to its being made imperative upon a corporation to take over the telephones, *Harrison* 1542–1549. 1562 *et seq.*

Report, 1895—*continued.*

*Local or Municipal Authorities*—continued.

Grounds for objecting to the grant of licences to municipalities; opinion that the telephone should be nationalised rather than municipalised, *Daw* 2115–2120. 2130–2151——Concurrence in the view as to the undesirability of municipal telephones, *Waldie* 2244–2247; *Moncur* 2300–2302. 2343–2349.

Objection to municipal licences on account of the inconvenience which would arise from a restricted area, and of the expenses attendant on a double subscription, *Ray* 2173. 2176. 2195–2205. 2214–2222——Personal opinion that the telephone should be nationalised; belief that municipalisation would be difficult to work successfully, *Riach* 2253–2257. 2268–2272. 2276–2285. 2290–2292 ——Approval of the municipalisation of telephones, *Provand* 2544, 2545.

Detailed explanation of seven reasons adduced by witness for contending that the telephones should not be in the hands of municipalities, *Preece* 2759–2773. 2787–2791 ——Attention called to the success attending the municipal management of the electric light, gas, &c.: contention that these services are confined to local areas, and are not of the imperial nature of the telephone, *ib.* 2806–2812. 2831–2839. 3165–3170.

Examination on the first objection of witness to municipal telephones, viz., that a municipality was a fluctuating body; contention that Parliament does not fluctuate to so great a degree, *Preece* 2823–2839——Justification of the reason for disapproving of municipal telephones on the ground of the objection of the poorer ratepayers, *ib.* 2844–2849. 2897–2905.

Explanation of the objection to municipalisation on account of the necessity for well-paid, highly-skilled officials, *Preece* 2850–2852. 3102–3111——Objection to the municipalisation of telephones even with the view of facilitating their acquisition by the Post Office in 1911, *ib.* 2929–2937.

Examination as to whether a municipality would not be in a better position than a private company to meet the difficulties arising in the formation of a telephone service, *Forbes* 4495–4498. 4684–4691——Grounds for objecting to telephones being worked by corporations, *ib.* 4980–4992. 5012–5018. 5052–6060.

*See* also *Competition. Municipal Corporations Association.*

*London:*

1. *Question of Administration and Control of the Telephone Service in the Metropolis.*
2. *Schemes and Estimates for an improved and extended System.*
3. *Area.*
4. *Question of Efficiency and of Charges.*
5. *Pipes laid by the Electric Lighting Company.*
6. *London Chamber of Commerce.*

1. *Question of Administration and Control of the Telephone Service in the Metropolis:*

Explanation of the action taken by the London County Council in regard to the telephone service in London; petition of the Council against the Telephone Bill of 1892 (which was withdrawn), whilst the Council did its utmost unsuccessfully to stop the Telegraph Bill of that year, *Dickinson* 1593-1596.

Grounds for the opinion that the telephones for the County of London should be in the hands of the London County Council, *Dickinson* 1655–1673. 1681–1684——Reference to the three recommendations of the County Council in regard to the telephone service; they were adopted by both the late and the present County Council, *ib.* 1714, 1715. 1761–1771.

Suggestion that the London system should be purchased by the Government, *Carbutt* 1799, 1800. 1874–1876——Reason of the City Commissioners of Sewers for desiring the telephone should be in the hands of municipalities, *Berridge* 2028–2031.

Desirability of the Post Office, within the next three years, taking over and remodelling the whole telephone system of London, *Webber* 3604–3606. 3891–3898——Belief that the Corporation of London could compete successfully with the National Telephone Company, *ib.* 3816–3826.

Very large preponderance of opinion of the National Company's London exchange subscribers adverse to the telephone service being undertaken by the London County Council; total of only forty-three in favour of administration by the Council, *App.* 315.

2. *Schemes and Estimates for an improved and extended System:*

Reference to an application made to the Commissioners of Sewers for their consent to apply for a licence to establish a double-wire service at a charge of 8*l.* per user per annum;

*London*—continued.

2. *Schemes and Estimates for an improved and extended System*—continued.

annum; resolution of the Commissioners, provided this charge could be guaranteed, to consent to certain tubes laid by the City of London Lighting Company being used for telephonic purposes, *Bates* 1968–1974. 1977–1996.

Belief that the City Commissioners of Sewers have not contemplated starting a telephone system, *Berridge* 2028. 2089——Evidence as to the offer of Mr. Foster to introduce a company which would supply a good service for 8 *l.* per annum, *ib.* 2036–2038. 2050–2052.

Attention called to two estimates put forward by the London County Council purporting to show that a rental of 10 *l.* would cover all expenses; opinion that the Council has rather under-estimated the expense, *Preece* 3171–3176.

Explanations in connection with a plan prepared by witness in 1891 (at the request of the late Duke of Marlborough) for a system of telephoning the City of London by the establishment of eight exchanges, *Webber* 3428–3440. 3472–3474. 3636–3651. 3708. 3733–3750. 3849–3864. 3913–3927——Description of the manner in which the eight exchanges could be worked, either by payment of toll or by means of different tariffs; opinion that the lowest amount of subscription to one exchange would be 8 *l.*, and that a double subscription would cover the remaining seven, *ib.* 3475–3486. 3662–3685. 3709–3736. 3803–3811. 3829–3832. 3840–3848. 3974–3984.

Examination as to the estimates of the County Council for supplying a telephone service for London at a rental of 10 *l.* per subscriber, *Dickinson* 4153.

Consideration of the estimate for the County Council by Mr. Newland, and also of the cost of installation suggested by General Webber; belief that such estimates are impossible, *Forbes* 4266–4276 —— Discussion of document referring to the estimates put in on behalf of the County Council; opinion that these estimates make no allowance for the waste caused by loss of subscribers, *ib.* 4425–4450. 4456–4480.

Summary of the Engineer's Report (London County Council) on the cost of telephone service for London, *App.* 303, 304.——Items of estimated expenditure of 36 *l.* for each subscriber, *ib.*—— Items of maintenance estimate: total of 90,000 *l.*, *ib.*

Report by Mr. J. L. Newland to the Engineer to the County Council, dated 2 April 1895, together with estimate for supplying the administrative county of London with a complete telephonic system for 10,000 subscribers, *App.* 305, 306—— Total estimated cost of 356,743 *l.*, the total annual expenditure being estimated at 75,898 *l.*, *ib.* 306.

3. *Area:*

Examination as to the increased expense of a large area; opinion that the system for London need not be complicated with the question of area, *Dickinson* 1690–1700 —— Grounds for the opinion that were the London County Council to supply the profitable area of central London they would also have to include the unprofitable fringe around it, even though it entailed an increased charge to subscribers, *Carbutt* 1862–1870. 1879–1884.——Explanations in regard to the day and night population of the area over which the City Commissioners of Sewers have authority, *Berridge* 2067–2074.

4. *Question of Efficiency and of Charges:*

Detailed information purporting to show that the telephone system of London is unsatisfactory, and that the charges are far in excess of those of continental cities, *Dickinson* 1606-1612. 1702–1711. 1750–1760——Statement in regard to the unsatisfactory nature of the present service in London; belief that it is largely due to the use of the single wire system, *Bates* 1956–1967.

Evidence respecting the inefficiency of the telephone in the metropolis, *Berridge* 2001–2007. 2041–2049. 2053, 2054. 2075–2088.——Excessive rate of subscription; witness is now paying 17 *l.* per annum, *ib.* 2008–2023.

Disapproval of the haphazard manner in which the telephones of London have been extended, *Webber* 3430–3433. 3707——Desirability of different tariffs to bring telephony within the reach of small tradesmen; probability that such a system could be arranged by the County Council without interfering in any way with the arrangement between the National Telephone Company and the Post Office, *ib.* 3503, 3504. 3571, 3572. 3683–3696.——Reference to the practice amongst several firms in the City of having a number of telephones in one office; this is only another way of varying the tariff, *ib.* 3985–3987.

Document handed in showing the plant working and ready for the metallic circuit which will be completed in London by the end of the year, *Forbes* 4277–4281. 4288. 4322–4326——Probability that many of the complaints against the National Company have been due to the disturbance arising from the change of systems,

Report, 1895—*continued.*

*London*—continued.

4. *Question of Efficiency and of Charges*—continued.

*Forbes* 4280——Expected completion of the new metallic circuit for London by the end of 1895, *ib.* 4421–4425.

Representation on the part of the Commissioners of Sewers respecting a circular issued in order to ascertain the views of the users of the telephone as to the efficiency of the service, *Morton* 5115. 5138, 5139——Report read showing that the majority of replies received to the circular testified to the insufficiency and great cost of the present service; suggestion of 210 subscribers that 10*l.* would be a fair rental, *ib.* 5116, 5117. 5121–5137.

General statement of the tariffs of the National Company in the metropolitan area, *App.* 321.

5. *Pipes laid by the Electric Lighting Company:*

Explanations with reference to some tubes laid by the Electric Lighting Company; negotiations still pending with the City Commissioners of Sewers as to the terms upon which they should be used for telephonic purposes, *Bates* 1968–1974. 1977–1996; *Berridge* 2025–2027. 2034–2036——Detailed information respecting certain spare tubes laid by the City of London Lighting Company; explanation that they were not laid surreptitiously, but were placed at the request of the late Duke of Marlborough, as representing the New Telephone Company, *Webber* 3439–3463. 3697–3706.

Particulars in connection with certain pipes as having been laid in the City surreptitiously when the electric lighting pipes were being laid, *Forbes* 5031–5033——Statement that the tubes laid by the Electric Lighting Company were placed without the consent of the Commissioners of Sewers, *Morton* 5118–5120——Opinion that the pipes laid by the Electric Lighting Company are unsuitable for telephonic purposes, *Lamb* 5199.

6. *London Chamber of Commerce:*

Advocacy on the part of the London Chamber of Commerce of the resolutions passed by a special committee of the Chamber; names of the members of the Chamber who formed the committee, *Sir E. Carbutt* 1786–1791. 1840–1846——Statement that, prior to the telephone resolutions being drawn up by the special committee of the Chamber, there was a great divergence of views amongst the members of the committee, *Flasch-Page* 1924–1927——Explanation of the views of the committee in regard to competition, *ib.* 1928–1930——Resolutions adopted by the London Chamber of Commerce on various points connected with the telephone service, *App.* 307.

*See* also *Competition. Exchanges. National Telephone Company. Post Office. Rates and Charges.*

*London and Globe Telephone Company.* Information in detail as to the system of working of the London and Globe Telephone Company; reference to the groups of exchanges which it proposed to institute, *Thompson* 3314–3331. 3343–3363. 3376–3389. 3393–3396.

Evidence respecting the inconvenience caused by the competition of the Globe Company in London; photographs handed in illustrating the operations involved when the lines were being placed, *Forbes* 4308–4315.

M.

*Manchester* (*Mutual Telephone Company*). Reference to the practice in Manchester in regard to the laying down of wires, *Sir R. Hunter* 391–393 —— Evidence respecting the capital and working of the Mutual Telephone Company in Manchester in 1890; the complaints of the National subscribers led largely to the establishment of the Mutual, *Webber* 3548–3557. 3563–3570.

Detailed information in respect of the Mutual Company at Manchester, showing that the inevitable result of competition in any particular area is combination, *Forbes* 4288–4308—— Examination as to the charges and working of the Mutual Company; opinion that subscribers to the Mutual found the service so unsatisfactory that they joined the National Telephone Company although the subscription was higher, *ib.* 4712–4736.

Objection of witness to give evidence respecting the contract between the Mutual Company of Manchester and the New Telephone Company in case it should prejudice the National Company in private litigation hereafter, *Forbes* 4737–4758.

Document handed in containing an agreement between the Mutual Telephone Company and the Electric and General Investment Company, which ultimately came into possession of the New Telephone Company; by this agreement the New Company were

Report, 1895—*continued.*

*Manchester* (*Mutual Telephone Company*)—continued.

were bound under a penalty of 15,000*l.* to carry out the policy of the Mutual Company, *Forbes* 4759–4769——Statement that the competition of the Mutual Company in Manchester did not cause any restriction in the rates of the National Company, *ib.* 5109–5111.

Comparative statement relating to the Mutual Telephone Company at Manchester, *App.* 318.

Decision of the Committee not to receive evidence from Mr. Provand with regard to the Mutual Telephone Company and the new Telephone Company in Manchester, *Rep.* vi.

*Marlborough, Duke of* (*the late*). Letters from the late Duke of Marlborough to the "Times," dated respectively 20th August 1892 and 6th September 1892, upon the steps taken by the New Telephone Company and other companies for the development of the telephone in London and throughout the country, *App.* 308, 309.

*Messages.* Total of 279,278,064 as the present ratio of effective calls and replies thereto per annum; that is, of "messages," *Forbes* 4205.

Statement of local messages for one day in April passing through the Exchanges at Glasgow, Aberdeen and Edinburgh; also, the causes of delay in making connections, *App.* 323.

Return of the number of local messages at some of the more exchanges on the National Company's system, *App.* 324.

*Metallic Circuits.* Question considered whether a system, in order to be efficient, must have the twin-wire or the metallic circuit; belief that such wires are only suitable to long-distance telephony, *Webber* 3581. 3621-3623——Statement that the new metallic-circuit system for London, will be completed by the end of the year, *Forbes* 4421–4425.

Statement showing the proportion of plant working, and ready for metallic circuit (National Telephone Company), *App.* 317.

List of towns, the principal exchanges in which are now fitted (or are in process of fitting) with metallic circuit switchboards, this representing the main work of transfer from the earth return to the metallic return system, *App.* 317, 318.

*Microphone.* Invention of the microphone in 1878 by Professor Hughes, this instrument used in conjunction with the telephone having converted the latter into a thoroughly practical means of transmitting speech, *Lamb* 8.

*Moncur, A. H.* (Analysis of his Evidence.)—Is a merchant and power-loom manufacturer in Dundee; is also an ex-Provost of Dundee, and holds several important positions, 2293–2295. 2324–2326.

Experience that the service of the National Telephone Company is very efficient, 2296–2299——Objection to the municipalisation of the telephone service, 2300–2302. 2343–2349——Grounds for believing that the present amalgamated service is better than when competition existed, 2303–2307. 2333–2343. 2351–2362.

Detailed information as to the effect of the competition of the Dundee and District Telephone Company on the charges of the National Telephone Company, 2308–2313——Disapproval of competition except as a means of reducing an extravagant price, 2314. 2350.

Evidence respecting the diminution of the dividends paid by the Dundee and District Telephone Company, 2315–2321. 2327, 2328. 2363–2371——Opinion that if any change is necessary the telephones should be nationalised, 2322, 2323.

*Monopoly.* Practical monopoly of telephone apparatus as formerly held by the Mutual Company, *Lamb* 20——Necessity in the event of the telephones being the monopoly of a private company that there should be conditions as to price, &c., *Colquhoun*, 721. 754–757. 812-814——Belief that the existing telephone monopoly has deadened the interest of the electrical profession in England, *Crompton* 3191-3193. 3226-3228. 3243. 3266-3269.

Reference to a paper read by witness in 1884, before the Society of Arts, in order to show the injurious effects of monopoly and to suggest how cheaply telephony could be introduced in the United Kingdom under a competitive system, *Webber* 3412-3414. 3418. 3487. 3827–3835.

See also *Competition.* *National Telephone Company.*

*Morton, Alpheus Cleophas* (Member of the House). (Analysis of his Evidence.)—Explanations respecting a circular sent out by the Commissioners of Sewers with a view to ascertain the opinions of telephone users in the City, 5115. 5138, 5139——Report read showing that the majority of replies to the circular testified to the insufficiency and

Report, 1895—*continued.*

*Morton, Alpheus Cleophas* (Member of the House). (Analysis of his Evidence)—*continued.*

great cost of the present service; suggestion of 210 subscribers that 10*l.* would be a fair rental, 5116, 5117. 5121–5137——Statement that certain tubes laid by the Electric Lighting Company were placed without the consent of the Commissioners, 5118–5120.

*Municipal Corporations Association.* Witness (who is Deputy Town Clerk of Liverpool) represents the Municipal Corporation Association and submits in detail the views of the Association upon the telephone question, *Clare* 1145 *et seq.*

View of the Municipal Corporations Association that, as the telephonic system is now an absolute commercial necessity and a great convenience for private and domestic purposes, it is most important that inter-communication between large centres of commerce should be made as easy and cheap as possible, *Clare* 1149–1151. 1222 *et seq*; 1355–1359. 1458 *et seq.*

Conclusions of the Corporations Association that the idea of municipalising the local exchanges is impracticable and wrong in principle; undesirability of the rates being pledged for carrying on a business undertaking which must result in a loss and which is not used by the large majority of ratepayers, *Clare* 1157–1167. 1260–1299. 1304 *et seq.*; 1408 *et seq.*; 1424–1443——Inclusion in the association of practically all the corporations in England outside London, *ib.* 1163–1167.

Agreement of witness with the statement that although the associated corporations did not appear before the Committee of 1892, their suggestions were as to retaining the exercise of the powers of the National Telephone Company were adopted by the Committee, *Clare* 1417–1423——Belief that the association would endorse the opinion expressed by witness that no powers should be conferred on corporations to construct telephones, *ib.* 1474–1479.

Witness (who is Town Clerk of Leeds) submits detailed statements and suggestions on behalf of the Municipal Corporations Association, *Harrison* 1480, 1481. 1536——General agreement of witness with the evidence given by Mr. Clare, *ib.* 1482 *et seq.*

*See* also *Local or Municipal Authorities.*

*Mutual Telephone Company.* See *Manchester.*

N.

*National Telephone Company:*

Evidence explanatory of the Post Office arrangements in August 1892, with the National Company respecting the acquisition of the trunk wires, &c., *Lamb* 89. 101–103. 198, 199. 309–313. 345–351.

Details respecting the capital and profits of the National Telephone Company; strong comments thereupon, *Colquhoun* 765–767. 803–809. 877——Evidence respecting the present financial condition of the National Company and its excessive capital; conclusion that it is hopeless to expect satisfactory terms from the company, as at Aberdeen, *Bisset* 1045, 1046.

Grounds for the opinion that the only alternative to buying out the companies (which course is not recommended), is to leave the present supply of telephonic convenience in the hands of the National Telephone Company, but under altered conditions, *Clare* 1213–1221.

Full particulars showing that the high charges of the National Telephone Company are due to its very large capital, the result of the process of amalgamation, *Dickinson* 1623–1625——Inexpediency of conferring any greater powers on the National Company, *ib.* 1645, 1646.

Attention of witness called to the custom of the National Telephone Company to charge double rates to non-subscribers, *Provand* 2456–2458——Particulars showing that the National Company is capitalised to the extent of 60*l.* per user, *ib.* 2505, 2506——Contention that the Post Office agreement gave the National Company enormous privileges, *ib.* 2519–2521.

Impression that the Telephone Company are doing all they can to improve their service generally, *Preece* 2816. 2932. 2973–2977. 3048, 3049——Opinion that the charges of the Company would not be excessive provided the service were efficient, *Webber* 3988–3994.

Detailed information as to the numerical progress of the Company consequent on the smaller companies being amalgamated; estimate that from 1890 to 1894 the subscribers have increased by 45,647, and that the ratio of effective calls per annum is 139,639,032, *Forbes* 4200–4208. 4259–4263——Details as to the reserve fund of the Company, which now stands at 300,000*l.*; *ib.* 4664–4679.

Consideration of the difficulties arising from the expiration of the license in 1911; opinion that it will be to the interest of the Company to develop business as rapidly as possible,

Report, 1895—*continued.*

*National Telephone Company*—continued.

possible, *Forbes* 4943–4955. 5025–5027——Evidence respecting the date and conditions of the agreement between the Government and the Company, *ib.* 5018–5024.

Copy of circular issued by the County Council in May 1895 requesting replies as to the efficiency of the service, &c., *App.* 314.

Very large majority of the Company's London Exchange subscribers who are satisfied with the service as given by the Company, *App.* 315.

Paper explanatory of the development of the National Company since its origination in May 1889, *App.* 316–319.

General statement of tariffs, *ib.* 320–322.

Statement showing the number of lines and the population at various centres at 31st December 1894, *App.* 325–327.

Statement showing the number of subscribers on the Metropolitan Exchanges having a limited local service and the number of subscribers on the same Exchanges having full Metropolitan service, *App.* 327.

*See* also *the Headings generally throughout the Index.*

*New Telephone Company.* Explanations in connection with the arrangement between the Post Office and the "New" and the "National" Companies in August 1892 respecting trunk wires, &c., *Lamb* 89. 101–103. 198, 199. 309–313. 345–351—— Reference to a contract between the New Telephone Company and the Telephone Defence Association, *ib.* 187–190. 287–290 ——Information respecting the system and charges of the New Telephone Company, *Berridge* 2055–2030.

Attention called to the attempt made by the New Telephone Company in London to supply a better service at a lower rate; belief that it could not be done for less than 5*l.* per subscriber, *Preece* 2867–2880.

Particulars respecting the formation of the New Telephone Company and of the agreement made between it and the Association for the Protection of Telephone Subscribers; belief that the agreement was never fulfilled owing to the absorption of the New Telephone Company by the National, *Webber* 3506-3547. 3635. 3769–3773. 3954–3956.

Detailed explanation of the complaint brought against the National Telephone Company on taking over the New Company's service for not fulfilling the pledges given by the latter; document handed in on this point, *Forbes* 4415-4420. 4499-4528 —— Explanatory statement respecting the agreement and the conditions under which the New Telephone Company were bound to carry out the policy of the Mutual Telephone Company, *ib.* 4759–4769.

Evidence showing that the New Company is now in process of liquidation, a considerable portion of its shares having been purchased by the National Telephone Company, *Forbes* 4769–4780. 4823. 4328–4831. 4833-4839. 5104, 5105 ——Particulars in regard to the Companies bought up by the New Telephone Company and the expenditure incurred thereby, *ib.* 4800–4817. 5032, 5033——Reference to an agreement entered into between the New and the National Companies in 1892 by which the two Companies were to work their respective systems without rivalry, *ib.* 4818–4832. 4868–4871.

Letters from the late Duke of Marlborough in August and September 1892 as chairman of the New Telephone Company, *App.* 308, 309.

Copy of prospectus of the New Telephone Company, together with Memorandum and Articles of Association, *App.* 310–312——Form of application for shares, *ib.* 313.

*New Zealand.* Statement that in New Zealand both telephones and telegraphs are entirely in the hands of the State, *Ward* 4001–4004. 4116–4119——Marked development within the last 12 years in the use of the telephone in the colony, *ib.* 4005–4010.

Description of the system now in use in the colony; the Blake instrument is used with a single wire service, *Ward* 4010-4015. 4058–4063. 4093–4096. 4021–4028 —— Information showing that the charges to subscribers increase in proportion to the mileage; belief that these adjustable charges are beneficial and have caused a large increase in the number of subscribers, *ib.* 4016, 4017. 4064–4083. 4113. 4125–4128.

Necessity for a five-year guarantee to be given in cases where subscribers require instruments beyond a distance of five miles from the exchange, *Ward* 4017-4020. 4114, 4115——Examination as to the financial results of the telephone service; details showing that from its inception until March 1894 the net profit, after allowing for depreciation, &c., was 54,082*l.*, *ib.* 4029–4039. 4048–4054.

Statement that the average total capital charge per subscriber is 24*l.* 12*s.* 1*d.*, *Ward* 4043–4047. 4120, 4121——Belief that the largest number of subscribers to any one exchange is about 1,200, *ib.* 4055–4058. 4101-4103.

*New Zealand*—continued.

Information respecting the utilisation of the telephones in connection with the post, *Ward* 4108–4112—Absence of any difficulties in regard to wayleaves, *ib.* 4122–4124. 4132–4134.

*Newcastle.* Statement that both the Post Office and the National Telephone Company work exchanges at Newcastle, *Lamb* 326–344.

Examination in regard to the Post Office competition in Newcastle; belief that for a consideration the National Company would agree to a connection between the exchanges, *Forbes* 5034–5041.

*Newland, J. L.* Report and estimate by Mr. Newland respecting a complete telephonic system for London, the cost being estimated at 356,743*l.*, and the maintenance at 75,898*l.* per annum, *App.* 305, 306.

*Norway.* Practice in Norway to charge an additional sum for a telephonic message when it is subsequently to be transmitted as a telegram; probable increase of the rates, *Lamb* 5168, 5169. 5172. 5226.

Paper containing explanations respecting the telephone service, the system in operation, number of subscribers, trunk-wire charges, &c., *App.* 298, 299.

Statistics as to the influence of telephones on the number of telegrams, *App.* 302.

*Number of Subscribers.* See *Subscribers and Terms of Subscription.*

O.

*Overhead Wires.* Grounds for believing in the necessity for trunk wires being overhead while local wires may, without disadvantage, be placed underground, *Preece* 2587–2592. 2606–2608.

Evidence showing the reasons which have led to the new metallic circuit in London being placed overhead, *Forbes* 4457–4460.

*See* also *Wayleaves.*

P.

*Permanent Arrangement.* Grounds for the contention that the Telephone Company or the authority controlling the telephone system should be given a permanent existence, with extended powers to maintain the undertaking on a cheap and efficient basis, *Clare* 1194–1221. 1235–1241.

*Plymouth.* Reference to the result of competition between the Post Office and the Telephone Company at Plymouth, *Preece* 2799–2805. 2967–2972. 2978—Means adopted by the National Company when competing with the Post Office at Plymouth, *Forbes* 4965–4969.

*Post Office:*

Explanations in detail respecting the policy and practice of the Post Office in dealing with the Telephone Companies and in London in the provincial towns, *Lamb* 11 *et seq.*—Reference to the attacks made in the House of Commons in 1884 on the policy of the Department and to the explanations given by Mr. Fawcett, *ib.* 41. 291–293—Reasons which led the late Government to consider the advisability of making fresh arrangements with the Telephone Companies, *ib.* 61–64.

Questions as to whether the existence of two Companies affects the binding nature of the agreement entered into by the Post Office; an agreement will be entered into with both the "New" and the "National" Companies, *Sir R. Hunter* 407–409.

Examination as to the power which the present agreement confers on the Postmaster General in the matter of underground wires, *Chisholm* 500–513. 558–562—Unsatisfactory nature of the agreement owing to the want of protection to the public in regard to charges, *ib.* 518–520.

Attention of witness called to a memorandum circulated by the Corporation of Glasgow in reference to the agreement; opinion that it probably expressed the views of the Corporation at the time, *Chisholm* 523–529. 635, 636. 644.

Suggestion that if an arrangement be made empowering the Postmaster General to take over the telephone system from the National Company when he thought fit to do so, some reasonable method of arriving at the price should be specified in the Act, *Clare* 1339–1347. 1432.

Report, 1895—*continued.*

*Post Office*—continued.

Practical concurrence of witness in the proposed agreement with the Postmaster-General, except as regards that part which relates to breaking up the streets; objection to the Postmaster General throwing on the corporations the necessity of protecting the public against his own licensees, *Clare* 1364 *et seq.*

Opinion that the additional facilities for telephonic communication that the Postmaster General proposes to give, if the agreement be carried out, will undoubtedly be a benefit to the public; great convenience of the arrangements by which telegrams can be telephoned at some post offices, *Clare* 1451–1457.

Opinion of the committee of the London County Council that the agreement between the Post Office and the National Telephone Company places the company in too strong a position, giving it a practical monopoly over the whole kingdom, to the very great prejudice of the public, *Dickinson* 1596.

Further evidence showing the grounds upon which the London County Council conclude that the agreement will materially and unduly strengthen the position of the Telephone Company, *Dickinson* 1597, 1598.

Detailed information in regard to the Post Office mileage scale as compared with that of the National Telephone Company, showing that for short distances the Post Office charges will be much heavier than those of the company, but that the Post Office offer a cheaper rate for long distances, *Provand* 2441–2448. 2458, 2459. 2464–2466——Use of the telephone chiefly for short distances, *ib.* 2448–2455 —— Statement as to the chairman of the National Telephone Company having drawn the attention of the Post Office to the very high charges which they proposed to make, *ib.* 2460–2463.

Evidence respecting an application (as yet unanswered) made by witness to the Post Office for a statement as to which rates would be higher and which lower, *Provand* 2463–2469——Examination as to whether the trunk line charges of the Post Office were not made with the view of protecting the public revenue; belief that if such charges are to be heavier than those now paid they cannot be in the public interest, *ib.* 2524–2531.

Total of 7,006 telephones in use at the Post Office, *Preece* 2785 ——Information respecting the trunk wires in course of construction; statement that so far they have cost 374,000*l.*, *ib.* 2949–2962.

Opinion that the Post Office are right in acquiring the arteries of the telephone system, viz, the trunk wires, but that the capillaries should be left to private enterprise, *Webber* 3415, 3416. 3868–3870. 3912——Attention of witness called to a question addressed to Mr. Raikes in the House of Commons in 1889 with respect to the telephone policy of the Post Office and to his reply thereto, *ib.* 3421–3424.

Reference to the rights accorded to the Post Office as the result of the judgment in the Post Office action of 1880, *Forbes* 4175——Belief that the agreement between the National Telephone Company and the Post Office will encourage the multiplication of call offices and consequently increase the spread of the telephonic system, *ib.* 4397–4401. 4559–4575.

Discussion respecting the obligations of the Post Office in 1911 in regard to telephones; opinion that according to the licence the Post Office is not compelled to purchase the National Company's system, *Forbes* 4873-4879. 5087–5098——Conclusion that if the public are dissatisfied with the present service they can appeal to the Post Office, *ib.* 5001–5011. 5028–5030.

Consideration of the policy of Mr. Raikes in regard to telephones, *Lamb* 5214–5219 ——Suggestions as to the policy of the Post Office on the expiration of the National Telephone Company's licence, *ib.* 5260–5264.

*See* also *the Headings generally throughout the Index.*

*Preece, William Henry, C.B., F.R.S.* (Analysis of his evidence).—Is Engineer-in-Chief and Electrican to the General Post Office; brought over the first pair of practical telephones in 1877; 2554, 2555.

Description of the instruments necessary to make a complete telephone circuit, 2557 —— Inefficiency of the single wire system, 2558-2561. 2610–2613——Detailed information in regard to switch boards; advantages of the multiple switch, which gives an operator command over 10,000 subscribers, 2562–2570.

Examination as to the operation of placing subscribers in communication one with the other; description also of a system of visual signals in use at the Post Office, 2571. 2576–2583——Particulars of the "Law" system of calling now in operation at Glasgow; belief that it may be the cause of difficulty, 2571–2575——Replacement of the old iron conductors by those of copper or bronze on account of the magnetism engendered in iron, 2584–2586.

Grounds for believing in the necessity for trunk wires being overhead, while local

Report, 1895—*continued.*

*Preece, William Henry,* C.B., F.R.S. (Analysis of his Evidence)—*continued.*

wires may be without disadvantage placed underground, 2587–2592. 2606–2608——Improvement of the defect of retardation in underground wires by the introduction of paper insulation in the place of gutta-percha, 2592–2595. 2604, 2605——Comparison of the cost of underground and overhead work; explanation that paper insulation has so reduced the price of underground work as to make it virtually as cheap as overhead, 2595–2603.

Detailed description of the "backbone system" of trunk wires; opinion that it will be very perfect owing to the heavy copper with which the lines are constructed, and will be enormously used, 2614–2629——Examination as to the growth of telephone business in the United States; reference to three visits made by witness in 1877, 1884, and 1893, showing that in 10 years the total mileage of wire has incrdased by 462,000 miles, 2630–2634——Particulars respecting the enormous use made of the telephone in Chicago, 2634–2645. 2680, 2681.

Evidence in regard to the great development of telephonic service in France, especially since the telephones were acquired by the State in 1889, 2646–2653——Explanation of the three classes of operation at an exchange, 2654——Copies of curves handed in, showing how unequally the work is spread over the different hours of the day, 2654–2663. 2670, 2671.

Information as to the number of operations necessary for each call at the exchange; statement that trunk working involves sometimes 16 operations, 2664–2666. 2674——Opinion that half the troubles in telephone working are due to the subscriber, 2664. 2667–2669. 2672, 2673——Belief that competing systems in one area would necessitate an increase of exchanges, and consequently increased delay, 2675–2680.

Evidence showing the daily calls per circuit in cities of the United States, and in Berlin, Paris, London, &c., 2682——Variation in regard to the number of lines that can be undertaken by one operator; five circuits a fair average for a busy trunk line, 2685, 2686——Information in regard to the circumstances which cause an increase of cost; opinion that the number of operators attendant on an increased number of subscribers is the basis of cost, but that it is also affected by local circumstances, 2687–2708.

Reference to a toll instituted at Buffalo in place of an annual subscription, 2691. 2721–2727——Statement that engineering expenses average 3*l.* per subscriber, 2709–2714——Estimate that an underground system for London would average 55*l.* per subscriber, 2715, 2716.

Table prepared by Mr. Lamb handed in, containing information in regard to the systems adopted in other countries, together with the tariffs, and the results obtained; attention directed to the three distinct bases on which such tariffs are formed, 2717–2727——Extract from a letter from Mr. Storckenfeldt, the Director-General of Telegraphs in Sweden, read, showing that for complete telephone operations the State must own the whole system, 2728——Difficulties experienced in London in regard to both underground and overhead wires, 2729–2734. 2736, 2737.

[Second Examination.] Description of an automatic switchboard; belief that it is adapted to small exchanges only, 2738, 2739——Explanation of the substitution in America of an electric lamp in place of the visual signal of call, 2739–2745. 2796——Return prepared by witness, handed in with a view to show how the number of subscribers compares with the population in various large towns in the States, 2745–2749.

Continuation of previous evidence respecting the three systems of tariff in use in America and European towns, 2752–2755——Practice in the United States to appoint inspectors to educate subscribers in the intelligent use of the telephone, 2756–2758. 2797, 2798.

Detailed explanation of seven reasons adduced by witness for contending that the telephones should not be in the hands of municipalities, 2759–2773. 2787–2792——Further evidence showing that the great delay occasioned by the number of operations necessitated when two or more exchanges are involved is partially removed when subscribers are in direct communication with the post office, 2763–2768. 3112–3130. 3137–3149——Conclusions to the effect that the telephone is imperial in its character, and should be in the hands of the State, 2770. 2786. 2793–2795. 3047. 3050. 3093–3097. 3131–3134. 3163, 3164.

Information as to the great difficulty met with in obtaining way-leave; suggestion that municipalities might greatly assist operations by providing subways for wires such as exist in New York, 2774–2782. 2906–2916. 3017–3029. 3177–3182——Opinion that telephones could be extended to rural districts, provided the district council in each case guaranteed an income sufficient to meet the requirements of the Treasury, 2783, 2784. 2820–2822——Total of 7,006 telephones in use at the Post Office, 2785.

Reference to the result of competition between the Post Office and the telephone company at Plymouth, 2799–2805. 2967–2972. 2978——Attention called to the success attending the municipal management of the electric light, gas, &c.; contention that these

Report, 1895—*continued.*

*Preece, William Henry*, C.B., F.R.S. (Analysis of his Evidence)—*continued.*

these services are confined to local areas, and are not of the imperial nature of the telephone, 2806–2812. 2831–2839. 3165–3170 ——Question as to whether the objection that, to preserve their present independent position, the company would reduce their charges would not prove a benefit to subscribers, 2813–2815.

Impression that the telephone company are doing all they can to improve their service, 2816. 2932. 2973–2977. 3048, 3049 ——Examination on the first objection of witness to municipal telephones, viz., that a municipality was a fluctuating body; contention that Parliament does not fluctuate to so great a degree, 2823–2839 —— Justification of the third reason for disapproving of municipal telephones, viz., the objection of the poorer ratepayers, 2844–2849. 2897–2905 ——Explanation of the fourth reason against municipalisation, viz., the necessity for well-paid, highly-skilled officials, 2850–2852. 3102–3111.

Question as to the means to be employed to oblige an existing company to reduce their prices; conclusion that the Post Office at the desire of a municipality could open a competing exchange, 2853–2855. 2863–2866. 3050–3092——Denial of the statement that the Post Office has declined to grant a license to Glasgow, 2856–2862 —— Attention called to the attempt made by the New Telephone Company in London to supply a better service at a lower rate; belief that it could not be done for less than 55*l.* per subscriber, 2867–2880.

Further examination on the letter from Mr. Storckenfeldt, the Director-General of Telegraphs in Sweden, 2881–2896. 3042–3046——Consideration of the position likely to arise in the year 1911; opinion that either the Post Office will have to start a system of their own or pay the telephone company its price, 2917–2930. 3030–3035.

Objection to the municipalisation of telephones, even with the view of facilitating their acquisation by the Post Office in 1911; 2929–2937——Evidence showing that with a multiple board the capital cost increases as the square of the number of subscribers, 2933–2947. 2982–3002. 3007–3012——Further information respecting the trunk wires in course of construction; statement that so far they have cost 374,000*l.*; 2949–2962.

Opinion that inter-communication between competing systems would not cause engineering difficulties, 3003–3006——Admission that if a company started with unwatered stock it would benefit subscribers, 3013–3016 ——Discussion as to the effect of an increased telephone service on the telegraph and postal revenue, 3036–3041. 3152, 3153——Impracticability of competition in any form, 3055. 3135, 3136.

Belief that when the trunk system is established the calls from one town to another will exceed the calls within towns, 3098–3102. 3154–3162 ——Attention called to two estimates put forward by the London County Council to show that a rental of 10*l.* would cover all expenses; opinion that the Council has rather underestimated the expense, 3171–3176——Evidence showing the necessity for limiting the size of exchanges, 3183–3186.

*Private Telephone Wires.* Evidence respecting the "private house" wires; there are 492 private house subscribers in London, *Forbes* 4401–4407 ——Information respecting the charges for private telephone wires in London, *Lamb* 322–324.

*Provand, Andrew Dryburgh* (Member of the House.) (Analysis of his Evidence.)—Statement as to the great increase in trunk wire charges in Scotland, which will result from the agreement between the Post Office and the National Telephone Company; table handed in, showing the charges of the company for 2,330 inter-town rates, 2428–2435 ——Reference to a complaint made by Messrs. D. M. Stevenson and Company of Glasgow and to Mr. Morley's reply that the Post Office did not intend reducing their prices, 2435–2440. 2470–2476.

Detailed information in regard to the Post Office mileage scale as compared with that of the National Company, showing that for short distances the Post Office charges will be much heavier than those of the company, but that the Post Office offer a cheaper rate for long distances, 2441–2448. 2458, 2459. 2464–2466——Opinion that the telephone is mostly used for short distances, 2448–2455——Attention of witness called to the custom of the National Company to charge double rates to non-subscribers, 2456–2458.

Statement as to Mr. Forbes, the chairman of the National Telephone Company, having drawn the attention of the Post Office to the very high charges proposed by the department, 2460–2463——Evidence respecting an application, as yet unanswered, made by witness to the Post Office for a statement as to which rates would be higher and which lower, 2463–2469.

Reference to the annual arrangements entered into formerly by large firms with the telephone company by which telephonic service was secured at reduced rates; belief that the Government might allow special terms to large subscribers without any question of

Report, 1895—*continued.*

*Provand, Andrew Dryburgh* (Member of the House.) (Analysis of his Evidence)—*contd.*

undue preference arising, 2476. 2481–2495——Opinion that the facilities of the telephone service on the Continent greatly surpass those of this country, 2476–2479.

Objection to the extension of trunk wires to outlying districts where the service would be too infinitesimal to repay the outlay, 2496–2498——Experience that the telephone service of Glasgow will never be good whilst the single wire system is in operation, 2501–2504——Contention that the double trunk wires which are to be provided by the Post Office will be useless unless the exchanges are also fitted with double wires; testimony of Mr. Wallace, a director of the New Telephone Company, on this subject, 2504, 2505.

Information as to the heavy charges of the National Telephone Company in Glasgow; the Post Office agreement does not in any way restrain these charges, 2505, 2506——Particulars showing that the company is capitalised to the extent of 60*l.* per user, 2505, 2506——Grounds for believing that terminal charges would render the system of municipal exchanges difficult and should therefore be abolished, 2507–2523. 2531-2543. 2546–2553.

Contention that the agreement gave the National Company enormous privileges, 2519–2521——Examination as to whether the trunk line charges of the Post Office were not made with the view of protecting the public revenue; belief that if such charges are to be heavier than those now paid they cannot be in the public interest, 2524–2531——Approval of the municipalisation of telephones, 2544, 2545.

*Provincial Towns.* Establishment of exchanges by the Post Office in several towns, including Cardiff and Newport, *Lamb* 31. 38–40. 326, 327——Statement that several licenses were granted to different companies by the Postmaster General in 1882 for the establishment of exchanges even in towns where the Post Office had previously held the monopoly, *ib.* 41. 168. 272, 273.

Explanations in regard to the number of lines and the population at various centres on 1st January 1895, showing that London makes less use of the telephone than many provincial towns; document hereon handed in, *Forbes* 4376–4378.

R.

*RATES AND CHARGES:*

Suggestion that, after having fixed the powers to be given to the Telephone Company, the fair maximum dividend that the company may pay on their capital, and the maximum charges in conjunction with maximum dividends should be considered, *Clare* 1180–1187. 1197–1201——Possibility of classifying the different local exchange areas and fixing the maximum charge in each class, *ib.* 1185, 1186. 1467.

Concurrence of witness in the suggestion that an arrangement similar to that made by the Manchester Corporation with the Telephone Company would be preferable to the corporation assuming control of the telephone system, provided the charge were fair and the service effective, *Harrison* 1568 *et seq.*——Tendency of the Post Office agreement to increase the charges for messages on trunk wires; cases illustrative of these charges, *Dickinson* 1601, 1602——Evidence showing that varying rate for limited services are in force at present at Kensington, Croydon, and other places, *Flood-Page* 1934, 1935. 1949–1951.

Explanations respecting the comparative rates and charges of the National Company and of those proposed by the Post Office, witness strongly objecting to the control of the latter department, *Provand* 2441 *et seq.*——Reference to the annual arrangements entered into formerly by large firms with the Telephone Company by which telephonic service was secured at reduced rates; belief that the Government might allow special terms to large subscribers without any question of undue preference arising, *ib.* 2476. 2481–2495.

Question as to whether the objection that to preserve their present position the company would reduce their charges, would not prove a benefit to subscribers, *Preece* 2813–2815——Considerations as to the means to be employed to oblige an existing company to reduce their prices; conclusion that the Post Office, at the desire of a municipality, could open a competing exchange, *ib.* 2853–2855. 2863–2866. 3050–3092.

Grounds for the opinion that the average annual payment of 9*l.* 2*s.* 2*d.* per line is far from exorbitant; contention that it is unfair to compare this charge with those of European cities, notably Stockholm and Berlin, owing to the heavier charge in England for wayleaves, rates and taxes, labour, &c., *Forbes* 4226–4245——Explanation of a certain document as to the number of local daily messages at certain important exchanges, showing the average cost to the subscriber to be in some instances under one farthing per message, *ib.* 4356–4370.

Information

Report, 1895—*continued.*

*RATES AND CHARGES*—continued.

Information as to the descending scale of charge to subscribers who enter into a five years' agreement with the National Company, *Forbes* 4451-4455. 4529, 4530—— Enumeration of some of the National Company's charges in various towns, *ib.* 4897, 4898——Admission that the 64,000*l.* per annum which has to be paid as interest on the "watered" capital, is obtained from the subscriptions, *ib.* 4974–4980.

Necessity for prudence respecting any general reduction of telephone rates, *Lamb* 5225——Comparison of the prices of the telephonic and the telegraphic services, *ib.* 5284–5288.

Statement showing the trunk-wire charges in various foreign countries, *App.* 297. 299.

Comparison of the charges of the National Company with those in force in other European countries, *App.* 317.

General statement of tariffs in the metropolitan area and in the larger towns in England and Scotland and throughout the country, *App.* 321, 322.

*See* also *Competition. Cost* (*Capital Outlay.*) *Cost of Working. Local or Municipal Authorities. London. Post Office, Stockholm. Subscribers, &c. Telegraphs.*

*Re-appointment of Committee.* Insufficient time at the disposal of the Committee (in view of the Dissolution of Parliament) to consider their Report; recommended appointment of a Committee on the same subject in the next Session, *Rep.* iii.

*Revenue* (*Post Office.*) Consideration of the effect of telephones on the Post Office revenue; opinion that public convenience should be considered before revenue, *Bisset* 1065–1070.—— *See* also *Post Office. Telegraphs.*

*Riach, Alexander.* (Analysis of his Evidence.)—Is a journalist and the editor of "The Edinburgh Evening Dispatch;" appears at the desire of the Telephone Company, 2248. 2265, 2266. 2273–2275.

Experience that the service in Edinburgh is very satisfactory and is yearly improving, 2249–2252. 2258–2264. 2288, 2289——Personal opinion that the telephone should be nationalised; belief that municipalisation would be difficult to work successfully, 2253–2257. 2268–2272. 2276–2285. 2290–2292——Objection to competition in the case of telephones, 2267, 2268.

*Royalties.* Belief that a system of royalties would prevent loss to the telegraph revenue, *Webber* 3417. 3798–3801.

*Rules and Regulations.* Necessity for a standard of regulations to be drawn up by a Government Department for the guidance of local authorities, *Carbutt* 1800–1804; *Flood-Page* 1930–1933.

*Rural Districts.* Belief that it would prove advantageous to start numerous small companies in agricultural districts and make similar powers to those applied for in the Light Railways Bill, *Carbutt* 1794–1799. 1826–1831. 1871–1874——Opinion that telephones could be extended to rural districts provided the District Council in each case guaranteed an income sufficient to meet the requirements of the Treasury, *Preece* 2783, 2784. 2820-2822.

Examination in support of the opinion that England compares unfavourably with other countries in the absence of telephonic service amongst the working and poorer classes in villages and small towns; practicability of intelligent young men starting small local exchanges for this purpose, *Crompton* 3209–3215. 3222–3224. 3230-3242. 3259-3265.

Enumeration of the advantages that would accrue to agriculturists by the introduction of telephones in rural districts, *Webber* 3573, 3574. 3593–3597. 3785–3791—— Details of an estimate made by witness of the cost of establishing rural telephones in the county of Suffolk; this estimate is based on the supposition that the work would be undertaken by the County Council, *ib.* 3575–3586. 3598–3600. 3632–3634. 3774–3784. 3792–3802. 3887–3889. 3937–3953.

*Russell, Sir James Alexander,* LL D. (Analysis of his Evidence.)—Has occupied the office of Lord Provost of Edinburgh, and has been a member of the Town Council for fifteen years, 892–894.

Statement that the corporation is a considerable telephone user, 895–899—— Evidence respecting the number of telephone subscribers, and the rentals charged; reduction of the charge to 10*l.* per annum, 900–902. 906, 907——Belief that the Edinburgh telephone service, although imperfect, is not so unsatisfactory as that of Glasgow, 903–905.

Particulars as to the various controversies that have arisen between the telephone companies and the corporation respecting overhead wires, electric trams, &c., 908–921. 937, 938. 969–976——Objection of the corporation to any interference with the streets, 922-924. 978–980——Resolution of the Edinburgh committee to apply for a telephone license, should one be obtained by Glasgow, 925–927. 977.

Report, 1895—*continued.*

*Russell, Sir James Alexander,* LL.D. (Analysis of his Evidence)—*continued.*

Grounds for believing it desirable that the telephones should be in the hands of the municipalities, 928–932. 939, 940. 951. 958–966. 992–1003——Improbability of difficulties arising in the event of the transfer of telephones from municipalities to the State, 932——Conclusion that the most important use of the telephone is for local areas; suggestion that Edinburgh and Leith should count as one area, 933. 936. 952–957. 982–991.

Examination as to the effect of the telephones on the telegraph revenue; probability that the royalties are not sufficiently heavy, 941-951——Statement that no dispute has ever arisen between the Post Office and the Edinburgh Corporation in regard to way-leaves, 967, 968.

S.

*Scotland.* Statement as to the great increase in trunk wire charges in Scotland which will result from the agreement between the Post Office and the National Telephone Company; table handed in showing the charges of the company for 2,330 inter-town rates, *Provand* 2428–2435.

Details showing the short time occupied in placing subscribers in effective communication in Glasgow, Aberdeen, Edinburgh, &c.; document containing statistics hereon, handed in, *Forbes* 4345–4356. 4407.

Statement showing the increases in the number of subscribers (National Telephone Company) in the four large Scotch towns during the last five years, *App.* 319.

Statement showing the number of lines, and the population at various centres, on 31st December 1894; *App.* 325.

*See* also *Aberdeen. Dundee. Edinburgh. Glasgow.*

*Short Distances.* Opinion that the telephone is mostly used for short distances, *Provand* 2448–2455.

*Single-wire System.* Experience at Dundee as to the defects of the single-wire system, *Sir J. Leng* 1127–1131——Inefficiency of the single-wire system, *Preece* 2558–2561. 2610–2613——Admission that the complaints respecting the single-wire system are well founded, *Forbes* 4276. 4288.

Statement showing for several foreign countries the extent to which the single-wire system is in operation, *App.* 296–299.

*Sinking Fund.* Statement that in all the systems described by witness allowance has been made for a sinking fund in anticipation of the expiration of all licences in the year 1911, *Webber* 3899-3911.

*Spare Wire (Metropolis).* Statement as regards the mileage of spare wire at 31st December 1894, the mileage erected during the year, and the mileage thrown spare by ceased subscribers or removals during the year, *App.* 329.

*State Purchase and Control:*

Grounds for the opinion that the whole telephonic system must be considered as a national undertaking, and should be taken over by the Government, *Clare* 1151-1157. 1233-1235. 1429–1431. 1464, 1465——Anticipation that if the Government take over the whole system a considerable reduction in the charges might be made by working at something like cost-price, and that developments would take place, in the interests of the public, that might not pay at once, *ib.* 1152, 1153.

Opposition of witness to any proposal that would put difficulties in the way of the State acquiring the telephone system, *Harrison* 1492——Desirability of the telephone being in the hands of the Government, *Dickinson* 1712–1715. 1772.

Concurrence of evidence in favour of the telephone being nationalised rather than municipalised, *Dow* 2115–2120. 2130–2151; *Preece* 2253–2257. 2268–2272. 2276–2285. 2290–2292——Opinion that if any change is necessary the telephone should be nationalised, *Moncur* 2322, 2323——Conclusion that nationalisation would be preferable to municipalisation, *Crombie* 2407.

Argument to the effect that the telephone is imperial in its character and should be in the hands of the State, *Preece* 2770. 2786. 2793–2795. 3047. 3050. 3093–3097. 3131–3134. 3163, 3164——Consideration of the position likely to arise in the year 1911; opinion that either the Post Office will have to start a system of their own, or pay the Telephone Company its price, *ib.* 2917-2930. 3030–3035.

Advocacy of limited competition, to be followed by State acquisition and control, *Crompton* 3193–3209. 3216–3221. 3229-3231. 3243-3258——View of the members of the Institute of Electrical Engineers that a Parliamentary monopoly only should exist, *Thompson* 3274–3278. 3313——Advocacy of the nationalisation of all telephones, *ib.*

Report, 1895—*continued.*

*STATE PURCHASE AND CONTROL*—continued.

3279–3283, 3296——Discussion as to the practicability of the State taking over the telephone at once instead of at the expiration of the license in the year 1911; *Thompson* 3297–3303.

Consideration of the question whether the grant of competing licenses now will not facilitate the purchase of the system by the Post Office 16 years hence, *Webber* 3607–3617——Contention that competition should not be allowed, and that the telephone system should be in the hands of the Post Office, *Lamb* 5254–5259. 5268–5283. 5289–5291.

Paper handed in by Mr. Preece showing for several foreign countries whether the telephones are in the hands of the State, *App.* 296-299.

*See* also *Competition.* *Local or Municipal Authorities.* *Post Office.*

*Stockholm.* Comparison of the charges in Stockholm with those of the National Telephone Company, showing that the latter are more than treble the former, *Lamb* 193–195. 200–204. 352–358. 367, 368——Result of inquiries in regard to the much smaller charges that prevail in continental cities, notably Stockholm, *Chisholm* 462, 463. 565–575——Description of the extent and working of the three telephone companies in Stockholm, *Colquhoun* 777–788. 816-821.

Discussion respecting the efficiency of the telephone service in Stockholm, where there is a strong competition between the General Telephone Company and the Post Office, as compared with that of London; grounds for the opinion that there can be no comparison between the two places, *Forbes* 4531–4639. 4656–4663.

*Streets.* Objection to private companies having authority over the streets, *Bisset* 1036, 1037——Necessity of an Act of Parliament empowering corporations to break up the streets for the purpose of pulling down underground telephone wires; practical agreement of all the corporations to withhold their consent to the exercise of way-leave powers under the Act of 1892; *Clare* 1172–1179. 1300-1303. 1348–1352. 1401, *et seq.*

Power of the corporations, under the provision of the Act of 1872, to exclude the operations of the telephone company or to fix the terms upon which the streets shall be opened up for putting twin wires underground; desirability of the corporations having complete control against everybody over their own streets, *Harrison* 1493–1498. 1540, 1541. 1550-1558, 1581–1591.

Personal opinion of witness that the City Commissioners of Sewers would not grant the London County Council control over their streets, *Berridge* 2097–2100——Explanation of the powers held by the local authorities over the streets, *Forbes* 4467–4474.

*See* also *Way-leaves.*

*Subscribers and Terms of Subscription.* Opinion that the difficulties arisingf rom the increase in the number of subscribers to any telephone exchange have been exaggerated, *Webber* 3474. 3619, 3620 —Contention that it is unnecessary for any lists of subscribers to be kept at public call offices, *ib.* 3756–3768.

Total of 75,216 as the number of subscribers' lines at the end of April last, *Forbes* 4205 —Comparative statement handed in as to the number of subscribers to the Post Office and the National Telephone Company respectively, showing that the latter has made the greater progress, *ib.* 4409–4415. 4680–4682.

Suggestion that an increase of subscribers is due more to an increased knowledge of the value of the telephone than to a reduction of price, *Forbes* 5061–5063——Total of about 75,000 subscribers in the United Kingdom, *ib.* 5114.

Statement showing for several foreign countries the number of subscribers and the terms of subscription, *App.* 296–299.

Number of subscribers at some of the more important exchanges, together with the cost per message, *App.* 324.

Comparative statement of the National Company's and the Post Office subscribers' lines, showing in each case the increase in the number of subscribers, *App.* 328.

Statement as regards new and ceased subscribers for the year ending 31st December 1894, *App.* 329.

*Sweden.* Particulars respecting the number of subscribers, and the area covered by the telephone, in Christiana, *Lamb* 204-208. 210–213——Increased rates to be charged in Sweden, *ib.* 5168, 5169. 5172. 5226.

Extract from a letter from Mr. Storckenfeldt, the Director General of Telegraphs in Sweden, read, showing that for complete telephone operations the State must own the whole system, *Preece*, 2738 —Further examination on the letter from Mr. Storckenfeldt, *ib.* 2881–2896. 3042–3046.

Report, 1895—*continued.*

*Sweden*—continued.

Return containing information respecting the telephone service, the system in operation, terms of subscription and number of subscribers, trunk-wire charges, &c., *App.* 298, 299.

*See* also *Stockholm.*

*Switchboards.* Detailed information in regard to switchboards; advantages of the multiple switch, which gives an operator command over 10,000 subscribers, *Preece* 2562-2570——Description of an automatic switchboard; belief that it is adapted to small exchanges only, *ib.* 2738, 2739.

*Switzerland.* Very extensive use of the telephone in Switzerland, *Forbes* 4265——Increase to be made in the terms of subscription by large users of the telephone in Switzerland, *Lamb* 5169-5172.

Return containing information respecting the telephone service, the number of subscribers, terms of subscription, trunk-wire charges, &c., *App.* 298, 299.

## T.

*Telegraphs (Postal Revenue):*

Detailed statement to the effect that the revenue of the telephone companies from 1886 to 1891 showed an increase of 204,000*l.*, whilst the net telegraph revenue presented a corresponding diminution, *Lamb* 65–68. 74–82. 120–122——Examination as to the causes of the diminished telegraph revenue; belief that it is largely due to the telephones, and is also affected by the increase in the pay of the telegraphists, *ib.* 69. 115–117. 123-129. 131. 144–159. 361.

Grounds for the opinion that an increase in the number of telephone subscribers (as at Glasgow) would not affect the revenue of the Post Office from the post offices and telegraphs, *Chisholm* 593-603——View of witness that telephones do not affect the telegraphic revenue, *Colquhoun* 809, 810.

Examination as to the effect of the telephones on the telegraph revenue; probability that the royalties are not sufficiently heavy, *Sir J. Russell* 941–951——Evidence to the effect that at Liverpool the telephone is doing a great deal of the work that would otherwise have been done by the telegraph, the telegraph business between Liverpool and Manchester having been practically ousted by the telephone, *Clare* 1231, 1232——No doubt that part of the net loss of 240,000*l.* a year incurred by the Post Office in the telegraph business is due to the competition of the telephones; contention, however that part of the loss is also due to press messages being carried at a lesser rate than other telegrams, *ib.* 1306 *et seq*; 1430, 1431.

Probability that increased telephonic service in London will prove detrimental to telegraphic communication, *Dickinson* 1720-1725——Discussion as to the effect of an increased telephone service on the revenue, *Preece* 3036–3041. 3152, 3153.

Document referred to (handed in) illustrating the effect of the telephone service on that of the telegraph in various European cities, *Forbes* 4370–4376. 4408——Probability that on the completion of the trunk system the telephone will seriously affect the telegraph revenue, *ib.* 4956-4961——Probability also that the purchase of telephones by the Post Office and the institution of a cheaper service would entail a loss on both the telephone and telegraph revenues, *ib.* 5099–5103.

Report read from the Postmaster of Liverpool showing how the extended telephone facilities have arrested the normal development of the local telegraphs; report handed in, together with a statement from Norway of a similar nature, *Lamb* 5182-5189. 5265-5267——Discussion as to whether a larger development of the telephone would not assist the telegraph service; opinion that the telephone generally results in becoming a competitor, *ib.* 5242–5253.

Extract from Report of Postmaster at Liverpool to the effect that the competition of the local telephones has produced a decrease in the number of telegrams, *App.* 301.

Paper showing the influence of telephones in Norway upon the number of telegrams, *App.* 302.

Comparative statement of telegraphic service of certain foreign countries, with ratio per head of population, *App.* 325.

*See* also *Post Office. Rates and Charges.*

*Terminal Charges.* Objections to the clause of the Post Office agreement which deals with terminal charges, *Dickinson* 1602-1606. 1629-1633. 1653-1662. 1739-1749——Grounds

*Terminal Charges*—continued.

Grounds for believing that terminal charges would render the system of municipal exchanges difficult and should therefore be abolished, *Provand* 2507-2523. 2531–2543. 2546–2553.

*Thompson, Professor Silvanus P., D.Sc., F.R.S.* (Analysis of his Evidence.)—Has been a member of the Institute of Electrical Engineers for fifteen years; has acted as adviser on telephonic matters to different companies, and confirms the evidence given by Mr. Crompton, 3270 *et seq.*

View of the members of the Institute that a Parliamentary monopoly only should exist, 3274–3278. 3313 —— Belief that limited competition would bring about a more effective service, but that the simplest solution would be the nationalisation of all telephones, 3279–3283. 3296 —— Reference to the want of encouragement for young men to enter upon the telephonic branch of the profession, 3283–3286. 3291–3295. 3311.

Discussion as to the practicability of the State taking over the telephones at once instead of at the expiration of the license in the year 1911; 3297–3303 —— Examination as to the possibility of young professional men starting small local exchanges; belief that they could do so if supported by local bodies, 3304–3310. 3312.

Evidence respecting the system and working of the London and Globe Telephone Company; reference to the groups of exchanges which it purposed to institute, 3314–3331. 3343–3363. 3376–3389. 3393–3396 —— Opinion that municipal telephones would be the best form of competition, 3332–3342. 3390–3392.

Desirability of extending the use of the telephone to the working classes, 3366–3375 —— Suggestion that in the case of competing exchanges the work might be simplified by having a directory inclusive of the names of subscribers to all companies, 3394–3401.

*Tradesmen.* Experience that a telephone supply is a business necessity, and is not likely to be much used by small tradesmen, *Forbes* 5069–5076.

*Trunk Wires:*

Details respecting the negotiations entered into between the companies and the Post Office in regard to the construction of trunk wires, *Lamb* 32–37 —— Explanation of the policy decided upon by the late Government as set forth in a Treasury Minute of May 1892; one of the features was the acquisition of the trunk wires by the Post Office, *ib.* 85–89. 168–174. 364–366.

Reference to the Telegraph Act of 1892, authorising the raising of a certain sum to defray the expenses of the acquisition of the trunk wires from the companies, *Lamb* 88. 90–94 —— Statement that an agreement was made with the "New" and the "National" Companies in August 1892; detailed explanation of the heads of this arrangement, *ib.* 89. 101–103. 198, 199. 309–313. 345–348. 350, 351.

Description of the trunk wires, showing the places connected by them; chart of the backbone system handed in, *Lamb* 94–100. 130 —— Belief that the taking over by the State of the trunk wires is a step towards acquiring the telephone generally, *ib.* 103. 219 —— Discussion as to whether the policy of the Government in acquiring the trunk wires has not resulted in a decided benefit to the companies at the cost of the public, *ib.* 214–234.

Doubt as to any public benefit arising from the Government taking over the trunk-wire system only, unless the number of trunk lines be increased, *Clare* 1153-1155 —— Dissent from certain evidence as to the comparatively minor importance of the extra-mural telephony, the wires within the local exchange area being of even more importance than the trunk wires, *Harrison* 1527–1530.

Evidence purporting to show that the double trunk wires which are to be provided by the Post Office will be useless unless the exchanges are also fitted with double wires; testimony of Mr. Wallace, a director of the New Telephone Company, on this subject, *Provand* 2504, 2505.

Detailed discription of the backbone system of trunk wires: opinion that it will be very perfect owing to the heavy copper with which the lines are constructed, and will be enormously used, *Preece* 2614-2629 —— Further information respecting the Post Office trunk wires in course of construction; so far they have cost 374,000*l.*, *ib.* 2949–2962 —— Belief that when the trunk system is established the calls from one town to another will exceed the calls within towns, *ib.* 3098–3102. 3154-3162.

Approval of the trunk wires, or arteries, being in the hands of the Post Office, but not the capillaries, *Webber* 3415, 3416. 3868-3870. 3912 —— Belief that the inconvenience that would arise if the Post Office trunk wires were connected with systems under the control of different undertakers would not be insuperable, *ib.* 3490–3502. 3601. 3755.

Report, 1895—*continued.*

U.

*Underground Wires.* Comparison of the cost of underground and overhead work; explanation that paper insulation has so reduced the price of underground work as to make it virtually as cheap as overhead, *Preece* 2595–2603 —Estimate of 55*l.* per subscriber as the cost of an underground system in London, *Preece* 2715, 2716 ——Difficulties experienced in London in regard to both underground and overhead wires, *ib.* 2729–2734. 2736, 2737.

*Undue Preference.* Advisability of provisions to prevent the telephone company unfairly favouring one exchange area at the expense of others and of giving undue preference as between one subscriber and another, *Clare* 1180–1187.

*Uniformity of System.* Desirability of having standard regulations which should be applicable to all towns, *Carbutt* 1800–1804 ; *Flood-Page* 1930–1933.

*United States.* Examination as to the growth of telephone business in the United States ; reference to three visits made by witness in 1877, 1884, and 1893, showing that in ten years the total mileage of wire has increased by 462,000 miles, *Preece* 2630–2634 ——Evidence showing the daily calls per circuit in cities of the United States and in Berlin, Paris, London, &c., *ib.* 2682——Explanation of the substitution in America of an electric lamp in place of visual signal of call, *ib.* 2739–2745. 2796.

Return, prepared by witness, handed in with a view to show how the number of subscribers compares with the population in various large towns in the States, *Preece* 2745–2749——Reference to the practice adopted in the United States of instructing subscribers in the use of the telephone, *Preece* 2756–2758. 2797, 2798 ; *Webber* 3601–3604.

Paper containing information respecting the telephone service, the system in operation, number of subscribers, terms of subscription trunk-wire charges, &c., *App.* 298, 299.

Return showing the population of the chief towns in the States, the number of subscribers in exchange, and the average number of inhabitants to each subscriber, *App.* 300.

Statement of the telephone tariff in the principal towns, *App.* 320.

*United Telephone Company.* Particulars as to the licenses granted by the Post Office to the United Telephone Company under the Telegraph Act of 1869; *Lamb* 13–19. 21–24——Statement that the United Company allowed subsidiary companies the use of its patent apparatus in parts of the country, other than London, provided licenses were obtained from the Post Office, *ib.* 19. 25–30. 40, 41.

Table of telephone chronology handed in ; explanation hereon of the circumstances which led to the formation of the United Company, *Forbes* 4175——Information as to the licenses granted by the Post Office to the United Company ; belief that the first license of 1881 tended to suppress the development of the telephone, *ib.* 4175–4180.

Summary showing the history of the United Telephone Company ; amalgamation with the National Company in May 1889, *App.* 316.

W.

*Waldie, James Paterson.* (Analysis of his Evidence.)—Is a coal merchant in Edinburgh ; appears at the request of the telephone company, 2223–2227. 2240–2243.

Evidence respecting the offices, &c. owned by witness, and the nature of the wires connecting them, 2228–2232——Experience of eighteen years that the system of the National Telephone Company is very satisfactory, 2233–2239——Undesirability of municipal telephones, 2244-2247.

*Ward, The Hon. J. G., M.H.R.* (Analysis of his Evidence.)—Is Postmaster General and Treasurer of the Government of New Zealand ; has held the former position for five years, 3995–4000.

Statement that in New Zealand both telephones and telegraphs are entirely in the hands of the state, 4001–4004. 4116–4119——Marked development within the last twelve years in the use of the telephone in New Zealand, 4005–4010——Description of the system now in use in the colony, the Blake instrument is used with a single wire service, 4010–4015. 4058–4063. 4093-4096. 4021–4028.

Information showing that the charges to subscribers increase in proportion to the mileage ; belief that these adjustable charges are beneficial and have caused a large increase in the number of subscribers, 4016, 4017. 4064–4083. 4113. 4125–4128——

Necessity

*Ward, The Hon. J. G., M.H.R.* (Analysis of his Evidence)—*continued.*

Necessity for a five-year guarantee to be given in cases where subscribers require instruments beyond a distance of five miles from the exchange, 4017–4020. 4114, 4115.

Examination as to the financial results of the telephone service; details showing that from its inception until March 1894, the net profit after allowing for depreciation, &c., was 54,082*l.*; 4029–4039, 4048–4054——Disapproval of the centralisation of exchanges, on the ground of loss of time, 4040–4043. 4084, 4085. 4129–4131——Statement that the average total capital charge per subscriber in New Zealand is 24*l.* 12*s.* 1*d.*; 4043–4047. 4120, 4121.

Belief that the largest number of subscribers to any one exchange in New Zealand about 1200; 4055-4058. 4101–4103——Information respecting the trunk wire charges to subscribers, viz., 6*d.* for six minues, 4086-4090——Reference to the practice of allowing subscribers an extra telephone either at their offices or private houses by payment of an additional 1*l.* per annum, 4091, 4092.

Details as to the number of telephone users in proportion to the population in Wellington and Auckland, 4101–4107——Information respecting the utilisation of the telephones in connection with the post, 4108–4112——Absence of any difficulties in regard to way-leaves, 4122–4124. 4132–4134.

*Way-leaves.* Detailed explanation of the powers of the Postmaster General and his licenses in respect of way-leaves, *Lamb* 294–303; *Colquhoun* 734–753. 845, 846. 856–863——Resolution of the Municipal Corporations Association, that the corporations of England should, as a body, oppose the exercise of the rights to be conferred on the National Telephone Company by the Postmaster General with regard to underground way-leaves, *Harrison* 1499 *et seq.*; 1581–1591——Opinion that something on the basis of the agreement made some time ago by the Leeds Corporation with the telephone company would be reasonable solution of the underground way-leave difficulty, *ib.* 1499 *et seq.*

Information as to the great difficulty met with in obtaining way-leave; suggestion that municipalities might greatly resist operations by providing subways for wires such as exist in New York, *Preece* 2774–2782. 2906–2916. 3017–3029. 3177–3182——Difficulties experienced by the National Company owing to the lack of definite powers in regard to way-leaves, &c., *Forbes* 4995–5000——Statement that the Post Office does not pay way-leave for the use of the streets, *Lamb* 5212–5214.

*See* also *Streets.*

*Webber, Major General, C. E., C.B., R.E.* (Analysis of his Evidence.)—Was for nine years divisional engineer of the Postal Telegraphs and had charge of the telegraph service in the Egyptain War; was also managing director of the Bell and Edison United Telephone Company, 3402–3411.

Reference to a paper read by witness in 1884 before the Society of Arts in order to show the injurious effects of monopoly and to suggest how cheaply telephony could be introduced in the United Kingdom, 3412–3414. 3418. 3487. 3827–3835——Opinion that the Post Office are right in acquiring the arteries of the telephone system, viz., the trunk-wires, but that the capillaries should be left to private enterprise, 3415, 3416. 3868–3870. 3912——Belief that a system of royalties would prevent loss to the telegraph revenue, 3417. 3798–3801.

Bar to the development of the telephone system through the action taken by the Post Office for the protection of its revenue 3418——Letters written by the late Duke of Marlborough in 1882 handed in, as exemplifying the inefficiency of the telephone service at that period, 3418–3420——Attention of witness called to a question addressed to Mr. Raikes in the House of Commons in 1889 with respect to the telephone policy of the Post Office, and to his reply thereto, 3421–3424.

Examination as to the efforts made on the expiration of the patent rights in 1890 to bring about competition; the Pioneer Telephone Company having been formed in 1892 with the object of raising capital for a projected company to be called the New Telephone Company, 3424–3428——Explanations in connection with a plan prepared by witness in 1891 (at the request of the Duke of Marlborough), of a system of telephoning the City of London by the establishment of eight exchanges, 3428–3440. 3472–3474. 3636–3651. 3708. 3733-3750. 3849–3864. 3913–3927——Disapproval of the haphazard manner in which the telephones of London have been extended, 3430–3433. 3707.

Detailed information in regard to the spare tubes laid by the City of London Lighting Company; explanation that they were not laid surreptitiously, but were placed at the request of the late Duke of Marlborough as representing the New Telephone Company, 3439–3463. 3697–3706——Evidence showing that a complete twin wire underground service could be provided for 28,000 subscribers at a capital outlay of 14*l.* 2*s.* 6*d.* each, 3464–3472. 3624, 3625. 3652–3661. 3751–3754. 3836–3839. 3928–3936——Opinion that the difficulties arising from the increase in the number of subscribers to any telephone exchange have been exaggerated, 3474. 3619, 3620.

Report, 1895—*continued.*

*Webber, Major General, C. E.*, C.B., R.E. (Analysis of his Evidence)—*continued.*

Description of the manner in which the eight exchanges could be worked either by payment of toll or by means of different tariffs; opinion that the lowest unit of subscription to one exchange would be 8*l.* and that a double subscription would cover the remaining seven, 3475–3486. 3662–3685. 3709–3730. 3803–3811. 3829–3832. 3840–3848. 3974–3984——Belief that the inconveniences that would arise if the Post Office trunk-wires were connected with systems under the control of different undertakers would not be insuperable, 3490-3502. 3601. 3755.

Desirability of different tariffs to bring telephony within the reach of small tradesmen; probability that such a system could be arranged by the county council without interfering in any way with the arrangement between the National Telephone Company and the Post Office, 3503, 3504. 3571, 3572. 3683-3696——Particulars respecting the formation of the New Telephone Company and of the agreement made between it and the Association for the Protection of Telephone Subscribers; belief that the agreement was never fulfilled owing to the absorption of the New Telephone Company by the National, 3506–3547. 3635. 3769–3773. 3954–3956.

Evidence respecting the capital and working of the Mutual Telephone Company in Manchester in 1890; the complaints of the National subscribers led largely to the establishment of the Mutual, 3548–3557. 3563–3570——Enumeration of the advantages that would accrue to agriculturists by the introduction of telephones in rural districts, 3573, 3574. 3593–3597. 3785–3791——Details of an estimate made by witness of the cost of establishing rural telephones in the county of Suffolk; this estimate is based on the supposition that the work would be undertaken by the county council, 3575–3586. 3598–3600. 3632–3634. 3774–3784. 3792–3802. 3887–3889. 3937-3953.

Question considered whether a system in order to be efficient must have the twin wire or the metallic circuit; belief that such wires are only suitable to long distance telephony, 3581. 3621–3623——Opinion that both town and county councils are perfectly competent to undertake the telephone service, but that competition in any form is necessary in default of purchase by the State, 3584–3592. 3618. 3824. 3868–3873. 3957-3973.

Probability that two systems of exchange in one area would prove a convenience to subscribers, 3601——Reference to the practice adopted in the United States of instructing subscribers in the use of the telephone, 3601–3604——Desirability of the Post Office within the next three years taking over and remodelling the whole telephone system of London, 3604-3606. 3891–3898.

Discussion as to whether the grant of competing licenses now will not facilitate the purchase of the system by the Post Office sixteen years hence, 3607–3617——Proposal that smaller charges might be made for deferred messages, sent over the trunk wires at certain less busy hours of the day, 3626–3632.

Contention that it is unnecessary for any lists of subscribers to be kept at public call offices, 3756–3768——Belief that the Corporation of London could compete successfully with the National Telephone Company, 3816–3826——Probability that competing companies would arrange amicably for inter-communication between their subscribers, 3874–3880——Statement that in all the systems described by witness, allowance has been made for a sinking fund in anticipation of the expiration of all licenses in the year 1911; 3899–3911.

Denial that reasonable competition has ever existed, 3961-3963——Reference to the practice amongst several firms in the City of having a number of telephones in one office; this is only another way of varying the tariff, 3985–3987——Opinion that the charges of the National Telephone Company would not be excessive provided the service were efficient, 3988–3994.

*Working Classes.* Practicability and desirability of extending the use of the telephone to the working classes, *Thompson* 3209–3215. 3222–3224. 3230–3244. 3259–3265. 3366–3375—— Opinion that working men will not use the telephone to any extent, but that it will benefit small tradesmen, *Forbes* 4386–4397.

# REPORT.

THE SELECT COMMITTEE appointed to inquire into the Liabilities to which persons are exposed under the present Law as to the ADMINISTRATION OF TRUSTS, and whether any further legislative provision might be made for securing adequate Administration of Trusts without the necessity of subjecting private trustees and executors to the risks which they now run;——HAVE agreed to the following REPORT:—

YOUR Committee were appointed on the 18th February, on the motion of Colonel Howard Vincent, to inquire into the liabilities to which persons are exposed under the present Law as to the Administration of Trusts, and whether any further legislative provision might be made for securing adequate administration of trusts without the necessity of subjecting private trustees and executors to the risks which they now run. Conformably with this Order, Your Committee sat on 11 days, and examined 18 witnesses, including the Lord Chancellor, Lord Halsbury, Lord Watson, Lord Justice Lindley, Lord McLaren, two County Court Judges, and Members of the Bar, and Solicitors of the greatest distinction. After hearing this evidence, it was the opinion of the Committee that sufficient materials had been obtained to enable them to report their conclusions to the House.

The terms of the Reference were wide enough to include the whole of the United Kingdom, and some evidence was given both as to Scotland and Ireland.

In Ireland there does not seem to be any widespread desire for change, or complaint of the existing law. Scarcely any communication on this subject reached Your Committee from Ireland or from Irish representatives, and accordingly it was not thought necessary to pursue the inquiry in regard to that country.

More evidence was taken in regard to Scotland, where, as appears in this Report, a special practice, the creation of statute, has been in force for some time. The existing law works well, and no desire was expressed for change except on two points. Lord Watson recommended that trustees in Scotland should be enabled to obtain the direction of a judge in chambers, as can now be done in England under an originating summons. He also recommended that any testator in Scotland should be at liberty to nominate a judicial factor in his will, who, upon confirmation by the Court, should become an officer of the Court. These would be desirable alterations, though subsidiary in comparison with other matters embraced in the Order of Reference.

In England it is undoubted that serious grounds of complaint exist. An enormous amount of personal property, as well as a great deal of land, is held upon trusts, some of which last for a considerable number of years. All these trusts are administered by private persons, often members of the family, who receive no remuneration, and are not allowed to make any profit, while the law imposes upon them a very serious responsibility. There is a statutory right in trustees to protect themselves by taking the directions of a Chancery Judge in regard to the exercise of their duties, but the fear of expense is apt to deter conscientious trustees from taking this course in a small estate. In return for the protection thus offered, the Courts of Chancery apply a more rigorous standard to the conduct of trustees than to the case of other bailees.

They are not allowed to delegate their duties, unless authorised to do so by the terms of their appointment, and will be held personally responsible for any misapplication of the funds by a stockbroker or solicitor, or even a co-trustee, which has been made possible by their parting with those funds, unless in strict compliance with the ordinary course of business. They are also personally responsible if they depart from the directions of the instrument appointing them, even if that departure be due to a perfectly honest misunderstanding of their duties.

In a recent decision in the House of Lords, Spaight *v.* Gaunt, a step was taken in the direction of alleviating the position of a trustee, and the overwhelming weight of opinion among the witnesses who gave evidence before your Committee was in favour of a still further alleviation. Your Committee recommend that the Court be empowered to relieve any trustee from personal responsibility when satisfied that he has acted honestly, reasonably, with the intention of carrying out the terms of the trust, and ought fairly to be excused for having acted without the directions of the Court. They also recommend that the Court be empowered to give sanction beforehand to such departures from the terms of any trust as have become expedient owing to altered circumstances, and are for the advantage of those beneficially interested. They also consider that the practice in obtaining the direction of a Judge, which has been described as a litigation in miniature, ought to be cheapened and simplified.

Under present circumstances it is not surprising to learn that much difficulty is found in inducing competent persons to undertake the office of trustee. The gentlemen representing the Incorporated Law Society expressed the opinion that this had been exaggerated. There may have been exaggeration in some quarters, but there can be little doubt that the difficulty is very real and increasing, especially with poor people, whose circle of relatives does not contain many persons of education.

Apart from the difficulty of finding competent persons to act as trustees, the frequency of instances in which beneficiaries suffer loss from the defalcations of dishonest trustees, or the negligence of careless and incompetent trustees, is a very serious matter.

Probably few trustees contemplate dishonesty when they first enter upon their duties, or have the opportunity of being dishonest while they are associated with others in the trust. It is when all the trustees except one have died or retired, and no fresh appointments have been made, that the temptation and opportunity arise. And the cases in which the temptation prevails are often those in which the trust has continued for a considerable number of years, and the circumstances or position of the trustee have been altered.
